If you want to improve your skin you should look improve your Lung function. If you wish to improve your hair loss then you should look to improving circulation but more importantly your Kidney function. I have two vintage Tesla Violet Rays one is broken and the other isn't working correctly. Have you looked on Ebay? Or specialized fetish sexual stores? These are the only places you'll find proper vintage Violet Rays these days. Do not buy one of these modern machines as many aren't true Tesla systems thus you're not getting all the frequencies you desire. Theres quite a few people who renovate the vintage models with new capacitors etc. If you can afford one then I'd recommend a Molecular Enhancer from Dan Dial or some other form of Multiple Wave Oscillator based on George Lakhovsky's excellent knowledge mixed with Nikola Tesla technology.

The Violet Ray system is very good at stimulating circulation and this is one of the ways it will aid hair loss if at all. I assure you that if you have this problem you should be eating fried (on its own) black Sesame seed. If you combine the two treatments you may get some good results or you may not, you'll just have to try it. Don't forget the information from Dr John Ray Christopher about Yarrow on the head daily even Rosemary will do it but takes longer. Try to boost the circulation to the head via herbs like Ginkgo Biloba. You may need to also address your Liver and Spleen function which are very closely tied with the Kidney function. I know someone who is bald but if the cat sits and licks his head regular hair will start to sprout.

I should warn you now that if you get a proper Violet Ray system that these

are very powerful indeed. You must be careful if you're taking herbs and/or pharmaceutical drugs. They certainly do cause electroporation of the cells meaning you can take anything up to fifty times the dosage than usual. I used my violet ray for ten minutes once then after thirty minutes I took my herbal tinctures and my eyes were bloodshot big time thus full of heat (Liver) and they were Liver herbs in this case. So be careful and space out treatments quite lengthy. Bob C. Beck spoke a lot about electroporation of cells with certain electrical healing devices. He claimed his blood electrification units could do it but some say this isn't the case. Beck blood electrification units do not compare with the power Violet Ray thats for sure, only a MWO system exceeds the Violet Ray. George Lakhovsky is one of my favourites of the past and look at what they did to him, similar to how they destroyed Royal Rife, Wilhelm Reich, Nikola Tesla and others.

Below I've found the right type of Violet Ray you should get which is the vintage system. The first link is perfect and will run straight on U.K. 240v mains but some of the others may run on the 120v of the U.S. system. Theres no problem with running on the U.S. system but you will need to buy a quality step-down transformer and get a good high wattage model not one of these simple plug type devices. You can then run anything on 120v as it just lowers the 240v down to 120v so you don't blow up the devices you're using. The wattage needs will depend on the device for example you cannot run a 500 watt TV through a 325 watt transformer. You can buy a Violet Ray with a two pronged plug no problem and just put on the end a British plug but you must use a step down. Check what socket end comes on your transformer before rushing to put a British plug on the Violet Ray as it may have a two prong feminine socket on there.

dorean - March 23, 2011 08:00 PM (GMT)

Thanks for all that. Will decide about which of the electrical systems to get, will certainly get one and see how it goes.

Are you saying the Violet Ray Device improves your bodies uptake of nutrients it gets from food??? So taking garlic, or any herb can improve, thereby getting more out of less, if I understand correctly.

I will look into Yarrow, hadn't known about that. I was told onion juice and/or garlic juice on the scalp may also help hairgrowth.

Do I need to grind the sesame seeds, or just fry them whole? Why i frying them better than raw?

TheUnhivedMind - March 23, 2011 09:38 PM (GMT)

Yes you can take less and get the same or more when using anything which causes electroporation. Just put the seeds on there own no grinding and fry them for two minutes from the popping starting the just eat when cooled. Make sure the oil covers all the seeds whilst cooking you may need slightly more than 2 minutes. These seeds are 50% plus made up of oil you see. The reason their cooked is so your body can utilize them properly and more so for the Kidneys.

dorean - March 26, 2011 10:34 AM (GMT)

Those Dan Dials are very expensive so I will get one of the Violet Rays. I am having trouble getting Black sesame seeds, will regular sesame seeds have positive results?

TheUnhivedMind - March 26, 2011 02:48 PM (GMT)

Yes Dan Dial's molecular enhancer went up in price quite a lot once he had it manufacturer professionally and it is a very good unit. It would cost a fortune to ship it to Ireland though but if ever theres someone in our lands who sells them then this would lower the price. Thats a seriously powerful healing tool and the only thing I'd prefer in that arena would be a proper large George Lakhovsky musical tuned coiled Multiple Wave Oscillator running on two huge Nikola Tesla coils. The Violet Ray is far easier to afford and find today whilst being pretty good at what it does. You'll certainly smell the Ozone off it thats for sure, try to get one with all the electrodes and ideally Argon gas filled ones, try to get the eye electrodes if you can. I did find though you need to be careful where you're putting the device and with which electrode you use. If you use the mushroom on the head you

can affect your brain function which is a bit creepy to feel. When I used to comb electrode I never felt this and therefore far safer. These are not toys I can't tell you how powerful they are within your body but you'll find out if you get one. I do love this kind of information and technology and George Lakhovsky was an absolute genius who's never been heard of by most which is such a shame considering everyone knows dunces like Einstein.

No you cannot substitute normal Sesame seeds for black Sesame seeds. You will find these in any Chinese supermarket you may have near you hopefully. I doubt you'll get them from a Western supermarket. You may also find them possibly in an Indian/Pakistani supermarket.

dorean - March 28, 2011 05:48 PM (GMT)

I got the black sesame seeds in asian market, and fried a tablespoon or so, dry on the pan at fairly high heat, no oil, and a few mins after started popping I removed and ate them, they were going to burn if I left them on any longer, is this the correct method.

I found yarrow tea bags in a health shop, couldn't get it loose, do I drink it or apply it to scalp. My wife thought yarrow was not recommended to drink?

TheUnhivedMind - March 28, 2011 09:45 PM (GMT)

Yes what you did was fine, depending on your heat setting will depend on how long you'll need to remove them, this is usually two minutes. Start with two teaspoons a day then head up higher if you have no issues, your target figure is six teaspoons a day everyday as I do without fail. You do not use oil or anything, these are done totally by themselves in an old pan with a splatter cover or you holding a plate above the pan to stop them popping everywhere. Once you have the oil released from all the seeds you then take them off for cooling and eating.

You could use Yarrow tea bags to make a strong infusion solution but fomentations are the best where you then rub this topically into the scalp and any hair you have. Ideally a toweling should then be soaked in the solution and left on the head for around 5-8 hours a time. Yarrow can be taken internally through infusing one to three times a day no problems usually people with chronic problems will take it three times a day. If you have serious conditions it can be taken every couple of hours. It will go to your Kidney, Liver, Bladder, Heart, Spleen, Ren and Chong meridians and this shows you how useful this herb really is. Its a cooling herb and also useful for the Uterus and Endocrine system. You should note that it has that lovely Rutin for the veins and Saponins against the Cancer. Don't dislike Yarrow or listen to anyone attacking it. Just don't use it on it's own for more than five months at a time without a month or so break. You'll sharp know if you are allergic to Yarrow as you'll simply get a Skin rash coming from the compound sesquiterpene lactone. The only other thing is of course for

feminines if their pregnant then you don't want to stimulate the Uterus and thats one of the reasons people are told to be careful of Yarrow. The Chinese would allow you a dosage of up to fourteen grams a day as an infusion and three to nine millilitres of a tincture at 1:3 strength in 45% ethanol. If juiced then the Chinese would allow you up to two teaspoons of Yarrow per day.

You should also be looking at He Shou Wu and Gotu Kola herbs which would well with the head as does Elecampane and Rosemary. The hair is dependent on both the Kidney function and Lung function do not over heat these regions or trouble will start. Ever wondered why many Indians and Pakistani type Asians suffer so bad with hair falling out in their middle years? Too much spicy food and a body cooking from the inside.

TheUnhivedMind - April 10, 2011 02:50 PM (GMT)

>
> http://cgi.ebay.co.uk/Classic-Violet-Wand-...=item35af68edc6

I have purchased the first one on the list as you suggested, am waiting for delivery, the dan dials are on the expensive side for now. Is there anything I need to know about working it, or even cleaning it, is there any maintenance involved.
Would it be of help if I put the yarrow tea or the garlic juice on the head just prior to using this Violet Ray? I managed to get loose leaf yarrow.
Is it enough to just eat the Rosemary, or should I rub it on the scalp?

TheUnhivedMind - April 13, 2011 12:13 AM (GMT)

You can utilise the Rosemary internally and/or topically as a 50/50 with Yarrow if you like. You need to utilise the herbal fomentation on the head for 8 hours day. Garlic isn't that great for aiding the head due to the heat. Eventually it can cause Lung Yin Deficiency and therefore hinder the hair. Ginkgo Biloba is neutral and excellent for head circulation.

Don't have herbs for two hours after using the Violet Ray as they're powerful and electroporation of the cell definitely occurs with these machines. Don't use the device for long periods of time as you'll burn it out quicker and if it has wax inside the wand this will melt so use it for 10 minutes at a time and give it a break then 10 minutes and say 20 minutes overall.

View Full Version: Avioding Endodontic Therapy

Title: Avioding Endodontic Therapy

CommanderKeen - March 28, 2011 12:52 AM (GMT)

Dear Craig,

I know this is may be a hard one, but may be you can help me?
My dentist wants to give me a enddontic therapy (http://en.wikipedia.org/wiki/Endodontic_therapy) on my front incisor because after an accident 3 years ago it is since then partly broken at the denth root. At this place where it is partly broken there evolved a constant infection since then with an incubation place of bacterias.

I really have no confidence in this treatment and I think it can do more harm than good, also I would have to get at least 5 times x-rays in this already sick tissue.

The problem is that the infection and bacteria will potentially spread across my body and could also finally reach brain and heart. Currently I am young healthy, I am using garlic regulary and it helps a lot, so my body can fight the baterias and infection at the moment.

But this situation can not last on and there has to be some way this infection needs to be stopped and cured and the bacteria need to be killed off permanently.

I would be most happy and glad if you can give me any help and suggestions.

Thank you.

TheUnhivedMind - March 28, 2011 03:08 PM (GMT)

I'm very glad you've been taking Garlic for the time being at least, shows you've understood its amazing powers against invaders. The only problem with the Garlic is its heat and this can eventually become a big problem unfortunately. You could keep a problem like this in check with things like Garlic but as I said it has a negative effect also. By the way Garlic would protect your Heart if you were taking enough of it, it has an affinity for this

area specifically. If one keeps consuming Garlic they have heat going constantly to the Lungs, Intestines, Spleen-Pancreas, Liver, Heart and Uterus if feminine. Can you imagine if I kept banging heat into an organ what its going to do to that organ? The organ will heat up and dry up then dysfunction as it has no balance in temperature and lack of water. As the damage to the cooling system of the body increases you have far more difficulty in bringing it back and this can take some time. So what you would need really is some form of herb that can be used daily thats neutral on the body meaning neither hot or cold such as say Ling Zhi known as the Ganoderma mushroom, Licorice root and others. Licorice root is a good antibacterial herb and very good for the body indeed, used as a carrier in most Chinese herbal prescriptions.

What I think I might suggest you use for this particular problem is probably a Magnetic Pulser based on the work of Robert C. Beck. With this you'll be able to target the area directly and not have any negative problems from heat etc. Please study the video below if you're unsure about Bob's work. I suggest you look at the company SOTA Instruments LINK. If you're from the U.K. I know a supplier here too thats of quality service. If you try it and find its of use then let us know your results.

[dohtml]<embed id=VideoPlayback src=http://video.google.com/googleplayer.swf?docid=3451198977216830251&hl=en&fs=true style=width:400px;height:326px allowFullScreen=true allowScriptAccess=always type=application/x-shockwave-flash> </embed>[/dohtml]

CommanderKeen - March 30, 2011 12:26 AM (GMT)

Hey,
Do you know may be any special herb I could use externally on the gingiva? Because the place where the infection is directly beneath the gingiva so any active substance should pervade it very easy and reach the infection and bacterias directly. I don't know, may be it could also work with garlic itself may be, I actually didn't try it yet.
Yes garlic is very awsome and I think it did a good part with this problem that it didn't get worse yet. I just know the last days the place began to hurt and to pulsate and I didn't take garlic some days before, but then I ate two complete garlics with 10 cloves or so every evening the last days and now it just vanished immediatly.
So problem is only that you can not do this when you don't have many social contacs the next day with ignorant fools who don't know anything about garlic, don't respect this amazing plant and prefere to eat this pharmaceutical poisons.
And yes, I also think garlic goes to the lungs in some way, but I don't know exactly how or what it does, but after minutes you eat the garlic you can feel it so fast coming into your body and especially the lung feels different then.
So I will also find some more info about this gadget you suggested here, that sounds very interesting though also quite sophisticated and I don't know how much it would

cost. I also couldn't watch this video yet because of low bandwith here.
So long, take care!

TheUnhivedMind - April 1, 2011 03:29 PM (GMT)

Did you not see the link I provided for SOTA Instruments where you can buy a magnetic pulser? Theres plenty of information about this device on the Internet. Theres not many herbs as good as Garlic for your kind of issues, its assimilated into the body very rapidly and all over the body quickly. You might want to check into the powerful herb called Oregano (Origanum vulgare) and also Yu Xing Cao, the later being a cooling herb. You've been taking far too much Garlic and you'll soon be damaging your Lung function amongst others. I assure you its hard to get the Yin to come back in if you dry it out.

CommanderKeen - April 2, 2011 10:30 PM (GMT)

I just thought much helps much, I didn't knew it was so dangerous . I actually had strong pain in my whole lungs the next morning after I took so much garlic. So how much garlic would you suggest on a daily basis? May be one clove or how much in grams ?
I will try oregano at next and also check out this chinese herb when I know where to get it...
Did you make some experience with this magnetic pulser by yourself yet, if I may ask? Or do you know somebody who used it? They want a lot of money for it, I mean if it works, it would be worth it of course , but it's too much for me to buy it in good faith.
Take care and thanks a lot.

TheUnhivedMind - April 2, 2011 11:16 PM (GMT)

The magnetic pulser is about one of the only things I've not had personal experience with unlike most things I promote. I do believe the data thats out there with this device and I've come across various forums with good chit chat in the past. The choice is yours but if it works for you it would certainly be safer than Garlic daily.

Garlic won't kill you or whack your Yin out in days but it will in weeks, months and years. I used to take one clove a day everyday but once I learned Chinese medicine and listened to my own Chinese doctor at the same time, well I gave it right up. Other than its heat side-effects I have nothing but praise for this herb which did me much good. Don't get me wrong when a serious pandemic is around you would be wise to utilise Garlic and stop if you come down with a fever and the flu yourself which is unusual if you're on Garlic. The Garlic goes to your Spleen, Lungs, Heart and Liver and thus will dry these up especial if your Yin is low and over a

period of time. The Chinese accept between 3-8 fresh cloves very short term for infections.

Make sure you do not take dried Garlic as this is hot. The other way of having Garlic regular would be to use a buffering herb to balance everything out. So what you'd do is find a herb which is as powerful at cooling as Garlic is heating. This isn't as easy as you think as you also have to make sure they do to the same meridians and organs. This would allow regular use of Garlic. You may have just been suffering pain from a cleansing in the Lung rather than heat issues. If you have a yin deficiency in the Lungs already then of course it may have been through that.

View Full Version: baby has high temperature

Title: baby has high temperature

dorean - April 2, 2011 02:13 AM (GMT)

Craig, could you advise natural remedy to help drop the temperature for 1 y.o baby please? My baby has sick stomach and is vomiting any liquid, including breastmilk for over 28 h now. The temperature is 38.4 at the moment, 5 hours ago it was 38.3. I know that high temperature actually means that the body fights and it is good but taking into account the dehydration i would just prefer to know what to do if it stays high for much longer or if it raises. The problem appears to be bacterial infection, we think from her first visit to local swimming pool, as vomitting started a few hours later.

TheUnhivedMind - April 2, 2011 05:08 PM (GMT)

Why put anyone in a swimming pool of poisonous Chlorine? You have now learned a great lesson in keeping away from poisons. Most people can go over the limits in temperatures given by the doctors of death. Theres only a few people who have a genetic or enzyme problem I cannot remember which, that can cause problems at high temperature. Fevers and the body raising its temperature is to help the liquefying of filth such as mucus/ phlegm. If the Spleen isn't functioning well and at its right levels then you'll not process properly all the mucus from the foods thus allow build ups which need removal. As the temperature rises you'll have a dramatic increase in immunity cells released to help try and keep the bacterial/viral count in balance during the process. Remember bacteria and viruses are cleansers of the body the later being a protein solvent needed for more filthier situations. Forget the lies of Louis Pasteur and study more the truth from William Beaumont from the 19th Century.

If you want to know how much Water to give your child a day study, Dr Fereydoon Batmanghelidj's formula. This is done by taking the weight of the human in pounds then halving this figure and taking this figure in ounces of water a day throughout the day. Therefore a 50lb being would need 25 fluid ounces of water per day. He also states that for every litre of water taken he recommended you take 1/4 teaspoon of Salt. Theres 32 fluid ounces to 1 litre when you do your calculations.

What you want to do is look to cooling herbs such as Chrysanthemum flower, Japanese Honeysuckle, Echinacea and Yarrow etc. I know you have some Yarrow or did thus having access to it regardless. Study up on how well this works against fever etc. The Chinese recommend a daily adult dosage of 8-14 grams a day, in the West its 15 grams. Yarrow can sometimes cause an headache or an allergic rash but don't worry if so just discontinue, its a wonderful herb to use. Now when dealing with children or animals you work out the dosage by their weight again. The dosages I told you are for adults based on 150lb of weight therefore if you're 200+ you also need to adjust dosages to suit. The same goes for children and if a child was 50lb then you'd give the child a third of the adult dosage. So if the adult dosage for Yarrow is 15 grams a day then a child of 50lbs would take 5 grams a day. Hope you understand that.

Do not cool the child with cold water or ice water because all you're doing is hindering the diaphoresis of the body and more importantly cutting off the Qi to the body which is vital. Remember half a second without Qi will kill you where as oxygen its minutes and water is hours. Use of Garlic isn't that great when dealing with fever as it dramatically heats the body up. So whilst Garlic is of use against bacteria and virus its a nuisance with the heat problems. Lets remember that even from a Chinese perspective of cooling the body we need to realize that this isn't totally the answer either. Why? Well you won't deal with the mucus load or filth shall we say if the temperature of the body is bought down too rapidly. Its the filth which is the cause of the problem whether it be mucus overload or pollution from chemicals. So you must when the fever is controlled start to work on the Spleen and elimination systems for the removal of poisons and mucus overload.

TheUnhivedMind - April 2, 2011 10:58 PM (GMT)

I forgot to mention the herb Hibiscus.

Hosted for free by InvisionFree

View Full Version: Fever and green nasal discharge

Title: Fever and green nasal discharge
Description: *in 9-year-old*

Alexandra - March 24, 2011 07:00 PM (GMT)

My son has a fever and a greenish discharge from his nose according to the school nurse, and of course I got the standard "take him to the doctor."

What can I do for him?

Alexandra - March 24, 2011 08:05 PM (GMT)

Just got him home...no green discharge.

Then again, that school nurse is prone to exaggeration...I'll give him coconut oil.

TheUnhivedMind - March 25, 2011 10:36 PM (GMT)

Most children have green discharge from the noise, its called mucus and filth from poor diet and Spleen dysfunction. If theres a fever then use cooling herbs like Echinacea or Chrysanthemum flower or of course theres Japanese Honeysuckle. Best thing you can do is home school him and keep him well away from these demons.

Alexandra - March 26, 2011 09:34 AM (GMT)

I have not noticed this at all with him since getting him home--it's been clear.

I'd homeschool if I could (long story).

Right now he just has a cough, probably a cold. I've heard that rubbing coconut oil into his chest would help.

TheUnhivedMind - March 26, 2011 02:38 PM (GMT)

For the Lungs you'd be looking at Echinacea, Boneset, Japanese Honeysuckle and Chrysanthemum flower. All those herbs are cooling and go to the Lungs. A little Honey would be good ideally raw honeycomb or Manuka. He may get aid from eating some occasional Banana. Keep him off mucus loading foods for a while.

View Full Version: Fluoride Free Toothpaste

Title: Fluoride Free Toothpaste

IloveJFKJr - November 8, 2008 04:16 AM (GMT)

Hello, Craig. I was wondering whether you know of any fluoride free toothpaste out there?

There was a toothpaste made by an Asian based company called Ghanozi(I think that's the right spelling). They make all kinds of products including cereal and tea. The list of ingredients did not list fluoride. My mother use to order coffee from that company. An uncle of mine actually did business for the company.

So, I was wondering whether you know of any fluoride free toothpaste? Thanks, and God bless you.

trk - November 8, 2008 03:55 PM (GMT)

I'm not Craig and he will have his own view I'm sure, but I do use fluoride free toothpaste, it is "Tom's of Maine". That brand is found in most major stores, and some of them are fluoride free, and some are not, so you just choose the one that is. My family has been using it for some time now.

Alexandra - November 8, 2008 08:34 PM (GMT)

That's what we've been using--Tom's of Maine. I got the children's kind for my son. Some supermarkets carry it, or you can find it at a health food store.

smashstuff - November 9, 2008 11:07 AM (GMT)

I'm currently using Olive Oil Soap. Takes a bit of getting used to the taste, but it does the job, it's cheap as chips and lasts for ages, much cheaper than any toothpaste, you

seem to have to pay a premium not to be poisoned!

Alexandra - November 9, 2008 01:10 PM (GMT)

I also use tea tree oil toothpaste.

Doug - November 9, 2008 01:33 PM (GMT)

Why use any toothpaste?Esecially if you are eating any organic food any food that lies on your teeth wont really affect them anyway.Just use a toothbrush with water morning and night and you will be fine.No need to waste money on toothpaste.

craig-oxley - November 10, 2008 01:25 AM (GMT)

Theres the Sarakan brand and Aloedent for instance. I prefer the Sarakan myself! That Oliva soap is getting hard to get now from Holland & Barrett as their in disput with the distributor over yet another price hike.

theresa - November 10, 2008 12:39 PM (GMT)

So, I use salt and baking soda misture w/drop of peppermint oil. I clean my toothbrush with white vinegar and only use my berkey water.

Works for me.

IloveJFKJr - November 13, 2008 05:42 AM (GMT)

Thanks. You guys have been a great help. I really need to have my eyes open wide because you'll see a lot of fluoride toothpaste on the isle. Which ever one that I get my hands on first of which you all recommended that will be the one I buy first.

Thank you all, once again, and God bless you all!!!

craig-oxley - November 14, 2008 01:53 AM (GMT)

If anyone is after a mouthwash then Sarakan is about the best again and cheaper with it. Stick with other methods though. The old MISWAK chewing sticks are a great anti-septic and tooth cleaner. The Pakistanis use these alot! I remember when a couple of front teeth of mine were stained with IODINE! I used Miswak and it was the only thing which removed it.

IloveJFKJr - November 14, 2008 02:40 AM (GMT)

The mouthwash will come in handy,too. Thanks, Craig. We all need a nice and clean mouth and not the opposite. Everyone loves a bright white smile.

truthersseeker01 - November 14, 2008 08:25 AM (GMT)

I remember buying some of that Sarakan, which worked quite well. I think I'll buy some more because I've been using this sea based organic toothpaste I bought at Kroger here in Cincinnati. So what is this Tom's of Maine brand? I've never heard of it and it sounds interesting.

craig-oxley - November 15, 2008 12:03 AM (GMT)

This Tom's is an old brand thats everywhere. I still found muck within it. I think it still contains SLS.

mvltiversal - November 15, 2008 09:29 AM (GMT)

Hi, here in spain, in the zone I live, if you want a toothpaste without fluoride, you have to use traditional cleaning methods or you have to buy PERIO-AID that contains... (quoting as it is written): *"Aqua, glycerin, xylitol hydroxyethylcellulose, Peg-40 hydrogenated castor oil, polyethylene, clorhexidine digluconate, cocamidopropyl betaine, sodium saccharin, arome, CI 42090"*.

Definitively I stick to **natural foods and natural cleaning methods** (eating apples also help to maintain teeth clean).

craig-oxley - November 17, 2008 02:53 AM (GMT)

This is the problem with most things. You need to be a chemist to understand them. If so then you move to something else as their poisons. Now why would anyone want to hydrogenerate Castor Oil? Fancy destroying such a powerful healing oil.

14april2000 - December 11, 2008 03:49 PM (GMT)

Where can buy The old MISWAK chewing sticks?

craig-oxley - December 12, 2008 12:56 AM (GMT)

You'll have to look on the web or at local Pakistan stores!

Insurgent - April 16, 2009 04:11 PM (GMT)

You guys can go to Vitacost.com and get plenty of brands of toothpastes w/o fluoride. I use that store for some time now, tons of stuff.

b_basa - May 18, 2009 06:17 PM (GMT)

Hi Craig,

I use neways products.

http://www.neways.com/

are they really safe?

-ben

poorejj - May 18, 2009 06:34 PM (GMT)

I just seen this part of the forum. I would have added my two cents a long time ago, had I known ya'll were trying to locate a good fluoride free toothpaste. I use Peelu toothepaste. It's good stuff. Check it out: http://www.peelu.com/

I don't like Tom's of Maine. They put a lot of bad stuff in their toothepaste. A lot of Tom's toothpastes have fluoride in them. But, even the ones that do not, have Sodium Laurl

Sulfate, or SLS.

Jason's Powersmile might be another one that is ok. But, Peelu is my favorite....

b_basa - May 18, 2009 07:08 PM (GMT)

i live in asia now in Malaysia, is there any good alternative for the things suggested above?

poorejj - May 19, 2009 12:47 PM (GMT)

If you can't get a hold of any Miswak, or good fluoride-free toothepaste, then I'd brush with baking soda.... Try mixing some 3% hydrogen peroxide with a little baking soda (make it into a paste), and then brush.... Or, just use the baking soda.....

b_basa - May 20, 2009 01:19 PM (GMT)

is it true that baking soda will make the tooth thinner? I tried using baking soda before but some dentists say it will make the tooth thinner...

Alexandra - May 20, 2009 01:37 PM (GMT)

Dentists will also push fluoride off on you--go figure. I wouldn't pay them any mind.

poorejj - May 20, 2009 03:06 PM (GMT)

You could also add xylitol to the mixture if you'd like to sweeten it up a bit. Xylitol is actually pretty good for your teeth.... You can usually find xylitol in health food stores.

poorejj - May 20, 2009 03:12 PM (GMT)

Pay attention to your body. If you fast a lot, or are on an abstemious diet, and you have sore teeth, then you're probably not eating, or assimilating, enough protein. Protein builds strong teeth.....

CLICK HERE

b_basa - May 20, 2009 06:07 PM (GMT)

Hi Alexandra, I totally agree with you with that. I just have some issues with baking soda because it does not give you a "fresh mouth" effect :)

Add 3% hydrogen peroxide? I thought this hydrogen peroxide is in liquid form? So how can i make a 3% hydrogen peroxide with the powder form baking soda?

poorejj - May 20, 2009 06:26 PM (GMT)

Yes, the hydrogen peroxide is in liquid form. You can buy it at your local pharmacy, grocery store, or convenience store. Just mix a small amount of it with baking soda, until it forms a paste. Add in a little xylitol if you want to make it somewhat sweet, and you could always add a little peppermint oil, so that it leaves a minty fresh taste in your mouth.

Alexandra - May 20, 2009 08:33 PM (GMT)

I'm wondering what would be good for a seven-year-old who does not spit out toothpaste. He has a fluoride-free toothpaste, but I heard it can be hard to rinse off. I just use a tiny bit with him.

I've never used a fluoride toothpaste on him and so far he hasn't had a cavity. (Of course I also don't give him a whole lot of sugar.)

poorejj - May 20, 2009 09:06 PM (GMT)

Would he swallow the toothpaste if he didn't enjoy the taste? Maybe the baking soda/ h202 mixture would be ideal for him, because I'm sure it would be unpleasant to swallow.... Also, if you used food grade h202, it wouldn't harm him to ingest it (as long is it weren't too concentrated).

Alexandra - May 21, 2009 03:33 AM (GMT)

For some reason he doesn't spit out anything. He's had a developmental delay. It took me a while to teach him how to blow.

poorejj - May 21, 2009 12:53 PM (GMT)

Well, in that case, I would definitely make my own toothpaste out of baking soda, and h202, because that would be safer than most toothpastes.... When I was younger, I used to get the heartburn real bad (before I changed my lifestyle), and if I didn't have tums, or something like that, I'd mix a teaspoon of baking soda in water, and drink it. I know it's not good for you now, but it's far safer than most toothpastes. It's just sodium bicarbonate pretty much, and that's the active ingredient in tums (I think). I would just use as little as needed when brushing.

Another benefit if the baking soda, and h202, is the cost. It's cheaper to make your own toothpaste.

b_basa - July 1, 2009 03:45 PM (GMT)

Hi,

I would like to know if this toothpaste alled Dentobac is good.

the ingredients are as follows:

Neem, Amla, Licorice and Clove

Gooseberry
Clove
Neem
Licorice
Pudina
Peppermint
Walnut
Cinnamon
Babool
Sorbitol/Glycerin
Coco Betaine
Water
Carageenan/Cellulose Gum
Flavour
Xylitol
Chlorophyliin

and no flouride

craig-oxley - July 1, 2009 11:44 PM (GMT)

Carageenan is a known pro-inflamatory which is a carcinogen

b_basa - July 6, 2009 07:40 AM (GMT)

too bad then... i thought this is a good toothpaste, i will just revert to using my baking soda + hydrogen peroxide solution then.

craig-oxley - July 6, 2009 01:03 PM (GMT)

I don't think theres a real pure toothpaste out there. They all have some form of poison somewhere, wether its the usual or a phosphate. What you've been using is much better but then again much of the sodium bicarbonate is laced with aluminium. The only truely natural and healthy way is the Miswak sticks.

dorean - December 13, 2009 10:22 PM (GMT)

Has anyone here tried "oil-pulling" to clean their teeth, I must give this a go. I read this in an Irish newspaper last week, the Sunday Business Post of all papers

QUOTE

Rude Health
06 December 2009 By Catherine McDonnell

The dental hygienist couldn't believe it: no harmful bacteria, no blood, no pain. All three generally are present when teeth are being cleaned, especially if they haven't been professionally cleaned in two years, as in my case. I told her I had been practising oil pulling for the previous two months. She had never heard of it.

Oil pulling is an ancient method of thoroughly cleansing the teeth and gums. Modern analysis shows why it works: the oil mixes with enzymes in the saliva, and draws heavy metals and harmful bacteria from the gums and mouth.

First thing in the morning, or when you have not eaten food for four hours and taken liquids for one hour, you swirl a tablespoon of sesame or sunflower oil (these oils are most effective) in your mouth for 15-20 minutes.

When it's spat out, the oil is no longer oily, but has changed to a thin, milky, toxic substance. If it's not milky, it hasn't been in the mouth for long enough.

One of the first and most obvious benefits of oil pulling is that the teeth are whiter and the gums and tongue feel incredibly fresh and clean. Teeth that are prone to the odd wobble can also tighten, and toothache can be relieved. This is a handy practice if you're waiting for a dental appointment.

Proponents of natural medicine claim oil pulling benefits all kinds of ailments, from eczema to heart trouble, high blood pressure, constipation, stiff joints and allergies. You name it, oil pulling, it appears, can help.

But how is this possible? Tony Hughes, director of the Natural Medical Clinic in Stillorgan, Co Dublin is a proponent of oil pulling's effectiveness with regard to more than just cleaning teeth. ''Oil pulling removes bacteria, waste and toxins - and possibly viruses - from the body," he says.

''Oil pulling is one of the best things one can do in terms of overall health. Teeth have miles and miles of microscopic dentine tubules inside them, and these are perfect hiding places for bacteria, which can then travel all around the body through the blood. Infected teeth can also cause inflammation and disease in organs via the connective tissue. This is why oil pulling can help with a myriad other diseases, as the body gets an overall cleanse," says Hughes.

Dr Evelien Van Amerongen, holistic dentist and founder of the Ishsko Centre in Westport, Co Mayo, says oil pulling is a great way to get rid of the by-products of bacteria that cause gum disease. She says it also deals with the effects of mercury fillings.

‘‘Most bacteria are fat-loving, so oil attracts the min the mouth," she says. ‘‘Mercury fillings are, from a metallurgic perspective, classified as a solid emulsion. Yet over time, they slowly change in consistency. Each time we chew, brush or grind our teeth, tiny amounts of metallic vapour can be released. Oil pulling is a great way to help counteract the damage this can cause."

But is there any scientific proof of the benefits of oil pulling?

The department of microbiology in VHNSN College, in Virudhunagar, India, tested the effects of the practice on ten people for 40 days.

Among the many positive results was a reduction in susceptibility to dental cavities. Each subject had been specifically chosen because they had ‘‘marked dental caries (cavities) susceptibility’’.

After the 40 days, this susceptibility was reduced to ‘slight’ in five cases, and ‘moderate’ in the other five cases.

Why not give this quick, harmless, cheap but possibly highly beneficial process a swirl? If nothing else, at least you’ll enjoy 20 minutes of silence in the morning.

dorean - December 13, 2009 10:27 PM (GMT)

I saw this Dr Christopher video on google videos, http://video.google.com/videoplay?docid=-6...042047985618357
can you say what exactly he is talking about. I would love to be able to repair all tooth decay naturally and grow new enamel, I didn't think that was possible, I thought once enamel was gone it stayed gone. Can my body easily grow new enamel? Has anyone done this. I would love to fill in all tooth decays and push out the fillings.

I had one tooth pulled last year, the entire tooth with the root pulled. I had considered having an artificial tooth implanted in its place. Can my body grow a new tooth in its place?

craig-oxley - December 14, 2009 12:47 PM (GMT)

The only way a tooth can be regrown is if the bud is intake and well. This usually isn't the case. People utilising grass foods are the only people standing a chance of this. I know the Arcana Arcanorum Rite of Atlantis have a ritual where by people are fasted for 30 days in pure darkness. Their then fed a herbal cocktail which makes their teeth and hair fall completely out quickly. After a short time their given another herbal cocktail which regrows all these. By the end of the ritual their seen as Spiritually perfect if I remember correctly. One of the authorities on teeth was Weston A. Price although I have no experience of his methods. I personally don't like some of his diets but if they work on the teeth they work. The teeth are reliant on the health of your Kidney's and more importantly its storage of Yin qi known as Jing which is highly tied to your bone marrow. So we'd want to maintain Kidney function which also means maintaining Liver function as they work together and finally the Spleen. Remember that the

Kidney is the mommy to the son, the Liver. If one is weak the other is stressed and so forth.
[dohtml] [/dohtml]
Kidneys:
Broomrape, Buchu, Couchgrass, Dandelion, Juniper berry & Parsley Piert

Liver:
Artichoke (2 months) then Greater Celandine, Berberis, Boldo & Vervain

Lung:
Bletilla striata, Chrysanthemum, Comfrey, Licourice root & Mullein

Blood:
Burdock root, Indian Madder & Red Clover

Spleen:
Chinese Yam, Ginger, Jujube, Hoelen & Huang Qi
[dohtml] [/dohtml]

craig-oxley - December 14, 2009 06:36 PM (GMT)

Now also note what Fluoride the so-called great saviour of teeth does to the Kidneys. Then think about the problems with teeth and bones and connect the dots.

QUOTE

Fluoride & the Kidneys: (Click for more detail)

http://www.fluoridealert.org/health/kidney/

Kidney disease markedly increases an individual's susceptibility to fluoride toxicity.

The kidneys are responsible for ridding the body of ingested fluoride, and thereby preventing the buildup of toxic levels of fluoride in the body.

In healthy adults, the kidneys are able to excrete approximately 50% of an ingested dose of fluoride.

However, in adults with kidney disease the kidneys may excrete as little as 10 to 20% of an ingested dose - thus increasing the body burden of fluoride and increasing an individual's susceptibility to fluoride poisoning (e.g. renal osteodystrophy).

The bone changes commonly found among patients with advanced kidney disease closely resemble the bone changes found among individuals with the osteomalacic-type of skeletal fluorosis. This raises the possibility that some individuals with kidney disease are suffering from undiagnosed skeletal fluorosis.

As noted by Dr. Edward Groth, a veteran Senior Scientist at Consumers Union:

"It seems probable that some people with severe or long-term renal disease, which might not be advanced enough to require hemodialysis, can still experience reduced fluoride excretion to an extent that can lead to fluorosis, or aggravate skeletal complications associated with kidney disease... It has been estimated that one in every 25 Americans may have some form of kidney disease; it would seem

imperative that the magnitude of risk to such a large sub-segment of the population be determined through extensive and careful study. To date, however, no studies of this sort have been carried out, and none is planned" (Groth 1973; Doctoral Thesis; Stanford University).

Because the kidney accumulates more fluoride than all other soft tissues (with the exception of the pineal gland), there is concern that excess fluoride exposure may contribute to kidney disease - thus initiating a "vicious cycle" where the damaged kidneys increase the accumulation of fluoride, causing in turn further damage to the kidney, bone, and other organs.

The possibility that fluoride exposure can cause direct damage to kidney tissue is supported by a long line of animal and human studies.

In studies on fluoride-exposed animals, kidney damage has been reported at levels as low as 1 ppm if the animals consume the water for long periods of time.

In humans, elevated rates of kidney damage are frequently encountered among populations with skeletal fluorosis. In addition, several case reports suggest that some individuals with kidney disease can experience significant recovery in their clinical signs and symptoms following the provision of fluoride-free water.

View Full Version: LUPUS: HOAX OR REALITY

Title: LUPUS: HOAX OR REALITY

thisisj1 - March 20, 2011 03:48 PM (GMT)

i have a friend that was diagnosed with lupus several months ago and she has been taking medicine thats prescribed.. the medicine makes her immune system attacks the medicine so doctors put her on a pill that basically keeps her immune system from attacking the pills and it keeps her out of the sun bc the sun will combat against he medicine. Does anyone know of alternative measures she can take to treat or cure the lupus and is lupus fake in general?

TheUnhivedMind - March 21, 2011 01:52 AM (GMT)

You'll simply go around in circles if you dare to use Western doctors on this subject whilst ending up with further problems which they'll tell you come from your Lupus but are coming from the drugs. I suggest you find out her vaccination history and do a detoxification process based on the individual vaccines she's taken. If she wants someone to help her on this area of vaccine detoxification then I'd suggest she has a consultation with Dr Rebecca Carley who's more of an authority on vaccine specifics than me and she also knows Homeopathic remedies well enough to remove the poisons from these particular vaccines.

I don't know if your friend is interested in healing and putting in the time and effort to heal so just for now I will give you a little book to read which may be of use and may switch her on to wanting to do something if she already doesn't. The book is by Dr Fereydoon Batmanghelidj and called 'ABC of Asthma, Allergies & Lupus: Eradicate Asthma - Now!' If she likes that book, then I'd tell her to then get his 'Water & Salt; Your Healers From Within'.

I think you'll find she has heat problems internally which will need addressing with the correct foods and herbal medicines. You may wish to send her to a good professional quality Chinese doctor for a full diagnosis of the Spleen. Kidney, Heart, Liver and Lung function. You want to know the Qi issues of all these organs and whether they have too much or less cold/

heat etc. If the body Qi is too upward, downward, inward or outward etc. Note all whats said to you.

Lupus is not fake as such but Western medicine have no clue about the disease and in truth everything stems from the Viscera system of the Lungs, Kidneys, Liver, Heart and Spleen.

View Full Version: Radiotherapy fears

Title: Radiotherapy fears

geetar - February 21, 2011 01:11 PM (GMT)

Hi Craig

My 21 yr old nephew has recently had a tumour removed from his brain which was apparently not cancerous. The thing is, the quacks now want him to have radiotherapy everyday for 6 weeks 'just in case'!
Im horrified about this but his close family follow the quacks advice to the letter! I want to try and talk him out of it but am afraid the family will just go along with the quacks 'advice' and put him through 6 weeks of hell.

If they make him go through with it, is there anything you can suggest Craig that might help him with the list of side effects that will probably occur?

He's a real nice kid and pains me to watch these buthers ruin his life!

All the best

TheUnhivedMind - February 21, 2011 06:27 PM (GMT)

I would suggest he takes Ling Zhi mushroom two-three times daily. I also recommend he eats plenty of Cabbage which is a good anti-radiation food. I'd suggest the use of American Ginseng if you're lucky enough to get hold of some. His Spleen is already low as is his Liver and Kidneys yet he's going to have something which will hinder these further and make him worse. He must boost his Spleen function with cooling/neutral herbs and foods such as Ling Zhi, Tuckahoe, Lotus seeds and Chinese red Dates. For his Liver he will need cooling herbs such as Chrysanthemum flower and food like Mung bean or at least their water. The Kidneys you'd be looking at Gan Di Huang from a Chinese doctor also Goji berries and cooked black Sesame seeds.

In the West herbalists would promote the use of Garlic as it promotes our strongest free radical scavenger, Glutathione. Another herb they'd utilise

would be Ginseng. Most forms of Ginseng are heating herbs and therefore from a Chinese perspective not good. The only form of Ginseng you can use is the American Ginseng which is cooling and more powerful than any other Ginseng but hard to get hold of.

geetar - February 21, 2011 10:23 PM (GMT)

Hi Craig

Much apreciation for your help. Ive just rang my niece and told her that Ive emailed your recomendations of a natural health protocol for her brother. She sends you her thanks and is very surprised and relieved that she can now do something to help him during his treatment. She was mortified when she read the possible side effects of radiotherapy but is much more positive now she can do something to help him.
Dangerous places these hospitals!

Many thanks for your help again Craig, I'll keep you posted on his progress :)

TheUnhivedMind - February 23, 2011 06:21 PM (GMT)

I would suggest to you that he also looks at taking the wonderful Flower Pollen also known as Bee Pollen which is an amazing medicine combining all the flavours etc all in one and neutral on the body to boot. Theres also the Shiitake mushrooms which are very powerful and can be bought from Chinese supermarkets countrywide. Also check out the wonderful unpasteurised Kombucha tea such as sold at Lewtress down in Wales. A large intake of the amazing unrefined Wheatgerm oil would be excellent for raising the natural Vitamin E in the body. If you cannot get Wheatgerm oil then go for the next best thing which would be extra-virgin Olive oil.

An intake of minerals as you know along with Iodine would be of major use to the body and you'd look to Bladderwrack, Kelp or Wakame seaweed, the later sold in Chinese supermarkets. Foods rich in B vitamins but in this case I'd recommend a B-complex 100mg supplement and take half a tablet morning and half evening so these will equal 50mg giving you all day protection of 100mg. He should be looking at Vitamin C at more pharmalogical levels but it should be Sodium Ascorbate due to the acidity of Ascorbic Acid hindering the Kidneys. Ozone water can be taken 2-3 times day of course away from times you've took other products. He should eat whole beetroots raw or juice them but believe me these are strong so start him slowly, I used to drink a pint but thats hardcore. I suggest plenty of carrots and their water if boiled. They should be lightly steamed as raw foods do upset the stomach by chilling thus hindering the Spleen.

Activated charcoal would be of much use and remember it can rip out over 3000 chemicals from the body and used against poisoning. Probably the

most powerful antioxidant herb in the World is Chaparral and this is what we use against Cancer, this would be useful against radiation. I forgot to mention that Siberian Ginseng would be acceptable for him to use as its neutral and not warming like other Ginsengs apart from American Ginseng of course. Its actually one of the best herbs you can get if the quality is good. He should eat 1-2 or Papaya every day. He should eat plenty of Apples some raw but also cooked for better acceptance. Aloe Vera can be taken both internally and topically as this is excellent and it is cooling. Green tea is also very powerful and cooling to the body so you get everything you want there too.

You can also look into DMSO which Dr Christopher helped make famous until the AMA clan attacked it and now all we have is the synthetic poison MSM which causes stomach cancer in its place. The DMSO came from simply the processing of wood/trees and was found by accident to have some pretty amazing powers and its penetration ability into cells made it an aid in the agent orange to help their chemical poisons enter the canopy of the Vietnamese jungles during Cardinal Francis Spellman's war. Proper sleep at the correct times and in real darkness as much as possible so that the Melatonin levels can rise which is also a good anti-radiation treatment.

geetar - February 27, 2011 09:47 PM (GMT)

Thanks for this info Craig. Ive forwarded it to my Niece and had another chat with her. I explained to her about the ascorbic acid and told that its quite safe to take in large amounts. I told her all about activated charcoal and its uses ect.
I was interested myself to learn about DMSO, sounds excellent!

Thanks again for the help Craig. :)

TheUnhivedMind - February 28, 2011 01:30 AM (GMT)

I explained to you that Sodium Ascorbate is the best Vitamin C this is alkaline and not Ascorbic Acid which is Acidic.

geetar - February 28, 2011 05:48 PM (GMT)

Hi Craig.

My mistake.. It was actually sodium ascorbate I was talking to her about rather than ascorbic acid!!

Had a text from my nephew a couple of hours ago after his first radiotherepy session. It seems the quacks have made a mistake and the tumour they removed was cancerous after all! He's got to take chemo tablets aswell now which is unbelievable. They've even told him that he'll probably have a short life span! Im gobsmacked.. They are just

incompetant butchers! I havn't been able to speak to him yet but Im gonna tell him that the quacks will probably kill him if he listens to them anymore.
Ive read a lot of positive things concerning high dose intrevenous vitimin C which I mentioned to his sister a few days ago so I'll research that some more.
What course of action would you reccomend now that the stakes have changed Craig?

Thanks again.

TheUnhivedMind - February 28, 2011 10:22 PM (GMT)

Well one guy who had a brain tumour in the past had it go according to his emails after listening to me advise him to try Cayenne pepper, Ozone and unpasteurised Kombucha tea daily.

geetar - March 1, 2011 01:43 PM (GMT)

> **QUOTE** (TheUnhivedMind @ Feb 28 2011, 10:22 PM)
>
> **Well one guy who had a brain tumour in the past had it go according to his emails after listening to me advise him to try Cayenne pepper, Ozone and unpasteurised Kombucha tea daily.**

Thanks Craig that sounds very interesting, I'll have to do some digging.

TheUnhivedMind - March 1, 2011 06:10 PM (GMT)

Well the idea is to get blood flow to the brain from a Cayenne point of view. Gingko biloba, Rosemary also Horse raddish would be similar also. Lying on a slant board or in a similar way would also be of use. I strongly suggest a good chiropractor work on him and especially his neck area to aid in this process and remove any possible constipations in that region affecting the head. The Kombucha works in many ways, one is the balancing of blood to the correct level needed with the acidity/alkaline balance. Head massages and hydrotherapy in the region would be also of much use as they all aid circulation. You may also find after having a chiropractor work on him that it would be wise to then see a Cranial Osteopath then on if you can find one, theres not many.

geetar - March 1, 2011 10:00 PM (GMT)

Hey thanks for that Craig, I'll pass that on too.

Ive sent my niece information about Ozone therapy and a link for a Ozone generator.

She'll probably purchase this for her brother I reckon as she's really taking your reccomendatios on board and is really determined to make him well. :)

ps I read somewhere yesterday that mega dose Vitamin C treatment should'nt be used at the same time as radiotherepy/chemo as it can make matters worse?? I cant find the link now damn!

I wish I could persuade him not to have the radiotherepy but he's to frightened not to!

TheUnhivedMind - March 1, 2011 10:52 PM (GMT)

You'll find that they'll always claim antioxidants (actually free-radical scavengers) are bad when having Chemotherapy but wheres the proof for this exactly? These Vitamin C's etc are acting as free electron givers to the body thus allowing the free radicals given off by the poisonous chemotherapy etc to have something to steal other than your own electrons. Remember a free radical is missing an electron so it goes on the hunt, when it finds what it wants it leaves damage where it took the electron from. This is kind of like having a cigarette burn on your skin if you will. By using the free radical scavenging free electrons like from Vitamin C you combat or stop this effect.

I will also point out that Vitamin C is an oxidizer at pharmalogical levels and works similar to a free radical in some ways. It is oxidization which reverses cancer and tumors. I suggest you look at the work of biochemist, Dr Otto Warburg on the subject of Oxygenation and Cancer. A good super-food intake would be wise and this would include Goji berries daily, Chinese Red dates and the likes of Wheat Grass ideally freshly juiced which is unpasteurized. The Echinacea and Kombucha tea combination from Lewtress in Wales would be the best purchase although if this one isn't available at the time then get one of the green tea varieties. I will send you an Ozone machine supplier privately for obvious reasons as the elitists hawk sites like mine regular to combat us as we also do with them.

People are full of fear and tell me this, what is his prospects of living under the quacks with just their treatment? What have they told him? Death! What are his prospects of not treating himself with anything? Death but with more dignity and probably a longer lifespan. Whats his prospects of treating himself along with doctors quackery? A better chance than just those others. What about on his own following things properly if he had the knowledge? Far greater than any of the others. The problem is that people are lazy and have been brainwashed into needing everything done for them. They'll no longer go in a store and look at price by the item they'd rather ask what the price is or go up the other end of the shop and get it scanned. They have to feel someone is telling them what to do you see, to feel secure through being psy-op'd regularly via the media systems. This is so they'll beg the State to tell them what to do with everything eventually just as the

State has geared them up to do as the State becomes the new replacement for God with its scientific (quackery) dictatorship from hell.

So he fears to work on his own, most are like this, I am not any longer as I've broke free and know and realize the situation and accept all possibilities including death. I know the later is more likely when utilizing the medical system which I know and see as the inquisition via synthetic medicine which as you know is nothing more than legal pushed poison. Now do you see why I've always pushed people to learn these things before the problems arise? Its a lot to learn and take in and especially in a stressed state of mind.

Chemotherapy stays in the body for life regardless what they say and you keep a good amount of it within the body too as evidenced from the Max Gerson protocol when it utilized the virgin Castor oil ingestion therapy. This nearly killed a few people and it was because the virgin Castor oil pulled far too much chemotherapy back into the main system burdening organs in one go. This was stopped for any new patients who'd had chemotherapy prior. The Gerson's prefer people who've not had chemotherapy when they come to the clinic but will treat both. Honestly this chemotherapy is lethal and radiation is actually safer as its at least localized. Its all quackery in the first place just the same as cutting open Cancer patients and also when they remove lymph nodes.

Please make a note of the first Bob Beck Protocol video which may help you get your relatives in a different mind set. The testimonies in part five or part seven if I remember correctly are worth noting asap. They may also like to try this therapy which actually utilizes Ozone. If they wish to make their own Silver with the ZBB5 Sota model sold for blood electrification or any other Silver generator then they would need a water distiller. I'll send you the information on a supplier of these too.

Bob Beck Protocol [Video]:
http://z10.invisionfree.com/The_Unhived_Mi...showtopic=51908

geetar - March 2, 2011 11:09 AM (GMT)

Hi Craig

Thats good news concerning the vitamin C, I'll pass this information on to them cheers.

Yeah, I completely understand what your saying about the death doctors and the way that people are psychologically reliant on them. I remember when you was helping me with my eye problem and the transition I went through from heeding the consultants advice to completely dismissing it and throwing the steroids and crap in to the bin!
It was pretty scary going from conventional medicine to natural healing, but now I can see it for what it is which is control and profit! If they would have had their way they

would have whipped my eye out like a shot, but thanks to your help I went down the natural route and thank god I did too!

The good thing is that my nephew is up for trying to heal himself, even though he's still to insecure and frightened to give up the radiotherapy, he's coming around to the natural way! :)

TheUnhivedMind - March 2, 2011 03:56 PM (GMT)

Send him this video:

http://video.google.com/videoplay?docid=-7...29140536485998#

[dohtml]<embed id=VideoPlayback src=http://video.google.com/googleplayer.swf?docid=-7357629140536485998&hl=en&fs=true style=width:400px;height:326px allowFullScreen=true allowScriptAccess=always type=application/x-shockwave-flash> </embed>[/dohtml]

geetar - March 2, 2011 06:50 PM (GMT)

Thats a pretty powerfull film! I'll send it over to them cheers :)

TheUnhivedMind - March 4, 2011 01:13 AM (GMT)

Heres another one for you:

[dohtml]<iframe title="YouTube video player" width="480" height="390" src="http://www.youtube.com/embed/wvzDHGLEUyw" frameborder="0" allowfullscreen></iframe>[/dohtml]

geetar - March 7, 2011 10:50 PM (GMT)

Cheers Craig I'll forward it to them.

They've ordered the ozone generator that you recomended so my nephew can get on to that shortly which is good news (Ive ordered one to). What would you suggest be the best way he can benefit from it? I know that you recomend drinking the ozone water but Im clueless on how much he should take and for how long to bubble the water ect so any info/links in this area would be great thanks. :)

TheUnhivedMind - March 8, 2011 03:14 AM (GMT)

Well that model you're getting is 600mg/hr which is very powerful. He would drink 500ml 3-5x a day of the Ozone water bubbled for five minutes. Once the Ozone machine has finished he must drink this as quickly as he can. Ozone evaporates out of water within twenty minutes at max. I don't agree with storing Ozone because it needs to be in a fridge to do so and bottled in glass only. The problem with this is that drinking cold fluid will hinder the Spleen function. We must stick to either ambient temperature fluid or warm fluid, never cold/chilled or hot. You do not use warm water for Ozone, its only for ambient or cold water. By the way your relative should start slowly with the Ozone in case they have a bit of a woozy head etc. This will usually pass the more you use the Ozone. Many people don't get anything like that and I never got it or my mother and neither have others I know recently. If you've got localised constipations blocking Oxygen to the brain then you'll become conditioned to that low level Oxygen. Now when Ozone enters and the Oxygen content of the body goes through the roof the brain goes oh my God whats this and you feel it until you condition to this new level.

geetar - March 10, 2011 01:02 PM (GMT)

Thanks for that Craig Ive forwarded it over. My Ozone generator arrived this morning so hopefully his has aswell which is good news.
Ive been reading that the tube can be put into the ear which sounds pefect for his condition, do you think he should try this??

Thanks :)

TheUnhivedMind - March 10, 2011 05:45 PM (GMT)

It could be but its better to use a medical grade ozone machine which are expensive for any insufflation work and definitely when working up the anus or vagina. Medical grade machines utilise 100% pure oxygen bottle fed into the unit other than yours which uses ambient air which isn't 100%.

You don't put the tube in the ear no especially if you don't know the pressure coming out the end of the tube. What you would do is funnel over the ear meaning you get a small plastic funnel and you'd attach this to the pipe at the narrow end of the funnel. You would have to put a small hole of two in the two sides of the funnel about 10mm or more away from the large opening. If you don't do this you'll cause a back pressure which would damage the unit as its not free flowing you see. I'd also suggest if you use the machine like this that you elevate the ozone machine higher than the sitting beings ear height at the time again to stop flow issues. Also use an ozone machine above the height of what your ozone stone is at. Also don't put the ozone stone in water further than around 7-8 inches because of pressure issues which damage the motors.

Now some people have done the ear work and had some pretty hard herxheimer detox effects afterwards such as pus release etc. This may or may not be the case with your relative but its nothing to worry about in most cases. He would do wise to also be using hydrotherapy on the head and then plastering his head in virgin castor oil at least once a day for 1.5-8 hours.

Enjoy your Ozone machine and if you want the best book available on the subject and it is a great book indeed this would be 'Flood Your Body with Oxygen' by Ed McCabe. A truly stunning book of great worth I assure you.

TheUnhivedMind - March 10, 2011 05:50 PM (GMT)

Listen 3 minutes in on Ozone:

geetar - March 13, 2011 03:28 PM (GMT)

Cheers for that Craig.

Ive seen glass funnels for insufflation that are available on the web but I guess a small plastic one with a couple of small holes as you sugested would suffice and be cheaper too!
Id imagine plenty of ventilation would be necessary when using the machine so close to the mouth and nose? You sure can smell the Ozone when its bubbling away in the water!
Ive hung mine up on the side of a cupboard so as to elevate it as you suggest and I'll remind my nephew to do the same.

Interesting info in the Beck protocol vid also the good old Mung beans cheers.

Im really happy that my relatives are taking your advice on board Craig as it's a whole new world of healing thats opening up to them. My Nephews Aunt in particular is studying your advice and is determined to do the best for him. :)

TheUnhivedMind - March 13, 2011 04:23 PM (GMT)

Don't worry so much about ozone inhalation when doing the funneling its all over hyped and only hinders some people because of their severe internal filth state. I've used ozone water in a nebuliser in the past. Get him grounding himself daily either with a mat in the home and/or barefoot on the soil or grass (not concrete). Also a good intake of Sunshine if we ever get any with all these damn aerosol programs. Tell him to try and get hold of some black Rice from the Chinese store which has some very powerful compounds within.

geetar - March 13, 2011 10:26 PM (GMT)

Ok will do cheers Craig, I'll be speaking to him on the phone tomorow so I can explain these points in more detail. :)

View Full Version: My sister has bad breast cancer

Title: My sister has bad breast cancer
Description: *in stage 4*

14april2000 - March 7, 2011 06:08 AM (GMT)

What would you suggest?

> **QUOTE**
>
> My sis has cancer
> A bad breast cancer to be precise, apparently stage 4. They plan to remover her breast in two weeks and part of the lymph node in her armpit. After she went in to get the preliminary workup done the staff seemed to be in a hustle about reacting to what they saw in the ultrasound .
>
> Apparently the tumor material was a yellowish color.
>
> She has invasive ductal carcenoma.

TheUnhivedMind - March 7, 2011 04:07 PM (GMT)

You know my Cancer protocols and I doubt they want to hear it let alone do it. Unless someone wants help then I have no time to help them and my information is already present against Cancer. You know the videos to use to break the programming or attempt to break the programming of the mind such as the Gerson documentaries the Bob Beck protocol video and so forth with the testimonies. Most people with Cancer are shut off with the worry of death and stressed let alone broken down for years prior by programming. When a beings organs are in this much dysfunction its very hard to teach them anything. As I've said before you need to learn this knowledge a long time before you get Cancer if its to be easy on yourself than forcing everything at the last minute when ideally its not suitable. By the way nobody should have lymph nodes removed or anything removed for that matter. The lymph damage will destroy your immune system for life and this is a part of the problem of Cancer amongst all else I've taught. Women should make sure they're aware of the Iodine aspect of their problems with Breast Cancer. The Breasts need a mass of Iodine almost as much as the Thyroid so guess who gets the piddly amount they do have? The thyroid as its the number one organ needing Iodine. So you could

promote the Iodine knowledge with breasts. Therefore you'd be looking at Lugol's Iodine or food sources such as Wakame, Bladderwrack, Iceland Moss, Kelp and so forth. The use of hydrotherapy in the region 3-5 times daily using cold shower water and hot shower water alternatively on and off for 3 minutes each. Look into Ozone 3x daily and also unpasteurised Kombucha tea. The yellow colour is heat my friend and thus the Yin is having a problem to the region through some form of localised constipation. Check out Dr John Ray Christopher's 'Incurables Program'.

14april2000 - March 7, 2011 06:33 PM (GMT)

View Full Version: larrea tridentata (shegoi)

Title: larrea tridentata (shegoi)

Keith - February 27, 2011 02:30 PM (GMT)

hey, unhived mind mod, do you think this desert herb has much value? my friend got some of this(shegoi) like 5 years ago, and he gave me about 10 days worth. i'll tell during those 10 days, i distincly remember breathing clearly out of both nostrils for the most of the day. as far as i can remember, i almost always only breath thru one or the other nostril at a time. supposedly, larrea tridentata's main use his to combat genital herpes, but i have a "hunch" that there's more to this "not prevalent" desert herb.

TheUnhivedMind - February 28, 2011 01:44 AM (GMT)

If you're having nose issues this shows you have issues deeper with the Lungs and remember these are balanced by the Heart and powered by the Spleen. Remember that the Colon is connected with the Lungs so make sure this area is clean but not over cleansed. Increase your Spleen function and Lung function and your nose issues will clear. At one time I couldn't breath through my nose either but I have no problems today. I would also suggest you utilise a chiropractor. With this herb I would suggest you use for only 21 days a time unless you're using it as a balanced formula. I would also suggest a maximum dosage of 4-8 grams or just 2.5ml of a good tincture. If you have Liver damage then don't use this herb or if you suffering diarrhea. This herb is known as Chaparral leaf to most people and is one of the kings at fighting Cancer. Its also quite possibly the most powerful antioxidant herb around thats well known at least. This will go to the meridians of the Liver, Bladder and Kidneys aiding the Stomach and urogenital system. You'll notice the Lung action from the fact that this herb is pungent, its also salty and bitter. Salty will aid your Kidneys and bitter will aid your Heart. The herb will cool heat in the body so if you have heat in your Lungs this will help lower this for instance. You'll also have an increase of immunity and it will raise your central Qi. If you have Liver damp-heat this will help to clear it out along with wind-heat

View Full Version: Olive Leaf extract

Title: Olive Leaf extract

miguelk2 - February 26, 2011 06:25 AM (GMT)

hi CraigÂ¡Â¡
i`d like to know how you prepare the extract, because i found many ways, but i don`t know a good one, can you explain me step by step your way, i won`t waste the pure alcohol, i payed 35 euros for 1 ltr. thank`s for your time and forum.

TheUnhivedMind - February 26, 2011 06:07 PM (GMT)

I've never extracted my own Olive Leaf I've always bought it in but its always come in an alcohol of 25% strength if that aids you. You see some herbs need a larger figure than that in alcohol strength in order to extract well an example is say Echinacea. Alcohol usually makes the best tinctures and pulls more if not all of the compounds out of the herb. Only a few herbs are better in other menstrum should as Plantain which works better with water and Apply Cyder vingar. You'll also find Lobelia is better extracted with a 50/50 of Apple Cyder vinegar and Alcohol. Follow the typical tincture making levels when preparing your Olive leaf. Olive leaf is an amazing herb if you have a quality product and it will certainly help protect against flus etc.

View Full Version: My ear has become really sore

Title: My ear has become really sore

Phazon - February 12, 2011 04:20 AM (GMT)

Edit: I did some research and it's otitis externa or otitis media, which is in other words an earache or swimmers ear caused by bacteria getting in the ear. It seems the best thing I can do really is to wait for it to heal on its own. I've put some coloidal silver in my ear and also had some applecider vinegar and garlic simply because that seems to be good for pretty much everything.

wades77 - February 12, 2011 05:07 PM (GMT)

ALWAYS use the raw unpasturised apples cider vin, its TOTALLY differently to the pastuerised, which has zero enzymes. You may already know this.

TheUnhivedMind - February 12, 2011 05:58 PM (GMT)

When I had this type of problem once I quickly removed it including the fungus buildup by filling up the ear twice a day but rotating two different methods. First of all I would use my fresh Urine and what you do is if you can leave this in the ear or you keep it filled for twenty minutes whilst lying down. Then you simply get rid of the excess fluid and leave the remainder of the fluid in the ear. Then on the evening or night you use your unpasteurised Apple Cyder Vinegar and do the same. Remember to cleanse ears of different treatments we use Apple Cyder Vinegar. Do what I've said for as long as it takes. Urine is very good indeed and remember most ear drops have a synthetic urea and where does urea come from? You got it, your urine which is a most powerful medicine indeed. The vinegar can be painful and cause you to feel a serious earache but try to get through it as long as possible but at least the twenty minutes . This type of side-effect soon wears off as you keep doing the protocol and things start to clear up. Thats what I did anyway before I knew Chinese medicine.

Now from a Chinese medicine point of view the inflammation and ache would be heat in the Ear. What controls the Ears? Its your Kidneys. So we

would want to always make sure your Kidneys are fed from now on in case this is stemming from a Kidney deficiency therefore you should start taking the black Sesame seeds daily and also look to eating regular some black Rice. All foods that work on the Kidney essence would be of most importance along with herbs. Kidney essence is very important, its life force and in men its drained quickly via ejaculation. So cut back any sexual activity whilst trying to boost this. A great herb for the Kidneys is the Rehmannia root both forms of it, one is cooling and one is warming. A herb very similar to Rehmannia root is our Western Artichoke root which is a most excellent herb for the Liver especially (Liver, Kidneys and Spleen are all closely connected). If theres some Lung heat causing this problem you should see some discharge from the Ear as can be the case with the Kidney deficiency depending how bad it is. So for the Lungs you'd want to cool these down and you'd look to herbs such as Chrysanthemum flower and Japanese Honeysuckle. Always utilise Licorice root with herbal formulas if at all possible because it powers all the meridians and is neutral from heat or cooling which is an added bonus. Licorice root helps to carry herbs better to their destinations and also helps to rid the body of toxins. I take Licorice root twice daily. The Goji berry by the way is a most excellent food for the Kidneys and Liver.

You should also build up your Spleen which is part of your immunity and the same with the Kidneys. If these go down then infections can easily occur. See the connections now? Depending on any discharge though you may find that the Spleen is over working or hypering as some may call it. If thats the case then you wouldn't want to boost the Spleen function you would want to calm and restore its natural functioning level thus balance. So some of it is dependent on the symptoms. You can take also Echinacea and Boneset which also cool the Lungs whilst fighting infections with their boosting of the immunity. Remember though although these herbs fight infection how do they do this? Your immune system. Now think about it, if your immunity is down via low Kidney and Spleen function then these herbs don't work as well do they? The same goes for Huang Qi (Astragulus) and most. Therefore they need to be combined with the correct foods which boost these areas. With this way of thinking you can do more against viral problems by keeping the Spleen function up with say Chinese Red dates than with well known herbs as such which rely on what the dates feed up. Do you understand? Sorry I think differently these days haha.

Phazon - February 13, 2011 01:48 AM (GMT)

Thank you.

My mum has made up a tonic for me that includes a majority of what you've recommended. She's quite good with this health stuff, so it should go well.

View Full Version: Stomache trouble

Title: Stomache trouble

Wotan - February 9, 2011 03:00 PM (GMT)

Hello Craig,
As I always appreciate your advises, I wanted to ask if you might help me with the following issue:
I had extreme stress and tension in the last days and now I have stomache trouble like I never had before, also digestion is out of order now because of it.
Cause I reducing stress now as much as possible, it reliefs but still is strong and really is not good. Also I can't hold back work any longer so I know my stomache will be rebelling again as soon as I go back to it.
It feels like stinging and cramping anytime I just get even a little anxious or alert. Still using cayenne and garlic everyday, didn't stop it yet and don't feel like I should. Also I drank a glass of vine in the last days every evening to sleep better but the alcohol also attacked my stomach immediatly and made it ache.
Any suggestions about herbs or other things that might help?
Thanks a lot in advance

TheUnhivedMind - February 9, 2011 05:59 PM (GMT)

You need to look after the Spleen function which controls the stomach and digestive system. When one gets stressed this immediately affects the Spleen function and this will eventually affect the Lung functioning and Kidney balancing. So this is why stress can affect the stomach as people find out when they're in stressful situations. I suggest you cut back on the Cayenne and Garlic in case you're making your stress worse via a Yin deficiency caused by increased Yang from these herbs. You should be looking to eating foods rich in B Vitamins. If you can't do this then I would suggest for a short time you take a complex of B Vitamins in a supplement say 50mg for 2-3 months then its up to you how you want to go. I don't particularly like supplements but I know a good quality B vitamin complex (combination of B Vitamins) works wonders for people depressed and stressed. I would also suggest you take a calming herb such as Valerian and/or Passionflower etc. Do some work on your Kidneys by eating black

Sesame seed fried and also black Rice along with black foods.

Wotan - February 9, 2011 07:12 PM (GMT)

Thanks for your advice. I will follow it!

View Full Version: i have the flu.... yet again

Title: i have the flu.... yet again
Description: *why???*

Novusordo - July 21, 2009 01:42 PM (GMT)

hey craig I felt like I was coming down with the flu yesterday and this morning it is confirmed. I last had the flu just before last xmas. Why the hell do I get te flu when I eat so well? I've been avoiding all dairy for MONTHS, and gluten/wheat.
I remember you saying flu is a detox process and not a virus/microbe.
Is this true?

craig-oxley - July 21, 2009 04:39 PM (GMT)

Everyone gets bugs because everyone is constantly being polluted. The difference is the severity of the illness compared to those who live incorrectly. Until you do water fasts the body is never truely cleansed you know. You can have all the ozone in the world but it just does not compare to the water fast im afraid. I know that first hand. So just keep eating well and staying away from the crap you are and you'll be doing better than most. Also remember that various herbs are specific foods for specific regions. Just do your best. Make sure now that your intaking raw garlic cloves and ideally 3 daily but at least 1 big one for sure. Viruses can only work within damaged cells, this occurs from pollutions amongst other things.

Novusordo - July 21, 2009 05:11 PM (GMT)

DAMM I was thinking about eating garlic earlier but forgot to ask my mum in the text to drop some off. How stupid of me :rolleyes:
I'll just have to make do with these oranges and limes. I feel a lot better after eating a few of them!

I'll get hold of some garlic tomorrow.

craig-oxley - July 21, 2009 10:15 PM (GMT)

You must start keeping a regular stock of Garlic in your home. You should purchase a bag or more of Garlic fortnightly like I do. I usually get two bags holding around 10-16 bulbs or so. You should be making up some tinctures in ACV with some for storage too. Be prepared I keep telling you guys this and no one listens. When the shit hits the fan and everywhere is closed, what in the hell will you do then? Sort it! Those oranges and limes are great mucus cleansers which is obviously needed to clean out the shit.

Novusordo - July 22, 2009 03:00 PM (GMT)

well your right craig, I felt 90% ok when I got up this morning and as the day has gone on I'm back to 100%. Not many people can claim to have the flu for only 1 day! Well actually I had it only for half a day :D

I bought some garlic, ate a clove just now. wasnt NEARLY as bad as the cooking oinion, my god do you really eat those things raw? I could NEVER get used to them - but garlic is bearable.

I have some ACV, how would I make a garlic tincture from it?

and I am preparing. all my money is going on preparations!I take everything u say seriously :)

craig-oxley - July 22, 2009 03:45 PM (GMT)

Garlic is far more bearable than Onion yet seems to get the worse rap out of the two with the sheople. Garlic is very tasty indeed when you get used to it. Onion is nice and goes well with raw tomato by the way. Infact I just had half a raw cooking onion and some raw tomato not long ago. Yes I would daily grab a raw cooking onion or two and chomp on them like apples. I'd make people around me cringe at the sight and thought of it. You get used to them mate but they sure release mucus out the system. It is an amazingly powerful medicine when raw like everything else. When faced with pandemics and such we do not care what we stink like. Another good reason to say Viva-La-France.

What you do is get a nice big jar like what the Meridian Blackstrap Molasses comes in (740g). Now fill it up with chopped raw garlic cloves to about a 1.5-2 inches high. Now pour in a bottle of unpasteurised ACV and fill the jar up, leaving just about .5-1 inch space at the top. Cap the jar, label and date it. Now store the jar in a dark cupboard and shake twice daily. Leave this for ideally 14-30 days.

When you've hit this timeframe then simply strain the liquid from the contents into a glass bottle ideally brown and viola this is your garlic tincture. You can of course just leave it in the jar unstrained for as long as you wish. It will never go bad, its already bad haha. Try to make enough tincture to fill a good few large bottles eventually and you have then everything at hand. Then always keep a nice bag of garlic bulbs in your home, enough to suit your families needs and more in pandemic. Every 2 weeks buy another bag and remember which is the new and which is the old hehe. Make tinctures out of older cloves which are shrinking and sprouting. You can eat the sprouts and shows theres much life in your garlic.

Either put your money into essentials, herbs, foods etc or put it into precious metals.

Keith - July 22, 2009 09:43 PM (GMT)

yeah i can attest to that garlic helping the flu. about two years ago someone else in my family had the flu, and after work that day i knew it was coming to me. i know what the flu feels like. so i at esome garlic and next day felt fine.

Novusordo - July 24, 2009 10:23 PM (GMT)

been having a raw clove a day since. yesterdays was worse then the first time because I actually chewed it properly!
It's so tempting to just swallow the thing after 5 quick chews to avoid the horrendous taste.

craig-oxley - July 25, 2009 12:03 PM (GMT)

Garlic doesn't taste horrendous, its all in in your mind.

Keith - January 27, 2011 09:42 AM (GMT)

I had the flu come onto to me 2 days ago. I woke up with a slight sore throat at 8am. By 3pm, my joints were achy and spine was achy-- I knew it was the flu. So by 5pm I ingested some organic garlic-- one big clove. 5 minutes later I felt so much more relief but the flu was still there. At 10 pm ate some more garlic and at 8 the next morning took 2 Tylenol, for I didn't want the garlic taste in the morning lol. Flu symptoms were gone shortly after and I hardly got any sleep the night before. Point is garlic OWNS the flu. Usually when I got the flu back in the day, I would b sick for like 5-8days and it would take 3 weeks thereafter until I felt "normal" again.

TheUnhivedMind - January 27, 2011 04:24 PM (GMT)

I've gone through this pain in the backside flu which has wrecked havoc recently in the U.K. I never once used Garlic except for the air around me and I did the same with some Onion. All you do is get a saucer and cut an Onion in half or more then put it in the rooms. You can do the same with a few crushed cloves of Garlic. Both are very effective at killing any viruses in rooms but I think I'd trust the Onion the most for this as its far more potent in many ways but doesn't last as long as the Garlic especially if your home is central heated. As I said earlier I never used Garlic once during my flu problems. Why? Although it can help with killing the viruses and bacteria if it gets to a pneumonia stage, this isn't always a good thing though. Why? Garlic is an extremely hot food and in the body it causes heat. When one has the flu and a fever does it make sense to compound the fever and heat which is already at high levels? Dr John Christopher promoted increasing the heat and a few other vitalists do but in reality is it the answer? Yes you will seriously increase the immune response each degree of temperature you increase upwards. This would of course have a larger kill rate against viruses and bacteria but is this the answer? Is there a better way than that? Hows about bringing the temperature down of the body whilst utilising herbs which attack virus and bacteria giving us what we got the other way round but with a more balanced body in the process.

So when you have a sore throat this is the first signal of serious levels of heat within the body. You'll usually have the running nose and so forth with this or not long after. This is heat building up in the body which has kick started into cleansing process usually due to any reasonable climate temperature alteration such as we saw with this severe cold weather due to the ice-age we're entering and Gulf of Mexico incident damaging the Thermohaline conveyor system which regulates Europe. When you get cold all your body rushes to the deeper levels of your body in order to keep the organs functioning. What also happens is that cold cuts of the Qi to the body so you become susceptible to illness as good Qi cannot defend well against bad Qi and the evils entering. This is why you must always keep warm in the winter by wearing thermals under your clothes and especially on your legs. In other words you should always wear long johns under your trousers. I know a Chinese feminine who wears three layers of thermal insulation under her trousers everyday here in the U.K. with our cold climate. Chinese people in the know and especially doctors always do this as they understand the importance of keeping the Qi up otherwise illness enters and this can be long-term arthritic problems or worse. Remember also that the meridians all root from the feet and come up the body therefore you must keep the legs healthy and warm. Anyhow as this blood flow rushes to the internal organs the heat that was once all over the body now compounds in a smaller area. Any filth build up such as phlegm will simply be melted down and in need then of removal from the system. This will be through your nose, mouth, ears, lungs, anus and genitals/vagina as a detox.

When this filth is present in the body and especially when its free flowing

the body goes through a procedure to try to clean it up quicker. This comes in the form of a bacteria or a virus which is merely a protein solvent to clean more intense filth. So does it make sense to kill the bacteria or virus if one doesn't help the detox further and combat the heat? Of course not because then you're slowing down the process of cleansing. The same as if you artificially block colds and flus when their needed. Everyone should have some form of a regular cleanse otherwise the localised constipations just mount up through the intense filth build up. Believe me eating correctly also leads you into a filth situation just not as intense as eating junk food. Food in truth is a poison as well as being needed to keep the body going. Don't believe me? Well everyone knows you have a level of free radical scavenging or electron stealing going on in the body after eating food because its part of the burn off. Think of yourself as a steam train needing the coal but you have the by product sulphur etc coming off which isn't wanted. This is where people utilise higher electron waters and high electron giving Ascorbate etc. So unfortunately we have an issue with food and anyone who has water fasted should be able to tell you how terrible food really can be as well as how powerful food is within the body. I know this exactly as I've been a strict water faster and its amazing how powerful food is for the body when its the proper foods and suitable for your own personal needs. So if you have filth in your body and especially if you're in the same climate as the next man on the bus you may catch what he has as he coughs out his viruses around you. I caught this pest recently and this was because my good Qi had been weakened by a severe allergy to Shiitake mushroom I'd taken over a period of days. May I say that Shiitake is a most wonderful food and healing tool but unfortunately for me it doesn't suit my body which I found out to my own disliking.

So now I learned you that you do not want to compound the heat within the body and therefore you want to cool the body down. This is not done with a poison called Tylenol which simply destroys your Kidneys thus your immune system further along with probably your Liver and God knows what else. You simply utilise cooling herbs such as the wonderful Chrysanthemum flower and Japanese Honeysuckle both highly cool the body and especially the later, whilst both also kill virus. So we have our perfect herbs in one there right? Coolers and killers just what we ordered. Then we have herbs like Forsythia and we have a very good herb called Fishwort you'll find it as Houttuyniae. Check those out for this problem as well as the Astragalus which is a little warming but most incredible at boosting the immune system. You should make sure you're Spleen is boosted in order to have a good immune system and of course the root of the immune system is the Kidneys which produce the Bone Marrow. The Astragalus is what I see as the Chinese version of Echinacea. In the West we have the wonderful Echinacea which is a cooling herb. In the West we use the amazing Boneset (Eupatorium perfoliatum) and this is the baby which can actually help you fight pandemic flu as it also stops and lowers Cytokine storming. Boneset as you can imagine is cooling and also has an affinity for the Throat and Lungs which is wonderful especially in the recent

flu outbreak here in the U.K.

Hope that helps people think a little differently.

Novusordo - February 5, 2011 02:39 AM (GMT)

Hi craig.

thanks for yet more info! I'm really understanding what the flu really is now.

Prior to getting my green star juicer earlier last year i would get moderately bad flu every year which included vommiting.

I never got the flu last year, but just this week I had a dry throat and a tremendous amount of mucus cleansing, but i recovered in 3 days as apposed to 5 days prior to owning a juicer.

TheUnhivedMind - February 9, 2011 05:51 PM (GMT)

Everyone has a level of filth even people on a mucusless diet or people who have good Splenic function. Food is filth and a part poison to the body but unfortunately we need it to survive and also to give energy to the organs and functioning of the body. So everyone is prone to a cleanse now and then its just how hard it hits certain individuals depending on how filthy. Just remember to look after the Liver, Kidneys, Lungs and Spleen after flu as it attacks these regions. Even a few weeks afterwards you should continue to look after these areas otherwise other disease can come from the flu at a later date as its so taxing on the system. I suggest the cooling herbs I've promoted for the flu, sore throats and fever. One of the best herbs for immunity is Astragalus which everyone should add to their stocks along with Echinacea and Boneset.

View Full Version: Parkinson's disease

Title: Parkinson's disease

pivakl - January 29, 2011 08:43 PM (GMT)

Hi.

What would you reccomend for a person in the early stages of Parkinson's disease?

Could drinking ozonated water benefit it? I read about electro-therapy ameliorating it, but the devices used ran on higher frequencies (80-90Hz) than Beck's blood electrifiers. I'm also thinking about MMS. Do you have any positive experience with some approach?

Thank you

TheUnhivedMind - January 29, 2011 11:47 PM (GMT)

You want to get nourishment into the brain and the Kidneys must be boosted up out of their dysfunctional state. The same will go for the Lung, Spleen and Liver. Ozone may cleanse up the body but its not the overall answer. The body needs to be bought back to balance or as close as in order to achieve a better wellness. This means that all excesses, worry and stress must be lowered otherwise further stress to the Spleen will occur. I would recommend the use of a Chiropractor and the mucusless diet until the Spleen function increases and the symptoms decrease. We would want to increase the Yin Qi of both the Kidney and Liver whilst relieving the wind stemming from the Liver in most cases. Sexual intercourse must be stopped thats for sure to aid with the lack of essence of the Kidney. I would suggest an acupuncture and dried herb treatment for a period of weeks. I'm sorry but electrification is certainly not the answer, how will this nourish the Kidneys and Liver or remove the wind in the system?

pivakl - January 31, 2011 11:40 PM (GMT)

QUOTE

> I'm sorry but electrification is certainly not the answer, how will this nourish the Kidneys and Liver or remove the wind in the system?

To be honest, I'm not familiar with the chinese approach you employ and advise.
To me it seems wholistic - in a sense where parts of the body intertwine, so you treat a disease by boosting the function of organs so they would then function better and improve the condition of a disease. But what if a disease is caused by a toxin or a virus, that integrates with the energy production function of a cell, (like William Koch hypothesised), causing fermentation in the cells, and the energy thereof then causing uncontrolled nerve impulses (like in Parkinsons?)? How would the chinese approach burn off a certain toxin or a virus, or a toxin producing bacteria? Would it not be good to stick to electrification of the blood from this point of view?

TheUnhivedMind - February 9, 2011 05:43 PM (GMT)

Look forget Western type thinking its all pharmalogical type thinking which in truth is mostly pseudo-science. How does the body deal with toxins? Just one example is the Liver, so therefore if we boost the Liver via food, herbs and acupuncture doesn't this mean that we stand a chance of removing that toxin that much more? Theres other areas lets say the Colon which if we boost the Lung functioning then the Colon will work better and so on and so on. Now you're worried about a virus but why is that virus in the body and how is it living? Its living off filth for a start off and its really there to try to cleanse a filthy body which is totally natural. Therefore we need to have a clean body its almost as simple as that. In this case with the virus issue we'd find the immune system is most likely low and this will be down to both Kidney and Spleen function. So if we boost these via food, herbs and acupuncture what will happen? Immunity will raise and that virus will be no more similar to taking Echinacea as such. The organs I tackle control all the functions of the body and when they're boosted correctly they'll eventually remove a disease and certainly lower the effects.

View Full Version: What to do about tight muscle pain

Title: What to do about tight muscle pain

Alexandra - October 15, 2010 03:58 PM (GMT)

I do plan on seeing my sister-in-law who is a massage therapist, but until then, how do I deal with tight muscle pain? I get really tight in my shoulders/back and I feel pain on the left side of my face.

TheUnhivedMind - January 11, 2011 04:50 AM (GMT)

Unless you've caused problems at the time or within a close timeframe through exercise then Muscular problem usually is your Spleen playing up and needing a boost or even repair. You might find the virgin Castor oil of must use in the future.

pivakl - January 29, 2011 08:31 PM (GMT)

Warm up, then try to do some light stretching on that area. If you warm up properly first, like doing some light weight exercise, your muscles should be prepared for a gentle stretch. Stretching also helps with breathing difficulties.

You can find stretching/strenghtening exercises for any area of the body, just do it slow. Also check your neck flexors, the scalene muscles. Just bending your neck sideways could provide great relief.

TheUnhivedMind - January 29, 2011 11:11 PM (GMT)

Thats all fine and dandy but if the problem is stemming from Spleen dysfunction which most muscular issues do then you must address this dysfunction.

Alexandra - February 5, 2011 03:02 AM (GMT)

I'll have to look into castor oil.

One thing I've found that helps is rosemary.

I also enrolled in an exercise program, though I haven't been able to do that the last few days due to the nice weather we've been having.

I'm going to have to get myself a book on herbs, there's so much to learn that so many people don't know about.

Ken Ardel - February 5, 2011 03:26 AM (GMT)

Chamomile tea with licorice root is what I drink to relax tight muscles after long bicycle rides.

View Full Version: UHM what is your opinion on Basil Earle Wainwright

Title: UHM what is your opinion on Basil Earle Wainwright
Description: *and RHP Therapy?*

Alex - January 27, 2011 11:09 AM (GMT)

UHM

I was reading on curezone about a person called Basil Earle Wainwright and how he worked with a person called Peter Jovan.A person by the name of Gaylen has made a link that Basil Earle Wainwright is the true inventor of RHP or Recirucuitlitory Hemo Perfusion.

> **QUOTE**
>
> So I keep reserching and read how Peter Jovan had worked with Basil Earle Wainwright in Africa.
> So I put his name in google and found an article saying Peter had stole Mr. Wainwrights equiptment and went to India with it to open a hospital there. I thought, man who can I trust? Peter seems so honest.
> I kept reading more about Mr. Wainwright http://web.archive.org/web/20020203005326/...rg/interest.htm and found out his life is even more incredible than Peters was. Wainwright's dad worked with Nikola Tesla and Dr. Raymond Royal Rife! "Basil Wainwright studied Physics, Quantum Mechanics, Mechanical Engineering and Advanced Electronics (in fact Basil started studying these specific areas with his fathers' assistance from the age of eight), with Physics being his personal strength." This guy appears to be a genius! He invented Polyatomic Oxygen Therapy & Polyatomic Apheresis technologies, along with many other things.
> Wainwright is supposed to be from Swindon, Wiltshire, England. Have you heard of him 2tuff? I think you're from that area of the world aren't you?
> Anyway, it seems Wainwright is really the master of ozone, and Dr. Pressman and Peter Jovan (which it turns out his real last name is Jovanovic) have been profiting from Ed McCabe's research & Mr. Wainwright's developments with ozone all along. It just blows me away how you think you know, but then you find out how little you know. Sorry if you don't care about all this, and find it boring, but I had to write it.
> Take Care,
> Gaylen

http://www.curezone.org/forums/am.asp?i=445853

I have been wondering if Basil Earle Wainwright is the true inventor or RHP or Recirculotory Haemoperfusion?

TheUnhivedMind - January 27, 2011 05:16 PM (GMT)

I cannot comment as I have no idea who created Polyatomic Apheresis. It has its place as a small part of a hollistic treatment but its not the be all and end all to disease. Its there to increase oxygenation and also decrease toxicity. It cannot boost the blood like the Spleen will with Qi, it cannot nourish the immune system and brain as the Kidneys can. We shouldn't rely on one treatment like this this Ozone treatment because its merely a small part of the a larger puzzle which will also need high energetic foods for specific organs. All you're doing with Ozone is aiding the cleansing of the blood if the Liver dysfunction is down. Theres other arenas Ozone is of use but then you have to be careful not to overload the Liver with toxins the Ozone may bring out the system all at one time. Its really irrelevant who first created Ozone and its various forms of treatments. I might add that doctors who utilise these types of treatments usually get killed by the pharmaceutical assassins set to wipe out the competition and exposers of the agendas lies. The facts are we have Ozone and how we use it today for what problems its needed for. I can tell you that Gaylen has cured his wifes Breast Cancer with Ozone water treatment in the past, I think this has happened twice.

View Full Version: Down syndrome

Title: Down syndrome

14april2000 - January 26, 2011 06:09 PM (GMT)

What would you suggest?

QUOTE

http://en.wikipedia.org/wiki/Down_syndrome

Down syndrome, or Down's syndrome (primarily in the United Kingdom), trisomy 21, is a chromosomal condition caused by the presence of all or part of an extra 21st chromosome. It is named after John Langdon Down, the British physician who described the syndrome in 1866. The condition was identified as a chromosome 21 trisomy by Jérôme Lejeune in 1959. Down syndrome in a fetus can be identified with amniocentesis (with risks of fetal injury and/or miscarriage) during pregnancy, or in a baby at birth.

Down syndrome is a chromosomal condition characterized by the presence of an extra copy of genetic material on the 21st chromosome, either in whole (trisomy 21) or part (such as due to translocations). The effects and extent of the extra copy vary greatly among people, depending on genetic history, and pure chance. The incidence of Down syndrome is estimated at 1 per 733 births, although it is statistically more common with older parents (both mothers and fathers) due to increased mutagenic exposures upon some older parents' reproductive cells (however, many older parents produce children without the condition). Other factors may also play a role. Down syndrome occurs in all human populations, and analogous effects have been found in other species such as chimpanzees and mice.

Often Down syndrome is associated with some impairment of cognitive ability and physical growth, and a particular set of facial characteristics. Individuals with Down syndrome tend to have a lower-than-average cognitive ability, often ranging from mild to moderate disabilities. Many children with Down Syndrome who have received family support, enrichment therapies, and tutoring have been known to graduate from high school and college, and enjoy employment in the work force. The average IQ of children with Down syndrome is around 50, compared to normal children with an IQ of 100. A small number have a severe to high degree of intellectual disability.

Many of the common physical features of Down syndrome may also appear in people with a standard set of chromosomes, including microgenia (an abnormally small chin), an unusually round face, macroglossia (protruding or oversized tongue), an almond shape to the eyes caused by an epicanthic fold of the eyelid, upslanting palpebral fissures (the separation between the upper and lower eyelids), shorter limbs, a single transverse palmar crease (a single instead of a double crease across one or both palms), poor muscle tone, and a larger than normal space between the big and second toes. Health concerns for individuals with Down syndrome include a higher risk for congenital heart defects, gastroesophageal reflux disease, recurrent ear infections, obstructive sleep apnea, and thyroid

dysfunctions.

Early childhood intervention, screening for common problems, medical treatment where indicated, a conducive family environment, and vocational training can improve the overall development of children with Down syndrome. Education and proper care will improve quality of life significantly, despite genetic limitations.

TheUnhivedMind - January 27, 2011 04:49 PM (GMT)

From what I've quickly checked up on with this problem we'd be looking at trying to keep nourishing energy to the Spleen, Kidneys, Liver and Heart. We will add the Lungs to this which is simply the normal treatment within Chinese medicine known as the Viscera system. These children suffer problems with their muscles and digestive issues and this stems from Spleen dysfunction. Therefore doesn't it make sense to try to boost, balance and focus on this organ? We then have the Kidneys which are closely connected with the Spleen as the Spleen balances them. These children suffer from mental retardation and skeletal problems which to me means we need to boost, balance and focus on the Kidney function. It seems these children also suffer from eye problems which to me means we need to boost, focus and balance the Liver regular. So far these three organs are very highly connected with one another, don't forget the Liver balances the Spleen and the Spleen balances the Kidneys. But what does the Kidneys balance? Why its the Heart and many of these Children suffer Heart problems which is no shock at all. So we'd look at keeping the Heart balanced and boosted regular.

What all this means is that the child would undergo a minimum 10-20 week program of one to two or more treatments per week including Acupuncture and dried Herbal medicine the late being taken twice daily morning and night. Then the intensity could be lowered once balance is achieved which would allow to keep this balance then on. A full Chinese diagnosis would need to be done in order to know the perfect needs of that individual Child. If theres no heat issues in the body I would promote the use of just a small teaspoon amount of blackstrap Molasses in order to help keep a form of mineral balance focusing on natural Iron & Selenium. Foods suitable for the individuals body but containing B vitamins would be of most use especially for mental issues. I would seek the help of both a Chiropractor and Cranial Osteopath afterwards. It seems people are trying to increase blood circulation to the head to combat some of the side-effects of this disorder. The use of Ginkgo biloba seems to be a favourite but this isn't a great idea as Ginkgo shouldn't be used long term as it does have a cummulative toxicity issue. Of course you can lower this problem if its part of a combination of herbs as a prescription. But one shouldn't take Ginkgo biloba on its own for more than two to three months. Theres plenty of other herbs which can aid blood flow to the head. If the individual hasn't any heat issues then Cayenne pepper for instance in low dosages would do just the same thing, as would horse radish. Theres plenty of alternatives to try other

than Ginkgo but I must admit that this herb is a special herb to as are all and it has great uses. You'll find Gingko is also good for the Heart, Lungs and Kidneys.

View Full Version: Oxycontin

Title: Oxycontin
Description: *What do you suggest?*

14april2000 - January 27, 2011 10:22 AM (GMT)

A lot people needs this drug, im asking for a daughter who has a mother they both live in Alabama.

What do you suggest

QUOTE

http://www.urbandictionary.com/define.php?term=oxycontin

oxycontin, oxy, OC, O are street names for this popular narcotic. To take oxy you have to bypass its time relaes, you can do this by peeling off the coating and chewing it, crushing it up and railing it, or in rare cases disolve it with a little water and slam it, that is to say inject it. Oxy is the most expensive drug out there ranging from $20-$50 for a 40mg pill or $35-$100 for a 80mg pill, $25 if you're lucky. An average user will use a minimum of 80mg to a maximum of 320mg a day. That's up to $300 a day!! You'll start taking oxy because it helps you work or it makes you feel good whatever but watch out take too much oxycontin for too long and you'll end up where if you don't do it, you'll be in the worst pain of your life.

Imagine the pain of the worst flu you've ever had in your life, take away the stomach aches and multiply the weakness, body aches and the feeling of pins and needle in every muscle of your body by about 10 and you have the pain of an oxy withdraw.

People will do oxy at work because it takes away the pain you get in your legs and feet after standing for hours on end. bust a rail and you're good to go.

The high you get from oxy is the greatest high in the world, getter than coke, and all that, it's indescribealble. If you think about it it's kind of like an insta-tanked pill. Once you take it you're loose and free kinda like being drunk but you wont get sick and you don't feel bad in the morning

You can also party like a rockstar all night long without getting tired.

If you have a hangover or you're getting sick bust a rail you'll be better in seconds.

Needless to say there are many reasons to get on oxy but a warning to all... You will spend every dime you have and a lot more, you'll hit rock bottom and guess what, there's nothing you can do about it because you physically can't stop railing this magic pill. You sleep habits get messed up 12 hours of

sleep will feel like only 4 hours of sleep, the only way to wake up is to hit up...

TheUnhivedMind - January 27, 2011 03:46 PM (GMT)

Seems this drug may be damaging an already dysfunctional Spleen which in turn will simply wreck the Kidneys and Liver. I suggest people do a Spleen boosting and restoration program also focusing on the others mentioned via a herbal program, diet and acupuncture. Theres no need for pathetic drugs like this because if they don't hurt you quick, they'll get you in the end. All a being needs is nourishment with the correct nutrients and energy to the correct meridians weakened by a lack of nourishment through wrong living and localised constipations usually through rock mineral buildup like plagues or phlegm stemming from again a weakened Spleen unable to cope with the excess phlegm buildup. See a good Chinese doctor nearby and start living correctly. Remember pains in the legs and especially lower legs is a signal of Kidney dysfunction, we would as part of a program of others use Goji berries in many cases for a being with weak legs especially when knees are involved.

View Full Version: Amalgam fillings

Title: Amalgam fillings

golden_oil - January 8, 2011 12:18 PM (GMT)

What is your opinion of amalgam fillings? I am aware of the dangers of mercury.

What about porcelain and silver or other combinations? I am in Europe.

TheUnhivedMind - January 11, 2011 03:59 AM (GMT)

No form of filling is fully acceptable in truth but you'd be much better off with a composite filling than a mercury filling thats for sure. Now when you come down to the root filling you should really be looking at removal of the tooth. Remember that theres no immune reaction left in a tooth root filled but theres plenty of bacterial overgrowth and therefore toxic bacterial after-product vapours which can be dangerous to your Heart amongst other areas. You also have to be careful of the many meridians in the mouth because metal affects these electrical pathways which may lead to damage and dysfunction in the organ they're connected with.

b_basa - January 12, 2011 06:18 PM (GMT)

Amalgam filings should be removed! I would like to tell my personal experience.

I have around 13 amalgam filings (accumulated throughout the years) and since childhood, yearly for everyday I have my allergies attack. Gets worse each year (as more and more filings are added).

Finally I have decided to take it out after learning that it is purely toxic and causes a lot of allergic reactions.

I found a heavy metal expert here in Malaysia that knows how to use the proper antidote through some form of chelation. I have undergone treatment for 3 months

weekly removing a filing and then taking in the medication for flushing out the heavy metals and toxins. After this 3 months all my allergies are gone, I would not say 100% but probably around 90, now I can breath again :)

Amalgam filings, you should remove it as early as possible, but please take caution. Do not remove it by your own, you need at least some form of therapy to gradually lessen the toxins in your body, or else you end up more sick than before.

golden_oil - January 14, 2011 02:15 PM (GMT)

View Full Version: Bronchitis or Bronchiolitis

Title: Bronchitis or Bronchiolitis
Description: *I might have it*

14april2000 - January 11, 2011 09:34 AM (GMT)

What would you suggest?

QUOTE

Not to be confused with bronchiolitis.

http://en.wikipedia.org/wiki/Bronchiolitis

The term usually refers to acute viral bronchiolitis, a common disease in infancy. This is most commonly caused by respiratory syncytial virus (RSV, also known as human pneumovirus). Other viruses which may cause this illness include metapneumovirus, influenza, parainfluenza, coronavirus, adenovirus, and rhinovirus.

QUOTE

http://en.wikipedia.org/wiki/Bronchitis

Bronchitis is inflammation of the mucous membranes of the bronchi, the airways that carry airflow from the trachea into the lungs. Bronchitis can be classified into two categories, acute and chronic, each of which has unique etiologies, pathologies, and therapies.

Acute bronchitis is characterized by the development of a cough, with or without the production of sputum, mucus that is expectorated (coughed up) from the respiratory tract. Acute bronchitis often occurs during the course of an acute viral illness such as the common cold or influenza. Viruses cause about 90% of cases of acute bronchitis, whereas bacteria account for less than 10%.[1]

Chronic bronchitis, a type of chronic obstructive pulmonary disease, is characterized by the presence of a productive cough that lasts for 3 months or more per year for at least 2 years. Chronic bronchitis most often develops due to recurrent injury to the airways caused by inhaled irritants. Cigarette smoking is the most common cause, followed by air pollution and occupational exposure to irritants, and cold air.

[

TheUnhivedMind - January 11, 2011 08:02 PM (GMT)

This diagnosis is being thrown out left, right and center at the moment even here in the U.K. by Sorcerors of Hermes. You should visit a professional Chinese doctor and get diagnosed properly as with this complication you could be suffering either from a heated version or cooling version so its better to know what you're dealing with otherwise you'll be compounding certain issues if you have a heating herb for the lung when you have heat issues in the lung. From a cooling perspective with this problem heres a few western herbs I've quickly compiled you should find of use; Mullein, Marshmallow root, Borage, Popular Bud, pure Aloe Vera gel, Iceland Moss Thallus, Slippery Elm bark ,Solomon's Seal root, Chickweed & Comfrey leaf.

This problem is usually tied to a deficiency in the Lung and Kidney region but you have to watch the Heart in all this as its very closely connected with Lung functioning as its the Heart which balances Lung function and its the Kidneys which balance the Heart. Its a vicious cycle if in depletion because its the Lungs which generator force for the Kidneys so you can imagine what happens when that force weakens, it will then take out the Liver and the Heart which will destroy Spleen function and well you know the rest. So I would suggest you also make sure your intake of Vitamin A is increased quite high especially by eating Vitamin A rich organic foods. I would suggest you have an intake of black Sesame seeds to aid with your Kidneys. I would have also promoted black Rice but seeing as its a form of mucus this wouldn't be that wise yet especially if you have a typical Western Spleen which usually isn't functioning correct. Bring me onto the subject of sticking to the mucus less diet for the time being.

A good couple of anti heat herbs also used against bacteria etc for the Lungs by the Chinese would be Chrysanthemum flower and Japanese Honeysuckle. For fighting the bacteria, virus etc you'd look at Astragalus. If you want to have cooling tea through the day you'd look at Green or Jasmine tea. An intake of Kelp may be of some use as would the Flower Pollen. Have an intake of real tomato soup which is very cooling but importantly nourishing. For your Heart we'd be looking at Hawthorn. Food wise take Oranges, Tangerines, Pineapple, red Grape, Pears (boiled better), Apricots, Carrots, water Chestnuts and Apples. If you want colling & anti-infection herbs which go straight to the Lung then in Western herbalism these would be the potent Echinacea and Boneset (Eupatorium perfoliatum). These would be more useful in this problem. I would also make sure a daily allowance of Licorice root is taken if theres no blood pressure or serious Kidney issues already.

Title: garlic aftertaste help

Keith - October 24, 2010 08:46 PM (GMT)

how can i conusme garlic then with the help of something else, offset the garlic after-taste.

Ken Ardel - October 24, 2010 09:22 PM (GMT)

I use freshly chopped Italian parsley.

Ironchef - October 29, 2010 11:38 PM (GMT)

I use home grown parsley, cumin and long green parts of celery.

TheUnhivedMind - January 11, 2011 04:46 AM (GMT)

Make sure before you consume Garlic that you don't have Yin deficiency or heat problems otherwise you'll just compound the problem even more.

Title: Anxiety/PanicAttacks

RazorD - October 20, 2010 07:30 AM (GMT)

Hi Craig. I wanted to get your opinion and maybe a little advice. Im sure your busy, so take your time. Ive always suffered from Obssesive Complusive disorder, and mind you that alot of people throw that out like they have it, but In my case, its been pretty severe. Since Ive had it all my life, I have been able to deal with it for the most part. A couple years ago, before I started taking better care of myself, I used to drink those awful energy drinks. I travel alot. One day, I had a real bad reaction that triggered my very first Panic Attack. I had never had one before. Since then, Ive had real bad, and I mean real bad anxiety. My anxiety tends to come from fearing the Panic Attack. So its like a vicious circle. It gets really bad when I travel. When Im in my home town, its ok cause its like a safe zone for me. Would have any suggestions? Some kind of herb, therapy or anything? Im not miserable all the time, but like I said, when I get out of my comfort zone or travel, it gets bad. And Im a performer, so thats all the time LOL. Anyhelp would be appreciate it! Thanks for your time Craig!

Hi RazorD,

There is a cure for both Anxiety and OCD in this section among my old questions.

The cure for Anxiety in my question regarding how to cure Depression.

Titel : best cure for Depression.

There might be a cure for Panic Attacks too on this site or on the old site.

I hope this is a help for you.

Best wishe
April

Ask Craig : **THE UNHIVED MIND I**

http://z13.invisionfree.com/THE_UNHIVED_MI...hp?showforum=50

Alexandra - October 20, 2010 04:38 PM (GMT)

First thing I'd tell you is make sure you're not consuming aspartame. I used to have bad anxiety/depression until I stopped drinking diet pop.

RazorD - October 22, 2010 06:28 AM (GMT)

Thanks for the replys friends. I will check out the link. And yes Alexandra, unfortunately I had a past of Aspartame, and during those times, my anxiety was way high. Ive been off Artificial sweetners and caffeine for about 2 years. Bad stuff.

14april2000 - October 22, 2010 09:06 PM (GMT)

Hi RazorD,

The below text is taking from the depression question.

Yes it would aid him but ideally the use of nervine herbs would be better for anxiety. Thyroid plays a large part with anxiety and should be checked. Maybe an intake of iodine in the form of either natural Green black Walnut or synthetic Lugol's Iodine.

Best wishe
April

Is there a cure for OCD, I am asking for another person

http://z10.invisionfree.com/The_Unhived_Mi...?showtopic=9818

What is the best cure for depression?, I am asking for another person

http://z10.invisionfree.com/The_Unhived_Mi...?showtopic=9056

RazorD - November 2, 2010 04:18 AM (GMT)

Thank you April, and Alexandra for the help. I really appreciate it!

View Full Version: Parkinsons

Title: Parkinsons

dorean - November 29, 2010 05:50 PM (GMT)

Have you heard of anyone making a full recovery from Parkinsons using natural methods? Any links to such a story?

TheUnhivedMind - January 11, 2011 04:42 AM (GMT)

Brain function is very much dependent on the Kidney function. The brain must also be clear of localised constipations and dehydration the later being caused by consuming alcohol which has an affinity for the brain. I would also have a chiropractor regularly go over the spinal area for subluxations. If you want a quick few hours mask of the problems you might want to look Glutathione.

View Full Version: Problems with my fingers

Title: Problems with my fingers

14april2000 - November 16, 2010 07:58 PM (GMT)

My right ringfinger has been deformed for most of this year.

I think it might has something to do with the dairy, and Gluten products i used last winter for about 3 mouths.

Also my left little finger has been stiff for the 5-6 days, and now also in the hand.

TheUnhivedMind - November 30, 2010 07:40 PM (GMT)

Bones or Muscular? Ring finger?

14april2000 - December 10, 2010 09:24 PM (GMT)

The problem in the left little finger is called skip finger, it relates to tendons. The right little, and ringfinger is deformed it`s called panarition. The nails is deformed too, the little finger has grey lines on the nail, the nail on the ringfinger is deformed.

The deformity begin a yeay ago.

TheUnhivedMind - January 11, 2011 04:37 AM (GMT)

I suggest you start working on your Liver dysfunction my friend. Other areas you should work on are the Kidneys and Spleen.

TheUnhivedMind - January 11, 2011 04:28 AM (GMT)

Wow thats one seriously ill patient there and you know under typical Western medicine that having COPD is a death sentence alone right? With all the illnesses he has I'm not surprised his cholesterol figure is high as this is a body repair mechanism. If someone is ill and cholesterol is a repair mechanism then what might you expect to raise when one is in this state of illness? Yes you guess it, the cholesterol. I'm fed up of the demonization of Cholesterol by these deceiving sorcerors of poison wrongly called doctors today.

If you've studied my teachings in the past I've explained why people have acid reflux and how its all tied in with a dysfunction of the Pancreas. Again if this occurs you cannot produce enough bicarbonate which results in the body not wishing to take food into the intestines as it struggles to buffer the acidic contents. Thus the body usually tries to reject the food back out the

Esophagus which itself most times causes Hiatus Hernia. So you have two routes with acid reflux and thats either counter its affects via alkalinity whether chemically, naturally or you can address the Pancreas function and over time bring this back to function, naturally allowing yourself to produce the correct bicarbonate levels for sustainment. So now I've explained this can you see the connection with the Diabetes? Hopefully you're aware of the Pancreas involvement in this disease right? Make yourself aware of how the insulin prescribed by Sorcerors of Hermes will burn the islets and create a bigger dependency for this poison and thus further Pancreatic dysfunction. Also note how the Pancreas is the line of defense against Cancer other than the immune function. Now understand why he's had inflammation of the Pancreas?

Guess what about the pancreatic function and why we get Cancer? Its called Splenic dysfunction as you should know by now that this controls the Pancreas and the Immune system, the later with a little help from the Kidneys. So do I make sense so far? Not rocket science when you know what I teach huh? But the sorcerors of Hermes would love you to believe its complicated, why? So they can fool you their puff magick sorcerory works when in truth its a flop making the once health of this planet into a giant death and incapacity sess pit.

Now when the Spleen is dysfunctional what will happen? It will end up affecting the Liver and Kidney functioning as well as the Lungs. But remember it balances the Kidneys so you're in trouble if its down or even over working. The Liver gets taken out and so the Cholesterol figures will be dramatically out of balance and one of the greatest herbs in many cases to correct this is the Artichoke root. Many also claim Milk Thistle, I only have very good experience with Artichoke. Now if someone has a Liver with heat problems then I'd give them Artichoke, if it had cold problems then I'd give them Milk Thistle. The Spleen directly affects the Lungs as it actually generates power for them to function. Please remember that Diabetes is always caused through a severely weak Splenic function again do I surprise you? I think not and when added with the need for Kidney function well case closed. If the Lungs, Kidneys and Liver are in trouble then the Heart is also in trouble so watch that area. The Kidneys balance it whilst the Liver generates it.

From what you'd given me with his bone issues you can see that he will have difficulty for sure with his Kidneys to a certain degree from their connection with the Prostrate and lower legs which are the realm of the Kidney. Also his Lungs somewhat via his other bone issue.

My advice is to have a very Professional Chinese Doctor come in and check him over. He will not be fully reversed for years if at all but if the family has money to pay the Chinese doctor then they should invest it in this arena and not give any more funds up to these sorcerors of Hermes who're just adding in this mans problems and speedier demise. He needs a complete

treatment of every single one of the Viscera organs and it needs to be done correctly meaning we need to know exactly if he's damp, hot, cold etc or in other words does he need a yang herb for a specific organ or a Yin herb or a drying or moistening herb. It will be very complicated and all would need to be treated together carefully and monitored weekly or daily and altered accordingly.

Police investigate three deaths at Stepping Hill Hospital

The inquiry now covers the death of three patients

15 July 2011 Last updated at 14:55
http://www.bbc.co.uk/news/uk-england-manchester-14166920

The deaths of three patients at a Stockport hospital are being investigated after a batch of contaminated saline was found.

Police said an inquiry into the deaths of two people was extended following the death of an 84-year-old man

All three - including another man aged 71 and a woman, 44 - were patients at Stepping Hill Hospital.

Staff alerted police on Tuesday after finding vials of saline solution had been tampered with.

A further 11 people are believed to have been affected by the incident but were not seriously harmed as a result.

The discovery came after several patients suffered lower than normal blood sugar levels.
'Deliberate contamination'

Assistant Chief Constable Terry Sweeney said: "Greater Manchester Police's priority is to prevent any further harm to patients.

"We have recovered a number of ampoules of solution and are working closely with the hospital to try and get to the bottom of what has happened."

He said all deaths at the hospital meeting certain criteria would be referred to the coroner adding: "It is important that people are clear in their minds that, as things stand, we do not know for sure if the contaminated saline contributed to the deaths of these three people.

"That said we have someone deliberately contaminating saline in the one place that people should feel they are being most cared for."
'Extra vigilant'

Dr Chris Burke, chief exectutive of Stockport NHS Foundation Trust, said: "It was the staff at the hospital who brought this matter to our attention and I've asked them to continue to be extra vigilant to help safeguard patients."

He said all saline ampoules in the hospital had been replaced and security increased at the site.

The cause of death in all three cases is not yet known.

Police said they had recovered "a number of ampoules of solution" from the hospital.

The hospital has launched a telephone hotline for patients or relatives affected by the case on 0161 419 4888.

Is a new angel of death stalking the wards? Hospital poisoner who killed 3 tries to murder 36
Patients given dangerous insulin and saline combination, murder method used by Beverley Allitt

Police increase hospital security following deaths
11 other victims are recovering in hospital
Hotline set up for concerned patients and their families

By James Tozer, Louise Eccles and Claire Ellicott
Last updated at 10:51 PM on 15th July 2011
http://www.dailymail.co.uk/health/article-...-sabotaged.html

A hospital poisoner who has killed three patients was trying to murder dozens more.

The saboteur injected insulin into at least 36 vials of saline solution, knowing it could be fatal.

Police do not know whether the killer is a visitor to Stepping Hill Hospital in Stockport or an employee there. Security has been stepped up, with the use of searches and entry restrictions.

Detectives believe insulin was deliberately injected into the saline containers which were in a store room used by at least two wards. Fourteen patients fell ill after nurses administered the contaminated fluid through drips.

The poisoner's first two victims – a 71-year-old man and a 44-year-old woman who had multiple sclerosis – are believed to have been terminally ill.

It is understood the latest, an 84-year-old man who died yesterday, was not. Nurses and other medics who were working on the wards are being spoken to by officers because they would have had the expertise and opportunity to tamper with the glass vials.

Detectives are also looking at whether there have been other potentially suspicious deaths at the hospital. The other 11 victims are recovering.

'We have someone deliberately contaminating saline in the one place that people should feel they are being most cared for,' said Assistant Chief Constable Terry Sweeney of Greater Manchester Police.

'We will be planning to take the person responsible for this contamination into custody and bring them to justice.'

He stressed it would be exceptionally difficult to prove a link between the tampering and the deaths.

'This investigation is at a very early stage and we don't know what effect, if any, the solution has had to the wellbeing of any patients,' he added.

Guards at Stepping Hill: Police said security has been increased at the hospital

'We have recovered a number of ampoules of solution and are working closely with the hospital to try to get to the bottom of what has happened.

'Understandably there is considerable concern within the hospital and the wider community about this.'

The police inquiry is concentrating on the period from July 7, but it could be extended to cover any earlier suspicious deaths.

The hospital contacted police on Tuesday after an experienced nurse reported a higher than normal number of patients on her ward with unexplained low blood sugar levels.

Tests found 36 saline ampoules had apparently been injected with insulin, a hormone which diabetics need to regulate their blood sugar but which can kill if given to non-sufferers who have other health problems.

Police have suggested to hospital chiefs that anyone entering the hospital should be searched and a hotline has been set up for worried patients and families.

Professor Vincent Marks, author of Insulin Murders, said: ‘It’s very hard to prevent the possibility of something like this happening because insulin has to be so readily available in hospitals.But it’s actually not a very effective way of killing people.

‘They would fall into a coma, and these days their blood sugar would be tested and they could be given glucose and would probably recover.
‘This is the one place that people should feel they are being most cared for’

‘Insulin is easily detected, but the hard thing will be proving if it has contributed to the deaths.’

South Manchester coroner John Pollard has asked for any similar deaths at the hospital to be referred to him.

Mr Pollard was the coroner duped by serial killer Harold Shipman. He told the official inquiry into the murders that he had tightened up procedures.

The Stockport case has echoes of that of Beverley Allitt, a nurse who used insulin to kill four children at Grantham and Kesteven hospital in Lincolnshire between 1991 and 1993.

Yesterday worried patients and visitors at Stepping Hill said they feared a rogue health worker was responsible.

Clifford Monks, 84, who was receiving treatment for a stroke, said: ‘It sounds like another Beverley Allitt. It can only be malicious – someone who has got a grudge against the hospital or someone who is insane and sick themselves.’

His daughter Carol Innes, 56, said: ‘What is most worrying is how random it is. They were of all ages and male and female, so whoever did this did not care who they hurt.’

Susan Jones, 57, whose 82-year-old mother Elizabeth suffers from cancer and was discharged from Stepping Hill three days before the deaths, described the events as extremely alarming.

‘Mum was on a lot of saline during her two-week stay so we are very concerned,’ she said. ‘It makes me shudder to think it could have so easily been her.

‘There should be better measures in place to stop this happening. You expect your loved ones to be safe in hospital. This is very scary for everyone being treated here.’

Dr Chris Burke, chief executive of Stockport NHS Foundation Trust which runs the hospital, said: ‘It was the staff at the hospital who brought this matter to our attention and I’ve asked them to continue to be extra vigilant to help safeguard patients.

‘We have increased security both in terms of access to the hospital and access to medicines and already replaced all saline ampoules across the hospital.

‘We are doing all we can to protect our patients and ensure their safety.’

TheUnhivedMind - July 19, 2011 06:09 PM (GMT)

Man seriously ill at probe hospital

19 Jul 2011
http://www.thisislondon.co.uk/standard/art...obe-hospital.do

A man is fighting for his life at a hospital where police are already investigating the suspicious deaths of three patients.

Police fear the suspect who sabotaged saline containers with insulin may still be stalking the corridors of Stepping Hill Hospital in Stockport, Cheshire.

The critically-ill patient, a man in his 40s, is part of a complex police investigation with 60 detectives questioning more than 50 staff at the hospital, with wards A1 and A3 the centre of the investigation.

Police have a "working assumption" that the contamination had taken place within the hospital and officers said they could not rule out the person responsible still being at the hospital but it may also be a visitor to the site.

The unexplained deaths of Tracey Arden, 44, George Keep, 84, and Arnold Lancaster, 71, are all being linked to the deliberate contamination of the saline solution.

They are among a total of 14 patients whose treatment since July 7 is being examined by police.

Detectives were called in after an experienced nurse reported a higher than normal

number of patients on her ward with "unexplained" low blood sugar levels pointing to the saline ampoules being sabotaged.

Officers found insulin had contaminated a batch of 36 saline ampoules in a storeroom close to ward A1 of the hospital.

The three deaths remain unexplained as detectives await the results of further pathology tests to find out if the insulin contributed to fatality.

Inquests into the deaths of all three victims were opened and adjourned by South Manchester Coroner John Pollard.

TheUnhivedMind - July 21, 2011 12:45 AM (GMT)

Stepping Hill Hospital: Nurse arrested in murder probe

Rebecca Leighton was arrested at her home in Stockport

20 July 2011 Last updated at 21:03
http://www.bbc.co.uk/news/uk-england-14214375

A nurse has been arrested on suspicion of murder after the deaths of three patients at a hospital in Stockport, Greater Manchester.

Rebecca Leighton, 27, of Heaviley, Stockport, was arrested at home and is being questioned after two men and a woman died at Stepping Hill Hospital.

Police believe insulin was deliberately injected into saline containers.

Sixty detectives have been involved in the inquiry and officers have so far questioned more than 50 people.

Police have been stationed outside Ms Leighton's flat on Buxton Road, where earlier officers removed six bags of items and a computer.

The Nursing and Midwifery Council said proceedings were under way to suspend her nursing registration while she is under investigation.

On her Facebook page Ms Leighton describes herself as engaged, and calls herself a "happy go lucky kinda gal".

She states that she is a staff nurse, adding: "god it hard work x". She adds that she "loves the weekend (if im not workin) and having a laugh with the people that I call friends for a reason x".

Deaths 'unexplained'

Tracey Arden, 44, 71-year-old Arnold Lancaster, and George Keep, 84, died at the hospital in the past month.

A fourth patient, a man in his 40s, remains critically ill.

Greater Manchester Police believe the sabotaged saline containers were used on at least two wards, A1 and A3.

The force said they were working on the assumption the contamination had taken place on site.

Police removed six bags and a computer from Rebecca Leighton's flat

The four patients are among a total of 14 whose treatment since 7 July is being examined by police.

Dr Chris Burke, chief executive of Stockport NHS Foundation Trust, said: "We are aware that Greater Manchester Police have made an arrest this morning of a 27-year-old female.

"As the police are continuing with their enquiries, we are unable to provide any further details, but it is important to stress that no charges have been made at this stage."

A hospital spokesperson said it hoped to return to full business by 0900 BST on Thursday, although security measures would remain in place.

Detectives were called to the hospital after an experienced nurse reported a higher-than-normal number of patients on her ward with "unexplained" low blood sugar levels.

Officers found insulin had been used to contaminate a batch of 36 saline ampoules in a storeroom close to ward A1.

Security has been increased on the hospital site and staff have been told to work in pairs when they check or administer drugs.

Senior NHS bosses at the hospital are having daily meetings with police.

Insulin is always stored in a fridge in a locked treatment room but saline has also been locked away as a result of the incidents.

Tracey Arden, George Keep and Arnold Lancaster have all died at Stepping Hill in the past month
Contaminated bag

South Manchester coroner John Pollard has opened and adjourned inquests into Ms Arden, Mr Lancaster and Mr Keep.

Police revealed a damaged bag containing saline solution was found in the maternity ward but it had not been contaminated.

Assistant Chief Constable Ian Hopkins, leading the inquiry for Greater Manchester Police, said: "It is important to stress that this product has not been contaminated and, in fact, the damage could very well be accidental, as can happen quite easily in a busy hospital environment.

"Extra security measures are in place across the hospital and staff continue to be vigilant, which of course, is to be expected.

"Due to heightened awareness, staff are alerting police to anything they feel might be suspicious or relevant to the investigation and to date there has been no further contamination of any product since the control measures were introduced."

Pharmageddon: Prescription drugs are killing America's youth

Tuesday, July 19, 2011 by: J. D. Heyes
http://www.naturalnews.com/033044_pharmage...drug_abuse.html

(NaturalNews) No parent wants to lose a child, but when one dies from something that should be very preventable, the heartbreak and tragedy is compounded. Such is increasingly the case with prescription drugs - they're killing our youth.

Sarah Shay and Savannah Kissick, of Morehead, Ky., best friends since high school, were both victims of what experts and the White House are describing as an epidemic of prescription drug deaths. Sarah died in 2006 at the tender age of 19; Savannah just three years later, at 22.

Since the medications they were using were prescribed by physicians, some experts believe they carry some sort of legitimacy. But the fact is they are being abused by young people just the same as drugs that are illegal - more so even, in some cases.

"I don't think the kids have any idea how addicting the substance is," Karen Shays told the BBC in an interview. "Before they know it, bam! They're addicted."

Drugs like Xanax, Oxycodone, Klonopin and Hydrocodone are routinely being abused more and more in Kentucky in particular, but in other parts of the nation too, by teenagers and young adults. So bad is the problem that the state has set up rehabilitation centers, where a huge number of addicts - more all the time - are being treated.

So bad is the addition that some kids have even turned to crime to feed it.

Some of the kids say they could have likely found other drugs to feed their habit, but prescription drugs were not only legal but much easier to get.

All in all, it's sort of like Armageddon, but with prescription drugs - a sort of "Pharmageddon," if you will, as evidenced by Kentucky's overflowing jails, say state officials.

"I believe I can safely say that over 80 percent of the inmates in the Pike County regional detention center are in there for something dealing with their addiction to prescription drugs," Dan Smoot, director of law enforcement with an organization called Unite - a new and innovative counterdrug that combines police investigations, treatment and education.

According to the federal Office of National Drug Control Policy, in a recent report, the problem stretches beyond the borders of Kentucky - and it's getting worse.

"A number of national studies and published reports indicate that the intentional abuse of prescription drugs, such as pain relievers, tranquilizers, stimulants and sedatives, to get high is a growing concern -- particularly among teens -- in the United States. In fact, among young people ages 12-17, prescription drugs have become the second most abused illegal drug, behind marijuana," said the study, called, "Teens and Prescription Drugs."

"Though overall teen drug use is down nationwide and the percentage of teens abusing prescription drugs is still relatively low compared to marijuana use, there are troubling signs that teens view abusing prescription drugs as safer than illegal drugs and parents are unaware of the problem," it said.

In particular, the study found:

- Teens are turning more and more away from illegal street drugs and instead are taking (and abusing) more prescription medications - so much so that new users of prescription drugs have caught up with new users of marijuana;

- Next to marijuana, the next most common thing kids use to get high are prescription drugs;

- Teens abuse prescription medications because they mistakenly believe that, since they are prescribed, they provide safe highs;

- Most teens get prescription drugs easily and free, usually from friends or relatives;

- The most commonly abused drugs by kids are OxyContin and Vicodin; and

- Adolescents are more likely to get hooked on prescription medication than are young adults.

The study found that teens most likely to abuse prescription medications live in the west and southeast. The most common abuse occurs in the following states: Arkansas (10.3 percent); Kentucky (9.8 percent); Montana (9.6 percent); Oregon (9.3 percent); Oklahoma (9.1 percent); Tennessee (8.9 percent); and West Virginia (8.9 percent).

"There's a reason that prescription drugs are intended to be taken under the direction of a doctor: if used improperly they can be dangerous," said a recent National Institute of Drug Abuse summary.

Abuse of prescription painkillers in general is not new. In fact, such abuse has risen 400 percent between 1998 and 2008.

But now it seems, our kids have made a startling discovery - that using prescription meds to get high - is too easy and too accessible. And it's costing more of them their lives.

TheUnhivedMind - July 17, 2011 10:09 PM (GMT)

Doctors told us to abort our little girl as she wouldn't survive birth - but our little fighter has flourished

Baby daughter's condition reveals her father and older sister also at risk from tumours

Last updated at 5:50 PM on 17th July 2011
http://www.dailymail.co.uk/health/article-...flourished.html

Before she was even born, doctors said there was little chance Charley-Marie Skinner's would survive her birth.

Scans showed a massive tumour covering the entire left chamber of her heart that was restricting blood flow.

Specialists were convinced she would die in the womb and advised her parents Heather and Andy, from Darwen, Lancashire, to terminate their baby.

They refused, saying they would rather let her die naturally than go through the trauma of an abortion.

The couple were told to start making funeral arrangements and even bought a moulding kit to make prints of their baby's hands and feet as a reminder of their child.

They were forced to break the tragic news to their five other children that they would not be welcoming a new baby sister.

The couple already knew they were having a girl after full-time mother Heather, 27, went for a 20 week scan at Burnley General Hospital - but the tumour was missed.

It was spotted just over a week later when she went for another scan to check the growth of the baby because some of Heather's older children had been born abnormally small.

Heather and Andy were transferred immediately to St Mary's Hospital, Manchester, to see a specialist.

Heather said: 'When the doctor said there was nothing they could do and that I needed a termination, I just said: 'no way.'

'I didn't want an abortion. I wanted nature to take it's course. The thought of losing my baby was awful. I didn't know how to deal with it.

'We were left in a room and just cried.'

When they got home, a specialist midwife was assigned to them to help them cope with their inevitable loss.

Heather added: 'We bought a moulding kit to make prints of her hands and feet. We also got two identical blankets - one to wrap her in when she was born that we would keep and the other to bury her in.

'It was heartbreaking having to tell the children. They were so quiet.

'Every day we wondered if today would be the day she died inside me.'

But against the odds, Charley-Marie, now 19 months old, astounded medics and clung on to life.

She was born in January 2010 three weeks premature by Caesarean section at Blackburn Royal Hospital.

Heather said: 'All I wanted was to see her eyes. The doctors still said that she would die as the tumour was so big it would stop the blood flow around her heart.

'But she cried, she was breathing and doing everything that a newborn does.

'Straight away they took her down to the neonatal intensive care unit and scanned her heart. The tumour was inside the entire left chamber but somehow her little heart was still finding a way to pump blood around.'

The first 48 hours were were critical and her parents were left not knowing if their daughter would make it.

However, scans showed that Charley-Marie's heart had actually grown to make room

for the tumour.

Three days after she was born, the couple were allowed to take her home.

Council worker Andy, 51, said: 'We came home and just in the car on the drive way. We didn't know what to do next.

'We were numb. We hadn't bought anything for her - just the clothes and blanket to bury her in.'

The couple even brought their wedding forward because doctors warned Charley-Marie would not see her first birthday.

Heather said: 'We'd planned a big, white wedding in our local Cathedral but we wanted Charley-Marie there so we got married when she five-weeks-old.'

The baby was diagnosed with the rare, life threatening condition Tuberous Sclerosis, which causes benign tumours to grow on vital organs, when she was five-months-old.

There is no cure and the couple were told an operation wouldn't help.

Heather said: 'We were told it was the largest tumour they had ever seen at the hospital.'

As Tuberous Sclerosis is a genetic condition, the family asked to be tested for it.

It revealed that Andy and the couple's daughter Emma-Jean also have the condition.

Scans showed three-year-old Emma-Jean has a tumour behind her left eye and two smaller ones in her heart. Their son Alfie, two, does not have the condition.

Andy has had several benign tumours during his life but it was never known why until Charley-Marie's diagnosis.

Heather and her three children from a previous relationship - nine-year-old twins James and Jessica and Jennifer, eight - did not need to be tested.

When Charley-Marie reached her first milestone, the family celebrated with a party and fireworks.

Heather said: 'She's our little miracle. She's proved everyone wrong and shown she's a fighter.

'They have no idea how Charley-Marie's heart will cope as she gets older. They don't think that the tumour will ever shrink but may in fact grow with her. We just have to watch her and hope for the best.

'She's just started walking and sometimes she gets out of breath, which worries me, but she's like any girl her age. She's loves Peppa Pig and always has a cheeky smile on her face.

'Finding out that Emma-Jean and Andy have Tuberous Sclerosis has definitely saved their lives as now we know what to watch out for and they can be closely monitored for any problems.'

Outsourced: Clinical Trials Overseas

Published on Wednesday, July 13, 2011 by Fault Lines / Al-Jazeera
http://www.commondreams.org/video/2011/07/13

As US pharmaceutical companies move their operations abroad, India has become a testing ground for trial medicines.

US pharmaceutical companies have moved their operations overseas over the course of the past decade.

Instead of testing trial medicines on Americans, more and more of these tests are being carried out on poor people in faraway places. Russia, China, Brazil, Poland, Uganda and Romania are all hot spots for what is called clinical research or clinical trials.

Now employing CROs - or clinical research organisations - the industry is big business, worth as much as $30bn today.

Over-stenting doc loses medical license

July 14, 2011 by MassDevice staff
http://www.massdevice.com/news/over-stenti...medical-license

The Maryland physician accused of implanting hundreds of unnecessary stents has his medical license revoked by the state's Board of Physicians.

MASSDEVICE ON CALL — Maryland cardiologist Dr. Mark Midei had his license revoked by the state Board of Physicians over allegations that he implanted unnecessary coronary stents in 369 patients while working at St. Joseph Medical Center in Towson, Md.

Midei will "more likely than not" appeal the decision, his lawyers told the Baltimore Business Journal.

The story starts with a lawsuit filed by a trio of cardiac surgeons who alleged that St. Joseph and an independent practice ran a 10-year scheme to drive referrals.

The hospital and Midei were slapped with a class-action lawsuit two weeks after the hospital notified patients about the possibly unneeded procedures in January 2010. A Towson attorney later filed 101 complaints against the two alleging conspiracy, negligence and fraud.

In November 2010, St. Joseph agreed to pay $22 million to the federal government to settle a whistleblower lawsuit over the implantations, without admitting any guilt.

Midei lost his license this week after the board found that he had exaggerated the extent to which arteries were blocked in four of the five patients investigated, the paper reported. Midei has a pending lawsuit against St. Joseph, accusing them of destroying

his reputation.

Novation announces a new contract with Covidien

Group purchasing organization Novation inked a new deal with Covidien plc (NYSE: COV) for level-of-consciousness monitoring, according to a press release.

Though jilted by Medtronic (NYSE:MDT) in February, the Irving, Texas-based GPO has been quick to fill the vacancies with MDT competitors.

Medtronic made headlines — and pleased Wall Street — when it canceled several contracts for its cardiovascular and orthopedic products with Novation worth an estimated $2 billion a year. A few weeks later the Fridley, Minn.-based medical device giant spiked a deal with Premier Inc. for some of its spine products.

The med-tech goliath insisted that the cancellations weren't part of a larger strategy to side-step GPOs, but analysts suspected that the sudden decision, which sparked a Senate probe, might start a trend of device makers bucking purchasing groups.

A growing list of GPO deals over the past few months put those speculations to rest.

Health care workers and executives protest federal spending cuts on Boston's Beacon

Hill

More than 50 health care workers and executives met on Boston's Beacon Hill to protest federal funding cuts yesterday, warning that the health care cuts could devastate a key sector of the Massachusetts economy.

Protestors included members of trade groups, insurance companies and local religious organizations, the Boston Globe's Boston.com reported.

"This is not a benign game that has no consequences," said Reverend Hurman Hamilton, pastor at Roxbury Presbyterian Church and president of the Greater Boston Interfaith Organization. "This is not a video game where you can drive recklessly off a cliff and then push 'start again'... They're playing Russian roulette with the funds of health care. This is insanity."

FDA issues draft guidelines for reviewing targeting drug therapies together with the devices they rely on

Targeted treatments or drugs tailored to an individual's genetic makeup may have to rely on FDA approval for their accompanying diagnostic devices before getting a pass from the agency, according to new policy proposals published by the FDA this week.

"One reason for increasing interest is the emergence of new technologies that can distinguish subsets of populations that respond differently to treatment. These technologies are making it increasingly possible to individualize, or personalize, medical therapy by identifying patients who are most likely to respond, or who are at lower or higher risk for a particular side effect," the FDA noted.

The agency is seeking public comment on the proposal, which suggests simultaneous review of personalized drugs alongside their devices, with the exception of treatments for life-threatening conditions with no viable alternative and treatments with risks that pale in comparison to benefits, Reuters reported.

Driving simulator to help in patient rehabilitation

A driving simulator designed for patient rehabilitation has been installed at 11 Army, Navy and Veterans Affairs facilities, and the program recently expanded to Charité Hospital in Berlin, according to a press release.

The simulator, intended to provide a more engaging treatment session in a safe environment, was developed by researchers at Clemson University and simulation tech company DriveSafety.

"Our ultimate goal is to enable drivers to maximize their independence," said Clemson psychology professor and researcher Johnell Brooks. Therapists using the simulator

can work with patients on treatment areas including cognitive, perceptual and physical skills.

One in ten adults depressed: Prescriptions quadruple in the last 20 years

More than 39 million scripts written for anti-depressants in 2009 compared with 9 million in 1991
GPs accused of handing out pills rather than choosing therapy

Last updated at 1:08 PM on 15th July 2011
http://www.dailymail.co.uk/health/article-...-depressed.html

One in ten adults is suffering from depression and four times as many anti-depressant drugs were handed out over the last 20 years, according to figures.

More than 39 million prescriptions for anti-depressants were written in 2009 compared with nine million in 1991, said the Office for National Statistics (ONS).

The soaring number of prescriptions shows that doctors prescribing drugs to treat depression has increased more than the number of adults being diagnosed with these conditions the ONS said in the latest issue of its study, Social Trends.

Mental health groups that GPs had become reliant of handing out powerful medications with potentially damaging side-effects rather than referring patients to therapy, which can more effective.

The study found that in 2009/10 in England, more than one in 10 people were diagnosed with depression, while the condition affected 11.5 per cent of the population of Northern Ireland, 8.6 per cent in Scotland and 7.9 per cent in Wales.

In England, in 2007, around one in six adults met the diagnostic criteria for at least one

common mental disorder (CMD). These are mental conditions that cause marked emotional distress and interfere with daily function, such as different types of depression and anxiety.

The study found that women are more likely than men to have a CMD with 21.5 per cent of females suffering with the condition.

Mental health problems can ultimately lead people to commit suicide - however, between 1991 and 2009, suicides in the UK fell among all adult age groups, and both males and females.

'Antidepressants are not recommended as the first port of call for mild to moderate depression - watchful waiting and ‘talking therapies’ are,' Bridget O'Connell, head of information at the mental health charity, Mind, told the Telegraph.

'Unfortunately, we know that in many cases a lack of access to talking treatments, such as counselling, means that doctors are left with little choice but to prescribe medication.'

Philip Hodson, a fellow of the British Association for Counselling and Psychotherapy, added: 'There is a role for anti-depressant therapy in conjunction with talking therapy but the fact remains that probably a third of all patients get nothing from anti-depressants. It is a cheap alternative to prescribe but in the long term it is a false economy.'

In 1991, 4,670 males committed suicide and this decreased by 7.9 per cent to 4,300 in 2009 while among females, suicides fell 16.7 per cent from 1,650 in 1991 to 1,370 in 2009.

Social Trends confirms that life expectancy continues to rise. In 2009 in the UK, males at birth could expect to live more than 78 years and females more than 82 years. In both cases this is 20 years more than in 1930.

One of the main reasons for the change is the considerable decrease in infant and neonatal mortality rates which were at their lowest recorded level last year since records began in 1930.

As well as living longer, both men and women are staying healthy and disability free for more of their lives.

The most recent data show that men in the UK aged 65 can expect to live more than 17 years on average and spend over 10 of these free of ill-health or disability, while women aged 65 can expect to live a further 20 years, spending more than 11 years free of ill-health and more than 10 years free of disability.

For the first time, cancer was the most common cause of death for both men and

women in the UK in 2009. Lung cancer had the highest cancer mortality rate for both sexes.

The highest incidence of cancer in the UK was that of the prostate for men and of the breast for women. Improved screening programmes may have identified more cases for both these cancers.

Between 2000/01 and 2009 the percentage of both men and women in Great Britain who were regular smokers fell.

However, a 2008/09 survey showed that 60 per cent of men and 52% of women in Great Britain were overweight or obese.

Description: *deaths*

TheUnhivedMind - July 13, 2011 04:16 AM (GMT)

Hospitals warned over Deep Vein Thrombosis (DVT) deaths

By Melanie Abbott
13 July 2011 Last updated at 01:46
http://www.bbc.co.uk/news/health-14124441

English hospitals face being "named and shamed" for not screening patients for deep vein thrombosis (DVT), NHS medical director Sir Bruce Keogh has said.

NHS trusts are required to screen 90% of hospital patients for the condition.

But fewer than half are managing this, according to the NHS, which estimates 25,000 people die each year from hospital-acquired DVT.

One assessed just one in four patients and another barely one in 10. Sir Bruce said this was "absolutely disgraceful".

"In the sort of NHS that I want to work in and be treated in, I don't think that level of practice is acceptable."

DVT involves blood clotting in the legs and can be fatal if a clot breaks off and travels in the blood up to the lungs and causes a blockage, known as a pulmonary embolism.

Since April 2010, trusts in England could be fined up to 0.3% of their income for failing to meet the guidelines. None has been fined yet, but they face fines for the next quarter if they do not meet the target, Sir Bruce Keogh told BBC Radio 4's Face the Facts.

He also says he will name the worst performers if they continue to do badly.

Mrs Dye's legs pictured the day before she died

Giselle Dye's mother Giska was admitted to Worthing Hospital in Sussex in January following a fall and with suspected internal bleeding. She was not assessed for DVT, which killed her.

"To my mind it's such a simple procedure they should be able to get this right," said Giselle. "If they had done the risk assessment they might have been able to make sure my mother's legs were elevated."

"My mother was left sitting in a chair. The carer took a photograph the day before she died and her legs from the knee down were dark purple. Your legs don't go dark purple unless you have been sitting for a very long time without moving."

Western Sussex Hospitals Trust, which runs Worthing Hospital, has apologised for not assessing Mrs Dye and for other shortcomings in the care provided.

But director of nursing and patient safety Cathy Stone said: "I am unable to talk directly about Mrs Dye's case but it is important to remember that treatment for VTE (vein thromboembolism) is not always appropriate."

Clot risk factors
Reduced mobility for three or more days
Surgery
Combined oral contraceptive pill
Infection
Obesity
Pregnancy
Cancer
Heart/circulation problems

The trust is now assessing 93% of patients and is aiming higher.

Risk factors for DVT include being immobile or bed-ridden for a long time and undergoing extensive surgery.

Preventative measures include blood-thinning drugs and compression stockings. But medication may not be appropriate in cases of internal bleeding or poor circulation.

Keeping patients mobile and hydrated is also important.

"Preventative treatment does reduce almost to zero the incidence of DVT," said John Black, the outgoing president of the Royal College of Surgeons.

Compression stockings and pneumatic compression devices can prevent a clot

"This is the number one clinical priority for me and my colleagues," said Sir Bruce.

"Some 25,000 people die a year from something that is preventable. The same sort of number which die from stroke and other major conditions which are far less preventable.

"Of course this is fairly early on in this initiative but we need to be firm about those that are failing to improve."

Radio 4's Face the Facts investigates DVT scans at 12.30 BST on Wednesday 13 July, repeated at 2100 BST on Sunday 17 July, in the first of a new series of investigations.

Death doctor can keep working

http://www.thisislondon.co.uk/standard/art...keep-working.do

A blundering German doctor who killed a British man with an injection of painkillers has been fined £6,000 in his homeland - but can carry on practising.

Daniel Ubani, 68, was a locum at an out-of-hours service in Cambridgeshire in 2008 when he gave David Gray, 70, a diamorphine overdose. An inquest ruled it was unlawful killing.

But in a deal with German prosecutors, Ubani, who lives in the town of Witten, was fined and given a nine-month suspended jail sentence.

Lung transplant patient dies after 'height error' sees surgeons force oversized organ into her chest

By Martin Delgado And Jo Macfarlane
Last updated at 10:03 PM on 9th July 2011
http://www.dailymail.co.uk/news/article-20...rgan-chest.html

A lung transplant patient died after medical staff made a mistake in recording the height of the donor – and then failed to report the matter to the coroner.

A specialist nurse fed the wrong figure into the NHS transplant service's computer system, leading surgeons to force an organ which was too big for the patient into her chest.

The exterior of the Harefield Hospital in west London where a woman died following a mistake by medical staff over a lung transplant

The mistake happened at Harefield Hospital in West London, where a similar incident in 2007 was followed by a two-year period in which managers took no action to suspend the consultant involved.

During that time the consultant bungled a heart bypass on an elderly man who bled to death and then lied to the patient's family.

After the latest mistake, transplant service officials were told the death had been referred to the coroner but that he had decided not to hold an inquest.

They were also assured the woman's family had refused permission for a post-mortem

examination.

But it later turned out the coroner had not been informed, although he should have been as an inquiry concluded the death was caused by human error.

The woman, who was suffering from advanced bronchial disease, underwent a double lung transplant at Harefield last October. She was 151cm tall and the donor's height was recorded electronically as 156cm.

The information was stored on the Electronic Offering System – the computerised organ-matching service run by the NHS Blood and Transplant Service (NHSBT).

The right lung was transplanted successfully but the left one had to be compressed to make it fit. And when a member of the transplant team checked the measurements later, it was discovered that the donor had actually been 165cm tall. After initially making progress, the woman developed pneumonia and died two months later.

Surgeons performing a heart transplant operation at the Harefield Hospital

NHSBT, which investigated the incident, said in a report: 'The transplant surgeon considers that the size of the lungs was a significant contributory factor in the patient's death.'

A doctor who has also served as a coroner told The Mail on Sunday: 'It is usual for operation-related deaths to be referred to the coroner. But health care professionals are under no professional or legal obligation to do so.'

Katherine Murphy, chief executive of the Patients Association, said: 'This must have been a terrible experience for the family.

'When attempts are made to cover up serious incidents like this, public and patient trust hits rock bottom.'

Hamzah Butt aged 16 from Sudbury,an active sportsman who underwent a heart transplant as a 10 day old baby at the Harefield Hospital, north west London. Hamzah is seen here at Harefield hospital Aged three.

Harefield Hospital would not comment on the case.

Anthony Clarkson, assistant director of organ donation at NHSBT, said the service had offered its sincere condolences to the woman's family.

New checking systems have been introduced and heights are now recorded in both metric and imperial measures.

Neither the surgeon nor the patient in the most recent case has been identified.

Painful deaths of two mothers sparks hospital probe after coroner condemns 'gross system neglect'

Last updated at 5:22 PM on 10th July 2011
http://www.dailymail.co.uk/news/article-20...r-confused.html

A major investigation has been ordered into a series of deaths at a hospital amid accusations of 'gross systems neglect'.

A coroner has announced an inquiry into care at Hinchingbrooke Hospital, in Huntingdon, Cambridgeshire, after the death of woman who was twice sent home without vital surgery.

An inquest revealed that care provided for Patricia Spooner, 67, fell 'well short of an acceptable standard' before she died of multiple organ failure at the hospital.

The mother-of-four's death came shortly after Jayne Smith, 51, died 'in agony' after surgery for haemorrhoids went wrong last September.

An inquest concluded Mrs Spooner died from a known complication of surgery 'compounded by gross systems neglect' at the hospital.

Assistant Deputy Coroner Dr Sam Bass heard she was admitted to the hospital with abdominal pain last July but sent home without surgery.

The mother-of-four's death came shortly after Jayne Smith, 51, died 'in agony' after surgery for haemorrhoids went wrong last September.

An inquest concluded Mrs Spooner died from a known complication of surgery 'compounded by gross systems neglect' at the hospital.

Dr Bass was told she was admitted to the hospital with abdominal pain last July but sent home without surgery.

She was readmitted in August and her conditioned deteriorated and she needed a colostomy in September.

But staff failed to act on indicators showing she was getting worse and she died of multiple organ failure on October 3.

Dr Bass criticised the hospital care as 'poor and confused'.

Jayne's widower Glen, 59, said today an inquiry ordered by coroner David Morris was 'long overdue'. His wife, a mother-of-two, from Somersham, died from multiple organ failure.

He said: 'My wife died as a result of basic errors made in her care and I've always hoped that no-one else would face the same problems.

'This investigation will undoubtedly go some way to providing the reassurances over safety that my family have called for since the death of Jayne.

'It is a huge relief to know that the issues at the hospital have not been ignored.'

View Full Version: Prescription Drugs Cause More Overdoses in U.S.

Title: Prescription Drugs Cause More Overdoses in U.S.
Description: *Than Heroin and Cocaine*

TheUnhivedMind - July 8, 2011 06:09 PM (GMT)

Prescription Drugs Cause More Overdoses in U.S. Than Heroin and Cocaine

By Oliver Renick - Jul 7, 2011 5:25 PM GMT+0100
http://www.bloomberg.com/news/2011-07-07/p...nd-cocaine.html

Accidental drug overdoses from prescription pills have more than doubled in the past decade as deaths from illegal drugs decreased, a Florida study found.

Prescription medications were implicated in 76 percent of all overdose deaths in Florida between 2003 and 2009, while illicit drugs like cocaine and heroin were present in 34 percent of deaths, according to data compiled by the Centers for Disease Control and Prevention in Atlanta. Ten percent of overdoses came from a mix of both illegal and prescription drugs.

Unintentional poisoning is the second leading cause of injury death in the U.S. after automobile accidents, accounting for 29,846 deaths nationwide in 2007, the CDC's Morbidity and Mortality Weekly Report, said. In 2007, the U.S. government began the Prescription Drug Monitoring Program, a $9 million program that provides state funding for recording and monitoring prescription drug use.

"By 2009, the number of deaths involving prescription drugs was four times the number involving illicit drugs," the report said. "These findings indicate the need to strengthen interventions aimed at reducing overdose deaths from prescription drugs."

The number of annual deaths from lethal concentrations of prescription medicines increased 84 percent from 2003 to 2009, while deadly overdoses of illegal drugs fell 21 percent. Deaths from the narcotic painkiller oxycodone and anxiety medicine alprazolam, sold under the brand name Xanax, more than tripled.

Availability

“The sense is that the widespread availability of prescription drugs is causing people to switch from illicit drugs like cocaine and heroin,” Leonard Paulozzi, a medical epidemiologist at CDC’s Injury Center, said in a phone interview.

Paulozzi said most prescription overdoses were in men between the ages of 45 and 54.

Heroin death rates dropped 62 percent in the period. Cocaine overdoses increased until 2007, and declined in 2008 and 2009, researchers found. Methadone rates rose 79 percent, the study said.

The federal government spent $15.1 billion on the so-called War on Drugs in 2010, according to the Office of National Drug Control Policy. Efforts to combat illegal drug use included prevention, treatment, law enforcement and interdiction.

Heart Procedure to Clear Arteries May Be Misused 12% of Time, Study Finds

By Michelle Fay Cortez - Jul 5, 2011 9:00 PM GMT+0100
http://www.bloomberg.com/news/2011-07-05/h...tudy-finds.html

A procedure used to clear clogged arteries is done inappropriately in more than one in 10 patients getting elective treatment, according to a study in the Journal of the American Medical Association.

The report is the first to examine whether the procedure known as angioplasty meets new guidelines for appropriate care. It found almost everyone needing urgent care to restore blood flow to the heart, such as those having a heart attack, received proper treatment, while 12 percent of those getting elective care might not have needed the procedure.

Most patients who were treated inappropriately had mild disease, few symptoms or weren't taking medicines that may have helped them avoid the surgery, said senior author John Spertus, clinical director of outcomes research at St. Luke's Mid America Heart Institute in Kansas City, Missouri. Sales of stents used to hold open the arteries, made by Boston Scientific Corp. (BSX), Medtronic Inc. (MDT) and Abbott Laboratories (ABT), plummeted in the past four years after studies suggested they were being overused.

"Some hospitals had very large inappropriate rates, where as many as 1 in 5 cases didn't have enough evidence to support it," Spertus said in a telephone interview. "That's an opportunity for hospitals to reflect on their decision-making process and consider if some of the patients they treat with angioplasty might be better treated with medicines or bypass surgery," he said.

There are about 600,000 angioplasty procedures done each year in the U.S., the researchers said. The analysis was conducted on more than 500,000 patients treated at 1,091 hospitals across the nation from July 2009 to September 2010. The study found 71 percent of the patients were treated for urgent conditions including heart attacks or severe chest pain. In those cases, 99 percent of the care was appropriate.

Johnson & Johnson (JNJ), the pioneer in drug-coated heart stents, said last month it plans to stop selling the devices after it failed to keep up with rivals in the $4 billion global market and competition eroded prices.

View Full Version: Big Pharma's Latest Shady Ploy to Sell Depression

Title: Big Pharma's Latest Shady Ploy to Sell Depression
Description: *Drugs That People May Not Need*

TheUnhivedMind - July 6, 2011 01:32 AM (GMT)

Big Pharma's Latest Shady Ploy to Sell Depression Drugs That People May Not Need

The drug industry is coming up with ever more clever ways to pump Americans full of drugs they may not need -- and that may not even work.

July 4, 2011 |
http://www.alternet.org/story/151513/big_p...ed_?page=entire

The discovery that many people with life problems or occasional bad moods would willingly dose themselves with antidepressants sailed the drug industry through the 2000s. A good chunk of the $4.5 billion a year direct-to-consumer advertising has been devoted to convincing people they don't have problems with their job, the economy and their family, they have depression. Especially because depression can't be diagnosed from a blood test.

Unfortunately, three things dried up the depression gravy train for the drug industry. Blockbusters went off patent and generics took off, antidepressants were linked with gory and unpredictable violence, especially in young users and — they didn't even work, according to medical articles!

That's when the drug industry began debuting the concept of "treatment resistant depression." It wasn't that their drugs didn't work (or you didn't have depression in the first place), you had "treatment resistant depression." Your first expensive and dangerous drug needed to be coupled with more expensive and dangerous drugs because monotherapy, one drug alone, wasn't doing the trick!

You've got to admire the drug industry's audacity with this upsell strategy. Adding drugs to your treatment resistant depression triples its take, patients don't know which drug is

working so they'll take all of them and the defective drugs are exonerated! (Because the problem is you.)

Now the drug industry has a new whisper campaign to keep the antidepressant boat afloat. Your depression is "progressive."

Once upon a time, when depression was neither seasonal, atypical, bipolar or treatment resistant, it was considered to be a self-limiting disease. In fact, just about the only good thing you could say about depression was it wouldn't last forever.

But now, the drug industry is giving depression the don't-wait scare treatment like coronary events (statins), asthma attacks ("controller" drugs) and thinning bones (Sally Field). If you don't hurry and take medication, your depression will get worse!

"Depressive episodes become more easily triggered over time," floats an article on the physician Web site Medscape (flanked by ads for the antidepressant Pristiq.) "As the number of major depressive episodes increase, the risk for subsequent episodes is predicted more from the number of prior episodes and less from the occurrence of a recent life stress." The article, unabashedly titled "Neurobiology of Depression: Major Depressive Disorder as a Progressive Illness," is written by Vladimir Maletic who happens to have served on Eli Lilly's Speaker's Bureau, says the disclosure information, and whose co-authors are each employees and/or Lilly shareholders.

On WebMD, a sister site to Medscape, the depression sell is even less subtle. An article called Recognizing the Symptoms of Depression, smothered with five ads for the Eli Lilly antidepressant, Cymbalta, submits, "Most of us know about the emotional symptoms of depression. But you may not know that depression can be associated with many physical symptoms, too."

Depression may masquerade as headaches, insomnia, fatigue, backache, dizziness, lightheadedness or appetite problems mongers the article. "You might feel queasy or nauseous. You might have diarrhea or become chronically constipated." And here, you thought it was something you ate!

The danger with these symptoms says the article is that you would fail to diagnose yourself as suffering from a psychiatric problem and buy an over-the-counter drug like a normal person. "Because these symptoms occur with many conditions, many depressed people never get help, because they don't know that their physical symptoms might be caused by depression. A lot of doctors miss the symptoms, too."

But when head and backaches aren't labeled as depression, the drug industry make no money and insurance rates could stop climbing from over-treatment with unnecessary, expensive and dangerous psychoactive drugs!

To prevent such goring of marketshare, the article (whose content was "selected and

controlled by WebMD's editorial staff and is funded by Lilly USA," an original WebMD financial partner according to the Washington Post) counselsworry about physical symptoms. "Don't assume they'll go away on their own." Symptoms may "need additional treatment" and "some antidepressants, such as Cymbalta and Effexor, may help with chronic pain, too."

Before direct-to-consumer advertising, the health care system was devoted to preventing over-treatment and assuring patients they were probably okay. Who remembers "Take two aspirin and call me in the morning"? Now patients are assured they probably aren't okay but probably have a progressive disease. Luckily their disease can be treated with progressive prescriptions from pharma

Doctors miss life-threatening brain tumour and cyst - even though they were the size of an ORANGE

Brain tumour diagnosed as an infection, cluster headaches and even a deviated septum

By Daily Mail Reporter
Last updated at 11:54 AM on 6th July 2011
http://www.dailymail.co.uk/health/article-...ize-ORANGE.html

Doctors failed to spot Terry Purkiss's life-threatening brain tumour and cyst - even though they were the size of an orange.

They repeatedly missed the symptoms over six months and when his condition was finally spotted he was told he was weeks from death unless he had urgent surgery.

He first complained to his GP about crippling headaches in January. He went on to visit three different hospitals, on one occasion in an ambulance.

He was in agony, unable to walk straight and lost vision in one eye. But again and again he was given antibiotics or painkillers and sent home.

Finally he had an appointment with a neurologist booked by his GP, who found the brain tumour and cyst the size of an orange.

The tumour has now been removed and Mr Purkiss is recovering at home in Thurrock, Essex.

His partner Julia Bathie, 43, said the couple have been 'on a roller coaster to hell and

back' in the last few months.

She said: 'I'm so angry at the way Terry was treated. He was just fobbed off by doctors and endured months of pain when he didn't need to.'

Before the brain tumour was picked up, Mr Purkiss saw two GPs, visited Basildon A&E once and Queen's A&E in Romford three times, during which he had a CT scan. He was also taken to Broomfield Hospital in Chelmsford.

Over the six months he was incorrectly diagnosed with an infection, cluster headaches and even the common nose disorder of a deviated septum.

The life-threatening condition wasn't picked up until he went to an appointment with a neurologist at Orsett Hospital in June, that had been booked in as a precaution by his GP back in January.

The neurologist shined a light in Terry's eyes and immediately picked up on the tumour.

An urgent MRI was then requested, and the benign tumour and cyst were removed at Queen's Hospital.

Julia said: 'The doctors told him the cyst was the size of a Jaffa orange, and was one of the biggest he had ever seen.

'They said the tumour and cyst were three millimetres away from his optic nerve, he could have lost his sight, or been left paralysed.

'He would have been dead within four weeks if they hadn't got it out, because of the pressure it was putting on his brain.

'Despite what he went through before, we would like to thank Mr Low the surgeon who saved his life.'

Mr Purkiss is now recovering at home after the operation, he has since complained to the Patient Advice and Liaison Service, and Thurrock MP, Jackie Doyle Price, about the care he received.

Pat Trinnaman, spokesman for Basildon Hospital said: 'We are unable to go into details about an individual's treatment, but it would appear that once this patient saw one of the trust's specialists, his condition was swiftly diagnosed and treated.

'Talking generally, patients coming to A&E with a headache or any other long-term pain or problem, would be assessed and have appropriate tests carried out.

'A doctor would refer a patient for an x-ray or a scan only if there was a clinical

indication for one.

'It would be clinically wrong - all imaging carries a degree of risk - and financially and logistically impossible to do so as a matter of course.'

Nicola Eves, spokesman for Queen's Hospital, added: 'We have not received a complaint from Mr Purkiss regarding his care, but apologise if he feels that mistakes were made.

'We are pleased that we successfully managed to remove his brain tumour and wish him a speedy recovery.

'If a complaint is received by the trust then we always carry out a full investigation.'

View Full Version: Dentists overusing expensive veneers 'after

Title: Dentists overusing expensive veneers 'after
Description: *diagnosing imaginary condition'*

TheUnhivedMind - July 5, 2011 10:43 PM (GMT)

Dentists overusing expensive veneers 'after diagnosing imaginary condition'

Last updated at 10:28 AM on 5th July 2011
http://www.dailymail.co.uk/health/article-...rn-experts.html

Dental patients are undergoing unnecessary work because dentists 'overuse' expensive crowns and veneers, experts say.

People who undergo such cosmetic treatments are often victims of a 'double mugging', according to Martin Kelleher, consultant in restorative dentistry at King's College London.

'These unfortunate patients are being robbed twice - first of their money and again of their enamel and dentine,' he wrote in the Faculty Dental Journal.

Necessary work? Consultant Martin Kelleher said bleaching and bonding should be considered before veneers

He said patients were having their teeth destroyed because some dentists diagnose them with 'porcelain deficiency disease'.

'This is a newish disease, identified by some dentists who also seem to think that teeth suffer from 'hyperenamelosis' (an excess of enamel),' he said.

'It probably goes without saying that both of these conditions are imaginary yet it does appear to me, at times, that they are perceived to exist by some 'cosmetic' dentists.'

Mr Kelleher said patients can end up with most of their original teeth removed to make

way for porcelain or ceramic veneers and crowns.

Up to 73 per cent of the tooth's structure is removed to fit a ceramic crown, yet there are question marks over long-term benefit.

Research suggests around half of veneers are no longer in place, require further treatment or are in a poor condition after a decade.

'All clinicians should place the long-term health of their patients first,' Mr Kelleher went on.

'Porcelain veneers have their place in responsible restorative dentistry when provided by suitably trained and qualified individuals but I believe that other safe and proven cosmetic treatments, like bleaching and bonding, should be considered before the destructive ones.

'Patients must understand that extensive porcelain veneer or crown treatment is not a risk-free shortcut to a perfect smile.'

Kathryn Harley, dean of the faculty of dental surgery at the Royal College of Surgeons, said: 'It's alarming that there has been a significant rise in complaints about dental veneers over the past five years; that fact alone suggests that patients do not fully understand the risks, outcome and long-term maintenance of porcelain veneers.

'We would welcome more in-depth research into this area so that current and future dentists are armed with the best evidence in order to recommend the appropriate treatment."
Dr Susie Sanderson, chair of the British Dental Association's executive board, said: "Every patient is different and while veneers are an appropriate treatment in some cases, in others they are not.

"In order to ensure that appropriate treatments are provided, decisions should be made between dentist and patient on the basis of a full understanding of the range of options available, what they involve and their implications."

View Full Version: Nottingham City Hospital doctor 'exposed himself

Title: Nottingham City Hospital doctor 'exposed himself
Description: *to Staff*

TheUnhivedMind - July 5, 2011 05:38 PM (GMT)

Nottingham City Hospital doctor 'exposed himself to staff'

A doctor indecently exposed himself to colleagues at a Nottingham hospital, a medical disciplinary panel has heard.

4 July 2011 Last updated at 20:37
http://www.bbc.co.uk/news/uk-england-notti...mshire-14022501

Dr Adeniran Yesufu, who worked at the City Hospital, was allegedly seen carrying out indecent acts three times in late 2007 and early 2008.

A General Medical Council (GMC) fitness to practise panel was told several employees described a man matching his appearance.

Dr Yesufu, who was not present at the hearing, denies the accusations.

The incidents were said to have taken place in outdoor smoking areas within the hospital grounds between 31 December 2007 and 6 January 2008.

Terence Rigby, counsel for the GMC, said CCTV footage and stills showed Dr Yesufu to be in the near vicinity at the time when the acts took place.
'Same description'

He said: "Was it Dr Yesufu or was it not? The GMC say that it is. He was there or thereabouts in close proximity on all three occasions in distance and time.

"Generally in all important respects it was the same description and putting that together by the identification of the witnesses, we can conclude that the man on each

occasion was in fact Dr Yesufu."

The doctor, no longer employed by Nottingham University Hospitals NHS Trust, was not legally represented at the hearing.

Mr Rigby told the panel sitting in Manchester that Dr Yesufu had sent a series of emails to the GMC with comments and arguments about what he pointed out were inconsistencies with the evidence against him.

The GMC alleges his fitness to practise is impaired because of his misconduct.

The hearing is scheduled to last five days.

TheUnhivedMind - July 5, 2011 04:26 PM (GMT)

The anti-depressants epidemic: One in three women take pills to relieve despair during their life

Last updated at 1:12 PM on 5th July 2011
http://www.dailymail.co.uk/health/article-...ying-study.html

One in three women have taken anti-depressants at some point in their lives, researchers say.

The study by women's campaign group Platform 51 found that 48 per cent of women currently using the drugs have taken them for at least five years, while 24 per cent have taken them for 10 years or more.

Meanwhile, 24 per cent of women on anti-depressants have waited a year or more for a review, the research found.

The charity, which commissioned a survey of more than 2,000 adults in England and Wales, said the figures pose 'worrying questions' about the appropriateness of prescriptions.

Platform 51's director of policy, campaigns and communications Rebecca Gill, said: 'These shocking figures reveal an escalating crisis in women's use of anti-depressants.

'We know from working with women and girls in our centres that anti-depressants have a role to play but they are too readily prescribed as the first and only remedy.

'Three in five women are offered no alternative to drugs at their reviews and one in four currently on anti-depressants have waited more than a year for review.

ANTI-DEPRESSANTS 'INCREASE AUTISM RISK'

Pregnant women who take SSRI anti-depressants early on in pregnancy increase their child's risk of having autism, a study shows.

Autism was reported in 6.7 per cent of children who had been exposed to SSRI drugs - selective serotonin reuptake inhibitor - in the womb, compared to 3.3 per cent who hadn't.

Study author Dr Lisa Croen from the Kaiser Permanente Division of Research in California, said: 'Our results suggest a possible, albeit small, risk to the unborn child.'

However, she said this should be balanced against the risk to the mother if her mental disorder is left untreated.

The study of 1,805 children was published in the Archives of General Psychiatry.

'Our research suggests that there is still a huge stigma attached to poor mental health. With so many women not telling their families, it is clear that women fear they will be judged on the state of their mental health.

'The current NICE guidelines are not being followed: women want more checks to make sure the medication use is right for them and they want more choice when it comes to receiving treatment.'

Platform 51 is calling on health authorities to launch a review into the guidelines for anti-depressant use and prescription.

The charity's research found 57 per cent of women who have taken anti-depressants were not offered any alternatives to drugs when they were prescribed.

It also found 18 per cent kept their prescription a secret from their family and one in 10 did not tell their partner.

People with depression have a chemical imbalance in the brain. Anti-depressants work by increasing the levels of chemicals called neurotransmitters, such as serotonin and dopamine. As it takes time to increase the levels the full effects are usually not felt until after two to four weeks.

While anti-depressants may relieve some of the physical feelings of the condition, they won't tackle what may have caused the depression in the first place. Therefore experts advise doctors to prescribe the drug in combination with therapy.

Bridget O'Connell, Head of Information at Mind told Mail Online: 'Antidepressants can

play a crucial role in helping many people manage a mental health problem.

'However, they are not recommended as a first port of call for mild to moderate depression so it is concerning that so many women are not being offered any alternative treatments, such as talking therapies, when antidepressants are initially prescribed.

Common symptoms of anti-depressants (Royal College of Psychiatrists)Anti-depressant Common symptoms (may wear off)

Tricyclics such as imipramine
Dry mouth, a slight tremor, fast heartbeat, constipation, sleepiness, and weight gain

SSRIs such as citalopram and paroxetine
Heightened anxiety and nausea in first fortnight. May disrupt sexual function

SNRIs such as venlafaxine
Same as SSRIs. Can also increase bllod pressure

MAOIs such as isocarboxazid
Rarely prescribed as can cause dangerously high blood pressure

NASSAs such as mirtazapine
Same as SSRIs. May make you feel drowsy

'Different people will find that different treatments work for their depression and it may be that some women find that taking antidepressants for upwards of ten years is necessary.

'Current guidance is that antidepressants should continue to be taken for at least six months after the depression has lifted but that they should not be taken indefinitely, as long-term use increases the risk and severity of withdrawal symptoms after usage has stopped.'

View Full Version: GPs pocket millions from secret taxpayer-funded

Title: GPs pocket millions from secret taxpayer-funded
Description: *scheme*

TheUnhivedMind - July 5, 2011 12:34 AM (GMT)

GPs pocket millions from secret taxpayer-funded scheme

A secretive taxpayer-funded scheme is allowing GPs to pocket windfalls running into millions of pounds from their surgeries, an investigation has found.

By Heidi Blake, Holly Watt and Emma Slater
6:00AM BST 04 Jul 2011
http://www.telegraph.co.uk/health/healthne...ded-scheme.html

Doctors are permitted to buy buildings for their surgeries which are then “rented” back to the Department of Health, often for far more than the mortgage repayments. The surgery is then sold off – either to another doctor or a developer – when the GP retires and they are allowed to keep the profits from the sale of the building.

An investigation by this newspaper and the Bureau of Investigative Journalism has uncovered details of the secretive scheme, which currently costs the Government more than £630m each year.

GPs have boasted that they have made six or even seven figure windfalls from the system – the costs of which have soared by more than 70 percent in just six years.

The terms of the arrangement are even more generous than the controversial system which allowed MPs to profit from the sale of taxpayer-funded properties.

A typical surgery may have been bought for £150,000 a decade ago. The GP then could then claim tens of thousands of pounds in “notional rent” annually which is used to clear the mortgage. They could then sell the property today for more than £500,000, and often substantially more, and keep the profit.

The disclosure is set to lead to renewed public concern over the taxpayer-funded largesse enjoyed by some GPs, amid reports that the best-paid doctors can earn far more than the Prime Minister.

Last week doctors still voted to consider striking in a row over pensions – which would be the first industrial action for more than 30 years.

The Department of Health is the only major Government department to be protected from spending cuts, although many experts believe there is a significant potential for cost savings to be made. Under reform plans, GPs are to be given even more control over health budgets.

The NHS paid GPs £630m in rent for their privately-owned surgeries last year, an increase of 70 per cent since 2004, when the figure stood at £370m.

The total cost to the Department of Health in the past five years has been £2.5bn.

Around 86 per cent of GP premises are either owned by doctors or by private companies and are paid for through the “notional rent” scheme.

The British Medical Association actively encourages its members to buy their own surgeries and promises that the investment will yield “real capital gains”.

James Wharton, a Conservative member of the Commons Public Accounts committee, accused GPs of "fiddling the system" and said he would ask the National Audit Office to open a "full and comprehensive investigation" into surgery funding.

"People are obviously going to be extremely concerned to see that taxpayers' money is being used in this way. For too long these people have profited too easily and the expense of the taxpayer and the government should look at this system and see whether it can be changed to ensure better value for money," he said.

"I will be writing to Margaret Hodge, the chair of the Public Accounts Committee, to request that she asks the National Audit Office for a full and comprehensive investigation into this system."

A Department of Health spokesperson said: "This system incentivises GPs to expand and improve services so that people have proper access to modern facilities. It represents the cost to GPs of renting or owning the premises, and is a cost that would met by government direct if GPs did not."

Description: *strokes'*

TheUnhivedMind - July 4, 2011 11:55 PM (GMT)

Taking ibuprofen every day 'can raise the risk of strokes'

By Sophie Borland
Last updated at 12:25 AM on 5th July 2011
http://www.dailymail.co.uk/health/article-...sk-strokes.html

Painkillers including ibuprofen and common arthritis treatments can drastically increase the risk of strokes, warns a major study.

Patients taking the drugs daily are more likely to develop an irregular heartbeat - which can be deadly.

Research involving 30,000 patients found that the group of treatments which includes ibuprofen raised the risk of this complication by 40 per cent.

And a group of painkillers known as Cox-2 inhibitors, which include Celebrex and other common drugs for arthritis, increased the likelihood by 70 per cent.

Research has already shown that ibuprofen and other non-steroidal anti-inflammatory drugs, known as NSAIDs, and Cox-2 inhibitors increased the risk of heart disease.

Certain treatments have been taken off the market because the risk was so high.

But this is the first time scientists have found that the drugs raised the likelihood of abnormal heart rhythm - known as atrial fibrillation - which can lead to a stroke.

The study in Denmark looked at 32,602 patients who had been diagnosed with atrial fibrillation from 1999 to 2008.

It found that patients who had been using drugs such as ibuprofen every day within the previous two months were 40 per cent more likely to develop an abnormal heart rhythm.

Those who started taking Cox-2 inhibitors daily within the previous two months were 70 per cent more likely to develop the condition.

The study published online in the British Medical Journal found that the elderly, those with rheumatoid arthritis or with chronic kidney disease were at a particularly high risk.

It also found, however, that patients who had been on the drugs for longer than two months seemed to be less at risk than those who had just started taking them.

The exact numbers of people taking both types of drugs regularly is not known.Experts last night stressed that the risk was low.

Natasha Stewart, senior cardiac nurse at the British Heart Foundation, said: 'This study suggests a link between common pain relief medicines and an increased risk of developing particular abnormal heart rhythms, known as atrial fibrillation or atrial flutter.

'However it’s important to note that the overall risk from these drugs and abnormal heart rhythms is still small. Those most at risk were the elderly or people with other illnesses, such as chronic kidney disease or rheumatoid arthritis.

'The study also noted that NSAIDs, which include ibuprofen, carried a lower risk than drugs in the COX 2 inhibitor group.

'Doctors are rightly already cautious about prescribing COX 2 inhibitors for people with heart and circulatory disease or at high risk of developing it.

'As with any drug, there are risks and benefits to be had. Talking these through with your GP will help ensure the benefits outweigh any risks involved.'

QUIT-SMOKING DRUG WARNING

THE POPULAR anti-smoking drug Champix could raise the risk of heart attacks and strokes, scientists warn.

A review of 14 studies found that those trying to quit using the drug were almost twice as likely to suffer heart problems in the coming year as those who took dummy pills. Most had no underlying cardiac problems at the start. Researchers believe the drug may disrupt the heartbeat.

Champix was prescribed almost one million times in the UK last year.

Makers Pfizer disputed the report in the Canadian Medical Association Journal.

Title: IVF procedure 'may increase risk of Down's syndrom

TheUnhivedMind - July 4, 2011 05:11 PM (GMT)

IVF procedure 'may increase risk of Down's syndrome'

By Michelle Roberts
4 July 2011 Last updated at 02:44
http://www.bbc.co.uk/news/health-13992232

Drugs used in IVF for older women may increase their risk of having a baby with Down's syndrome, experts say.

Doctors already know that the chance of having a baby with the genetic condition goes up with the age of the mother, especially for those over 35.

Now UK researchers, who looked at 34 couples, think drugs used to kick-start ovaries for IVF in older women disturb the genetic material of the eggs.

Work is now needed to confirm their suspicions, a meeting in Sweden heard.

And they do not yet know the magnitude of risk, but say it could also cause many other genetic conditions, not just Down's.

The findings, presented at the European Society of Human Reproduction and Embryology's annual conference, come from a UK study of 34 couples undergoing fertility treatment.

All of the women in the group were older than 31 and had been given drugs to make their ovaries release eggs ready for their IVF treatment.

When the researchers studied these now fertilised eggs they found some had genetic errors.

These errors could either cause the pregnancy to fail or mean the baby would be born with a genetic disease.

A closer look at 100 of the faulty eggs revealed that many of the errors involved a duplication of coiled genetic material, known as a chromosome.

Often, the error resulted in an extra copy of chromosome 21, which causes Down's syndrome.

But unlike "classic" Down's syndrome which is often seen in the babies of older women who conceive naturally, the pattern of genetic errors leading to Down's in the IVF eggs was different and more complex.

And this led the researchers to believe that it was the fertility treatment that was to blame.

Lead researcher Professor Alan Handyside, director of the London Bridge Fertility, Gynaecology and Genetics Centre, said more research was now needed.

Down's syndrome risk with the mother's age:
20 years - 1 in 1,500
25 years - 1 in 1,300
35 years - 1 in 350
40 years - 1 in 100
45 years - 1 in 30

"This could mean that the stimulation of the ovaries is causing some of these errors. We already know that these fertility drugs can have a similar effect in laboratory studies. But we need more work to confirm our findings."

If more tests back up their suspicions then it would mean that doctors should be more cautious about using these treatments, he said.

The researchers believe their work could also help identify which women might be better off using donor eggs for IVF instead.

Co-investigator Professor Joep Geraedts, of Bonn University in Germany, said: "This in itself is already a big step forward that will aid couples hoping for a healthy pregnancy and birth to be able to achieve one."

UK fertility expert Mr Stuart Lavery said: "There's a huge increase in the number of women undergoing IVF at later ages as people delay the age of starting a family.

"Previously we have always thought that these chromosomal abnormalities were

related to the age of the egg.

"What this work shows is that a lot of the chromosomal abnormalities are not those that are conventionally age-related. It raises the concern that some of the abnormalities might be treatment-related.

"It's a little unclear as to whether it's the medication itself that is affecting the egg quality or whether it's the medication that is just forcing the issue and allowing eggs that nature's quality control system would have otherwise excluded, to arise."

Anti-smoking drug raises risk of heart problems, scientists warn

Sophie Goodchild, Health and Social Affairs Correspondent
4 Jul 2011
http://www.thisislondon.co.uk/standard/art...entists-warn.do

A drug given to tens of thousands of smokers to help them quit cigarettes increases the risk of serious heart problems, researchers say.

GPs issue more than 70,000 prescriptions a month in the UK for Champix, but a study published today links the anti-smoking drug with heart attacks and strokes.

Experts warn that the drug, also known as Varenicline, can trigger heart problems in about one in every 100 users of the drug. These are people who are healthy apart from the fact they smoke.

The research, published in the Canadian Medical Association Journal, states that the risk of ending up in hospital, becoming disabled after a stroke or dying from a heart attack is even greater in smokers with a history of heart disease.

Experts estimate that one in 28 of these patients will develop additional heart problems if they take the drug for a year. The study was carried out by the University of East Anglia, John Hopkins University in New York and Wake Forest University in North Carolina.

The findings were based on an analysis of 14 clinical trials of Champix involving more than 8,000 people. Champix is recommended by NHS rationing watchdog Nice.

It is one of the most widely used drugs for helping people to stop smoking, especially heavy smokers. The US Food and Drug Administration has already warned that the prescription-only drug can cause depression and suicidal thoughts.

Concerns have also arisen in the UK about the impact of the drug on mental health. Three years ago, a Sky Sports editor was found dead at his home two months after being prescribed Champix to help him quit smoking.

Omer Jama, 39, slashed his wrists and stabbed himself in the thigh and stomach. The coroner at his inquest said he could have been influenced by the side-effects of the drug.

Dr Yoon Loke, one of the lead researchers, said it was unclear why there was a link between the drug and heart problems. But he advised users of Champix to talk to their doctor about any concerns, especially if they have a history of heart disease.

He said: "Although the actual numbers of patients developing heart problems on Varenicline is relatively low, these are life-threatening diseases so any increased risk should be carefully avoided - particularly as heavy smokers are already susceptible to cardiovascular disease.

"Long-term trials are now needed to determine whether or not the health benefits of this drug outweigh the risks. In the meantime, I would advise people taking Varenicline not to stop taking their medication suddenly, but to discuss any concerns with their doctor."

Description: *explodes after she lost 14 stone*

TheUnhivedMind - July 4, 2011 04:59 PM (GMT)

Gastric band agony as 25-year-old woman's stomach explodes after she lost 14 stone

Last updated at 3:49 PM on 4th July 2011
http://www.dailymail.co.uk/health/article-...t-14-stone.html

A young woman who had a gastric band fitted to help her lose weight ended up fighting for her life after it caused her stomach to explode.

Samantha Haworth, 25, had the operation when her weight soared to 28 stone, putting her health at risk.

For two years, her gastric band appeared to be a great success as she steadily shed 14 stone.

Two years later, a rare complication meant the band slipped and turned septic, leaving Miss Haworth from Walsgrave, Coventry, in great pain. However, she mistook her symptoms for heartburn.

Eventually after her stomach rupture, she went to hospital where it was thought she might have just minutes to live.

Surgeons at the city's University Hospital faced a race against time to salvage what they could and save her.

They pieced her stomach back together but estimated she had just a five per cent chance of survival.

The 25-year-old recalled: 'When they opened me up they saw there was no stomach

left - it had exploded.

'I was only given 15 minutes to live unless they did something drastic.

'They even had researchers trying to work out what to do while police escorted a transplant doctor from Birmingham to save my life.'

Samantha had her gastric band fitted after she developed arthritis in her ankles.

'I was never skinny but once the problems with my ankles started, my weight kept rising no matter what I did,' explained Samantha.

For more than two years the band worked perfectly and it was gradually expanded to constrict her stomach and help her lose more weight.

But in February this year Samantha began suffering chest pains that she put down to heartburn.

Swallowing food also became difficult and she began vomiting. Samantha's dietician told her to see a doctor if it continued but she never did as the symptoms came and went.

'By April I was getting stabbing pains in my chest. I lay on the floor sobbing "I'm dying".'

Samantha finally made an appointment with her doctor but as the pain spread to her arms and lower back, she was rushed to hospital on May 2 where X-rays revealed unexplained air pockets in her abdomen.

Samantha had the operation when her weight soared to 28 stone, putting her health at risk

Surgeons scheduled a routine operation to find the cause of the problem but before she went to theatre, her vital signs plummeted. The ensuing drama remains a painfully vivid memory for Samantha.

She recalled: 'I started drifting in and out of consciousness. I knew straight away I was dying. Every time I closed my eyes I saw memories - I could see myself sitting in my old flat stroking my pet cat.'

In theatre, surgeons pieced the healthy bits of Samantha's stomach together 'like a jigsaw'.

After the operation, she was put on a life support machine and given only a five per cent chance of survival. But she defied doctors' fears and woke up later the same day.

The first thing she saw was her mother Christine and best friend Laura Pearson walking

on to the ward in a flood of tears.

She said: 'My first words were, "I'm alive, why are you crying?" I didn't realise how close it had been. The doctors Andy Kitchen and Jez Jeyasingham are my heroes, they were great. So were Laura, my mum and my nan.'

Marketing executive Samantha spent nearly a month in hospital and is still recovering she spends much of her time asleep.

Gastric bands are still relatively rare on the NHS. During the last financial year, city health trust NHS Coventry approved the procedure for just ten patients, spending £60,000 on surgery plus follow-up care.

Like any operation, there are risks and Samantha's story is a stark warning of what can go wrong.

Small ruptures caused by a gastric band that has slipped are a recognised risk that can prove fatal.

But she has no regrets about having the band fitted and is now nearing her healthy target of 13 stone.

'I know I nearly died but I've been lucky,' said Samantha. 'If I hadn't had the surgery I would have been dead before I hit 30 because I was so big.

'I'm not trying to scare other people off having a gastric band.

'I just want them to know things can still go wrong even after their follow-up appointments end so they are alert to the symptoms.'

A spokeswoman for University Hospital said a slipped gastric band was a rare but recognised complication of the surgery, which could perforate the stomach wall and allow the contents to leak out.

She said patients were warned about the small risk of such problems before the procedure was carried out.

View Full Version: 25 DIE EVERY WEEK FROM SIDE EFFECTS

Title: 25 DIE EVERY WEEK FROM SIDE EFFECTS

TheUnhivedMind - July 3, 2011 02:05 AM (GMT)

25 DIE EVERY WEEK FROM SIDE EFFECTS

Chris Wilkinson died after he was put on a trial of a drug which caused his liver to fail

Sunday July 3,2011
By Lucy Johnston
http://www.express.co.uk/posts/view/256490...om-side-effects

AT least 25 deaths a week are linked to the side effects of different medicines, figures reveal.

Last year 1,433 deaths were associated with severe reactions to drugs, while 23,247 suffered side effects or serious adverse reactions, leading to 12 hospital admissions a day.

Deaths associated with drugs have soared 20 per cent in the past year and this year's total is the highest recorded so far. In 1997 there were 447 deaths.

However, experts say only 10 per cent of cases are reported because the system is voluntary.

Concerned scientists recently wrote to David Cameron and Health Secretary Andrew Lansley calling for testing procedures to be overhauled.

They say one of the key problems is too much reliance by the pharmaceuticals industry on the use of animals for testing.

Dr Bob Coleman, adviser to the Safer Medicines Trust, said: "Developments in technology and the availability of human tissue mean it is now easier to carry out drug

tests in the lab without using animals.

Developments in technology and the availability of human tissue mean it is now easier to carry out drug tests in the lab without using animals

“You can prove what you like in a mouse but it is not a human and there is complacency on this.”

The figures were gathered using the Government’s “yellow card” scheme where doctors and patients can report side effects to the Medicines and Healthcare Products Regulatory Agency.

Adverse drug reactions are believed to account for one in 16 admissions to hospital, costing the NHS £466million a year. The drug linked most often to patient deaths is the anti-psychotic clozapine, with 399 suspected fatal reactions last year.

The painkiller morphine and tranquilliser diazepam were linked to 25 and 17 deaths respectively while the blood-thinner warfarin was blamed for 17 patient deaths.

Capecitabine, used to treat breast and colon cancer patients, was eighth on the list, connected to 20 suspected fatal reactions. A spokesman for the MHPRA said: “All medicines have side ^ªeffects and no effective medicine is without risk.

“The fact that an adverse reaction has been reported does not necessarily mean that the medicine has been proven to cause the reaction.”

William Anderson, a father of two, died of a heart attack at 56, two years after he was prescribed the painkiller vioxx for his arthritic hip.

Given to hundreds of thousands of patients, vioxx was banned in October 2004 after studies linked it with an increased risk of heart attacks and strokes.

His son, William, 40, is one of 250 relatives or patients taking legal action against the makers.

Chris Wilkinson died, aged 63, after he was put on a trial of a drug which caused his liver to fail. Mr Wilkinson, of Didcot, Oxfordshire, had been cleared of kidney cancer and was given the drug to prevent it returning.

His wife Susanna said: “This drug was not safe for my husband. You would think that by the time they are carrying out trials in humans the risks would be minimal.”

Errors Occur in 12% of Electronic Drug Prescriptions Matching Handwritten

By Michelle Fay Cortez - Jun 29, 2011 11:30 PM GMT+0100
http://www.bloomberg.com/news/2011-06-29/e...andwritten.html

As many as 12 percent of the drug prescriptions sent electronically to pharmacies contain errors, a rate that matches handwritten orders for medicine from physicians, researchers said.

An analysis of 3,850 computer-generated prescriptions written over a four-week period found 452 contained errors, including 163 that could harm the patient, according to a report published today in the Journal of the American Medical Informatics Association. The rate was consistent with past studies reviewing the risk of errors when a doctor writes a prescription and hands it to the patient, the researchers said.

The results undermine the expected safety benefits from computer-generated prescriptions, said the study authors led by Karen Nanji of Massachusetts General Hospital's anesthesia, critical care and pain department. The U.S. paid more than $158.3 million to doctors and hospitals in the first half of 2011 to encourage adoption of electronic health records, which President Barack Obama has advocated as a way to lower health- care costs and reduce medical errors.

"Providers appear to be rapidly adopting electronic health records and computerized prescribing, and one of the major anticipated benefits is expected to be through medication-error reduction," the researchers wrote. "Many of these benefits will not be realized if the electronic prescribing applications are not mature and either do not catch or even cause new medication errors."
Wrong Dose

The most common error was the omission of key information, such as the dose of medicine and how long or how many times a day it should be taken, the researchers said. Other issues included improper abbreviations, conflicting information about how or when to take the drug and clinical errors in the choice or use of the treatment, the researchers said.

“With more than 3 billon prescriptions written annually in the U.S. alone, this could amount to 385 million errors each year, with 128 million of them having the potential to cause patient harm, said researcher Jeffrey Rothschild, from the center for patient safety research and practice at Brigham and Women’s Hospital in Boston.

Among the providers of electronic health records are General Electric Co. (GE), Siemens AG (SI), Cerner Corp. (CERN), Allscripts Healthcare Solutions Inc. (MDRX) and closely held Epic Systems Corp.

Man has heart attack in Maine heart disease class

By: The Associated Press | The Associated Press | 06/29/11 7:32 AM
http://washingtonexaminer.com/news/2011/06...-victim-lecture

A Maine cardiologist and a team of nurses are being credited with saving the life of a heart attack victim, but it wasn't in an emergency room.

Dr. William Phillips was giving a lecture Monday on heart disease at the Central Maine Medical Center in Lewiston when he was interrupted by a man complaining of chest pain.

Phillips asked a nurse to take the patient to the emergency room, but he collapsed. The victim wasn't breathing and had no pulse.

One of three cardiac nurses grabbed a defibrillator to help restart the man's heart. Meanwhile, paramedics arrived and took the patient to the emergency room.

Phillips tells the Sun Journal the man is now doing fine.

After the interruption, Phillips continued his lecture.

TheUnhivedMind - June 29, 2011 03:43 AM (GMT)

Hearing may be end of road for breast cancer drug

By MATTHEW PERRONE, AP Health Writer – Mon Jun 27, 12:07 pm ET
http://old.news.yahoo.com/s/ap/20110627/ap...XJpbmdtYXliZQ--

WASHINGTON – The best-selling cancer drug in the world comes under federal scrutiny once again this week, as drugmaker Roche makes a last-ditch effort to keep Avastin approved for breast cancer, despite the government's opinion that it is ineffective against the disease.

The two-day meeting at the Food and Drug Administration is unprecedented since the agency has already ruled against the drug, saying it neither extends nor improves life for breast cancer patients. Roche has taken the rare step of challenging government regulators.

Experts say the fact that the agency granted another hearing on the issue is testament to the difficulty of withdrawing approval of a cancer therapy.

"It says to me that either they've gotten a great deal of negative feedback from various quarters, or there's some kind of internal disagreement within the agency," said Dr. Gary Lyman, professor at the Duke Cancer Institute in North Carolina. Lyman was part of the majority of FDA advisers who voted 12-1 to revoke Avastin's approval last July.

Roche faces a smaller and even tougher panel this Tuesday: five out of six panelists voted against the drug last year. Only one voting member is new. The other panelists either couldn't make the hearing or were recused because of potential conflicts of interest. The FDA weighs the advice of its panels, though agency commissioner Margaret Hamburg will make the final decision.

Avastin is FDA-approved for various types of colon, lung, kidney and brain cancer, which are not part of the discussion. Even if its indication for breast cancer is withdrawn it will remain on the market, though insurers may not pay for breast cancer patients to receive it.

For doctors and breast cancer patients still using Avastin, the meeting is the latest twist in a winding, bureaucratic saga that began with the drug's surprise approval in 2008. The FDA granted the drug accelerated approval based on evidence that it slowed growth of breast cancer tumors for more than five months when combined with chemotherapy.

But that delay shrunk to less than three months in follow-up studies, and patients did not live any longer. Along with that, many suffered side effects like hypertension and blood clots.

Most cancer experts say the drug should remain available for patients who are already responding well. They say Avastin benefits a subset of patients, though it's not yet clear how to identify them.

The Swiss drugmaker will ask the FDA for more time to study if patients with certain genetic proteins respond better to the drug, a years-long process.

The drug is approved for advanced breast cancer that has spread, or metastasized, to other parts of the body, which is considered incurable.

Avastin's supporters say those patients need every option available, despite the side effects.

"There seems to be this perception that there are all these kinder, gentler treatments for metastatic breast cancer, but I'm not aware of those treatments, said Dr. Kimberly Blackwell of Duke Cancer Institute.

Blackwell helped conduct the trials of Avastin in breast cancer and believes the FDA is "moving the goal posts" on the drug's effectiveness, which could discourage drugmakers from pursuing new drugs.

"If the label is withdrawn, we will not see a new drug for metastatic breast cancer for another decade," said Blackwell, who directs Duke's breast cancer program.

The panel will hear from a handful of patients whose cancer has been in remission since using Avastin. But some doctors say such anecdotes are not scientifically sound and ignore the vast majority of patients.

"You've got a patient who is on a drug and they're doing well, but in any individual case you can't say what caused it," said Dr. Frederick Tucker, a cancer specialist based in

Fredericksburg, Va. "The difficult point to make is that there are many patients who were on the drug that didn't do well, and so they're not here to give their testimony."

Avastin was Roche's best-selling drug last year, with global sales of $6.8 billion. Use of the drug has already waned in the U.S., with sales falling 14 percent last quarter. Most of the decline was attributed to reduced use for breast cancer.

Since Avastin is approved for other cancers, doctors will still be able to prescribe it "off-label," for breast cancer, even if it loses that indication.

But analysts expect insurers to eventually drop coverage of the drug, making it unaffordable for most patients.

A year's treatment with Avastin can run more than $100,000, when infusion charges are included. Roche caps spending at $57,000 per year for patients who meet certain financial criteria.

The FDA is legally barred from considering cost when making decisions about drugs. But Lyman and other doctors say the issue will soon become unavoidable and FDA must set clear standards for cancer drugs now.

"There are literally hundreds of children of Avastin coming down the pike that will be very pricey and we need to have clarity about the expectation for benefit and harm," Lyman said.

Description: *Low Payments, Study Finds*

TheUnhivedMind - June 28, 2011 06:13 PM (GMT)

Doctors in U.S. Turning Away Insured Patients on Low Payments, Study Finds

By Drew Armstrong - Jun 27, 2011
http://www.bloomberg.com/news/2011-06-27/d...w-payments.html

U.S. doctors are turning away an increasing number of patients, including those with private insurance, according to a study in the Archives of Internal Medicine.

Physicians were willing to accept about 88 percent of patients who had private insurance in 2008, down from 93 percent in 2005, the study released today found. Patients in Medicare, the U.S. health insurance program for the elderly and disabled, also had a harder time finding a doctor. About 93 percent were accepted by physicians in 2008, down from 96 percent in 2005.

The drop in doctors willing to take private insurance was caused by low payments for services as well as administrative difficulties, said Dr. Tara Bishop, an assistant professor of public health at Weill Cornell Medical College in New York.

“At a moment when the country is poised to achieve near- universal coverage, patients’ access to care could be a casualty of the collision between the medical profession and the insurance industry,” Bishop, the lead author of the study, said in a statement.

The health-care overhaul signed into law in March 2010 requires people to buy private insurance policies and provides tax subsidies to help with the purchases. The Congressional Budget Office projects it will expand medical coverage to 24 million people.

The U.S. government is considering its own assessment of access to physicians under

a “secret shopper” program that would have surveyors contact doctors’ offices trying to get appointments. Jay Carney, a White House spokesman, said at a briefing with reporters the plan is still being reviewed and that similar approaches have been used by past administrations.

Coverage Plans

In 2009, 57 percent of Americans younger than age 65 got health coverage through work, and 20 percent were on Medicaid or other public insurance programs, according to the Menlo Park, California-based Kaiser Family Foundation.

Patients in Medicaid, the joint U.S.-state health program for the poor, had more difficulty than privately insured or Medicare patients in finding a doctor who would take their coverage, the study found.

While the drop in doctors’ willingness to see patients was small, the expansion of insurance coverage under the health law in 2014 is likely to mean many more people will be trying to see physicians, said Leighton Ku, a professor of health policy at George Washington University. The newly insured will be seeking medical care while the number of doctors will stay relatively the same, he said.

Finding a Physician

“It may well indicate that there are going to be some problems,” Ku said in a telephone interview from Washington. “If you see a big surge in demand in 2014 and not enough doctors taking patients, then we have a recipe for a bad situation,” he said.

Without more doctors joining the workforce or putting in longer hours, U.S. health-care providers may have to rely more on nurses and physicians assistants to provide care, Ku said.

A reason that doctors may be accepting fewer patients is that some insurers have shrunk the network of doctors and hospitals they contract with to improve quality and value, said Robert Zirkelbach, a spokesman for America’s Health Insurance Plans. The group is the Washington trade association for health insurers led by Indianapolis-based WellPoint Inc. (WLP) and Philadelphia-based Cigna Corp. (CI)

“Health plans are selective in who they contract with, so that their members have access to doctors and hospitals that provide safe, high quality care,” Zirkelbach said in a telephone interview.

While insurers have increased their scrutiny of medical claims to try to keep down costs, doctors also must do a better job of filing requests for payment correctly and on time. Too few use electronic records, and many file claims late or inaccurately, he said.

“It’s a two-way street,” Zirkelbach said.

View Full Version: 'Poison doctor' Edward Erin struck off for abortio

Title: 'Poison doctor' Edward Erin struck off for abortio
Description: *bid*

TheUnhivedMind - June 28, 2011 04:11 PM (GMT)

'Poison doctor' Edward Erin struck off for abortion bid

Erin did not show remorse for his actions, the GMC said

28 June 2011 Last updated at 14:20
http://www.bbc.co.uk/news/uk-england-london-13945541

A doctor who was jailed for trying to poison his lover to induce a miscarriage has been struck off the medical register.

A General Medical Council (GMC) disciplinary panel found Edward Erin had "shown no remorse" and had not "gained insight into the gravity of his actions".

Erin, of west London, was jailed for six years in 2009 for spiking Bella Prowse's drinks after she became pregnant, but refused an abortion.

Ms Prowse gave birth to a healthy boy.

She was a secretary at St Mary's Hospital in Paddington where Erin was a chest consultant.

His trial at the Old Bailey heard they were having an affair in 2008 which left her pregnant.

Erin gave Ms Prowse miscarriage-inducing drugs by grinding up tablets and spiking her coffee and then a bottle of orange juice.
'Premeditated acts'

But she became suspicious and alerted the police.

Erin, a married father-of-two, was found guilty of two charges of attempting to administer poison.

Ms Prowse did not know whether her child would be affected by the drug as traces of it were also found in her body. Her son was born in September 2008.

Bella Prowse gave birth to a healthy boy in 2008

The GMC said: "The panel noted that this case is concerned with grave breaches of good medical practice.

"It is concerned that Dr Erin's offences were premeditated acts, using his medical skills and knowledge to attempt to cause serious harm to others.

"As a doctor, he knew or should have known that Methotrexate in particular could cause long-term harm to his intended victim and her unborn child.

"The panel considers that Dr Erin has never acknowledged fault in this case and has shown no remorse for his actions and the panel has received no evidence to suggest he has now gained insight into the gravity of his actions."

The panel struck him off, saying his behaviour was "utterly unacceptable" as a medical practitioner.

Busted! Big Pharma epilepsy study rigged to push drug gabapentin

Monday, June 27, 2011 by: S. L. Baker
http://www.naturalnews.com/032828_Neuronti...cal_trials.html

(NaturalNews) If you think being concerned over natural health issues means you automatically dismiss everything that mainstream medicine has to say - think again. Not only are many mainstream researchers coming up with evidence that nutrition and other natural therapies really are effective but now comes a report published in none other than Archives of Internal Medicine, a Journal of the American Medical Association (JAMA), that blows the lid off an unethical Big Pharma practice.

Specifically, the article shows how drug pushing - not science - appears to have been the motivation behind a study that supposedly was testing the drug Neurontin (gabapentin), currently widely used to treat nerve pain. The test was allegedly designed to document how various doses could treat epilepsy. But it turns out the trial was set up to "seed" the results in order to sell the drug, much like a card shark might stack a deck of cards in order to cheat at a game of poker.

According to the just published article, when researchers are involved in so-called seeding research, they are conducting clinical trials primarily as marketing tools so the drug can be promoted and sales pushed by doctors. Bottom line: these are promotional trials used for selling drugs and research subjects and physicians may not be told the true purpose of the studies.

Surely, promoting a study as true scientific research when it is really a ploy used to market drugs must be illegal, right? According to the new report, Big Pharma is allowed to get away with seeding studies under the current law. However, the authors (Samuel

D. Krumholz, B.A., David S. Egilman, M.D., M.P.H., and Joseph S. Ross, M.D., M.H.S., who are consultants at the request of plaintiffs currently suing Pfizer Inc. over the gabapentin seeding study in the U.S.), report the practice is clearly unethical.

To prepare their report, entitled "Study of Neurontin: Titrate to Effect, Profile of Safety (STEPS)", the researchers investigated whether the study was a seeding trial by looking into documents related to the marketing, sales practices, and product liability litigation of Neurontin (gabapentin), prescribed for epilepsy. Because the authors were consultants to the plaintiffs in a lawsuit involving the drug, they had access to depositions and the document database. And that meant they were able to get their hands on damning correspondence, clinical research reports and market research analyses for a look inside the workings of Big Pharma's pushing of the drug.

What did they discover? Although the trial's supposed purpose was to study dose-titration of gabapentin among 2,759 patients enrolled by 772 investigators, the study was uncontrolled and unblended. In other words, it didn't meet the basic criteria for a sound drug study.

However, articles based on the results of this anything-but-gold-standard-science study managed to be published in two journals - even though the sloppy study design was questioned by two outside sources and that "data quality during the study was often compromised."

But here's even more compelling evidence something was not on the up and up: the authors cite documents that strongly suggest drug company marketing personnel were involved in collecting the trial data. What's more, the Big Pharma marketing heads viewed the trial (and not only its results) as a way to push sales of gabapentin.

This involvement of the marketing team and the failure to disclose the study's real purpose from both research subjects and collaborators are the "smoking guns" that mark the STEPS study as a seeding trial, according to the authors. They are calling for institutional review boards (IRBs) to finally take a strong stance in discouraging these types of marketing-over-science trials. "Reform of the current IRB system," they wrote, "as well as promoting better clinical trial practice in the human subjects research community, are necessary to prevent continued conduct of seeding trials by the pharmaceutical industry."

In an accompanying commentary to the study, G. Caleb Alexander, M.D., of the University of Chicago, noted that seeding trials negatively affect scientific knowledge and clinical care. "The biomedical enterprise depends on good science for its foundation, and good science requires transparency of methods and integrity of purpose," he wrote.

He pointed out the evidence presented by Krumholz and colleagues "strongly supports

the conclusion that STEPS meets key criteria of seeding trials." Dr. Alexander also stated that these unethical seeding trials can detract from the legitimate value of well-designed and well-conducted phase 4 studies of pharmaceutical drugs.

"Although the road is long and the hill steep, these and other changes offer the promise of incrementally improving and safeguarding the integrity of the biomedical enterprise. One can only hope that the report by Krumholz et al will contribute to this evolution," he concluded.

Let's be blunt here: the new report in the Archives of Internal Medicine shows that Big Pharma's research results cannot always be trusted and may place more importance of skewing data to promote and push drugs on the public than in coming up with true scientifically sound data.

Bristol-Myers, AstraZeneca Diabetes Drug Shows Bladder, Breast Cancer Risk

By Elizabeth Lopatto - Jun 25, 2011
http://www.bloomberg.com/news/2011-06-25/b...ancer-risk.html

Bristol-Myers Squibb Co. (BMY) and AstraZeneca Plc. (AZN) said patients taking their experimental diabetes pill, shown effective in a two-year study, had more breast and bladder cancers than those on a standard drug.

In all the clinical programs, nine breast cancers and nine bladder cancers were seen among 5,478 patients taking the drug, dapagliflozin, compared with one breast and one bladder cancer among the 3,156 in control groups, Bristol-Myers and AstraZeneca said in a statement today. There was no imbalance in overall cancer risk, the companies said.

The dapagliflozin cancer findings will be a topic at a U.S. Food and Drug Administration advisory panel on July 19, said Mark Schoenebaum, an analyst for ISI Group. The treatment is facing increased scrutiny from regulators and doctors after two rivals were tied to malignancy and heart risks. Data presented today at the American Diabetes Association meeting in San Diego has been shared with the FDA, the companies said.

“No doubt they’ll bring this up at the advisory committee,” Schoenebaum said in an interview today. “But I’d be very surprised if this blocked approval.”

Patients probably already had the cancer when they enrolled in the trial, Schoenebaum said. The timing of the cases made it seem unlikely that dapagliflozin caused the cancers, although it may have accelerated them, he said.

What is likelier is that the agency will require a post- marketing study on cancer risks, he said. At the very worst, there may be a black box warning on the drug, Schoenebaum said.
'Numerical Imbalance'

"We look at this very seriously," said Elisabeth Svanberg, the vice president of development for New York-based Bristol-Myers, in an interview today. In preclinical studies in rats and mice, where the animals were given up to 100 times the human dose, dapagliflozin didn't increase cancer risks, Svanberg said.

"It's probably a numerical imbalance," she said. "Those occur in clinical trials."

Results from a two-year study released yesterday reported that dapagliflozin in combination with metformin, a standard treatment, was safe and effective. The study, funded by Bristol- Myers and London-based AstraZeneca, showed that patients getting dapagliflozin lowered their blood sugar more than patients on metformin and another generic diabetes drug, glipizide.

An estimated 25.8 million Americans have diabetes, most of the Type 2 variety linked to weight gain and a lack of exercise, according to the U.S. National Institutes of Health.
Avandia, Actos Risks

In May, U.S. regulators restricted use of London-based GlaxoSmithKline Plc (GSK)'s Avandia, ordering the drug to be pulled from pharmacy shelves and made available only through a special program. Sales of Avandia fell to $680 million last year from $1.8 billion in 2007 after a study that year showed a 43 percent increased risk of heart attacks among patients taking the medicine.

On June 15, a five-year analysis from a decade-long company-sponsored study of Osaka-based Takeda Pharmaceutical Co.'s Actos showed an increased risk of bladder cancer. Actos is the world's biggest-selling diabetes drug. The FDA had required the study under new guidelines for diabetes drug approvals.

Dapagliflozin works differently than Actos and Avandia. While those drugs adjust the hormone that regulates blood sugar, the new pill helps patients excrete sugar through their urine.

The new mechanism would make dapagliflozin the first entry in a class called SGLT-2 inhibitors that work by allowing patients to excrete their excess blood sugar in their urine. Johnson & Johnson, Eli Lilly & Co., Boehringer Ingelheim GmbH, and Astellas Pharma Inc. are among the companies pursuing similar drugs.

The breast and bladder don't express SGLT-2, Bristol-Myers and AstraZeneca said in the statement.

Patients on dapagliflozin were more likely to have urinary tract and genital infections than those taking metformin alone, according to the two-year results released yesterday.

TheUnhivedMind - June 26, 2011 10:48 PM (GMT)

IMPLANT MAY END MIGRAINE MISERY

Sufferers can have several attacks a day, each lasting 15 minutes to three hours

Sunday June 26,2011
By Lucy Johnston
http://www.express.co.uk/posts/view/255041...migraine-misery

A TINY gadget that can relieve the pain of severe headaches and migraines could save up to £17billion a year in lost working days.

The device is surgically implanted into the gum in a nerve bundle behind the cheekbone.

Once switched on by a remote control it transmits electrical signals which can bring total relief from the pain within 15 minutes.

Headache specialist Professor Rigmor Jensen, who led the Danish research, said:

“If this device continues to work, it would be wonderful.” One in seven Britons suffer migraines, one in six have recurring headaches and one in 1,000 have “cluster” headaches. These are known as “suicide headaches” because the intense stabbing pain in the area of one eye can be almost unbearable.

Sufferers can have several attacks a day, each lasting 15 minutes to three hours.

This was the group used to trial the kit, called the Neurostimulation System.

One patient said her headaches caused her marriage to collapse and led to her losing

her job.

Now Christina Jensen, 35, says: “My headaches are gone completely. I feel nothing. It’s like being reborn. I would get around 10 attacks a day. The pain was so horrible I really thought I would end my life.”

If the implant can help with these cluster headaches, it bodes well for less extreme migraines too.

Migraines hit the British economy hard, with hundreds of thousands either having to take time off sick or being unable to function effectively if they do make it into work.

Women are twice as likely to suffer as men, hit by an average of 13 attacks a year, lasting from four to 72 hours.

Targeting the same nerve bundle with painkillers has had more limited success.

View Full Version: High Court limits generic companies' duty to warn

Title: High Court limits generic companies' duty to warn

TheUnhivedMind - June 26, 2011 03:55 AM (GMT)

High Court limits generic companies' duty to warn

Ruling likely to have 'unintended consequences'
http://www.pharmacist.com/AM/Template.cfm?...ContentID=26253

The U.S. Supreme Court has ruled that patients who are harmed by generic drugs cannot recover damages from the drug manufacturer because generic drug manufacturers have a limited duty to warn patients of adverse effects and other safety issues with their products.

On its surface, the decision seems to run counter to a 2009 case in which the Court said that patients can recover damages from brand-name manufacturers for failing to warn. The majority opinion in the current case drew a distinction based on differences between FDA drug-approval processes and requirements for brand-name versus generic drugs, along with the supremacy of federal over state laws, a position that prompted a vigorous dissent by 4 minority justices.

"This ruling may have unintended consequences," said Brian Gallagher, BPharm, JD, Senior Vice President of Government Affairs at APhA. "Patients harmed by generic drugs now have limited recourse in the courts. Many states have laws that require pharmacists to dispense generics when available. In addition, third-party payers often require dispensing generics, or effectively limit options through lower tier copayments. APhA supports patient access to lower priced generics, but this ruling could raise patient concerns about their options if they have an adverse reaction. APhA will continue to review this ruling to assess its implications for pharmacists."

The ruling in Pliva, Inc., et al. v. Mensing involved two women who were prescribed brand-name Reglan by their physicians but were dispensed generic forms of metoclopramide by their pharmacists in 2001 and 2002 and developed tardive

dyskinesia after several years of therapy. They sued the generic manufacturers involved for failing to include adequate warnings of this adverse effect in product labeling.

The generic manufacturers responded that FDA required their labeling to be identical to that of the brand-name Reglan product, which at the time did not prominently list tardive dyskinesia as a possible adverse effect of long-term use.

Lower courts had rejected that argument. In its 5–4 decision, the U.S. Supreme Court reversed that judgment and remanded the case to the Fifth and Eighth Circuits for further consideration.

The majority opinion, written by Justice Clarence Thomas and joined by the Court's more conservative wing, invoked the legal theory of "impossibility pre-emption." In this situation, the majority said that generic manufacturers could not simultaneously comply with federal law—specifically FDA's requirement that generic labeling be identical to brand-name labeling—and state law that required a more robust duty to warn of adverse effects. Because of this impossibility, the Court held that federal law prevails, and thus the generic companies had no duty to warn beyond the language used by the brand-name companies.

"Brand-name and generic drug manufacturers have different federal drug labeling duties," Justice Thomas wrote. "A brand-name manufacturer seeking new drug approval is responsible for the accuracy and adequacy of its label.… A manufacturer seeking generic drug approval, on the other hand, is responsible for ensuring that its warning label is the same as the brand name's."
Justice Sonia Sotomayor, writing for the Court's more liberal justices, strongly dissented. "Today's decision leads to so many absurd consequences that I cannot fathom that Congress would have intended to pre-empt state law in these cases," she wrote. "Consumers of brand-name drugs can sue manufacturers for inadequate warnings; consumers of generic drugs cannot. These divergent liability rules threaten to reduce consumer demand for generics, at least among consumers who can afford brand-name drugs."

"They may pose 'an ethical dilemma' for prescribing physicians," she added, quoting from an amicus brief filed by the American Medical Association. By extension, pharmacists may have similar challenges in dealing with the "unintended consequences" of this decision, at least until Congress or FDA acts to alleviate the situation.

Many drugs no longer have a brand-name product, so legal recourse for patients in those situations may be limited. "This opinion may contribute to the mistaken perception that brand-name drugs are better than generic drugs," Gallagher said. "In addition, people may be led to believe that legal protection only exists when they take brand-

name drugs, but while taking generics they may be at their own risk."

Glaxo to pay Idaho $600K over faulty drugs

Published: 06/23/11
http://www.idahostatesman.com/2011/06/23/1...l#ixzz1QATzdQ5j

BOISE, Idaho — British drugmaker GlaxoSmithKline PLC will pay the state of Idaho more than $600,000 for selling substandard antidepressants and other medicines produced at its former factory in Puerto Rico.

Idaho was among 37 states that filed complaints against the company under their consumer protection laws following a $750 million settlement with the federal government last October. The states reached a $40.75 million settlement with the company.

Idaho Attorney General Lawrence Wasden says the state will receive $602,825.

Both settlements involve production of adulterated, or substandard, products made from 2001 through 2005 at a factory in Cidra, Puerto Rico. The products included antidepressant Paxil CR, anti-infection ointment Bactroban and combination Type 2 diabetes pill Avandamet.

GlaxoSmithKline admits no wrongdoing.

Title: Common medicines for elderly linked to death
Description: *[JUST FOUND IT OUT SHERLOCK?]*

TheUnhivedMind - June 24, 2011 03:40 AM (GMT)

Common medicines for elderly linked to death

By James Gallagher
24 June 2011 Last updated at 01:07
http://www.bbc.co.uk/news/health-13880553

Commonly used drugs - for conditions such as heart disease, depression and allergies - have been linked to a greater risk of death and declining brain function by UK researchers.

They said half of people over 65 were prescribed these drugs.

The effect was greatest in patients taking multiple courses of medication, according to the study in the Journal of the American Geriatrics Society.

Experts said patients must not panic or stop taking their medicines.

The researchers were investigating medicines which affect a chemical in the brain - acetylcholine. The neurotransmitter is vital for passing messages from nerve cell to nerve cell, but many common drugs interfere with it as a side effect.

Eighty drugs were rated for their "anticholinergic" activity: they were given a score of one for a mild effect, two for moderate and three for severe. Some were given by prescription only, while others were available over the counter.

A combined score was calculated in 13,000 patients aged 65 or over, by adding together the scores for all the medicines they were taking.

A patient taking one severe drug and two mild ones would have an overall score of five.
Deadly consequences

Between 1991 and 1993, 20% of patients with a score of four or more died. Of those taking no anticholinergic drugs only 7% died.

Patients with a score of five or more showed a 4% drop in ratings of brain function.

Other factors, such as increased mortality from underlying diseases, were removed from the analysis.

“
Start Quote

Do not stop your medicines without taking advice first”
Dr Clare Gerada
Royal College of GPs

However, this study cannot say that the drugs caused death or reduced brain function, merely that there was an association.

Dr Chris Fox, who led the research at the University of East Anglia, said: "Clinicians should conduct regular reviews of the medication taken by their older patients, both prescribed and over the counter, and wherever possible avoid prescribing multiple drugs with anticholinergic effects.

Dr Clare Gerada, chairman of the Royal College of GPs, said the findings of the study were important.

She told patients: "The first thing is not to worry too much, the second thing is to discuss it with your doctor or the pharmacist, and the third thing is do not stop your medicines without taking advice first."

She said doctors reviewed medication every 15 months and were aware of the risks of combining different drugs.

Dr Fox said he wanted to conduct further research to investigate how anticholinergic drugs might increase mortality.

Electrical signals cannot cross the gap between brain cells; neurotransmitters pass the message on

A more modern study is also thought to be desirable. Practices and drugs have changed since the data was collected two decades ago.

Ian Maidment, an NHS pharmacist in Kent and Medway, believes the situation may now be even worse.

He said the use of anticholinergic drugs had "probably increased as more things are being treated and more drugs are being used."

Brain decline

Reduction of the neurotransmitter acetylcholine has already been implicated in dementia.

The drug Aricept is given to some patients with Alzheimer's disease to boost acetylcholine levels.

Dr Susanne Sorensen, head of research at the Alzheimer's Society, said a 4% drop in brain function for a healthy person would feel like a slow, sluggish day.

"If you are at a level where one little thing pushes you over into confusion, then that is much more serious," she added.

"However, it is vital that people do not panic or stop taking their medication without consulting their GP."

Rebecca Wood, chief executive of Alzheimer's Research UK, said: "This comprehensive study could have some far-reaching effects. The results underline the critical importance of calculated drug prescription."

View Full Version: Bristol Diabetes Pill Faces Safety Hurdle After

Title: Bristol Diabetes Pill Faces Safety Hurdle After
Description: *Early Drugs Tied to Risks*

TheUnhivedMind - June 24, 2011 03:21 AM (GMT)

Bristol Diabetes Pill Faces Safety Hurdle After Early Drugs Tied to Risks

By Elizabeth Lopatto - Jun 23, 2011
http://www.bloomberg.com/news/2011-06-23/b...ndia-actos.html

Bristol-Myers Squibb Co. (BMY) and AstraZeneca Plc. (AZN)'s new diabetes pill will probably face increased scrutiny from regulators and doctors after two rivals were tied to cancer and heart risks.

The drug, dapagliflozin, works differently than Takeda Pharmaceutical Co.'s Actos, linked to cancer last week, and GlaxoSmithKline Plc (GSK)'s Avandia, tied to heart risks in 2007. While those drugs adjust the hormone that regulates sugar, the new pill helps patients excrete sugar through their urine.

"Increasingly, people are on the lookout for problems with these drugs," said Laurence Kennedy, chairman of Cleveland Clinic's department of endocrinology, diabetes and metabolism, in a telephone interview. "There will always be a market for finding newer and different ways to help control blood sugar, but the newest ways will be under increasing scrutiny."

Some analysts say they won't project sales for dapagliflozin because of the risks posed by Avandia and Actos. Even if approved after a regulatory panel next month, doctors say they will be slow in using the new drug until more is known about long-term safety. A one-year study reported last year found no cancer or heart risks. Two years of data will be reported June 26 at the American Diabetes Association meeting.

An estimated 25.8 million Americans have diabetes, mostly the Type 2 variety linked to being overweight and sedentary, according to the National Institutes of Health. The

disease is caused by an inability to use insulin to break down blood sugar into energy and can increase the risk of heart disease, stroke and kidney damage. Medicines are used to lower sugar levels.

Stock Performance

Bristol-Myers gained $1.59, or 5.7 percent, to $29.33 at 4 p.m. in New York Stock Exchange composite trading. The New York- based company reported yesterday that its experimental blood thinner apixaban beat warfarin in a study. American depositary receipts of London-based AstraZeneca, each representing one ordinary share, fell 30 cents, or less than 1 percent, to $48.89.

Dapaglifozin is being developed jointly by Bristol-Myers and AstraZeneca. The earlier trial showed it worked better than insulin plus a placebo, and that patients using it lost weight. This is particularly noteworthy because insulin drugs frequently trigger weight gain.

New Class

If approved, dapagliflozin would be the first in a new class of medications, called SGLT2-inhibitors. Similar drugs are also being developed by Johnson & Johnson, of New Brunswick, New Jersey, Indianapolis-based Eli Lilly & Co. (LLY) and the German drugmaker Boehringer Ingelheim GmbH, Tokyo-based Astellas Pharma Inc., Isis Pharmaceuticals Inc., based in Carlsbad, California, and Lexicon Pharmaceuticals Inc., of The Woodlands, Texas.

The companies, analysts and investors will be closely watching the safety results and a panel of Food and Drug Administration advisers that is set to review dapagliflozin on July 19, said Les Funtleyder, a portfolio manager at Miller Tabak in New York, in a telephone interview.

Concerns about potential side effects of all diabetes medications leave analysts little room to assess the sales potential of dapagliflozin, he said.

“With these type of drugs, we don’t model until they’re approved because so much can go wrong,” Funtleyder said. “We know it’s a new class in diabetes, which is often not well- controlled. The downside is people are nervous about possible infections and other side effects, and you have to take the good with the bad.”

Bristol-Myers referred comment to AstraZeneca. AstraZeneca’s spokeswoman Kirsten Evraire declined to comment.

Avandia Restrictions

In May, U.S. regulators restricted use of London-based Glaxo’s Avandia, ordering the drug to be pulled from pharmacy shelves and made available only through a special program. Sales of Avandia fell to $680 million last year from $1.8 billion in 2007 after a

study that year showed a 43 percent increased risk of heart attacks among patients taking the medicine.

On June 15, a five-year analysis from a decade-long company-sponsored study of Takeda's Actos showed an increased risk of bladder cancer. Actos is the world's biggest-selling diabetes drug. The FDA had required the study under new guidelines for diabetes drug approvals.

$1.6 billion by 2017

Bristol-Myers's and AstraZeneca's Onglyza and Kombiglyze, a version of the drug combined with metformin, a standard treatment, generated $158 million last year. Those two drugs are projected to make $1.6 billion by 2017, according to estimates from Seamus Fernandez, an analyst for Leerink Swann.

Even after approval, "we still have an obligation to conduct studies carefully and properly just to make sure nothing major has been missed" said Kennedy, of the Cleveland Clinic.

Since its original warning on Avandia, the FDA has required an aftermarket study of heart risks for all diabetes drug applications, said Karen Riley, a spokeswoman for the FDA, in an e-mail.

"Not all programs are identical and development isn't static so as these data come in, we have to apply new lessons learned to the interpretation of risk assessment for subsequent programs," she wrote.

The number of Americans with diabetes is expected to rise to as many as 1 in 3 adults if trends continue, according to the Atlanta-based Centers for Disease Control and Prevention.
New Drugs

This explosion in cases has spurred the development of at least nine classes of diabetes drugs, some oral and some injectable. Today there are more than 39 diabetes drugs on market, generating about $16.8 billion in U.S. sales in 2010, according to data from research firm IMS Health.

Only half of diabetes patients have their blood sugar under control, so there's a need for new medications, said Martin Abrahamson, the chief medical officer of Joslin Diabetes Center, an affiliate of Harvard Medical School in Boston.

"Type 2 diabetes being a progressive disease, one drug, a single drug, is unlikely to be a control for glucose levels over many years," Abrahamson said in a telephone interview. "Usually you add more medications to achieve glucose targets."

Metformin, approved for use in the U.S. in 1995, is almost universally accepted as a first-line therapy for diabetes, because it has a long safety record and is cheap, Abrahamson said. Often, though, it's not enough.

Many people with Type 2 diabetes are overweight or obese, and have co-existing conditions such as heart disease and high blood pressure, Abrahamson said. Complications associated with the disease also make prescribing tricky, he said.
Doctors Eager

Given the difficulty in controlling the disease, doctors remain eager for new medications, even though they are "becoming more gun shy" as dangerous risks are uncovered after the drugs are approved, said Robert Rushakoff, medical director for inpatient diabetes at the University of California, San Francisco.

"Given the reality of diabetes and how difficult it is, endocrinologists will be using it right away," he said in an interview. "I know I'll be using it right away. It's easier than teaching someone to inject a medication. It's a matter of once the drug moves out of studies, how those side-effects appear. More common, more severe or not a big deal?"

The data presented at the American Diabetes Association meeting in San Diego is expected to provide new details on dapagliflozin's safety profile, said Tony Butler, an analyst with Barclays Capital in New York. He, like Miller Tabak's Funtleyder, is unwilling to project sales at this point.

In the one-year study, dapagliflozin was linked to an increased likelihood of urinary tract and genital infections. While that's a lesser concern than heart or cancer, it has raised red flags.

Rita Rastogi Kalyani an assistant professor of medicine at Johns Hopkins University in Baltimore, said the infections probably occur because the urinary tract is a more hospitable environment for bacteria when patients excrete more sugar in their urine.

"I think as much as we're excited about new classes of medications, we're still looking at the older medications first because they've been tested over time," Kalyani said, referring to metformin. "We've seen an explosion of classes but we still don't know about long-term risks."

Description: *bypass leads to 13 STONE weight loss in*

TheUnhivedMind - June 22, 2011 05:34 PM (GMT)

Former nurse, 67, 'starves to death' after gastric bypass leads to 13 STONE weight loss in just seven months

Went from 21 stone to 8 stone after keyhole surgery

Last updated at 12:55 PM on 22nd June 2011
http://www.dailymail.co.uk/health/article-...ven-months.html

A former nurse is believed to have starved to death after her weight plummeted by 13 stone in just seven months, following a gastric bypass.

Virginia Humphrey, 67, from Brighton, shrank from 21 stone to eight stone after reluctantly undergoing the keyhole surgery last September.

Her son Kevin, 47, said his mother had been desperate to lose weight before visiting her daughter in America but was 'extremely reluctant' to go under the knife.

Mrs Humphrey was told the operation would help her lose a healthy five stone and help tackle her diabetes, he added.

However after returning home from London University Hospital, she became unrecognisable as she lost two-thirds of her body weight.

The father-of-two said: 'She was questioning it right up until the last minute but eventually had it done in September.'

He said: 'She was being sick all the time. Everything she ate just came straight back up.

'It was heartbreaking to watch because she just kept trying to stay smiling and happy.

'She was sure there was something wrong but when she was re-admitted to hospital for a couple of weeks she came home saying they thought it was in her imagination.

'Being told there was nothing wrong, that it was a normal reaction to the surgery, made her lose confidence in herself and feel like she couldn't keep asking.'

By the end of April, he said he was giving his mother round-the-clock care as the former Army nurse's condition deteriorated drastically.

She was malnourished, weak and weighed just eight stone when she was admitted to Brighton's Royal Sussex County Hospital, where she died on May 9.

An inquest into her death has been opened and adjourned.

A spokesman for the University College London Hospitals NHS Foundation Trust said: 'The trust very much regrets Mrs Humphrey's death and our sympathies are with her family.'

Last month, mother-of-two Kim Swan, 43, from Peaceheaven, East Sussex, died in agony of post-operative complications.

Her widower John Swan, 45, warned others considering having the same gastric procedure.

He said: 'Anyone considering it should take a long look at the pictures of my wife Kim in hospital before she died.

'She was absolutely crawling the walls with pain. Then ask yourself if it is worth trying dieting and exercise one more time.'

Title: Supreme Court Will Review The Patentability Of
Description: *Medical Diagnostic Tests*

TheUnhivedMind - June 22, 2011 03:20 AM (GMT)

Supreme Court Will Review The Patentability Of Medical Diagnostic Tests
from the we-can't-tell-you-if-you-have-cancer,-since-that-would-infringe dept

http://www.techdirt.com/

For a few years now, we've been following the case of Prometheus Laboratories v. Mayo Collaborative Services, which looked into the question of whether or not certain medical diagnostic tests could be patented. Doctors are vehemently against such patents, believing, completely correctly, that it's ridiculous to patent a test to determine if someone has a particular ailment. The Mayo Clinic has pointed out the ridiculousness of all of this, and has been fighting this for the precedential value:
"The patents are based on observations of the laws of nature," says David Herbert, chief administrative officer for Mayo Medical Laboratories. "We chose to make a stand." Such "observational" patents increase costs, slow innovation, and worsen patient care, he says. "It doesn't allow the test to be performed close to the bedside, and there's no ability to have second opinions."
Unfortunately, as we noted last December, the appeals court for the Federal Circuit (CAFC, whose motto sometimes feels like "patent everything!") decided that it's perfectly fine and dandy to patent such diagnostic tests. At the time, we noted that this issue would likely end up at the Supreme Court... though I partly wondered if the Supremes would wait for the slightly related Myriad Genetics case on patenting genes.

Instead, the Supreme Court is forging ahead directly on the medical diagnostics issue, and has agreed to hear the case. Of course, it's quite difficult to predict which way it will go. For a period of about five or six years, it seemed like the Supreme Court (which had mostly ignored patent issues for a while) had taken a bunch of patent cases in order to smack down CAFC for its expansionist and overly broad rulings. However, with a new court in place, the last few years have shown the pendulum swing back towards

supporting CAFC's thinking on many of these issues. Hopefully this case ends up going the other way, and the Supreme Court makes it clear that patenting a medical test is not what the law was intended for, and should not be allowed.

Woman, 26, died of DVT after NHS walk-in centre nurse 'diagnosed muscular pain using COMPUTER guide'

Rebecca told husband nurse had 'fobbed her off' days before she died

Last updated at 3:24 PM on 20th June 2011
http://www.dailymail.co.uk/health/article-...cular-pain.html

The case of a young woman who died from deep vein thrombosis after nurses used a computer guide to diagnose her with muscular pain, has been referred to the Health Secretary.

Rebecca Cain, 26, died after suffering a huge blood clot in her leg in 2009 - days after she had begged nurses at a Nottingham NHS walk-in centre for help.

Rebecca, from Radford, Nottinghamshire, diagnosed her own condition after spending just 10 minutes on the internet but nurses insisted the pain and swelling in her leg was 'definitely muscular' - and sent her home.

Her husband Gareth told an inquest into her death that his wife had been in tears, saying the nurse had 'fobbed her off.'

After the inquest last November, Coroner Geoff Fell ordered an investigation into the 'serious failure' to be carried out.

Rebecca's widower, Gareth Cain, 29, has now welcomed the findings of the investigation, which have not been made public, being passed to Health Secretary Andrew Lansley, to check the necessary action has been taken.

Gareth said: 'From my point of view, any further investigation is a good thing. I'm hoping it will have a positive impact.'

Coroner Geoff Fell made a narrative verdict at the inquest in Harrogate, ruling that Rebecca died because a nurse missed symptoms of deep vein thrombosis last June, and asked for a serious case review.

The inquest had heard that Rebecca had diagnosed herself with Deep Vein Thromboses after noticing pain and swelling in her right calf.

She had asked the walk-in clinic for help, but a nurse at the centre relied on a computerised guide to diagnose Rebecca, rather than rely on her experience as a nurse.

Rebecca, a marketing executive, was told by the nurse her problems were 'definitely muscular'.

Gareth told the inquest his wife was in tears, saying the nurse had 'fobbed her off'.

A few days later, while visiting friends in Harrogate, Mrs Cain collapsed and died hours later in hospital, where doctors diagnosed DVT.

Mr Fell ordered a full review into the 'serious failure'.

The walk-in centre used to be managed by an organisation called CitiHealth NHS Nottingham. It is now run by the Nottingham City Care Partnership, which provides services for NHS Nottingham City.

A previous investigation was carried out by independent consultants Verita, which found two previous incidents of deep vein thrombosis being overlooked at the centre, in 2002 and 2008.

A spokesperson for NHS Nottingham City said: 'Following the death of Mrs Cain an independent investigation was undertaken into the care and treatment she received.

'The report from this investigation made recommendations which have now been fully implemented, including additional training for staff.

'In addition, we have also ensured that the computer system used to diagnose patients has been modified to minimise the risk of any future misdiagnoses.

'We have met with the family of Mrs Cain to ensure that they are satisfied with the actions taken and to address any remaining questions they had.

'We will now be reviewing all correspondence from the coroner and proactively seeking

to work with both him and the Department of Health to resolve any outstanding concerns.

'We again extend our sympathies to the family of Mrs Cain and wish to reassure patients that we are committed to ensuring that they are safe and protected whilst in our care.'

As the case has been referred to the Secretary of State this means the Department of Health will now review the paperwork to check all the recommendations have been adhered to.

The Secretary of State will then either write to the coroner and say he is satisfied, or say he is not satisfied and ask NHS Nottingham City to do more to implement the recommendations.

TheUnhivedMind - June 20, 2011 03:36 PM (GMT)

GSK launches inquiry after China bans Augmentin antibiotic

Drugs giant GlaxoSmithKline has launched an investigation into its Augmentin antibiotic after China became the latest Asia-Pacific country to withdraw the medicine over safety fears.
GSK sold £291m-worth of Augmentin, in its various forms, to emerging markets last year.

By Alistair Osborne
6:00AM BST 20 Jun 2011
http://www.telegraph.co.uk/finance/newsbys...antibiotic.html

GSK said it was working with regulators across the region after China claimed to have found traces of diisodecyl phthalate (DIPD) – a compound used to make plastics more flexible – in the syrup form of Augmentin.

The drug is commonly prescribed to children. GSK sold £291m-worth of Augmentin, in its various forms, to emerging markets last year – though it is a small contributor to a group with annual sales of £28bn.

A company spokesman said: “GSK is currently in discussion with a number of regulatory agencies in the Asia Pacific region, some of whom have also conducted tests.

“The amount of phthalates identified as present in Augmentin syrup samples tested is very low; some tests have found none and the highest level reported by the authorities is 88 parts per million.

“Even this highest result is significantly lower than the levels that the US and European authorities deem as presenting no risk to humans.”

Earlier this month, Taiwan and Hong Kong told GSK to recall Augmentin after it was found to contain DIPD.

There has also been a wider crackdown by authorities in the region over the plasticiser, which is commonly found in the environment.

Hong Kong banned several Taiwanese drinks, while Taiwan has recalled nearly half a million bottles of sports drinks and fruit juice over fears they contained the chemical.

The GSK spokesman added: “Augmentin has been available to patients for more than 25 years to treat a variety of bacterial infections.

“We do not believe that the identification of DIPD at these levels represents any new safety information about the medicine.”

China’s halting of Augmentin sales comes only days after GSK strengthened its presence in the country by taking full control of influenza vaccine maker Shenzhen GSK-Neputnus Biologicals in a £24m deal.

It bought out the 51pc stake held by its local partner.

Description: *Unusual Odor*

TheUnhivedMind - June 20, 2011 02:53 AM (GMT)

J&J Unit Recalls 16,000 Bottles Of Risperdal For Unusual Odor

JUNE 17, 2011, 2:30 P.M. ET
http://online.wsj.com/article/BT-CO-20110617-710060.html

Ortho-McNeil-Janssen Pharmaceuticals Inc., a unit of Johnson & Johnson (JNJ), recalled about 16,000 bottles of its Risperdal schizophrenia drug on reports of an uncharacteristic odor.

The recall affects one lot--shipped between Aug. 27, 2010, and Feb. 15, 2011--thought to contain trace amounts of tribromoanisole, the byproduct of a chemical preservative sometimes applied to wooden pallets. Although it isn't considered toxic, TBA can generate an offensive odor, the company said.

J&J has been grappling with a series of product recalls that span its diversified businesses, from over-the-counter medicines to hip-replacement parts to surgical sutures. The actions have hurt sales and tarnished J&J's once sterling reputation for quality. Among its responsive actions, the company has shuffled its management and closed a plant outside Philadelphia.

TheUnhivedMind - June 19, 2011 12:13 AM (GMT)

Hospital faces legal action over newborn baby seized from mother

Breastfed baby taken from mother for six days, a move she says trust denied her right to challenge

Karen McVeigh
guardian.co.uk, Friday 17 June 2011 18.42 BST
http://www.guardian.co.uk/society/2011/jun...orn-baby-seized

A breastfeeding mother whose newborn baby was forcibly taken from her and put into care for six days is seeking a judicial review over alleged unlawful treatment during a crucial bonding period with her daughter.

Verna Joseph, who has a history of depression and post-traumatic stress disorder, says she was pushed to the ground, restrained by security guards, and her baby taken in full public view during a scuffle at King George hospital in Redbridge to which police were called.

She was then transferred by ambulance to Goodmayes hospital, North-East London NHS foundation trust, in Ilford, but was not told until several hours later that she was being compulsorily admitted for an assessment under the Mental Health Act.

Despite repeated pleas for news about her three-week-old daughter, Madeleine, she was not told what was happening to her, or given any opportunity to make her own arrangements for her care.

Joseph, 37, a mother of nine who was granted asylum in Britain following rape and torture in St Lucia, was left traumatised by the week-long separation from her infant on

11 March this year, during which she was unable to breastfeed or provide breast milk due to a lack of facilities.

She said: "I feel very let down by the trust. They treated me like an animal. I was afraid I would never see my daughter again. I kept asking: 'Where is she, how is she getting on?' They told me nothing. When I got her back, six days later, she was clinging to me."

Joseph had recently learned that her 15-year-old son had been killed in St Lucia on the 14 February, the day Madeleine was born by caesarian section. But she felt unable to grieve for her son: "I was scared that if I cried too much, they would think I was depressed. A psychiatrist asked about me crying and I told him: 'It's natural to cry when your son has been killed, isn't it?' He said: 'Yes, it's natural to cry.' I knew there was nothing wrong with me."

According to Joseph's medical notes, psychiatrist Andrew Biggs at Goodmayes concluded on the 16 March: "I cannot find symptoms of acute mental illness of any severity sufficient to justify detaining this woman currently." He said she had a history of illness with unstable moods and "may react badly to crises". She left hospital the next day and was reunited with Madeleine on the 18 March.

Her lawyers, who say the case will have important implications for all new mothers subjected to psychiatric detention, are seeking a declaration from the high court that Joseph and her baby were unlawfully separated and that she was denied her right to a fair hearing.

Cristel Amiss, of the Black Women's Rape Action Project, said: "The worst thing you can possibly do, if you are concerned about a mother's mental health, is to take her baby off her, not tell her what is happening, and not allow her to breastfeed."

Joseph's submission to the court includes evidence from the Royal College of Psychiatrists and the Prison Service's mother and baby policy advisers that close and frequent contact of mother and newborn is "vital" in forming an attachment.

Joseph's solicitor, Nicola Daniel, said: "There is a basic human right that a mother and child should not be separated at that crucial bonding time. We are hoping that the outcome of this case will be important for all mothers with babies who are subjected to psychiatric detention."

Morgan Gallagher, chair of Nursing Matters, said: "A three-week-old, exclusively breastfeeding baby will be traumatised by the abrupt removal of the mother. It will be further traumatised by being bottle-fed by a stranger.In these cases, the needs of the baby should come first."

Joseph was admitted to King George hospital on 7 March after suffering abdominal pains related to her caesarian. She left three days later as the hospital was unable to

give her a room where her daughter could stay.

She returned at the hospital's request on 11 March and was seen by five people, including a psychiatrist and two mental health social workers.

It was following a break in the assessment, during which Joseph went outside for a cigarette, that events took a dramatic turn. Joseph said: "I saw this man coming up to me shouting to get away from the baby. I said to him: 'What are you talking about, it's my baby.' He said: 'I've come to take the baby.'

"He pushed me and I fell. The two security men put my hands behind my back. I was crying and asking: 'Why have they taken my baby?'"

A spokeswoman for the North-East London NHS Trust said it was investigating but would not comment on an ongoing legal case. She said: "When somebody raises a concern it is investigated and answered fully. If the investigation highlights areas for improvement we will of course take action to address them."

NHS WILL ONLY SAVE MY LIFE IF I START TO CLAIM BENEFITS

Veronica Hayhow can only eat a piece of toast and half of a chicken breast each day

Saturday June 18,2011
By Jo Willey Health Correspondent
http://www.express.co.uk/posts/view/253436...-claim-benefits

A WOMAN with a rare stomach illness fears she will starve to death because she says the NHS will only give her life-saving surgery if she claims benefits.

Veronica Hayhow, 47, who works full-time, can only eat 250 calories a day after being diagnosed with stomach paralysis, known as gastroparesis.

The mother-of-two has eaten just one piece of toast with Marmite and half a chicken breast a day for the past 18 months.

The rare stomach condition leaves her body unable to digest food and she constantly feels nauseous and vomits.

She has lost four stones and dropped from a size 14 to 10 in months. Now she needs an operation to fit a pace-maker in her stomach that will help her to eat properly. But she claims her local NHS trust has refused to pay for the £12,000 surgery because she will not quit her job and claim disability allowance.

A gastric pace-maker would regulate Veronica's digestive processes and stop her body from rejecting food.

Veronica's surgeon Sritharan Kadirkamanathan put together a "business case" for the operation but this was rejected by Mid Essex NHS Trust.

Veronica, from Great Bardfield, Essex, said she does not want to "scrounge off the state" but is desperate for the operation. She said: "This is a chronic condition, which is ruining my life. It makes me angry when I see people having gastric bands fitted but I can't have a life-saving operation.

"I don't want to give up my job as I really enjoy it but I feel that works against me sometimes. I don't want to be told I have only a year or so to live because I am starving to death."

Jennifer Melville, commissioning manager at Mid Essex Trust, said treatment for Veronica's condition is not normally available on the NHS.

She said: "We would like to assure the patient that the process for considering a business case for any new treatment has no bearing on decisions about individual care."

Description: *review*

TheUnhivedMind - June 16, 2011 03:20 PM (GMT)

Concerns over North Staffs hospital doctor sparks review

The hospital trust has confirmed it has carried out an internal review

16 June 2011 Last updated at 14:25
http://www.bbc.co.uk/news/uk-england-stoke...dshire-13791619

A Staffordshire doctor has been stopped from performing some procedures after concerns were raised about his work.

Dr Changez Khan Jadun practises at the University Hospital of North Staffordshire where he specialises in clinical radiology.

The hospital trust has confirmed it has carried out an internal review and commissioned an external review.

It is also looking again at the scans of 468 patients to "reassure patients and colleagues".

A spokesman for the University Hospital of North Staffordshire NHS Trust said: "A doctor at University Hospital is not performing interventional radiology whilst an investigation is under way following concerns raised internally in relation to a small number of patients.

"He continues with other parts of his work."

He added no doctor in this field has been referred to the General Medical Council by the trust.

Dr Jadun has chosen not to comment to the BBC about the investigation.
'Acted properly'

In a statement the trust said concerns were first raised in 2009 about the consultant's work.

It said a review was carried out externally and seven recommendations implemented although the doctor was not required to stop his work.

A second review was conducted 12 months later which showed no concerns but in late 2010 concerns were raised again internally.

At this stage the trust said the consultant was stopped from performing interventional radiology "related to the issues highlighted" although he continued other parts of his work while a review was carried out internally.

Following the review the Royal College of Radiologists was asked to recommend interventional radiologists to carry out an external review of specific cases. This review is ongoing.

The trust said of the 468 scans being re-examined so far 66 had been re-reported with no clinical difference found.

The review of the remaining scans is expected to be completed in the next few weeks.

The statement said: "University Hospital has acted properly on each occasion."

The investigation is being conducted at a hospital in the same county as a trust which is the subject of an unconnected public inquiry.

The inquiry into Mid Staffordshire NHS Foundation Trust is looking into monitoring by regulatory bodies after a higher-than-expected number of deaths occurred between 2005 and 2008 at Stafford Hospital.

Woman sends two cats to the vet when one falls ill... and he puts the wrong one down by mistake

Last updated at 3:42 PM on 16th June 2011
http://www.dailymail.co.uk/news/article-20...at-mistake.html

Vet forced to put sick kitten down too after blunder
Surgery supplies memorial plaque and ashes to devastated pet owners

A couple who were devastated to be told one of their two cats needed to be put to sleep because it was so ill were horrified when blundering vets put down the other cat by mistake.

Mandy Raab said she was told by vets that her beloved pet Maddy needed to be down because of a deteriorating leg condition.

But Miss Raab, from Telford, Shropshire, and partner Paul Saxton said they later discovered the wrong cat - Tammy - had been put down.

Mandy Raab and Paul Sexton say they are to make a complaint to the Royal College of Veterinary Surgeons

Now heartbroken Miss Raab, 36, says she will make a complaint to the Royal College of Veterinary Surgeons.

The couple had arranged to have the rescue cats, Tammy and Maddy, neutered last week.

But vets said that Maddy was suffering from a deteriorating leg condition and needed to be put to sleep.

Miss Raab said: "Maddy's leg had started to get very bad - she couldn't jump up or climb on anything, and she got to the point where she couldn't even stand up without falling over again.

'When we took the two kittens to the vet, we asked him to look at Maddy's leg - but we weren't expecting such bad news.

'I cried when the vet told me the kindest thing to do would be to put her down.

'But I took comfort in knowing that I would still have Tammy, and knew I had to be strong for her, because she would miss Maddy.

'When my partner walked in to the vets and saw Maddy standing there, he asked the nurse straight away where Tammy was. Her face dropped and she said 'are you sure that's Maddy?'

'What pet owner wouldn't recognise their own cat though? The vet came out and was very apologetic - he said he was very sorry, but there had been a mistake, and they had put the wrong cat to sleep.

'I just howled in pain - I was distraught, no-one could comfort me. Tammy was a perfectly healthy 10-month-old kitten. There was no need for her to die.'

Miss Raab said she couldn't understand how the mix-up could have happened because, she said, Maddy would fall over as soon as she tried to stand up.

She added that the vets were returning both cats' ashes to her next week as well as a memorial plaque.

Wrekin View Vets, in Wellington, Shropshire, refused to comment on the matter but Miss Raab said they had given her two new kittens, one of which she claimed had to be taken back to the vets because it had 'flu.

Ian Holloway, Royal College of Veterinary Surgeons spokesman, said: 'Allegations of negligence are usually resolved between the parties or by the civil courts.

'There are occasions, though, when the alleged negligence is so serious as to be an issue of professional conduct.

'Where this appears to be a real possibility, we will investigate.'

View Full Version: Drug firms go online to test and sell medicines

Title: Drug firms go online to test and sell medicines

TheUnhivedMind - June 9, 2011 05:34 PM (GMT)

Drug firms go online to test and sell medicines

(April 20, 2009)
Ben Hirschler
June 8, 2011, 4:50 a.m.
http://www.latimes.com/health/sns-rt-us-ph...0,1501547.story

LONDON (Reuters) - Prompted by the soaring cost of developing and marketing their medicines, drug companies are embracing the Internet in a bid to drive down costs.

The hope is that digital tools will not only make them more efficient, but also smarter and nimbler.

Pfizer, the world's biggest drugmaker, is pushing the envelope on clinical trials by conducting the first ever "virtual" study of a medicine, in which patients will be able to participate by using home computers and smartphones.

At the same time, several large companies are changing the way they communicate and market their medicines to doctors by establishing new online services to answer product queries and let physicians order free samples.

The moves come as the cost of drug research continues to spiral upwards and companies face a wave of patent expiries on some of their biggest selling products, leading to an unprecedented round of cost-cutting across the industry, with big job cuts in both marketing and research.

"Drug companies are going to look at any method of cutting costs and the whole marketing process is certainly changing," said Dominic Valder, industry analyst at Evolution Securities.

Pfizer's online study of its overactive-bladder drug Detrol, announced this week, has the blessing of the U.S. Food and Drug Administration (FDA) and will be closely watched as a test case by other companies.

In itself, the 600-patient pilot study is not likely to throw up any major surprises, since it aims to replicate the results of a previously completed traditional trial to assess the validity of the new approach.

But Steve Cummings, an emeritus professor of medicine at the University of California, San Francisco, believes it could be the start of something much bigger.

"This virtual method enables scientists to conduct trials more efficiently. Additionally, as more people participate in trials conveniently from home, the results of trials may apply to a broader patient population," he said.

Cummings has a vested interest, since he is chief executive of the company Mytrus, which designed the study for Pfizer. Mytrus's business model is built on the idea that people can safely participate in clinical trials from home, thereby improving recruitment and compliance, as well as cutting costs.

The U.S. patients in Pfizer's 16-week trial will receive blinded medications by mail -- either Detrol or placebo -- and will record their symptoms and report back to researchers over the Internet. They will get paid up to $175 for taking part, according to the trial's website (http://j.mp/ltRO0F).

Valder said such online methods were most likely to be used in post-launch tests of established drugs, like Detrol, rather than in make-or-break studies needed to get a new drug approved. But in future it might be possible to combine data collected online with information from traditional face-to-face tests.

ONLINE MARKETING TOOLS

Using online tools to market medicines is less revolutionary but the approach has gained considerable momentum in the past two years, according to analysts and industry executives.

AstraZeneca, for example, has set up a website for U.S. doctors called AZ TouchPoints that provides online sample ordering, formulary information and patient education materials.

The group's heightened focus on online communication with prescribers coincides with a recent decision to end payments for physicians to attend international meetings.

Other drugmakers have yet to follow AstraZeneca in scrapping such trips but an

increasing number are relying on the Internet, rather than in-person meetings, to get their message across. Sanofi's iPractice site, for example, also allows U.S. doctors to request samples and product information online.

Such digital marketing techniques are starting to replace some of the traditional activities of pharmaceutical sales reps, who nowadays are paid more to be trusted collaborators with healthcare providers rather than simply salesmen.

The new frontier in marketing is social media -- and drugmakers, like many companies, are dipping into Facebook and Twitter. Where this avenue will lead is still unclear, as the industry is still awaiting social media policy guidelines from the FDA that were originally promised by the end of 2010.

Hinchingbrooke NHS hospital poised to be privately run

The Cambridgeshire hospital's debts of £40m have been underwritten

Thursday, 18 February 2010E-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/england/cambrid...ire/8522684.stm

A failing hospital looks set to become the first of its kind to be run by a private firm, after the only NHS bidder withdrew from the race to manage it.

Five private health providers are still vying to manage Hinchingbrooke district general in Cambridgeshire.

A boss from the East of England health authority denied the move amounted to the privatisation of the service.

But a health union warned the hospital was part of a "dangerous experiment" involving bidders with no experience.

£40m debt

The health authority's director of strategy, Stephen Dunn, said all the companies in the contest had provided elective surgery, such as knee and hip replacements, to NHS patients in treatment centres.

He said: "The NHS remains firmly part of this process. Staff and assets will remain in the NHS. They are not being sold. This is not about selling the family silver. This is not about privatisation

Dr Stephen Dunn

"This is not about selling the family silver. This is not about privatisation. These worries are just unfounded."

But a spokeswoman for health union Unison said it was a waste of public money to go through a process of "market testing" just as Hinchingbrooke started making progress.

She said she was worried most private sector companies did not know how to run a hospital with intensive care, maternity and emergency services.

"The experience in the UK is that when you have an emergency in a private sector hospital it is transferred to the NHS. This is a dangerous experiment," she said.

Earlier this week Cambridge University Hospitals Trust withdrew from the race to run the large, debt-ridden hospital in Huntingdon from April 2011.

A spokesman for the Trust said: "The competitive bidding process will involve considerable investment in both time and money.

"Continuing to take part would have an impact on services at Addenbrooke's and The Rosie. Accordingly, we have decided to withdraw from the project."

Any incoming company would have to help repay an NHS loan being used to underwrite the hospital's £40m debt.

Use your loaf! NHS officials pay £32 for gluten-free bread that costs £2.25 in the shops
Sourcing through pharmacies costs £2.48 a slice

By Lydia Warren
Last updated at 2:17 PM on 19th July 2011
http://www.dailymail.co.uk/health/article-...costs-2-25.html

NHS officials paid more than £32 each for thousands of small loaves of bread, it has emerged.

The gluten-free product, which is given out free of charge to patients with coeliac disease, costs just £2.25 in supermarkets.

Official figures show the cost to the NHS of supplying it through pharmacies has rocketed to £32.27 for a small loaf – or £2.48 a slice. The total cost of the bread was £1.25million in a year.

The sum was paid by NHS officials in Wales. The Health Service there also pays £11.54 for a bag of pasta which costs £3.20 in a shop, and £7.14 for gluten-free biscuits that are £2.22 on the high street.

Darren Miller, Shadow Health Minister in the Welsh Assembly, uncovered the bread bill, which is only blamed on ‘administration charges’.

He said: ‘This is not an effective use of resources. The Health Minister needs to change the way in which patients access such foods to protect the public purse.’ The Government in Cardiff is led by Labour.

Taxpayers Alliance spokesman Emma Boon said: ‘It smacks of incompetence. This doesn’t look like taxpayers are getting value for money.’

NHS prescriptions for gluten-free and wheat-free food in Wales have rocketed in the last five years, from 106,000 to 142,000, as more patients are diagnosed with coeliac disease of the small intestine.

Welsh Minister Lesley Griffiths said: ‘Determining what is given on prescription is a matter for GPs who use their professional clinical judgement based on the patient’s clinical needs. Previously gluten-free products were only available in specialist food shops.

‘Now they are widely available. Work is now under way to identify savings that can be made in reducing the number of gluten-free products prescribed by the NHS.’

TheUnhivedMind - July 15, 2011 03:36 PM (GMT)

Scrapping child heart surgery at Royal Brompton 'unlawful'

Kiran Randhawa, Health and Social Affairs Correspondent
15 Jul 2011
http://www.thisislondon.co.uk/standard/art...ton-unlawful.do

Plans to axe children's heart surgery at one of London's leading hospitals are "flawed" and "unlawful", the High Court has heard.

The Royal Brompton Hospital says the proposals are "shot through with legal error" as it seeks a judicial review to challenge the closure of the department. It is the first time an NHS organisation has taken the health service to court. Patients, their families and medical leaders, including Professor Sir Magdi Yacoub, the first person in Britain to perform a heart and lung transplant, have objected to the proposed closure, saying it would threaten the lives of thousands of sick children.

The plans were made in February as part of an NHS review into child heart units. A committee of primary care trusts recommended paediatric surgery be discontinued at the Brompton, leaving two specialist centres offering heart surgery for children in the capital, one at Great Ormond Street and the other at Guy's and St Thomas'.

The closure could threaten other departments at the Royal Brompton including the cystic fibrosis unit and the paediatric intensive care unit. A public consultation on the plans ended this month.
Alan Maclean, QC for the hospital, told the High Court the decision-making committee included doctors from Great Ormond Street and Guys and St Thomas' but that the Royal Brompton was not represented.

A spokeswoman for the Royal Brompton & Harefield NHS Foundation Trust said: "We believe the public consultation is fundamentally flawed and unlawful because the decision to reduce the number of centres in London from three to two does not stand up to scrutiny and it is not transparent.

"The consultation's analysis is flawed because it ignores the fact that Royal Brompton fulfils the set criteria, and fails to take into account the disastrous effects on other NHS services if children's heart surgery is withdrawn."

Teresa Moss, director of the national specialised commissioning team, said: "The Royal Brompton Hospital's legal challenge is regrettable and will be robustly defended. Pooling expertise will help the NHS make further improvements to patient outcomes and deliver a truly excellent service."

She added that an independent panel had also been set up to consider the potential impact of the proposed changes on other services. A decision on whether the judicial review will be granted was expected today.

'My son's life was saved by these experts'

By Emily Kilner

Carlos Bacchus would not be alive today had it not been for the child cardiac surgery unit at the Royal Brompton, his mother Carla said.

One of her routine pre-natal tests revealed that her unborn son had a dangerously high heart rate and a build-up of fluid around the organ. Doctors feared that his heart could explode from over-exertion.

Ms Dougan-Bacchus, 35, underwent drug treatment to slow his heart, but in the end, one hour after he was born, doctors at the Royal Brompton performed surgery - stopping his heart before electrically shocking it back to life again.

Carlos's heart now beats in regular time and he is a fit and healthy seven-year-old.

Ms Dougan-Bacchus, an editor from Colindale, said: "Carlos is with us today because of the expert treatment he received from the talented children's cardiac team at the Brompton. If the closure goes ahead, it will have devastating consequences for babies, young patients and mothers suffering from life- threatening heart conditions."

Long hospital waits 'on the increase'

By Nick Triggle
12 July 2011 Last updated at 01:21
http://www.bbc.co.uk/news/health-14111452

The number of people facing "long waits" for hospital treatment in England is rising, NHS figures show.

Under the NHS Constitution, patients have a right to be seen in 18 weeks.

But there are currently 236,155 on the waiting list who have waited longer than that - a rise of 8.5% in a year, according to official data. Nearly half have waited more than six months.

The government said there could be valid medical or personal reasons for long waits.

However, doctors blamed the rise on the squeeze in budgets that is increasingly being seen in the health service.

The most common treatments people are facing long waits for is in orthopaedics, which includes operations such as knee and hip replacements.

Peter Kay, president of the British Orthopaedic Association and a former adviser to the Department of Health, said the sheer numbers waiting longer than 18 weeks meant it was unlikely to be solely for personal or medical reasons.

He said the focus of hospitals was now slipping and patients were being left waiting for too long.

And he added: "One of the issues with 18 weeks is that once you have missed the boat there is less incentive to get the patient treated. They get left on the list for longer than they otherwise would."

The rise in those waiting longer than 18 weeks has happened despite a small drop in the overall number of people on the waiting list.

The April data - the latest available - showed that 2.47 million were on waiting lists, down from 2.51 million in April 2010.

Waits of a year are even being seen. Nearly 13,500 patients have waited this long.

A spokesman for the Patients Association said the figures "back up what patients are telling us".

But a Department of Health spokesman said average waiting times were "stable" and the government was committed to keeping them low.

But he added: "There will always be some longer waits reported - including as a result of clinical decisions, patients missing appointments and patients exercising choice."

The spokesman also pointed out that overall hospitals were meeting the waiting time performance expected of them.

While all patients are entitled to treatment within 18 weeks under the NHS Constitution, hospitals are only expected to see 90% of inpatients and 95% of outpatients in that timeframe to reflect the fact that some patients are not seen for valid reasons.

View Full Version: Call to cut hospital beds and improve dementia

Title: Call to cut hospital beds and improve dementia
Description: *care*

TheUnhivedMind - July 12, 2011 06:33 PM (GMT)

Call to cut hospital beds and improve dementia care

By Adam Brimelow
12 July 2011 Last updated at 07:48
http://www.bbc.co.uk/news/health-14109089

The number of NHS hospital beds in the UK should be cut by at least 10% to free up funds for dementia care, a group of MPs and peers says.

The All Party Parliamentary Group on Dementia says this would free £1bn that would be better spent on improving community-based services.

Its report says failure to act will result in an "unqualified crisis".

However, some experts have warned that the savings would be difficult to achieve.

The APPG report says the annual cost of dementia is the UK has reached £20bn.

Health and social care budgets are coming under extreme pressure, it warns.

But it says there is "ample opportunity" to spend the money more effectively.

It criticises the NHS for failing to place a priority on dementia services, and calls for better co-ordination across the system, including carers, GPs, care homes, hospitals and social care.

Crisis point

The report argues that people with dementia often go without support until they reach

crisis point.

It says the care they then require is hugely expensive - much of it "unnecessary and completely avoidable".

In particular, it calls for changes to reduce inappropriate hospital admissions of people with dementia and to shorten their stay.

Drawing on data from the Alzheimer's Society and the Department of Health, the APPG says up to a quarter of hospital beds in England are estimated to be occupied by people with dementia aged over 65 years at any one time.

It says this means more than 26,000 people with dementia are in hospital at any one time, at an annual cost of more than £2bn.

The APPG argues this could be reduced by moving treatment and care out of hospitals into community based services, and suggests that reducing acute and geriatric beds by at least 10% would release £1bn.

The group says the money would be better spent on specialist support for GP practices to help diagnose dementia.

It also recommends strengthening community support to avoid emergency admissions, and providing day and night respite care.

Money 'thrown away'

The chair of the APPG on Dementia, Baroness Sally Greengross, said the plan could deliver immediate savings.

"Money is consistently being thrown away on poor quality services and inappropriate care for people with dementia.

"The Dilnot Commission last week put caring for older people firmly in the spotlight, but its recommendations are not yet a reality.

"Our report shows there are many ways to save money and improve care now."

Jeremy Hughes, chief executive of the Alzheimer's Society, said: "We can't keep using the chicken and egg excuse that it's not possible to cut hospital beds, and release funds, until community services are in place.

"The reality is, money is not being spent in the best way and NHS bosses must find a way to change this."

But Professor John Appleby, chief economist at health research group the King's Fund,

warned that this was easier said than done.

"It can be difficult to free up resources in one part of the system to be spent in another.

"In theory, treating people in community settings should reduce bed use in hospitals, with the savings being used on community services. In practice it can be very difficult to realise such savings."

The chief executive of the NHS Confederation, Mike Farrar, said the report raised a difficult issue for politicians.

"Shaping dementia services to suit the needs of local people will require some frank and honest discussions about the need to close some services and move others out of hospital if we are to provide the best care possible in the future."

Care services minister for England, Paul Burstow, said dementia was a priority for the government.

"Early diagnosis is key as it allows people to plan for their future, preventing the need for crisis intervention and premature admission to acute hospital care.

"This delivers better outcomes for people with dementia as well as significant cost-savings"

TheUnhivedMind - July 10, 2011 12:57 AM (GMT)

‘Close hospitals down to avoid scandals caused by cost cutting’, NHS boss warns MPs

By Rebecca Twomey
Last updated at 12:02 PM on 9th July 2011
http://www.dailymail.co.uk/news/article-20...re-scandal.html

As David Cameron sets out his ambitions to restructure the country’s health service, the chief executive of the NHS believes hospitals must close in order to avoid scandal such as the Stafford Hospital disaster that saw 1,200 ‘excess’ deaths in just three years.

Sir David Nicholson who holds the most senior role in the NHS advised MPs that they should face the wrath of an angry public and cut hospital beds, close units and centralise services.

If these reshuffles are not adhered to the health service chief warns patient safety will be put at risk under the new cash cuts.

This issue is something Sir David has experienced first-hand, when he worked at the crisis-hit Stafford Hospital where patients were so thirsty they were forced to drink water from vases for flowers.

Following the scandal, Sir David now oversees the health reforms planned by the Government, despite his successor Cynthia Bower blaming the crisis on the merger of Stafford and Cannock Chase hospitals – something the now chief executive of the NHS oversaw.

These comments come as a warning that political self-interest should not overshadow plans to restructure how hospitals operate in the health service.

Sir David gave his frank speech to the NHS Confederation conference in Manchester yesterday, he said: ‘We should expect out politicians to support us and take these arguments forward to their local communities however tough it may be.

‘The alternative is real danger for our NHS.’

The chief argues that confrontation from locals is not a reason to sabotage his request that the NHS make efficiency savings of £20 billion over the next four years.

Sir David told managers the dramatic slash in spending on the health service should not simply be a case of cost-cutting or back office belt-tightening.

To ensure patient safety the NHS chief wants more drastic measures employed which will involve fundamental redesigns of the health service.

His attitude is shared by numerous health care experts who want to see patients with long-term conditions such as dementia, diabetes and respiratory disease treated out of hospitals.

Hospitals are the NHS’ biggest expenditure with treatment of long-term conditions accounting for over two thirds of the £110 billion NHS budget.

In order to achieve the ambitious cuts to the health service Sir David advises the number of beds in hospitals be reduced, moving patients suffering from illnesses such as diabetes away from hospitals and into specialised centres.

He used the stroke services in London, amalgamated from 32 hospitals into eight specialised units, as an example of how this could be executed effectively.

Sir David’s case for change is supported by Peter Carter, head of the Royal College of Nursing, who wants the worse performing hospitals shut down.

To add further weight to his argument, Sir David said if his suggestions were not implemented the NHS faces ‘the greatest danger for quality and safety.’

He is not entirely unsympathetic to the pressure this move would make on politicians, but spoke of the alternative option – NHS managers who would be scraping to secure savings elsewhere which would be even worse than an angry public.

This sentiment Professor Chris Ham, chief executive of the think-tank, the King’s Fund, also shares: ‘Unless politicians show leadership they are condoning the continuation of unsafe care.’

View Full Version: NHS chiefs warn of rising hospital waiting times

Title: NHS chiefs warn of rising hospital waiting times

TheUnhivedMind - July 6, 2011 03:15 AM (GMT)

NHS chiefs warn of rising hospital waiting times

By Nick Triggle
6 July 2011 Last updated at 01:17
http://www.bbc.co.uk/news/health-14034835

Financial problems in the NHS are likely to cause a rise in waiting times in England, health chiefs believe.

Mike Farrar, the head of the NHS Confederation, said the difficulties could even lead to the 18-week limit for elective operations being broken.

He made the warning after feedback from senior NHS managers showed many feared it would get harder for patients to access care in the next 12 months.

But ministers insisted waiting times would remain low.

The NHS is currently meeting the 18-week standard overall.

However, the national figure masks the fact that a growing number of areas are experiencing difficulties.

The latest monthly statistics revealed a third of trusts were in breach of the limit for inpatients - double the number from a year ago.

This research by the NHS Confederation showed many health chiefs expected the situation to get worse.

The group, which represents managers, polled bosses working across the NHS in hospital, mental health and ambulance trusts. Private firms running dedicated NHS

clinics were also quizzed.

'Very serious'

They received 287 responses - only a third of the total they polled - but Mr Farrar said it still provided clear evidence of the pressures the NHS was under.

Nine in 10 described the financial situation as very serious with nearly half of them saying it was the worst they had ever seen.

While most felt this would not harm patient safety or the quality of care over the next year, 53% said patient access could get worse.

The NHS Confederation said this was because of increased rationing of services - there have been reports of restrictions being placed on everything from fertility treatment to hip and knee operations - and longer waiting times for treatment.

Speaking ahead of the NHS Confederation's annual conference which is starting in Manchester on Wednesday, Mr Farrar admitted there was a danger this could compromise the 18-week hospital waiting time limit.

"I think there is a risk. That is clearly what people are saying."

His warning comes just a month after David Cameron made a personal pledge to keep waiting times below 18 weeks as part of his drive to allay fears over the NHS reform programme.

Mr Farrar also called on politicians to stop attacking managers and called for them to show more "political courage" by supporting proposals to close hospital units where it was shown to be clinically necessary.

He said he had had experience of cases where MPs said they agreed with plans in private, but then opposed them in public.

"Managers need more support if we are going to deal with the difficulties ahead," he added.

Shadow health secretary John Healey said: "This is further evidence of widespread anxiety in the health service, as financial pressures impact on patient care and we start to see the NHS going backwards again under the Tories."

But Health Secretary Andrew Lansley said waiting times would continue to remain low and stable as promised.

He added: "Ultimately, our modernisation plans will safeguard the future of the NHS,

improve care for patients, drive up quality and support doctors and nurses in providing the best possible care for their patients."

TheUnhivedMind - July 5, 2011 04:35 PM (GMT)

Addicts given £14,000 of heroin a year on the NHS

Kiran Randhawa, Health and Social Affairs Correspondent
5 Jul 2011
http://www.thisislondon.co.uk/standard/art...r-on-the-nhs.do

Drug addicts are being prescribed heroin across London, with doctors able to issue it in exceptional cases if they get Home Office approval.

Diamorphine - pure heroin - has been given to addicts in a third of London boroughs over the past three years. They take it under medical supervision several times a day.

The annual NHS bill per addict is put at £14,000. Supporters of prescribed heroin say this is dwarfed by the cost of crime users might otherwise commit to fund their addiction.

Experts estimate an addict spends £45,000 a year on average on street heroin.

However, former Tory frontbencher Ann Widdecombe said: "You are not tackling the root cause of their problems.

You remove the danger of dirty needles, but not the addiction." Dr Adrian Rogers, a retired GP, said: "The only thing you should offer is detoxification. Drugs prevention has grown into a massive industry costing the taxpayer huge amounts."

Brent Shared Care Prescribing Team - which treats addicts in Brent, Westminster, Hammersmith, Barnet, Kensington and Chelsea, Ealing, Harrow, Camden and Islington - prescribed 466 addicts with methadone, routinely used to treat heroin addicts, in the past three years.

Six were discharged drug-free, a success rate of 1.2 per cent. In the same period, 48 people were issued with heroin and six kicked the habit - a 12.5 per cent success rate.

Martin Barnes, chief executive of the charity DrugScope, said: "It can stabilise someone's drug use, achieve positive health outcomes and reduce crime. It can put someone on the path to becoming drug-free."

TheUnhivedMind - July 4, 2011 05:03 PM (GMT)

ELDERLY AT HIGHER RISK IN HOSPITAL

Patients aged over 75 are 50 times more likely to die from mistakes than children under 14

Monday July 4,2011
http://www.express.co.uk/posts/view/256654...isk-in-hospital

ELDERLY patients are more likely to fall victim to hospital blunders, a study has found.

Patients aged over 75 are 50 times more likely to die from mistakes than children under 14, the study reveals.

Researchers found items left inside patients, dosing errors and infections from surgery, which were all more likely to affect the elderly.

In the first study to analyse deaths and serious harm from “medical misadventure”, researchers at the London School of Hygiene and Tropical Medicine looked at 20 years of NHS data.

They found that while older people spend more time in hospital, this alone does not explain the greater risk of avoidable injury while there.

Dr Phil Edwards, one of the authors of the study in the Journal of the Royal Society of Medicine, said: “It could be down to older people receiving poorer care.

“At the moment, we just don’t know.”

Title: Public to pay for NHS alterations

TheUnhivedMind - July 1, 2011 01:55 AM (GMT)

Public to pay for NHS alterations

Thu Jun 30, 2011 6:29PM
http://www.presstv.ir/detail/186977.html

Britain's Labour leader Ed Miliband says government's NHS alteration plans will impose an £852 million bill on British taxpayers as the planned changes will not lead to real redundancies.

Miliband faced Prime Minister David Cameron during Prime Minister's Questions, warning that the greater part of the personnel of the Strategic Health Authorities and Primary Care Trusts (PCTs), who are being dismissed, would be reemployed by PCT successors, the GP commissioning consortiums.

Miliband said after changing the original proposals for the shake-up of the NHS, the number of the service's statutory organizations will rise from 163 to 521, effectively contradicting the government's former claims that the NHS reforms are aimed at cutting bureaucracy.

In response, Cameron claimed the plans do cut the bureaucracy leading to saving of £5.

"What we inherited was a situation where the number of managers was going up four times as fast as the number of nurses. What's happened since we took over? The number of doctors has gone up, the number of bureaucrats has gone down," he said.

But Miliband challenged the PM, counting a number of cases where Cameron's administration has failed to deliver its commitments on bureaucracy, saying Cameron “promised a bonfire of quangos [but] he is creating more. He promised a better deal for

patients and things are getting worse".

You can't join NHS post-natal depression support group, you're too sad: What mother was told by mental health nurse

Last updated at 10:49 AM on 30th June 2011
http://www.dailymail.co.uk/health/article-...p--unhappy.html

A young mother suffering from post-natal depression was told she would 'bring down' other mothers if she joined an NHS support group.

Rachael Dobson was told that she was too unhappy to be allowed to join other mothers in the same situation in a bid to regain full health.

The 22-year-old was shocked when a health visitor refused to refer her to the group while a mental health nurse also refused to help her, saying she should 'work through' her problems on her own.

Mrs Dobson, who suffered severe post-natal depression following the birth of her son Andreas, is now setting up her own charity to help other sufferers.

She said: 'The health visitor told me there was a support group where women suffering from post-natal depression would meet up but she said to me: 'You're two pegs above them and you'll bring them all down.'

'It was like being told I was too unhappy to go to the group but that was the whole point of the group.

'It would hardly be full of women joking around - all these women were suffering post-natal depression.

'I genuinely felt like I had been slapped round the face.

'Post-natal depression is very misunderstood but it had a devastating effect on me.

'Some days I couldn't physically get up and my husband would have to take the day off and drag me out of bed.

'I've always been very active and sociable but post-natal depression knocked me sideways.'

Mrs Dobson was struck down with post-natal depression just minutes after giving birth to her son Andreas on February 8 last year.

She said: 'The birth wasn't exactly plain sailing. I had an emergency caesarean and I felt as if I was being attacked.

'When Andreas was delivered I was put in a side room on my own and looking over into the cot I was not met with love or joy, just nothing.'

Her fragile state got rapidly worse when she and husband Stuart, 26, took Andreas back to their home in Shrewsbury, Shropshire.

She said: 'For the first few weeks I would cry when my husband walked through the door and would launch into rageful fits of anger.

I wouldn't do anything with my son and when he cried at night I would bury my head in the pillow and Stuart would get up to help him.

'One morning I was overwhelmed with tremendous anger and I wanted him [Andreas] gone.

'I was then met with a sadness and horror because I couldn't believe I felt like this towards a baby.

'I rang my health visitor and collapsed into tears on the phone. She came round and I poured everything out.

'After that I was contacted by a community practice nurse from the mental health team but she just told me I had to 'work through it' on my own.'

Rachael and Stuart, who both work for Severn Trent Water, moved to a new house in Shrewsbury under the care of a different health visitor.

Social Services got involved and Rachael was banned from being on her own with Andreas for four months until her condition improved and she was deemed safe.

She has now set up her own support group called the Pandas Foundation for other mums suffering post-natal depression.

She said: 'I feel like I was left on my own by the health visitor.

'I was lucky that I had my family to fall back on for help and I feel like I'm coming out the other end of the post-natal depression now which is why I want to help others.

'I want to create a support network and one-to-one sessions for women and men who are suffering like I did.

'Post-natal depression is a terrible thing to happen to anyone and it almost sent me over the edge.

'I feel let down by the health visitor who refused to help me and almost led me to lose my family.'

TheUnhivedMind - June 29, 2011 04:16 PM (GMT)

Major investigation into care at London NHS trust

Five women have died at the same maternity unit in 18 months.

29 June 2011 Last updated at 13:06
http://www.bbc.co.uk/news/uk-england-london-13956392

A major inquiry has begun at an east London NHS trust following serious concerns about the levels of patient care, including in A&E and maternity.

The Care Quality Commission (CQC) has started a full investigation - only the second time it has done so - into the Barking, Havering and Redbridge University Hospitals NHS Trust.

In April it was told to improve its maternity services but the CQC said not enough has been done.

The trust said it welcomed the inquiry.

In April 2010, the CQC imposed eight conditions on the trust - seven of which have now been lifted - due to concerns about its performance.

Since then, inspectors have made unannounced visits, resulting in urgent demands for improvement and have carried out reviews into the maternity and A&E services.

The review of A&E, which will be published next month, found that problems with how the department was organised was affecting care.

The review of maternity services, published in April, found the trust was failing to meet six essential standards, with two areas - staffing, and care and welfare of people - a

major cause for concern.

Serena Ali and her baby died after staff failed to spot a ruptured womb

At this time, staff told inspectors that patient care was being compromised by staffing issues, and the CQC warned the trust that this must be addressed as a matter of urgency.

It has since recruited 60 midwives.

The report came three months after two midwives were suspended following the death of Tebussum Ali, known as Serena, and her newborn baby at Queen's Hospital in Romford.

Staff had failed to spot signs of her ruptured womb and tried to resuscitate her with a disconnected oxygen mask.

The CQC's Colin Hough said: "CQC has now launched a full investigation into whether Barking Havering and Redbridge University Hospitals NHS Trust has the right systems in place to protect people and make sure they receive safe care.

"We'll also be looking at the bigger picture - whether the trust has the support it needs to make improvements."

The trust's chief executive Averil Dongworth said: "The CQC recognises that some improvements have already been made, although we need to go further and sustain this.

"We welcome the CQC's investigation and will be working closely with them."

The CQC has a range of powers, including the ability to close wards and hospitals.

TheUnhivedMind - June 28, 2011 04:12 PM (GMT)

Doctors reject revised NHS plans

By Nick Triggle
28 June 2011 Last updated at 11:26
http://www.bbc.co.uk/news/health-13942819

Doctors have rejected the government's revised NHS plans, urging their union to take a tougher stance.

Delegates at the annual British Medical Association conference voted in favour of calling for the Health and Social Care Bill to be withdrawn by 59%.

The union initially welcomed concessions by ministers this month on competition and patient choice.

But doctors at the Cardiff meeting said it was time to keep pushing the government "further and harder".

The plans involve opening up the health service to greater competition and giving GPs a lead role in spending the NHS budget.

Amid mounting criticisms the government put the changes on hold in April. Two weeks ago ministers attempted to appease opponents by watering down certain aspects of the plans.

But delegates at the BMA said they were still not satisfied - despite pleas by BMA leader Dr Hamish Meldrum not to vote in favour of a series of critical motions.

One of those was calling for the bill underpinning the changes to be withdrawn.

Dr Meldrum said he would continue to ask for more.

But he added: "If you push too far you may lose some of the ground you have taken."

But delegates were not convinced with 59% voting in favour of the motion.

Dr Jacqueline Applebee, a GP from London, said the overhaul would result in one of the "biggest ever social injustices" as it would lead to charges for services and backdoor privatisation.

"We have a duty to past, present and future generations," she said.

Paddy Glackin, who is also based in London, added: "This is a slippery government that we cannot give any wriggle room to. This is not the time to back off, this is the time to push further and harder."

Vote 'disappointing'

It is the second time the BMA has called for the bill to be withdrawn. In an emergency meeting in March doctors voted in favour of it being withdrawn, but their attitude softened when the concessions were published, with the union's leaders indicating they were willing to work with ministers to get the bill right.

That stance will now harden following the conference vote. In fact, Dr Meldrum is likely to convey the message on Tuesday afternoon when he gives evidence to the House of Common's bill committee about the reform programme.

A Department of Health spokesman said: "This vote is disappointing because only a few weeks ago the doctors' union said there was much in our response to the listening exercise that addressed their concerns, and that many of the principles outlined reflected changes they had called for.

"The bill has changed substantially since the BMA first voted to oppose government policy. Our plans have been greatly strengthened in order to improve care for patients and safeguard the future of the NHS."

Failing NHS complaints system needs overhaul, MPs say

By Michelle Roberts
28 June 2011 Last updated at 06:49
http://www.bbc.co.uk/news/health-13926248

The NHS complaints system in England is failing patients and needs an overhaul in order to ensure justice, according to a committee of MPs.

The health select committee says a "more open culture" is needed when handling complaints and criticises the Health Ombudsman's role as too narrow.

The cross-party group says too few complaints are officially investigated by the ombudsman.

The Department of Health says new plans will make the NHS more accountable.

The ombudsman's office insisted it can review cases that merit it.

It is only relatively recently that NHS patients in England have been able to take their complaints direct to the Health Ombudsman.

Before April 2009, any complaints not settled locally between the parties involved were reviewed by the Healthcare Commission and referred up to the ombudsman if necessary.

In a bid to simplify and speed up resolutions, the Healthcare Commission stage was scrapped.

But some critics are concerned that the streamlined system now means some complaints are falling by the wayside. In 2009-2010, the ombudsman investigated 3% of about 15,000 health complaints it received, although many more were examined unofficially.

There appears to be something of a "black hole" into which the many complaints which would have been reviewed by the Healthcare Commission and upheld have fallen, Action Against Medical Accidents said.

The committee of MPs agreed.

Chairman Stephen Dorrell said the ombudsman's current remit excluded a number of cases sent for review.

"Patients should feel entitled to an independent review. That mismatch between patients' expectations and what the ombudsman does in practice needs to be closed," he said.

A complaint is accepted for formal investigation or intervention by the ombudsman only if the person has suffered injustice or hardship as a result of poor service or maladministration, and only if there is the prospect of "a worthwhile outcome".

In one instance the ombudsman declined to investigate because missing medical records meant the family were unlikely to get a "worthwhile" response.

'Complex' system

Health select committee chairman, Stephen Dorrell, on the need for a proper NHS complaints process.

The committee also wants healthcare providers to be more open and adhere to a "duty of candour", which requires them to publish information about the complaints they receive and the progress they make.

Action Against Medical Accidents chief executive Peter Walsh said: "We are very pleased that the committee has accepted our and other participants' calls for better access to independent review of complaints.

"Only a fraction of people who had independent reviews under the old system can get the ombudsman to investigate."

A spokeswoman for the Health Ombudsman said: "Where our assessment reveals clear evidence of maladministration or injustice, we consider whether we can resolve

the issue quickly and effectively through our intervention rather than a full investigation."

She added: "The system for handling NHS complaints is a complex one. We welcome the report's endorsement of the current system's design and potential, its emphasis on listening to patients and support for advocacy and the committee's call for a greater focus on complaints data and learning from complaints."

A Department of Health spokesman said: "The revised plans we set out last week, in response to the independent NHS Future Forum, will safeguard the future of the NHS and put patients at the heart of our health service.

"Under the plans, patients will have a stronger voice and the NHS will be more accountable for the quality of care it provides for patients.

"In addition, Local HealthWatch will champion the views and experiences of patients, helping to drive improvements in the quality of health and social care services."

View Full Version: A £2 packet of pasta was costing the NHS £50

Title: A £2 packet of pasta was costing the NHS £50

TheUnhivedMind - June 22, 2011 12:56 AM (GMT)

A £2 packet of pasta was costing the NHS £50 (including a £40 delivery charge)

Last updated at 9:43 AM on 21st June 2011
http://www.dailymail.co.uk/news/article-20...g-delivery.html

Pasta costing £2 proved somewhat more expensive to provide for patients on a gluten-free prescription

Wasteful health chiefs have been paying almost £50 for a £2 packet of pasta, it has emerged.

While many shoppers have been watching every penny they spend, it would appear some health service bosses have been acting far less frugally with taxpayer cash.

Now one NHS Trust has finally come to its senses and is getting patients to buy the packets in supermarkets for £2.

Everyone who previously had gluten-free pasta on prescription from the Eastern and Coastal Kent NHS Trust has now been advised to buy it themselves.

'A £2 packet of pasta from a supermarket could cost the NHS up to £47,' said Alison Issott, assistant director of medicines management at the Trust.

She added: 'It will cost £5 from the manufacturer, plus a £1 dispensing fee, £1 pharmacy fee and a delivery charge up to £40.

'Manufacturers and wholesalers can charge the NHS significantly more for gluten-free products than when bought directly in a supermarket.

'As a wide range of gluten-free products are now available in the supermarkets, which

was not previously the case, it is felt reasonable and fair to expect people to buy some of their own foods, as we do not pay for food for patients with other long-term food intolerances.'

Patients with coeliac disease – who have an intolerance to gluten – can get NHS prescriptions for some gluten-free foods.

Around one in 100 Britons have coeliac disease. If they eat gluten – found in wheat, barley or rye – it causes damage to the lining of the small intestine which stops it absorbing nutrients.

Gluten free food, like these chocolate chip cookies, can be five times more expensive than standard items

Over time, this causes diarrhoea, bloating, extreme pain and weight loss.

Miss Issott added: 'As we recognise that having a gluten-free diet costs more than an average diet, the NHS will continue to help towards these costs by providing staple foods such as long-life bread and flour, which are less likely to attract substantial additional charges to the NHS.'

'This has not been an easy decision to make.

'While we do not wish to add to the burdens on patients we must ensure equity and best use of NHS resources,' she adds.

Newborn baby died after 61-hour delivery delay at over-stretched maternity unit

By Chris Brooke
Last updated at 2:00 AM on 15th June 2011
http://www.dailymail.co.uk/news/article-20...rnity-unit.html

A baby died because of a 61-hour delay in delivering him at an overstretched maternity unit, an inquest heard yesterday.

Teacher Sarah Dawson, 33, was sobbing in agony after her waters broke and she tried to give birth naturally.

It was more than two days later before her baby boy, Oliver, was born by caesarean section. He died 42 minutes later as a result of an infection picked up as she waited to give birth.

Phillip Schofield, an electrician, and his partner Sarah Dawson, a school teacher. Their baby died because of a 61 hour delay in delivering him an inquest has heard

Attempts to deliver Oliver were first delayed due to hospital policy to wait 24 hours to see if labour starts naturally after a woman's waters break.

This was extended to 38 hours because 'assisted births' cannot be carried out at night at Dewsbury Hospital, the inquest was told.

Miss Dawson then had to wait much of the next day because midwives and doctors in the delivery suite were too busy to deal with her.

More problems ensued when a doctor was unable to take a sample of the baby's blood to check on his condition because a piece of medical equipment was missing, the hearing in Bradford was told.

Eventually the caesarean section was carried out and Oliver was born with barely a heartbeat and could not breathe unaided.

A post mortem revealed that he died from pneumonia due to an infection which had developed after his mother's waters broke. Miss Dawson and her partner Phillip Schofield, an electrician, of Morley, Leeds, have accused Mid Yorkshire NHS Trust of negligence.

She said: 'I have been to see my own doctor who is of the opinion that had my baby been delivered in 24 to 48 hours following my waters breaking – rather than 61 hours – he would be with us today.

'I'm now off work sick with depression and I'm finding it hard just to get through each day.' Her baby was due on August 3 last year – until her waters broke at 36 weeks at 7.30pm on Monday, July 12.

The hearing was told that under national guidelines pregnant women in her situation should be brought to delivery in 24 hours. However, in Miss Dawson's case it took more than twice as long.

Consultant Dr Sadiq Shama said the delivery suite was busy because of the number of mothers and the lack of midwives at the time. 'If I was concerned about her and the baby we would have stopped someone else's ongoing care to start the induction,' he added.

Another consultant, Dr Muhammed Sandow, who was unable to take a fetal blood sample in the run-up to the caesarean because the necessary amnioscope was not available, said of the pregnant mother: 'She was in tears due to the painful contractions.' He said the risks of her developing an infection were obvious by this stage.

When delivery with the help of an epidural wasn't successful, medical staff initially decided upon a forceps delivery, but the boy was eventually born by caesarean at 8.15am on Thursday, July 15.

The inquest continues.

Title: NHS changes: GPs want 'more concessions'

TheUnhivedMind - June 9, 2011 03:56 PM (GMT)

NHS changes: GPs want 'more concessions'

By Nick Triggle
9 June 2011 Last updated at 10:30
http://www.bbc.co.uk/news/health-13702147

GPs have urged ministers to make more concessions in their re-think of the NHS plans for England.

Earlier this week David Cameron outlined changes to the coalition's original plans, to win over critics.

But doctors at the British Medical Association's annual GPs conference said the steps were still not enough to win their backing.

The union's leaders warned a further climbdown was needed over competition in the NHS in particular.

During the opening session of the two-day meeting in London a series of critical motions were passed warning patient care was under threat and services could become fragmented if the changes were introduced.

The conference is taking place just two days after the prime minister set out a number of concessions he was planning to make.

Under Health Secretary Andrew Lansley's original plans consortia of GPs would be given much more responsibility for spending the NHS budget in England, while greater competition with the private sector would be encouraged.

But on Tuesday Mr Cameron indicated his willingness to include hospital doctors and nurses on the consortia alongside GPs and also said the NHS regulator would have a duty to promote co-operation as well as competition.

Dr Laurence Buckman, of the British Medical Association, says reform must not be a 're-spray' job

But in his speech to open the union's conference, Dr Laurence Buckman, the chairman of the BMA's GPs committee, said: "He has still not taken away the duty to promote competition. I want politicians of every stripe to understand that we do not need competition to run the NHS. It creates duplication that is wasteful.

"This bill whether substantially amended or not is going to alter the face of the English NHS forever."

He said it was now important that ministers go further.

More details are expected to emerge next week of how the plans could change when the panel set up to carry out the recent listening exercise hands in its report to cabinet.

Dr Buckman said: "My plea is please do not let this exercise just be a respray job to try to persuade us to accept the unacceptable."

Concerns were also expressed about the potential conflict of interest doctors could face in making decisions about the budget, while doing their best for individual patients.

Fears have also been voiced about whether expanding the membership on consortia to other professionals could dilute decision-making.

Dr Simon Hodson, a GP from Shropshire, said: "This pause can only be seen as a sham."

And Dr Tim Bland, who works in Barking and Havering, London, said: "I believe the health bill is the greatest threat to the NHS since its inception."

But not everyone was so opposed. There was even a motion - voted down - that said the plans were a "great opportunity".

Dr Phil Garnett, from North Yorkshire, said GPs had a "responsibility" to work with the government as the NHS was facing some difficult decisions because of tightening budgets.

"We are in the best position to make these decisions because we talk to patients on a daily basis," he said.

Shadow health secretary John Healey said the criticisms once again showed that there was widespread opposition to the changes.

He added: "David Cameron is desperately trying to sell his 'I love the NHS' image but he still wants to force through his ideological reorganisation."

But a Department of Health spokesman said the plans had received support from other NHS groups.

She also defended the role of competition.

"It's not an end in itself, but it will bring in fresh thinking and different ways of doing things, which not only deliver better but also mean better value for money."

View Full Version: More than half of GPs planning to retire in next

Title: More than half of GPs planning to retire in next
Description: *two years 'are leaving due to proposed*

TheUnhivedMind - June 9, 2011 03:20 PM (GMT)

More than half of GPs planning to retire in next two years 'are leaving due to proposed NHS reforms'

ast updated at 3:00 PM on 9th June 2011
http://www.dailymail.co.uk/news/article-20...HS-reforms.html

More than half of all GPs planning to retire in the next two years say the Coalition's unpopular NHS reforms are the reason for them leaving.

Thousands say they are ready to quit and are particularly angry the controversial Health Bill offers the chance for doctors to earn bonuses at the taxpayers' expense.

This will be another blow to Health Secretary Andrew Lansley who has been desperately trying to amend his reforms to quell rebellion within the NHS.

He claims the proposed changes, which include allowing more private companies to run NHS services and allowing GPs more spending power, are vital to avoid a £20billion funding black hole which would mean thousands of people being denied drugs and operations.

But a survey released by the British Medical Association (BMA) today shows that many GPs are deeply unhappy.

After age, NHS reform was the second most common reason for GPs planning to retire in the next two years - 71 per cent and 56 per cent respectively.

The details were published ahead of the start of the annual GP conference of Local Medical Committees in London today.

Dr Laurence Buckman, Chairman of the BMA's GPs Committee, said: 'These results show that GPs have significant concerns about the Government's NHS reform plans as they stand.

'If these reforms are to stand any chance of being successful, the Government must carry health professionals with them.

'From talking to GPs we know that they see potential in the principle of clinically-led commissioning, but there need to be major changes made to the Bill if the Government is to reassure GPs.

'Staff are leaving Primary Care Trusts in droves.

'In many areas, GPs are being left to get on with it while many of the key questions, such as how groups will be determined geographically, are left unanswered and still not determined by law.

'Above all, patients must be reassured that their GP continues to place their needs at the heart of any clinical decisions and the Bill must be amended to ensure that this trusted relationship is preserved.'

The BMA survey, which asked about working practices as well as a range of questions relating to current government health policy, was sent to every GP in the UK in April.

More than 18,000 GPs responded, a response rate of just over one in three, making it the most significant survey in recent years.

The results suggests that in the next two years, approximately 6,700 GPs across the UK plan to retire, of whom approximately 3,700 would say that NHS reforms were a factor in their decision.

Approximately 1,345 family doctors plan to leave general practice, not because of age but at least in part because of NHS reforms.

Other key findings from the survey included three-quarters of GPs do not believe consortia should be paid performance-related bonuses for commissioning.

While approximately seven in ten are concerned about the potential conflicts of interest within the Health Bill, both for the impact this could have on their relationship with patients and because of their role as commissioners as well as providers.

Description: *left to die in corridor is ignored for*

TheUnhivedMind - June 8, 2011 05:06 PM (GMT)

The ultimate NHS indignity: Body of hospital patient left to die in corridor is ignored for hours... before staff simply drag him away

Last updated at 4:17 PM on 8th June 2011
http://www.dailymail.co.uk/news/article-20...House-unit.html

'He went to them for help and they left him out in the corridor to die', says Peter Thompson's daughter Senior nurse claims it was 'the appropriate method of handling the situation'

Two heartbroken parents have slammed 'inhumane' nurses who left their dead son lying in the middle of a hospital corridor and stepped over his corpse for more than ten hours thinking he was asleep.

CCTV captured staff pulling the lifeless body of Peter Thompson along the floor like they were 'dragging the body of a dead animal'.

Today a coroner said his death was 'wholly preventable' and believes he could have survived but for the neglect of nursing staff, three of whom now face disciplinary proceedings.

41-year-old Mr Thompson had taken a cocktail of drink and drugs but instead of taking him to accident and emergency, staff at the Edale House unit at the Manchester Royal Infirmary left him sprawled on the floor, where he eventually died.

The discovery of the footage has left his family devastated about the indignity of their son's death in April last year.

Mr Thompson's father Alan, 60, said: 'Seeing your own flesh and blood being dragged across the floor like a dead animal is heartbreaking.

'It was just inhumane what they did to our Peter and I just cannot understand how in this day and age this can be allowed to happen on a hospital corridor in the 21st Century.

'I can never ever forgive these people for what little they did - no matter what.'

Mother Rene, 59, said: 'I wish the staff had phoned us to say he was at the hospital. We'd have been down there and at least we'd have been there for him. He'd have had us there with him - we didn't even have a chance to say goodbye to him.'

Mr Thompson's daughter Carly, 23, said: 'I just didn't realise the extent of the neglect they had shown to my dad until this week.

'He went to them for help and they left him out in the corridor to die cold, wet and lonely with nothing. I'm disgusted at their treatment of him.'

The incident occurred between April 3 and 4 last year after Mr Thompson, a voluntary in-patient with alcohol and drug problems, was stopped from entering his ward after he turned up with a bottle of vodka and refused to surrender it.

He then fell asleep in the corridor at around 8.10pm after nurses decided to let him 'sleep off' the effects of the alcohol.

But rather than wake him up or move him, a member of staff just placed a towel next to the patient and he was not given a blanket or a pillow.

Instead nurses and managers were forced to step over Mr Thompson to get into the Grafton ward.

Senior nurse Helen De Lacy-Leacey said she alerted night staff that the patient was outside the doors of the ward and asked them to: 'keep an eye on him and make sure he is okay'.

But she ended her shift at 9.15pm and did not try to wake Mr Thompson to carry out a risk assessment of his condition.

Distraught parents Alan Thompson and Rene Thompson say they can 'never ever forgive these people for what little they did' to their son Peter Thompson

And night manager Steve Soobhug said leaving him to sleep outside was 'the appropriate method of handling the situation at the time'.

Fellow senior staff nurse Miss Dini Oyebadejo said she checked on the patient several more times overnight but discovered him 'stiff' at 6.15am and raised the alarm.

When asked of he believed it was dangerous to leave Mr Thompson in his condition, she replied: 'It could have been dangerous yes. I was concerned about the patient but I felt he needed to sleep. I didn't want him to leave the ward.'

Mr Thompson formerly of Levenshulme, Manchester was declared dead at 6.43am.

Expert Dr Alan Fletcher a consultant in emergency medicine concluded the victim would have lived had he been taken to an A&E during the night.

A pathologist report concluded he died from fatal levels of alcohol and anti-psychotic drugs, with liver cirrhosis as a contributing factor.

He was four times over the drink-drive limit.

After hearing the jury's verdict, Manchester coroner Nigel Meadows told the inquest: 'It seems to me undeniable that the jury came to a conclusion the death was wholly preventable.'

He will now write to Manchester Mental Health and Social Care Trust, responsible for Edale House laying out recommendations and will also inform the Nursing and Midwifery Council calling for investigation into three of the nurses involved.

Nadia Kerr, partner at Pannone solicitors who represented the family, said: 'This is a shocking indictment on the care standards provided by the Manchester Mental Health and Social Care Trust.

'Peter Thompson was a voluntary patient who was aware he had problems but was trying to address them.

'The apology given during this inquest and the written apology from the Trust go some way to acknowledging that Mr Thompson could and should have been treated more appropriately and with the dignity that was sadly lacking throughout this whole episode.

'We have now agreed compensation for Mr Thompson's family, but no amount of money can ever compensate them for their sad loss.'

A Manchester Mental Health and Social Care Trust spokesman said: 'We would like to apologise to Peter Thompson's family and friends and express our deep regret about the circumstances of his death.

'This was an isolated incident and does not reflect the high levels of care and dignity with which we treat our service users. On this occasion we fell short of our usual high

standard and we are very sorry about this.

'Following the incident we completed a thorough review of the case and produced a detailed action plan. Mr Thompson's family were given a copy of this review and have been kept informed of the process as it developed.'

Title: Cameron outlines changes to NHS reforms after
Description: *criticism*

TheUnhivedMind - June 7, 2011 11:46 PM (GMT)

Cameron outlines changes to NHS reforms after criticism

David Cameron: "Hospital doctors and nurses will be involved in care commissioning"

7 June 2011 Last updated at 22:55
http://www.bbc.co.uk/news/uk-politics-13675619

David Cameron has outlined "real changes" to controversial plans for NHS reforms in England, following criticism from health service professionals.

Hospital doctors and nurses will be involved in care commissioning, as well as GPs, regulators will have a duty to "support integration" of services and there will be limits on competition.

It comes ahead of the outcome of a consultation exercise due next week.

Labour say the plans are "botched" and would divert money from patient care.

In a speech, Mr Cameron said the government had listened to concerns about the planned reforms - which would give GPs more commissioning powers, increase competition in the NHS and abolish primary care trusts - expressed during a recent "listening exercise".
'Listened and engaged'

As a result, he said he would support a number of important changes to the proposals:
Doctors and nurses will be involved in new consortia planning and buying care, not just GPs
These groups will only take responsibility when they are ready not by April 2013 as

previously envisaged
New "clinical senates" consisting of senior medical professionals will oversee integration of NHS services across local areas
NHS economic watchdog, Monitor, will have a duty to promote integration of care across an area
Greater competition will only be introduced when it benefits patient care and choice

The prime minister also confirmed that the coalition will retain existing targets such as the 18-week limit on waiting lists in England and the four-hour waiting limit in A&E but there will be increased focus on the outcomes of treatment - such as hospital readmission rates.

Mr Cameron said ministers had "learned a lot about how to make our plans better" during the two-month consultation.

"We have listened and engaged and not just heard what people have said but we are going to reflect it in what we are going to do. There are real changes being made to these health reforms to reflect the concerns of patients, doctors and nurses so we get that right."

As part of efforts to reassure the public about the changes, he also set out "five guarantees" which he said would protect the "precious idea" underpinning the NHS.

He said the NHS would remain a universal service, changes would improve "efficient and integrated care", hospital waiting times would be "kept low", NHS budgets would increase every year and there would be no privatisation nor cherry-picking by private providers.

"There can be no compromise on this. It is what patients expect. It is what doctors and nurses want. And it is what this government is determined to deliver."
'Panic move'

Plans to modernise the NHS have caused tension between Conservative and Lib Dem coalition partners and ministers have already conceded there would be substantial alterations to the Health and Social Care Bill as a result of the consultation.

Deputy Prime Minister and Lib Dem leader Nick Clegg told a meeting of his MPs and peers on Tuesday that the reforms were now "on the right path".

According to aides present at the meeting, Mr Clegg said his party's insistence on major changes had forced the Tories to "move quite a bit".

But his Lib Dem colleague Andrew George earlier said the proposals amounted to a "U-turn" and the entire legislation should return to Parliament for detailed scrutiny by MPs.

The BBC News Channel's chief political correspondent Laura Kuenssberg said these were very real changes to the original plans drawn up by Health Secretary Andrew Lansley and would raise concerns among some Tory MPs about whether the health service was really being simplified.

For Labour, Ed Miliband said the proposed shake-up would divert hundreds of millions of pounds away from patient care, at a time the NHS was expected to find £20bn savings.

"I think the reason why the prime minister is in such a panic over the NHS is because he knows that this is total breach of the promises he made at the election," he said.

"He promised no top-down reorganisations, he went to nurses' conferences and promised that and now he's doing the opposite... in the most cack-handed way."
'Right direction'

Organisations representing NHS professionals reserved their judgement on the changes, saying they wanted to see the full details.

The British Medical Association said greater input from doctors and nurses was a "step in the right direction" but there must be clarity on competition between providers.

"The prime minister's speech suggests he is committed to integrated NHS services," said its chairman Dr Hamish Meldrum. "However, he also spoke in glowing terms about the benefits of competition. We would point to the many damaging effects its application in the NHS has had so far."

The Royal College of Nursing said standards of care, not cost control, should drive the government's approach.

"If you just worked on the basis of cost, you would have the cheapest providers - cheap care is often poor care and poor care often ends up being more expensive," its chief executive Dr Peter Carter said.

The Health and Social Care bill has been on hold pending the outcome of the consultation. According to the Department of Health, 8,000 people took part in 250 events, 2,400 public comments were submitted via a government website and 970 comments submitted privately.

The BBC understands the NHS Future Forum report, which will formally recommend any changes, will be delivered to cabinet either next Monday or Tuesday.

NHS FACES NEW CRISIS AS MIDWIVES LEAVE TO JOIN THE PRIVATE SECTOR

The Royal College of Midwives estimates the NHS is at least 4,500 staff short

Sunday June 5,2011
By Lucy Johnston
http://www.express.co.uk/posts/view/250863...-private-sector

UNDER-PRESSURE midwives are deserting the NHS. Almost 1,000 want to become independent midwives.

The Royal College of Midwives estimates the NHS is at least 4,500 staff short and safety is being compromised.

A Sunday Express inquiry found up to 2,392 baby deaths were linked to lack of proper care in maternity units.

The Independent Midwives UK group, which represents private practitioners providing home and hospital birth support, reported a huge increase in NHS staff applying to join their ranks.

“We know that thousands of qualified midwives have left and are choosing to walk away from the profession because they cannot bear to work in the fragmented system,” said leading independent midwife Annie Francis.

“We have newly qualified midwives who are thrown in at the deep end on these big labour wards. They last 12 to 18 months before they leave because they are so

stressed.

The Royal College of Midwives estimates the NHS is at least 4,500 staff short

“These big wards can be like baby factories and the stress levels are very high.”

Staff numbers are failing to keep pace with a 19 per cent rise in the birth rate. David Cameron has not yet honoured a pre-election pledge to create 3,000 new posts.

A report in The Lancet revealed Britain ranked 33rd in the developed world for stillborn babies with 11 delivered every day.

A recent study also showed 14 NHS trusts have shockingly high baby death rates which have soared to twice the national average.

Fifth mother dies at 'worst maternity unit in the country' as sister blasts doctors for 'delaying treatment'

By Martyn Halle
Last updated at 2:58 PM on 3rd June 2011
http://www.dailymail.co.uk/health/article-...it-country.html

A fifth mother has died at a hospital dubbed the worst maternity unit in the country.

Violet Stephens, 35, died just days after the Care Quality Commission delivered another damning report on Queen's Hospital in Romford, Essex.

Last year the hospital had three maternal deaths which makes its death rate three times higher than the national average for maternity units.

Ms Stephens, a care worker, from Brentwood, Essex, was rushed to hospital at the beginning of April when she was 32 weeks pregnant.

She had raised blood pressure a warning sign that she might have the potentially fatal condition pre eclampsia.

It was her third pregnancy and she had suffered from the condition at the same stage of her first pregnancy.

But staff delayed giving her a caesarean operation for four days and she died soon after surgery from HELLP Syndrome an advanced form of pre-eclampsia.

Her son Christian survived and he is now being cared for by Violet's sister, Kitty

Mhango, a midwife who lives in Leicester.

Kitty, 53, blames the hospital for her sister's death.

'Why did they delay when they knew her medical history? If they had acted sooner she would have survived. It was an avoidable death. HELLP syndrome requires early intervention.'

She added: 'It is simply appalling that the hospital didn't take notice of her history and act accordingly. I am deeply shocked at the lack of care she received.'

The Maternity unit at Queen's Hospital, Romford: Viiolet Stephens died in April from advanced pre-eclampsia

The family of a fourth pregnant woman who died and whose baby was stillborn at Queen's in January, want an inquiry.

Widower Usman Javed, from Ilford, East London, said the deaths of his wife Sareena Ali and their first child could have been prevented if hospital chiefs had responded to "failings" in the maternity unit.

Meanwhile Kitty said she had been unaware of the hospital's previous dreadful record of maternity care at the hospital where maternal deaths were three times higher than the national average.

Barking Havering and Redbridge Hospitals NHS Trust, which runs Queen's, is awaiting the results of a full external investigation into Mrs Stephens' care.

It was being carried out by an independent senior obstetrician and midwife.

A spokesman said: 'It would be inappropriate to comment further until we have the results of the external investigation.'

View Full Version: Health Secretary Andrew Lansley: funding crisis

Title: Health Secretary Andrew Lansley: funding crisis
Description: *threatens the NHS*

TheUnhivedMind - June 2, 2011 06:57 PM (GMT)

Health Secretary Andrew Lansley: funding crisis threatens the NHS

The National Health Service is facing a £20 billion-a-year funding black hole that will threaten its founding principles unless the Coalition's controversial reforms are brought in to prevent it, the Health Secretary has warned.

By Andrew Porter, Political Editor, and Martin Beckford
9:42PM BST 01 Jun 2011
http://www.telegraph.co.uk/health/healthne...ns-the-NHS.html

In an article for The Daily Telegraph, Andrew Lansley says the core values of the NHS are under threat as never before from a "financial crisis" that will see annual health spending double to £230 billion a year without urgent reform.

While insisting he would never privatise the NHS, Mr Lansley warns that its future as a universal service, available to all and free at the point of use will be at risk "within years" if radical change is blocked.

Mr Lansley's remarks are his first since the end of the listening exercise ordered by David Cameron to try to rescue the plans, which have angered many health professionals and disgruntled Liberal Democrat Coalition members, including Nick Clegg, the Deputy Prime Minister.

While admitting that he is prepared to accept "substantial and significant" changes, the Health Secretary's article will be seen as a clear reaffirmation of his belief in the reforms, which would abolish two tiers of NHS management and allow GP-led consortia to decide whether to buy treatment from local state-run hospitals or private providers.

It will also serve as a warning to his Cabinet critics who have privately been suggesting that the Health Secretary might resign or be sacked over his handling of the NHS changes.

Mr Lansley's intervention in the debate comes on the day that a leading doctors' union describes a key plank of the reforms as "completely unethical".

The British Medical Association says plans to hand bonuses to high-performing GP groups risk "undermining patients' trust".

It also warns that giving GPs the power to buy £60•billion-a-year worth of treatment for their patients — the centrepiece of the reforms — may lead to accusations of conflicts of interest.

However, the Health Secretary makes clear that the changes are essential to cope with the "enormous financial pressures" generated by advances in medical science and a rapidly ageing population.

He says that unless "we act now", real terms health spending will ultimately double to £230•billion a year – or £7,000 a second – by 2030.

"This is something we simply cannot afford," he says.

His focus on the cost implications of allowing the NHS to continue as it is are part of the Coalition's drive to help explain why the decision has been taken to shake up the service fundamentally.

And the need for urgency will be seen as a move to block Lib Dem attempts to delay the Health and Social Care Bill.

NHS reorganisation has become Mr Cameron's most pressing problem. After spending his time in opposition trying to neutralise perceptions that the Tories were enemies of the NHS, often through using examples of his own experiences when caring for his son, he is now faced with accusations from inside the Coalition and from Labour that the reforms will cause widespread and detrimental upheaval.

The unexpected nature of the reforms – which critics argue were not in the Coalition Agreement – has led to heavy criticism. Mr Lansley, who has held the Conservative health portfolio for eight years and had been trusted to deliver the vital changes by Mr Cameron, has had his reputation battered.

Despite originally fully backing the plans, Mr Clegg is now threatening to block the reforms if substantial changes are not delivered.

Mr Lansley has been blamed for the poor communication of the aims of the reforms –

something he attempts to address with today's article. He specifically addresses Lib Dem fears about so-called privatisation of the NHS. He says: "We will never privatise our NHS. But if we choose to ignore the pressures we face, the NHS will face a financial crisis within years, a crisis that would threaten the very values of our health service that we hold so dear – a comprehensive health service, available to all, free at the point of use and based on need and not the ability to pay."

The BMA has for several months opposed the Health and Social Care Bill, with family doctors fearing not just the back door privatisation of the health service and a fragmentation of care but also that they will be blamed by patients if things go wrong.

Its new warning is the strongest yet on the issue of performance-related pay, which would be available for new GP-led commissioning groups that do well financially under the reformed NHS.

Dr Laurence Buckman, the chairman of the BMA's GPs committee, said: "GPs are very concerned about the potential conflicts of interest inherent in the Health Bill. They are worried that their patients' trust in them may be damaged unless there are transparent processes in place to ensure confidence that commissioning decisions are being made in patients' best interests.

"Financially rewarding GPs by directly linking their earnings to their consortium's financial management, particularly when the NHS is under continuing pressure to reduce budgets, is completely unethical. We strongly urge the Government to listen to and act upon our concerns."

HOSPITAL STAFF TOO BUSY TO FEED ELDERLY

The undignified care has been exposed in a series of random checks

Thursday May 26,2011
By Victoria Fletcher Health Editor
http://www.express.co.uk/posts/view/248862...to-feed-elderly

ELDERLY patients are being forced to eat with their fingers in NHS hospitals too busy to help feed them, a damning report has found.

They are dished up food that has gone cold and put to bed hours before they are ready to go.

The undignified care has been exposed in a series of random checks.

Inspectors found that in a quarter of cases the law was being broken by failure to provide adequate care in terms of patient dignity and nutrition.

This included failing to help patients eat and sometimes not putting food within reach or cutting it up for them.

Patients using bedpans were not offered wipes and were often not even helped to wash their hands.

The findings lend weight to the Daily Express's Respect For The Elderly crusade calling for action to safeguard vulnerable older people.

The Care Quality Commission said three of the 12 hospitals inspected – the Alexandra Hospital in Redditch, Worcs, the Ipswich Hospital NHS Trust in Suffolk and the Royal

Free Hospital in Hampstead, London – were failing to meet essential standards.

The undignified care has been exposed in a series of random checks

At the Alexandra they found “meals served and taken to the bedside of people who were asleep or not sitting in the right position to enable them to eat.” Food was left for 15 minutes to go cold. They said: “We saw several people use their fingers to pick up food as they had no one to help them.”

Staff said they sometimes had to prescribe water on medication charts to “ensure people get regular drinks”.

At Ipswich the investigators found patients left in night clothes all day and not always taken to the toilet.

In Hampstead patients were put to bed at 6pm against their will. In other cases call bells were not within reach and staff failed to treat patients with respect.

TheUnhivedMind - May 26, 2011 03:59 PM (GMT)

Failing hospitals could be put into private hands

Sophie Goodchild, Health and Social Affairs Correspondent
26 May 2011
http://www.thisislondon.co.uk/standard/art...rivate-hands.do

Failing hospitals in the capital face being privatised to improve patient care and reduce debt.

NHS London revealed today it has "an open mind" on private companies running hospitals. It is the first time health chiefs have admitted that firms could be brought in to improve performance of failing London trusts.

Next month a private firm will become the first to take over an entire NHS hospital. Healthcare provider Circle will run debt-ridden Hinchingbrooke hospital in Cambridgeshire on a 10-year deal.

Staff will still work under existing NHS contracts and the NHS will own the hospital. But the management will be replaced under a fixed-term franchise. Circle will also help repay loans taken out to cover historic debt.

NHS London says it is awaiting full details of the Hinchingbrooke move before investigating how trusts in the capital could similarly benefit. Health Secretary Andrew Lansley says he has no agenda to increase private sector involvement in the NHS.

Wales facing 'worst health cuts'

By Nick Triggle
25 May 2011 Last updated at 01:53
http://www.bbc.co.uk/news/health-13531235

Wales is facing the worst NHS cuts in the UK, a review of spending suggests.

The analysis, by Professor John Appleby, of the King's Fund think tank, suggests the Welsh NHS budget will fall by nearly 11% in the next three years, once inflation was taken into account.

Northern Ireland faces a 2.2% cut over four years, he says, with the long-term picture in Scotland less clear.

England came out best, but even it is facing a cut of 0.9% over four years - despite promises to protect the budget.

Prof Appleby said this was because new inflation figures, which were higher than expected, had counteracted the small rises for the NHS in England that were announced last autumn.

The government in England has suggested it is prepared to pump more money into the health service if the inflation predictions come true, to ensure it does get a real rise in its budget.

For Scotland, the comparison was harder as the budget has only been set for this year, when there will be a 3.3% cut.

However, Prof Appleby also said the NHS was coming out better than other government departments.

The analysis, published by the British Medical Journal, also detailed the differences in spending per head of population.

In Scotland it stands at over £2,000 per head - about 15% higher than in England.

Prof Appleby said: "This shows that all the parts of the UK are facing a difficult task with the NHS, but Wales certainly has the hardest."

A Welsh government spokesman said ministers were fully committed to the health service, pointing out that 40% of its budget was being devoted to the NHS.

But he added: "We acknowledge that the settlement for health and social services will be challenging, but it is fair and manageable within the constraints of the reduction in funding we have received from the UK government."

Outrage as maternity centre at new hospital lies empty for months

Kiran Randhawa and Pippa Crerar
24 May 2011
http://www.thisislondon.co.uk/standard/art...y-for-months.do

A new hospital in one of London's most deprived areas is almost entirely empty, it emerged today.

Barking Community Hospital has state-of-the-art facilities but two months after work was completed, much of the building is unused.

The delay has been blamed on the Government's NHS reforms, which campaigners say are preventing health chiefs from signing off its lease.
Local MP and former Labour minister Margaret Hodge said the situation was an "outrage".

The hospital, on an old site which cost £12 million to redevelop, is in the same catchment area as King George Hospital in Ilford, which faces losing its A&E and maternity departments.

Health Secretary Andrew Lansley has been asked to stop the closures and warned that they will put increasing pressure on the overstretched Queen's Hospital in Romford and Whipps Cross Hospital in Leytonstone.

Queen's Hospital has been ordered by NHS watchdog the Care Quality Commission to make drastic improvements to its maternity unit and has been criticised for neglecting patients.

Barking Community Hospital has a fully equipped maternity unit standing empty.

Mrs Hodge said: "It's an outrage that the buildings were handed over to the health authorities in March and are standing empty today. We desperately need the maternity services now."

In a letter to Ruth Carnall, chief executive of NHS London, the overseeing health body, she wrote: "This is deeply depressing. You and your new team should have timed your procurements so services could have started when the building works had been completed. You didn't and we're now going to lose months procuring services.

"Further delays are being caused because you are creating bureaucratic hurdles which are preventing leases being signed off."
The hospital has opened its sexual health centre and its mental health services, but its birthing centre, GP-led urgent care centre and diagnostic services, such as X-ray, ultrasound and MRI scanning, are yet to start operating.

A spokesman for NHS outer north- east London said the hospital would be fully opened by the autumn.

TheUnhivedMind - May 18, 2011 03:32 AM (GMT)

Two London health trusts are to axe almost 300 front line staff

Kiran Randhawa, Health and Social Affairs Correspondent
17 May 2011
http://www.thisislondon.co.uk/standard/art...xe-300-posts.do

Almost 300 NHS posts including those of doctors and nurses will be lost at two hospital trusts in London, it emerged today.

Imperial College Healthcare is slashing 150 positions, while Whipps Cross Hospital is cutting 142.

Imperial, which covers Charing Cross, Hammersmith, Queen Charlotte's & Chelsea, St Mary's and the Western Eye hospitals, faces a £30•million hole in its budget.

The majority of positions going at Whipps Cross Hospital are believed to be frontline employees, with only 25 from back office or clinical support positions.

The hospital, serving 350,000 people, is one of five in the capital listed as "challenged" on finance by the Department of Health.

More than 6,000 posts have already been earmarked to go across the NHS as trusts struggle to achieve the Government's £20•billion "efficiency savings" over the next four years.

A spokeswoman for Whipps Cross said cuts will be achieved "through natural turnover and reducing use of agency staff". Imperial said savings would be made by reducing temporary staff numbers and by "natural turnover and redeployment of staff".

Thousands of NHS workers and patients were today joining anti-cuts campaigners in a protest march from University College Hospital to the Department of Health. The marchers want the Coalition to halt the sweeping reforms, which they claim will lead to the privatisation of the NHS.

Description: *he tries to keep health reforms afloat*

TheUnhivedMind - May 17, 2011 04:18 AM (GMT)

So guess what that means folks? It means your health care will be privatized maybe not under a NHS but under a new name as they move you from the one to the other during this chaos period so you'll accept the new trash.

QUOTE

NHS is safe behind my red lines, says Cameron as he tries to keep health reforms afloat

By Daniel Martin
Last updated at 2:05 AM on 17th May 2011
http://www.dailymail.co.uk/health/article-...rms-afloat.html

Health service will never be privatised on my watch, Prime Minister tells doctors
He said change was vital if Britain was to 'save' NHS

David Cameron yesterday set out a series of ‘red lines’ that he will not cross – in an attempt to placate Lib Dem critics of his controversial NHS reforms.

He said the Health Service would never be privatised on his watch and pledged that hospital doctors and nurses would be much more closely involved than originally envisaged in the plan.

But the Prime Minister vowed to plough ahead with the main thrust of the reforms – handing GPs control of most of the health budget. He said change was vital if Britain was to ‘save’ the NHS.

David Cameron this morning said 'no change' was not an option during a speech to doctors and nurses on NHS reform during a visit to Ealing Hospital

The Lib Dems have demanded wholesale changes to the controversial proposals, drawn up by his beleaguered Health Secretary Andrew Lansley.

Along with many hospital doctors, they fear the reforms will give too much power to GPs, and open the NHS to too much private-sector competition.

View Full Version: NHS reforms 'will destroy services'

Title: NHS reforms 'will destroy services'

TheUnhivedMind - May 14, 2011 02:24 AM (GMT)

NHS reforms 'will destroy services'

14 May 2011
http://www.thisislondon.co.uk/standard/art...roy-services.do

Health professionals and patients fear NHS reforms will "destroy essential services", the senior doctor leading an urgent review of the controversial government plans has warned.

Professor Steve Field detailed a number of concerns surrounding the radical shake-up in an interview with The Guardian, mostly surrounding a push to increase competition within the health service.

He insisted that the expert panel examining the need for changes to the Health and Social Care Bill, due to report to ministers within weeks, had not reached its final conclusions and that he was simply reflecting concerns raised during a "listening exercise" ordered last month amid a welter of political and medical clamour against the reforms.

But his words are certain to highlight the scale of revision that is likely to be required if Health Secretary Andrew Lansley's project is to survive mounting dissent. Ministers have promised "substantial" changes after calling a "pause" to the progress of the Bill.

Deputy Prime Minister Nick Clegg has vowed to veto the legislation - elements of which are deeply unpopular among Liberal Democrat MPs and activists - as part of efforts to demonstrate a greater influence by his party in the Tory-led coalition Government following disastrous results at the ballot box last week.

The blueprint would scrap primary care trusts and strategic health authorities and give

GP groups control of around £80 billion worth of NHS spending, with a remit to commission treatment and services from "any willing provider" - including private companies. It also places a duty of watchdog Monitor to promote competition in the provision of health services.

Accusations that the Government was effectively seeking to privatise the NHS have been among the most politically damaging to the coalition.

In the comments reported by The Guardian, Prof Field, who chairs the NHS Future Forum, said: "If you had a free market, that would destroy essential services in very big hospitals but also might destroy the services that need to be provided in small hospitals. The risk in going forward (with the Bill) as it is, is (of) destabilising the NHS at a local level. It would lead to some hospitals not being able to continue as they are," he added.

And there needed to be "significant changes in how the role of Monitor is described and enacted in order to reassure patients and doctors and nurses."

Among initial suggestions made by Prof Field, the newspaper said, were lists of "designated" services that all hospitals should provide to ensure they were available in all parts of the country. New GP consortia should also include a nurse on their boards - an idea promoted on Friday by Mr Clegg.

Family of man who died of thirst in hospital told 'you can take a horse to water but you can't make it drink'

By Daily Mail Reporter
Last updated at 4:29 PM on 12th May 2011
http://www.dailymail.co.uk/news/article-13...make-drink.html

Staff refused to put Kenneth Walters on a drip

The family of an elderly patient who died from dehydration said they were forced to give him water through a damp flannel - after hospital staff refused to put him on a drip.

One nurse allegedly told the man's daughter: 'You can take a horse to water but you can't make it drink' just days before he died.

Kenneth Walters, 83, dropped from around eight stone to six stone in weight in just two weeks - while his family described him as 'emaciated, skin and bone'.

But he was not put on a drip or given a special beaker to aid with drinking water.

Kenneth Walters, 83, dropped from around eight stone to six stone in weight in just two weeks. Trainee doctor Mahya Mirfattiahi, pictured leaving Derby Coroner's Court yesterday, admitted failings in the care of Mr Walters

Another blundering doctor even said Kenneth was ready to be discharged only hours before he passed away - and told coroners his family were happy with his treatment.

Daughter Jane Carlton, who herself is a nurse, said: 'He was a frail old man - but I didn't

think that should deprive him of routine hydration and food.

'I could not see how on earth you could discharge someone in that state.

'I was told by one nurse "you can take a horse to water, but can't make it drink".'

Bosses at Royal Derby Hospital, where Kenneth had undergone a routine hip operation, have admitted a string of failures at an inquest into his death.

The hearing even discussed whether Mahya Mirfattiahi should face a police investigation for initially telling a coroner's officer the family were happy with his treatment.

Daughter Jane had refused to register Mr Walters' death demanding a full investigation.

But Coroner for Derby and South Derbyshire, Robert Hunter eventually decided not to refer the doctor's actions to police.

Mr Walters, who also had dementia, was admitted after a fall at Spencer Grove Care Home, in Belper, Derbsyshire, which fractured his hip.

After the successful hip-replacement operation, he was put on to a ward where he was initially eating and drinking but then started losing weight.

Jane added: 'He was fading away - I mentioned to the staff he appeared to be dehydrated.

'His mouth was getting quite crusty - we used to wipe his mouth with a wet flannel and he used to suck the water out.'

From August 2009 to his death later that year on September 7, Dr Mirfattiahi had been monitoring his progress.

But she admitted yesterday that she had misread blood tests which showed how dehydrated he was.

She said: 'I made a mistake in the way I interpreted them.'

She also failed to check why earlier blood tests she ordered had not been carried out, adding: 'I was looking after 30 patients by myself.'

At one stage, when she was on call, she had to be bleeped 12 times as Kenneth deteriorated.

The junior medic said she consulted with senior staff about whether he should be put on a drip - but it was decided they should encourage 'oral intake' to get him home quicker.

Dr Hunter said: 'Oral intake was sucking fluids with a flannel. Oral fluids, in this instance, were completely inappropriate.'

Dr Mirfattiahi had a meeting with Mr Walters' daughters on the morning he died.

Jane said: 'By this stage we'd had two weeks of asking, and asking, and asking.

'We stressed we were not happy with his condition. We asked 'are we looking at him dying?' Was treatment being withheld because of that?

'She said she was not concerned. In the end, I asked her if she would be concerned if it was her father.'

An action plan was drawn up, which finally included Mr Walters being put on a drip. But he died that night.

Jane added: 'We did comment that we hoped it wasn't too little too late.'

Dr Hunter was due to record a verdict last night - telling the family it could be one of accidental death, with a rider of neglect.

Last night, the hospital apologised for the failings in care that Kenneth received.

Brigid Stacey, director of nursing and midwifery, told his inquest: 'I offer sincere condolences to the family of Mr Walters and formally apologise for the insufficiencies.'

She said after his death in 2009 a report had identified eight key areas for improvement.

Among them were staffing levels, communication errors, training issues, monitoring of hydration and the ordering of blood test results.

She added that, if measures that have now been put in place had been there in 2009, 'the situation would have been very different'.

View Full Version: London hospital patients denied crucial blood clot

Title: London hospital patients denied crucial blood clot
Description: *screening*

TheUnhivedMind - May 11, 2011 05:53 PM (GMT)

London hospital patients denied crucial blood clot screening

Sophie Goodchild, Health and Social Affairs Correspondent

11 May 2011
http://www.thisislondon.co.uk/standard/art...ot-screening.do

More than 100,000 London hospital patients were denied potentially life-saving blood clot screening last year, an investigation by the Lifeblood charity shows.

Imperial College, Homerton, Epsom and
St Helier, Whipps Cross and Newham hospital trusts were screening only one out of five patients admitted between October and December - 20,810 out of 100,659. The government target is more than four out of five.

Blood clots, or thrombosis, cause more hospital deaths than any other condition, about 25,000 a year, and can affect both young and old. The NHS is paying out millions in compensation for missed cases.

Causes of thrombosis include sitting too long, damage to veins and obesity. Diana Buchan, 29, of Balham, nearly died after doctors missed clots on her lungs last year. Her GP offered painkillers but a scan revealed the clots.

She said: "Thousands of young people get clots every year, and too many die due to misdiagnosis or symptoms going unchecked."

Top London hospital to cut 360 posts after fall in funding

Kiran Randhawa, Health and Social Affairs Correspondent
3 May 2011
http://www.thisislondon.co.uk/standard/art...l-in-funding.do

One of the country's leading hospitals is cutting hundreds of posts.

University College London Hospital is axing 360 positions, which could include frontline staff.

The move came after the hospital in Euston was hit by a major drop in funding for treating NHS patients.

Primary care trusts, which provide the money, instead intend to treat more patients in the community.

As a result, treatments that are known as "low-priority procedures" such as tonsillectomies, varicose vein surgery or cosmetic procedures would no longer be provided free at UCLH.

Chief executive Sir Robert Naylor said: "If we have fewer contracts from the primary care trust to treat patients, and we do less work, then we must have fewer staff. Any business runs like that. We flex our staff numbers up and down all the time."

He said any job cuts would "mainly be achieved by improving efficiency in back office and admin areas".

Thousands of NHS posts will be slashed across London as health trusts struggle to meet the Government's £20 billion in "efficiency savings" over the next four years.

London Ambulance Service is due to axe 890 positions, with the majority of those frontline jobs.

In addition, St George's Hospital and Kingston Hospital are both axing around 500 posts, including those of doctors and nurses.

It does take inspiration and guts to write this kind of letter. Unfortunately, the sender wants to remain anonymous.

Subject: Office of the Prime Minister / Cabinet du Premier ministre

Office of the Prime Minister
Canada

Dear Mr or Ms Bustos:

Thank you for your reply. I am happy to know that the Prime Minister, The Rt. Hon. Stephen Harper, MP, considers international crime, and its concealment by foreign judiciary, police and government, a concern for Canadians and international security. Obstruction of justice is a serious matter.

As you know, since writing initially, I have provided further information about the widespread use of the UK's super-injunctions used to silence victims of both crime and the, less obvious, abuse of family court and social services process in the UK. In addition, an internet search for "John Hemming injunctions, OR Andrew Marr injunction, OR Fred Goodwin injunction (Royal Bank of Scotland) OR Vicky Haigh injunction" will

bring back a wealth of information about the corrupt use of injunctions, which may raise a few questions about the banking industry, and the recent world monetary fund disaster.

There is still more information here:

http://www.publications.parliament.uk/pa/c...911/bbc2911.htm which link makes particular reference to a Miss Yvonne Goder, who was imprisoned by UK authorities for speaking out about serious fraud committed against her and her family. She was imprisoned without, due process, and gagged from speaking to her MP, amongst others.

A millionairess was defrauded through the Office of the Public Guardian/Court of Protection, under which jurisdiction she was put without her knowledge. She had not lost capacity, and there was no legitimate right for anyone to be appointed as her power of attorney. It was all done unlawfully. (The Office of the Public Guardian/Court of Protection is a prime operational tool for fraud of many colours, as it is blatant in its refusal to address the lack of risk management protocols, and security checks. This court works hand-in-hand with the Bank of England. It meets the definition of FRAUD ENABLER.)

All of the woman's real estate was conveyed into other names unlawfully with false legal documents, and bailiffs unlawfully evicted her, throwing the widow and her three children into the street. They were left homeless and the government had to house them (all subsidized by the public purse). The mother and daughter both spent time in prison for contempt of court as a direct result of their attempts to obtain justice, and after no police agency in Britain and no government department would help them. Injunctions have silenced them, and they have even been prevented, by injunction, from talking to their member of parliament. This case is nine years old and, even if this now penniless family had the money, or were given legal aid (no longer available) to fight the case in civil court, (a) nobody should be told to fight their own criminal cases in civil court as the only option available to them, and (B) lawyers and judiciary will fix it so that they lose. In this case, a large, well-known, international law firm is involved, and has both the support of the courts and government, quite obviously, and the financial resources to ensure that victims simply CANNOT win. As the firm is international, world authorities should be taking note.

I can personally attest to the fact that the Serious Fraud Office refuses to investigate this case, along with the National Fraud Office, and the Serious Organized Crime unit. Someone at a high level must be preventing police from investigating. International agencies MUST ask why the UK is supporting this.

However, the problem is not only the injunctions, many of which have been placed WITHOUT DUE PROCESS or authority, often by corrupt county council officials, but the crimes themselves, which take place in a manner exactly similar to that which takes

place in Bulgarian, mafia-run courts, with fraudulent court documents being issued without due process or basis in fact, bailiffs unlawfully employed to eject victims from their homes, unlawful imprisonment, unlawful detainments in mental hospitals, false bankruptcies, charges of false debts, and more. Naturally, there are injunctions placed on the media, so that neither the British public nor the world at large is aware of the corruption in the UK.

I have knowledge of some of these crimes taking place using large, well-known, international law and accounting companies. International authorities should be very concerned about this and should put these entities under investigation, and foreign ministers should most certainly be aware of the legal and judicial culture in the UK and how it affects not only international trade, but also security of world citizens, and the monetary fund. G20 and UN members should be taking a look at the cuckoo in the nest. There are many cases. Details can be provided along with documentation.

It appears that only one MP has the courage to speak out, and actually carry the standard for what is just and right in the UK: The Rt. Hon. John Hemming. John Bercow, (http://en.wikipedia.org/wiki/John_Bercow) does not appear to be onside with justice, human rights and dignity, or protection of children, much less transparency.

http://painali100.multiply.com/journal/ite...over_injunction

Who is it that keeps the lid so clamped down on corruption in the UK, and why?

Many victims of crime who have been seriously defrauded, even of hundreds of millions of pounds, have appealed to the Lord Chancellor, Kenneth Clarke, for help in obtaining an inquiry or police investigation, but he refuses, and has suggested to the victims that they fight the crimes on their own, using unaffordable civil “remedy”. As these people have been bankrupted and, in many cases, been made homeless by big business working with corrupt legal and judicial entities, this is impossible for them to do. There is no legal aid available to them either. They are simply discarded in what can only be described as a serious human rights violation. It is crime against the people being committed by the British government. It is no better than what has happened in any corrupt foreign country, and Britain has no right to point fingers at Egyptian or Libyan leaders, or anyone else. The Nigerian police’s Economic Crime Division is swimming upstream in its efforts to break links forged by corrupt UK and Nigerian entities and the banking system. The UK continually courts business from Russia: a country well known as being ingrained with corruption for many generations. There was a time when Britain would have turned away from such connections yet Russia, too, is a G20 member country.

I know for certain that the British Home Office, Foreign Office, and Ministry of Justice are just a few departments which are aware of many of the crimes. No matter what the circumstances, the Home Office blatantly states that it does not intervene in individual

cases. Who does then? At the Behest of the British Home Office, police are at liberty to pick and choose which frauds they investigate. This is clearly stated in a Home Office guidance brochure, written as guidance for police. There is no government accountability whatsoever, and the government feels no prick of conscience or embarrassment about this. Not one government department holds itself accountable either to parliament or the British public and, as we are all now involved in close relationships through the global community, then it is easy to see that the British government will not hold itself accountable to the global community either – much less offer any transparency, as indicated by the injunctions alone.

The Rt. Hon. Kenneth Clarke, Lord Chancellor and Secretary of State for Justice, is under pressure from the USA to bring the Bribery Act into effect quickly. I am wondering if he has any personal reasons for dragging his heels. All the talk with regard to this act is about bribery in the private sector, but it would seem that world governments and the its citizens should be more concerned about bribery which may well be taking place in the public sector. After all, it has far more serious ramifications.

I am wondering if, when the final wording of this law is made known, IT MAY DELIBERATELY PRECLUDE ACTION TAKEN AGAINST BRIBERY IN THE PUBLIC SECTOR, and I would hope that North America, at least, will take action NOW to ensure that the wording does not cleverly preclude public sector bribery offences.

There is at least one case, ongoing for twenty years, where it has been well proven that someone within the income tax department bankrupted an individual with a false debt, and make him homeless. All his assets were seized, when he was actually owed a refund of 3000 pounds by HMRC. There is a big cover up by the government, including false accusations against him for making threats. Charges were never laid. Despite him having an MP on his side (which MP has seen all the proof that the man was defrauded by the government), the government now pretends that his income tax file has been destroyed and refuse to make restitution. Cases like this are not isolated.

There are many others where wealthy people have had false debts brought against them and they have been made bankrupt. One was made bankrupt and taken through bankruptcy courts when he still had many assets, which proves that due process is not being followed and there is serious corruption.

Appeals to the Home Office, Minister of Justice, or anyone whatsoever in the police or government result only in injunctions, false imprisonment or the unlawful application of the Mental Health Act. The victims are usually intelligent, well educated people, with substantial financial assets and little debt. They are forced into an arena with a corrupt ring of legal mafia. The victims are not people who do not understand the law. They are people who had assets that someone else wanted, and who are victims of criminals with law degrees. This has to stop.

I think you will agree that these matters are very serious, high level crime and corruption issues, which ultimately affect the international community and its policing efforts. It is simply wrong for Canada to spend money on policing in order to play its part in the UN convention against Transnational Serious Organized Crime, and for it to be active as a G20 member, when other members are not only slacking off but actively working against Canada and other countries.

Armed, now, with this knowledge, I suggest that Canada can no longer support the cuckoo in the nest, and should take action. There is, without a doubt, serious corruption which is not being addressed, and this affects Canadians.

Not only have I, and other Canadians that I know of, been directly affected, but they are most certainly being indirectly affected by a country which deliberately fosters and conceals economic and other crimes. What is worse, is that it is not a third world country, but a Commonwealth, UN, and G20 country but with a with a low rating on the Transparency International Index of only 20, and slipping. The other team players in the G20 and UN must bring the UK to task over the crimes.

I shall be very pleased to provide The Rt. Hon. Lawrence Cannon, PC, MP, His Excellency the Right Honourable David Johnston, C.C., C.M.M., C.O.M., C.D., Governor General and Commander-in-Chief of Canada and The Rt. Hon. Stephen Harper, MP, Prime Minister, or any interested authority, with access to victims and complete information. There is need for a public inquiry into why the British government and/or police refuse to investigate serious fraud committed against individuals. They are quick only to investigate fraud committed against the government, such as welfare fraud, but anyone else can go whistle for a crime investigation. This is due to high level corruption.

As this matter is of such serious proportion, I am sending a copy of this letter to other interested parties around the world.

I look forward to hearing further from Mr. Cannon, Mr. Harper, His Excellency, or from any domestic or foreign intelligence agency. On a personal level, my rights, as both a British and Canadian citizen and a victim of crime in the UK have also been violated, along with my family's rights under Section 8 of the UK Human Rights Act, and there appears to be no recourse. Canadians should be made aware of this, if they have any connections to the UK, which millions do, and the Canadian government must make it a duty to protect Canadians from the UK.

Yours sincerely,

XXX

British Columbia

Dear Ms. XXX:

On behalf of the Right Honourable Stephen Harper, I would like to thank you for your e-mail, in which you raised an issue which falls within the portfolio of the Honourable Lawrence Cannon, Minister of Foreign Affairs.

The Prime Minister always appreciates receiving mail on subjects of importance to Canadians.

Please be assured that the statements you made have been carefully reviewed.

I have taken the liberty of forwarding your e-mail to Minister Cannon so that he too may be made aware of your comments. I am certain that the Minister will give your views every consideration. For more information on the Government's initiatives, you may wish to visit the Prime Minister's Web site, at www.pm.gc.ca.

NHS rewards bosses after 1,200 'excess' deaths at scandal-hit hospitals

By Ian Birrell
Last updated at 2:38 AM on 1st May 2011
http://www.dailymail.co.uk/news/article-13...-hospitals.html

Julie Bailey is still haunted by the death of her mother, who entered hospital a sprightly 86-year-old but was dropped by a nurse and never recovered. She sat by the bedside for six long weeks, holding the hand of her panic-stricken parent as her life ebbed away.

She was horrified by the gruesome scenes around her in a hospital that viewed itself as a national trailblazer: patients screaming in pain, but ignored by those meant to care for them; confused old people falling out of bed and left in soiled bedding; patients left hungry and thirsty.

'Things were so bad I started feeding, watering and taking all the other patients to the lavatory,' said Ms Bailey, a cafe owner.

'It felt like it wasn't just my mum I watched dying, but all the others as well.'

Her mother was among hundreds of victims of Britain's worst health scandal this century, caused by a litany of failings and an obsession with targets at Mid Staffordshire NHS Trust.

It stands as a shameful symbol of an NHS tied up in red tape and focused on management reorganisation losing touch with those entrusted into its care. It is also the most egregious example of how in the public sector you are not sacked for failure - but promoted to bigger and better things.

Unbelievably, two of those who oversaw the tragedy are now among the most senior National Health Service managers.

One is Sir David Nicholson, the NHS chief executive who is overseeing the health reforms planned by the Government. The other is Cynthia Bower, who succeeded him as chief executive of the strategic health authority (SHA) overseeing the two hospitals at the centre of the scandal, Stafford and Cannock Chase.

She is now the £200,000-a-year head of the Care Quality Commission (CQC), the super-watchdog formed two years ago to safeguard standards in health and social care in England. SHAs manage local services on behalf of the Government.

Yet despite her role to ensure highquality care, Ms Bower has admitted the situation at Stafford 'wasn't on my radar'. Last week, she was called to testify to the public inquiry into this awful chapter. Over two days, in a masterclass of buck-passing and obfuscation, she refused to accept any significant responsibility.

Pressed to admit that the SHA had failed in its duty to protect patients, she was unrepentant. To the amazement of observers, she said: 'I don't accept there was a serious failure.

'I completely accept there was a serious failure in care and I accept there were signs we should have picked up, but I don't accept there was a serious failure by the SHA, no.'

She has said the SHA responded to evidence of high death rates by commissioning a study from Birmingham University. As a result of this, the SHA concluded, wrongly, that Stafford's problems were due to poor information systems, not poor medical care. She pointed out that an administrative merger had contributed to the failure. The man in charge of the merger? Sir David Nicholson.

Ms Bower expressed 'deep sorrow', admitting patients were 'let down', but said it was inevitable some died without good cause in hospitals.

'Mistakes are made, people do die unnecessarily, however uncomfortable a truth that is' - this from someone paid a small fortune to decide if thousands of hospitals, GPs and dentists are fit to practice.

Her stance shocked the victims' families. Among them was Julie Bailey, who attended all 75 days of the inquiry. After her mother's death in 2007, she joined other relatives to launch a pressure group called Cure The NHS to ensure other patients do not suffer in the same way.

At Stafford the alarm bells had included a critical report into clinical governance,

damning patient surveys, warnings on staff shortages and a zero-star rating given by the CQC's predecessor. It took a private research group to persuade the authorities to act.

One official estimate suggested between 400 and 1,200 'excess' deaths between 2005 and 2008 alone. Wards were filthy and blood-splattered; heart monitors were switched off because nurses did not know how to use them; receptionists were left to determine needs of those arriving at A&E. Some patients were left screaming in agony, others grew so thirsty they drank water from vases.

Much of the blame must lie with those on the front line. But staff who spoke out were ignored, while doctors were preoccupied with waiting lists. Meanwhile, the management focused on financial targets and winning foundation hospital status.

Under Sir David the SHA was accused of concentrating on administrative merger and cost cutting.

The catastrophic failings reveal something rotten in the NHS. Some action has been taken, including the encouragement of whistleblowing and abolition of some targets.

But a series of reports has raised continuing issues of neglect, all too often involving the elderly and disabled. It seems strange that a pair of bureaucrats who failed to prevent hundreds dying in obscene conditions should end up in two of the top positions in the NHS.

Their promotion smacks of contempt for patients.

TheUnhivedMind - April 30, 2011 03:26 AM (GMT)

NHS hospitals in England face tough efficiency savings

By Dominic Hughes
29 April 2011 Last updated at 16:43
http://www.bbc.co.uk/news/health-13242722

The regulator of NHS foundation trusts in England has warned hospitals must make even bigger efficiency savings than previously thought.

The Department of Health has already said it wants efficiency savings of 4% for each of the next five years.

But the regulator Monitor says it expects savings will be more in the order of 6% to 7%.

Monitor says higher than expected inflation and tougher financial penalties for hospitals are to blame.

As part of the government's reforms of the NHS in England every hospital is expected to become a foundation trust.

But to do that they must satisfy the financial regulator they can balance their books.
Efficiency savings

About 85 hospitals and mental health trusts have yet to achieve foundation status, but now Monitor has told them the bar is being raised even higher.

In December the Department of Health said it was looking for efficiency savings of 4% for each of the next five years.

But in a letter to foundation trust applicants, Monitor says that higher than expected inflation, plus tough financial penalties for things like emergency re-admissions after surgery, mean savings will need to be between 6% and 7%.

In a statement the regulator said the changes to the economic climate meant all trusts would need to make savings.

"However, we should be clear that these assumptions are a reflection of the risks in the external environment; they are not a directive to make cuts.

"Trusts will need to take account of the individual circumstances that exist within their local health economy, which could mean that they will need to take either a more optimistic or pessimistic approach than the one set out by Monitor.

"It is essential that the quality of patient services does not suffer as a result cost-cutting measures."

In a statement the Department of Health said Monitor's assessment would be "challenging" for the NHS but pointed out that it was the "more pessimistic" of two scenarios set out by the regulator.

"The NHS is in a strong financial position. We are investing an extra £11.5 billion into the NHS by 2014-15.

"But higher costs and an ageing population mean that the NHS must meet the highest possible financial standards and find savings to reinvest into patient care.

"Monitor's assessment of 6% to 7% is its 'downside case', meaning it is more pessimistic. But it is right that Monitor's assessments are challenging - we want all hospitals to be able to meet Monitor's standards and show that they can provide sustainable, high quality and efficient services for their patients."

Benchmark

These figures matter not just because they show the financial pressures on the health system and in particular on hospitals.

They are also the benchmark which Monitor will use to judge whether a hospital will be granted foundation status.

And while some health economists had questioned whether hospitals could make year on year savings of 4%, these new figures look much tougher.

John Appleby, chief economist at the health think tank the King's Fund, said the savings were a big increase.

"I can see a hospital doing this for one or two years, but not five years.

"It's like the unit cost of a hip operation, around £6,000, has got to decrease by 37%. How?"

Shadow health secretary John Healey said: "This confirms the combination of broken promises on NHS funding and reorganisation is putting a huge strain on hospitals. David Cameron must halt his high-risk, high cost overhaul of the NHS."

Hospitals in England have until April 2014 to achieve foundation trust status.

TheUnhivedMind - April 28, 2011 11:36 PM (GMT)

Hospital 'failed' fall pensioner sent away with fractured ribs

Rob Parsons
28 Apr 2011
http://www.thisislondon.co.uk/standard/art...actured-ribs.do

The family of an 82-year-old man who died after being sent home from hospital with seven fractured ribs have condemned his care.

Ernest Noyce injured himself falling down stairs at his Raynes Park home on Christmas Day last year. The retired lorry driver was given the all-clear at Kingston Hospital but his health deteriorated and he died on January 18.

Mr Noyce's family believe that he may have survived if nurse practitioner Andrew Mitchell had ordered an X-ray. At the Westminster inquest into his death, the pensioner's wife Ivy claimed that Mr Mitchell had failed to do his job properly. She said that her husband slipped after going downstairs to make a cup of tea.

"I saw Ernie lying there with a head wound after hitting his head against the wall at the bottom. I could see he needed hospital treatment. At Kingston Hospital he was given some tablets and sent home." Mr Mitchell, who carried out the assessment at the hospital's emergency department, said he suspected Mr Noyce had a fracture and concussion but his breathing and consciousness were otherwise normal. He stitched the wound in his scalp and sent him home with advice about what to do if he had signs of complications.

Mr Mitchell told the inquest: "Radiography guidelines don't suggest taking an X-ray to diagnose a simple rib fracture. Due to the lack of abnormal findings I did not request an

X-ray. There isn't a specific exclusion or inclusion for age."

Mr Mitchell's boss, consultant Daniel Harris, said had the hospital known Mr Noyce was so badly injured he would have been transferred to a high dependency unit and given respiratory support. Defending Mr Mitchell, he called him "superior to the majority of junior doctors".

Recording a verdict of accidental death, coroner Dr Fiona Wilcox said she had "concerns" over how the multiple fractures could have been missed. After the room cleared Mr Mitchell could be heard crying.

View Full Version: 'Radical' NHS shake-up may jeopardise patient care

Title: 'Radical' NHS shake-up may jeopardise patient care

TheUnhivedMind - April 27, 2011 02:06 AM (GMT)

'Radical' NHS shake-up may jeopardise patient care

27 April 2011 Last updated at 01:12
http://www.bbc.co.uk/news/health-13193604

The planned shake-up of the NHS in England that will put GPs in charge of buying in services could risk patient care, warns a group of influential MPs.

The Public Accounts Committee says pushing through the changes while seeking £20bn in efficiency savings may damage front-line services.

The concerns follow those of others, including Deputy Prime Minister Nick Clegg's close adviser Norman Lamb.

The government insists the overhaul is essential to safeguard services.

Health secretary Andrew Lansley said: "The efficiency challenge and our reforms are inextricably linked.

"Our reforms help the NHS make savings, because getting rid of tiers of bureaucracy will mean an extra £1.7bn each year to reinvest in patient care.

"And if we don't give doctors and nurses the power to make decisions for their patients, then quality of care will suffer."

Under the plans GPs will be handed control over much of the health budget and the health service will be opened up to greater competition from the private sector.

At the same time the government also expects all hospitals in England to become foundation trusts, free from central control.

And it wants to secure efficiency gains across the NHS of up to £20bn by the end of the financial year 2014-15 and to reduce administrative costs in non front-line organisations by 33% over the same period.

Ministers maintain this is achievable, but the Public Accounts Committee is less sure.

Its report warns that ministers have "no control" over many of the costs.

And if the department's estimate of the one-off costs associated with reorganisation turns out to have been too low, it will make the challenge of achieving savings for re-investment even tougher, it says.
Mounting concerns

Committee chairman Margaret Hodge said: "The Department of Health acknowledged the risks associated with this radical shake-up of the NHS.

"Whilst the reforms could complement the imperative of achieving £20bn efficiency gains by 2014/15, the reorganisation might also distract those responsible for making the savings while safeguarding standards of patient care."

She added: "We were also concerned that the Department has not yet developed a high quality risk management protocol for either the commissioning or providing bodies.

"The Department acknowledged that some health trusts and some GP practices had some way to go to achieve foundation trust status or become commissioning consortia.

"The Department must have effective systems in place to deal with failure so that whatever happens, the interests of both patients and taxpayers are protected."

Dr Hamish Meldrum, Chairman of Council at the British Medical Association, said: "The Public Accounts Committee is right to highlight the risks posed by such a massive restructuring at a time of financial crisis.

"However, it is not just the timing, but also the direction of travel of these reforms that will cause problems.

"We share the concerns of the PAC that the consequences of increasing competition in the NHS have not been fully addressed.

"'Market failures' in healthcare have far more serious consequences than in other industries - and may have little connection with quality of care, or even patient demand."

Description: *[SOCIALIZED MEDICINE SUCKS BEWARE U.S]*

TheUnhivedMind - April 20, 2011 03:40 PM (GMT)

Kings Fund: Waiting times in England at three-year high

By Branwen Jeffreys
20 April 2011 Last updated at 03:37
http://www.bbc.co.uk/news/health-13130678

Hospital waiting times in England are at their longest for three years, an independent health think tank says.

The Kings Fund says statistics for February show 15% of patients waited over 18 weeks for treatment, the longest time since April 2008.

It argues the shift is due to the financial pressures on the NHS.

But the government says these figures included some patients who delayed their own treatment and insists the real figure is 10.2%.

In the NHS in England, waiting for hospital treatment is measured from the date when a GP writes a letter asking for their patient to be seen until that treatment is started.

The whole process is not meant to take more than 18 weeks, the limit for waiting promised to patients in the NHS constitution.

The government says it is no longer "performance managing" that 18-week time although the health service still collects all the data.

Kings Fund chief economist Professor John Appleby said the health service was now operating in a different climate.

"In the past the two things that kept waiting down were targets and extra money. Managers got sacked for not meeting targets. And of course in the future there won't be the same amount of extra money."

The official waiting figures are only part of the picture. As the BBC recently found, some parts of the NHS in England have introduced new restrictions on treatment or put routine operations on hold for several months. None of this appears in the statistics as it occurs before the clock starts.

The analysis by the Kings Fund also found that despite financial pressures in the NHS, cases of both Clostridium difficile (C diff) and MRSA have continued to fall. The decline in these hospital infections has been under way for a number of years.
Financial pressures

David Flory, the deputy chief executive of the NHS in England, said the health service was continuing to perform well despite the financial pressures.

"People with cancer symptoms continue to see a specialist quickly, MRSA and C difficile rates are at their lowest level since records began, and the NHS has achieved a healthy financial surplus in line with its plans."

Nigel Edwards, of the NHS confederation, said the relaxation of targets had given hospitals greater freedom to make decisions on clinical needs, but warned that waiting times could not slip too far.

"We need to ensure that if they are being taken away or reduced in importance, there are still mechanisms to ensure that patients can expect treatment to be timely and not subject to unnecessary delay."

Shadow Health Secretary John Healey said it would add to concerns that the health service was slipping backwards.

"Front-line staff and managers are massively distracted by David Cameron's top down reorganisation of the health service, and the signs of strain are now there for all to see."

Stafford Hospital: Former health authority boss 'sorry'

18 April 2011 Last updated at 17:52
http://www.bbc.co.uk/news/uk-england-stoke...dshire-13122885

The former head of the health authority which ran Stafford Hospital has apologised to a public inquiry for failing to spot problems there.

Cynthia Bower was the chief executive of the West Midlands Strategic Health Authority, which ran the hospital at the height of its problems.

She expressed "deep sorrow" at the inquiry, saying patients had been let down.

Ms Bower was giving evidence at an inquiry into the hospital's failings.

It is looking at the role of regulatory bodies after a higher than expected number of deaths between 2005 and 2008.

The inquiry continues.

TheUnhivedMind - April 18, 2011 05:24 PM (GMT)

Trafford General Hospital 'could be privatised'

Trust managers say they will select a partner to run Trafford General this summer

18 April 2011 Last updated at 16:50
http://www.bbc.co.uk/news/uk-england-13114964

The birthplace of the NHS could be privatised, according to health managers in Greater Manchester.

Trafford General Hospital treated the first ever NHS patient when the health service was inaugurated in 1948.

Trafford Healthcare NHS Trust has now confirmed that privatisation is being considered as way of dealing with the hospital's mounting debt.

Meanwhile, claims that Whiston Hospital on Merseyside could also be handed over to the private sector have been denied.

In 2008, Trafford General was at the heart of celebrations marking the 60th anniversary of the NHS.

However, two years later, Trafford Healthcare NHS Trust said it was currently involved in a process of selecting a partner "to secure the best deal for patients in Trafford".
'Secret meetings'

A trust spokesman said: "Our strong preference is to be acquired by one of our neighbouring foundation trusts and we are currently engaged in a process to achieve that.

"If, however, for some reason this does not prove possible we will move to an open process.

"This would involve inviting other NHS trusts and social enterprises to bid to acquire us as well as the private sector."

Claims that both Trafford General and Whiston Hospital could be put in private hands were made by Labour MP for St Helens Dave Watts who said he had seen documents on the matter.

Health minister Aneurin Bevan visited Trafford in 1948 on the day the NHS was born.

He described it as "a major issue" and called on the government to discuss its plans for the NHS openly.

"I think that's why the government has been sneaky about it," he said.

"They are not having these discussions with the general public; they are having it behind closed doors and in secret meetings with secret documents."

In a statement, the Department of Health said it was "in discussions with the North West Strategic Health Authority about how best to continue to ensure that services remain sustainable and viable".

Whiston Hospital recently underwent a £250m rebuild funded via a private finance initiative (PFI).

Mr Watts said he had seen documents listing three options; a £20m cash injection; merging with a neighbouring hospital and transferring to a private firm.

But St Helens and Knowsley Hospital NHS Trust said that, while it was drawing up plans to achieve foundation status by 2014 in line with government policy, those plans did not include developing a relationship with the private sector.

View Full Version: Hospitals spend £15million on interpreters

Title: Hospitals spend £15million on interpreters

TheUnhivedMind - April 16, 2011 04:32 PM (GMT)

Hospitals spend £15million on interpreters

Nicholas Cecil, Chief Political Correspondent
15 Apr 2011
http://www.thisislondon.co.uk/standard/art...interpreters.do

EXCLUSIVE: Hospitals in London have spent at least £15million on interpreters, the Standard reveals today.

Seven hospital trusts have run up bills for translation services of more than £1million as they treat patients in communities where more than 140 languages are spoken.

The revelation sparked a fresh call from the Government for newcomers to Britain to learn English.

Immigration minister Damian Green told the Standard: "This illustrates very starkly why we need to do more to ensure that those people who are settled in this country can speak basic English."

Interpreters and translators are being used to help patients and publish leaflets in Bengali, Cantonese, Somali, Turkish, Polish, Vietnamese, Spanish, Portuguese, French and a string of other languages.

Barts and The London NHS Trust had the biggest bill, £2.2million. It said the cost was for patient advocates whose job included interpreting.

University College London Hospitals Trust spent £1.6million, Guy's and St Thomas' paid £1.3million, and St Mary's Hospital, Paddington, King's College Hospital Trust, Great Ormond Street Hospital and Homerton University Hospital all spent about

£1.2million each.

The figures were unearthed by Nick de Bois, Conservative MP for Enfield North, through freedom of information requests for spending on interpreters in the three years from 2007/08 to 2009/10. He said: "What these figures show is the financial cost of people not learning the language.

"In a time of austerity, we have to ask ourselves whether spending millions on translation services in the NHS is a good use of public money, or whether that money could be better spent on more doctors for our A&E, nurses or more life-saving cancer drugs."

The data comes after David Cameron made a landmark speech calling for an end to mass migration.

The Prime Minister sparked a Coalition row when he said communities had been damaged by an influx of people from abroad. Business Secretary Vince Cable accused Mr Cameron of "risking inflaming extremism".

A Barts spokeswoman added that the trust served areas with more than 140 languages spoken, so "offering access to an interpreter is a crucial part of assisting patients whose first language is not English".

King's College Hospital said it served one of the most ethnically diverse patient populations in London, with as many as 100 different languages spoken.

UCLH, which includes six hospitals, emphasised it treated patients speaking more than 60 different languages and that it was "clearly essential for the safety of all of our patients that we communicate with them effectively".

Imperial College Healthcare NHS Trust, which includes St Mary's, said the "use of interpreters is an essential part of providing the appropriate patient care".

Translation and interpretation services to public services are charged at about £30 for the first hour, falling as the hours increase.

NHS bosses see their bonus pot double in 5 years ... as staff face cuts

By Sophie Borland
Last updated at 11:26 PM on 15th April 2011
http://www.dailymail.co.uk/news/article-13...-face-cuts.html

NHS chiefs have seen their bonuses double in the last five years even though tens of thousands of frontline workers face the axe to save money.

Some officials at the Department of Health on six-figure salaries are receiving performance-related awards that exceed the average nurse's wage.

The payments are being dished out despite the fact that up to 40,000 posts in hospitals and health trusts will go over the next year as part of attempts to save billions.

Last year 1,162 senior officials at the Department of Health shared £2.5million in bonuses, taking home an average of about £2,150.

One civil servant was paid £27,500 on top of their six-figure salary; the average nurse earns just over £26,000 a year.

The pot has more than doubled since 2004/5, when just £1.15million was handed out.

The bonuses are usually only given to the most senior staff on the highest salaries, and are typically awarded if the department believes it has met certain targets, such as keeping waiting times down, reducing superbug infections, or making efficiency savings.

The department refuses to name the recipients of its top bonuses, but two of its highest-

paid employees who may benefit from performance-related pay are Sir David Nicholson, NHS chief executive, and Clare Chapman, its director general of workforce.

Sir David earns between £255,000 and £259,000 – over £100,000 more than the Prime Minister. His pay package includes up to £50,000 for a rented flat in London and living expenses.

Two years ago he instructed the NHS to make £20billion of efficiency savings by 2014. Hospitals have resorted to scrapping thousands of posts to meet the targets.

Mrs Chapman earns around £245,000. She has seen her pay increase by up to a fifth since her appointment in 2006.

The revelations will further anger frontline workers who say they are being stretched to the limit.

Nurses made their discontent clear earlier this week when they backed a vote of no confidence in Health Secretary Andrew Lansley at the annual Royal College of Nursing conference.

Many say that because of cuts they are too busy to assist elderly people with their food or help them to the toilet.

Despite the strains being placed on the NHS, figures from April to October last year show that almost £1.8million has already been given out, meaning bonuses for 2010/11 are on target to be higher still.

The payments, condemned by critics as ‘indefensible’, are only a fraction of the bonuses handed out across the health service among various quangos and local health trusts.

Dr Peter Carter, chief executive and general secretary for the Royal College of Nursing, said: ‘The inexorable rise in bonus payouts will leave frontline staff reeling, especially the news that the Department of Health is paying out bonuses higher than a nurse’s starting salary.

‘At a time when those earning above £21,000 are being subjected to a pay freeze, frontline nurses and others will feel that there is one rule for them and another for us. This appears at best insensitive and at worst, during a time of financial austerity, indefensible.

‘We need to know what improvements those receiving bonuses have made to health services and patient care.’

Conservative MP Priti Patel, who obtained the figures, added: ‘The levels of pay and

bonuses overseen by the previous Labour government showed utter contempt for Britain's hard-pressed taxpayers and those who work on the frontline in the NHS.'

A Department of Health spokesperson said: 'The Coalition Government has announced that in light of the financial difficulties facing public services, the number of performance-related payments made to senior civil servants overall will be significantly reduced.'

Half of axed NHS posts will be doctors and nurses

By Sophie Borland
Last updated at 12:40 AM on 11th April 2011
http://www.dailymail.co.uk/news/article-13...ors-nurses.html

More than half of the NHS posts being axed in spending cuts are those of doctors, nurses and midwives, it has emerged.

The Royal College of Nursing has warned that hospital wards are becoming unsafe as there are just not enough frontline workers to look after patients or prevent the spread of infection.

There are also fears that nurses are so overworked they are unable to carry out their most basic duties of care such attending to the needs of the vulnerable elderly.

The latest estimates suggest that at least 40,000 posts at hospitals and health trusts will be lost over the next four years as the NHS tries to make billions of pounds of efficiency savings.

New figures published by RCN ahead of its annual conference in Liverpool show that 46 per cent of these are nursing posts.

A further 8 per cent involve doctors, midwives and other clinicians – meaning 54 per cent of posts cut are frontline workers.

These findings sharply contradict the Government's claim that any job losses in the NHS will involve bureacrats and backroom staff– so patient safety will not be affected.

But morale amongst nurses is currently at an all time low and many feel they are being prevented from doing their jobs as they are being “stretched to the limit.”

There is also mounting concern over the Government’s controversial health reforms – the brainchild of Health Secretary Andrew Lansley – which will see GP’s take control of up to £60 billion of the NHS budget.

Nurses say they have been cut-out of these plans -and they are also worried the reforms are being brought in far too quickly, at a time when the NHS is under huge financial strain.

Although Mr Lansley is due to attend the conference he will not be giving a speech. It will be the first time in eight years that the health secretary or Prime Mister has not given an addressed to the nurses.

Officials strongly deny the Mr Lansley has stepped aside to avoid being heckled by angry nurses – a fate met by former Labour health secretary Patricia Hewitt at the same conference in 2006.

Dr Peter Carter, general secretary of the RCN, last night warned that reforming the health service during a time of severe financial strain was a “recipe for instability”.

He said that the cuts would have “catastrophic consequences” for patient safety and care, and could lead to increasing waiting lists and the return of deadly superbugs MRSA and C Diff.

“Cutting thousands of frontline doctors and nurses could have a catastrophic impact on patient safety and care.

“It’s a myth that the NHS has been protected. People can play with figures as much as they like, these figures are real.”

The figures for the proportion of frontline posts being cut were obtained from an in-depth analysis of 21 trusts in England.

Most of the posts are being gradually cut through natural wastage – such as people not being replaced when they leave or retire – rather than actual redundancies.

But morale of NHS staff is also low as most have been forced to accept a two-year pay freeze, which is effectively a pay cut once inflation has been taken into account.

TheUnhivedMind - April 9, 2011 02:24 AM (GMT)

Loss of NHS jobs will hit patients says nurse chief

Kiran Randhawa, Health and Social Affairs Correspondent
8 Apr 2011
http://www.thisislondon.co.uk/standard/art...-nurse-chief.do

Cuts to thousands of NHS posts will cause long-term damage to patients, the head of the Royal College of Nursing warned today.

Dr Peter Carter condemned the widespread shedding of positions as "misguided" and "ill thought through", adding the health service will end up spending more instead of saving.

In an interview with the Standard, Dr Carter also said the measures could lead to a return of superbugs to hospitals. The warning comes as the revolt against health reforms gathered pace, prompting Health Secretary Andrew Lansley to announce a "pause" in driving them through.

This week, leading London hospital the Royal Free announced it was slashing 450 posts - almost a tenth of the workforce - to make £40 million savings this year. Doctors and nurses will be among those to lose their jobs.

St George's Hospital in Tooting has already announced it is axing up to 500 posts, including those of consultants and nurses.

Kingston Hospital is also planning to axe almost 500 posts. The draft plans would see 22 fewer consultants and 214 fewer nurses, midwives and health visitors. Barts and The London NHS Trust said it was axing 630 positions, including 250 nursing posts.

The RCN said almost 27,000 NHS posts nationwide have been earmarked for cuts as health trusts try to meet the Government's £20 billion savings target over the next four years.

Speaking before the college's annual conference, Dr Carter said: "Far from saving money, these ill thought through and misguided cuts will cost money.

"London hospitals and the UK in general have done well in eradicating hospitals bugs such as MRSA and C.diff but if you start cutting staff all that hard work may be undone. It's the patients who will suffer."

He added that cutting "huge numbers of jobs" was bound to affect standards of care, and that trusts should instead be looking at better ways of working.

View Full Version: Hip and knee patients facing 'cruel' delays

Title: Hip and knee patients facing 'cruel' delays

TheUnhivedMind - April 5, 2011 05:03 PM (GMT)

Hip and knee patients facing 'cruel' delays

Patients awaiting knee and hip operations are being denied surgery unless they can show their condition is causing them increasing disability or pain, say doctors.

By Stephen Adams 5:50PM BST 05 Apr 2011
http://www.telegraph.co.uk/health/healthne...uel-delays.html

Hospital trusts are clamping down on routine surgery including hip and knee replacements to save money.

But orthopaedic surgeons said the delays are "devastating and cruel" to patients.

Peter Kay, president of the British Orthopaedic Association (BOA), told the BBC that there was "excellent evidence" that these operations improved quality of life and were cost effective.

But he said: "The double jeopardy is that patients wait longer in pain, and when they have the operation, the result might not have been as good as it otherwise would have been had they had it early. "

Almost 700 orthopaedic surgeons across England sent the BBC information on their primary care trusts' policies on hip and knee replacements.

Of those, 152 said patients were now having to show they were more disabled or in greater pain than before to qualify for surgery; 118 said the operations were now regarded as a low priority; while 106 said they had been put on hold.

Some trusts have introduced score cards for pain and disability.

Last week the Primary Care Trust Network, which represents health service managers who buy treatment, admitted that a number of trusts had "reluctantly" started to ration routine surgery more tightly "in the context of financial constraint".

David Stout, its director, said the number of such operations had doubled in the last decade to almost 200,000 per annum.

A Department of Health spokesman said: "When clinicians and patients are making decisions about joint replacement surgery, it is right that other procedures - which could provide better outcomes for patients and provide better value for taxpayers - are also considered."

TheUnhivedMind - April 5, 2011 12:24 AM (GMT)

Lansley recognises 'genuine' concerns about NHS plan

Health Secretary Andrew Lansley: "No change is not an option"

4 April 2011 Last updated at 23:16
http://www.bbc.co.uk/news/uk-politics-12953646

Andrew Lansley has acknowledged there are "genuine concerns" about the NHS shake-up in England - amid accusations the policy is in "chaos".

The health secretary said ministers were "listening" and would now "pause" to allow further consultation.

Plans which would give GPs control of about 60% of the NHS budget and allow more private firms to provide care have come under cross-party criticism.

Labour's John Healey accused Mr Lansley of "confusion, chaos and incompetence".

The Health and Social Care Bill, currently going through Parliament, is the largest piece of health legislation since the NHS was created.

It would allow groups of GPs' consortia to decide what health care to buy - something currently done by primary care trusts - putting £60bn of the health budget into their control by 2013.
'Legitimate concerns'

The plans would also allow doctors to buy care from "any willing provider", including private companies and voluntary groups. Currently private firms do very little NHS work,

but under the plans which actively promote greater competition, many predict this will increase.

The government says the changes will help the NHS meet challenges like a growing elderly population as well as international benchmarks on cancer survival and dementia diagnosis.

But critics say changes are being done too quickly and some have attacked the bill as a way of privatising the NHS.

Mr Lansley said the bill had made good progress through Parliament but people had "legitimate concerns and issues" and the government wanted to "move forward with the support" of NHS staff.

He said: "We recognise that this speed of progress has brought with it some substantive concerns. Some of those concerns are misplaced or based on misrepresentations but we recognise that some are genuine.

"I can therefore tell the House that we propose to take the opportunity of a natural break in the passage of the Bill to pause, listen and engage with all those who want the NHS to succeed, and subsequently to bring forward amendments to improve the plans further in the normal way."

He told MPs competition must be fair and private providers would not be allowed to exploit the new system and "cherry-pick" the most profitable services.

And he signalled there could be changes when it came to opening up the NHS to private providers, adding emergency units "clearly will never be based on competition".
Listening exercise

The government was "committed to listening and we will take every opportunity to improve the Bill" but he added: "No change is not an option."

BBC political editor Nick Robinson said ministers were preparing to change their plans to see off their critics before the bill goes to the House of Lords where it may face more opposition.

Prime Minister David Cameron and Deputy PM Nick Clegg are expected to join a "listening exercise" designed to reassure doctors and voters about the bill before it returns to the Lords after May.

Lib Dem MPs and peers met for several hours on Monday evening to discuss the NHS plans.

BBC political correspondent Ross Hawkins said they would present Nick Clegg, who

was not present but was represented by his aide Norman Lamb, with a list of changes they want made to the Bill.

A source said the party wanted progress on three areas, accountability, the involvement of councillors and how to stop private firms "cherry picking" work.

A source told the BBC Mr Lamb had told the meeting there would be no "US-style privatisation of the health service on our watch".

In the Times, Conservative MP and former health secretary Stephen Dorrell accused the government of losing control of its health policy.

Labour accused the government of creating a "crisis of confidence" in the NHS with a "wasteful" and unnecessary reorganisation.

In a speech in London on Monday, party leader Ed Miliband said GPs could "play more of a role in commissioning", but the idea of transferring all commissioning "lock, stock and barrel" to GPs "without it being properly tested... doesn't make sense".

Labour did see a role for private companies within the NHS, but the proposals "take us into a whole different arena" and are "ideological and reckless", he said.

The Labour leader also attacked "horse-trading" between the Conservatives and Liberal Democrats and "contradictory briefings to the newspapers" which had created "utter confusion and chaos".

At their spring conference last month, Lib Dems voted to amend what they called the "damaging and unjustified" shake-up of GP services, including more scrutiny of GP consortia.

Doctors have also criticised the plans. At an emergency meeting with the health secretary this month, the British Medical Association stopped short of rejecting the bill altogether, but urged ministers to "adopt an approach of evolution not revolution" towards the NHS.

View Full Version: HOSPITALS ‘ARE CLOSING BEDS AND AXING JOBS TO

Title: HOSPITALS ‘ARE CLOSING BEDS AND AXING JOBS TO
Description: *BALANCE THE BOOKS'*

TheUnhivedMind - April 4, 2011 11:59 PM (GMT)

HOSPITALS ‘ARE CLOSING BEDS AND AXING JOBS TO BALANCE THE BOOKS’

Monday April 4 2011 by Alison Little Deputy Political Editor
http://express.co.uk/posts/view/238555/Hos...ance-the-books-

HOSPITALS built under the Private Finance Initiative are closing beds and cutting jobs to balance their books, a campaign group claimed yesterday.

Health Emergency said it had also discovered “asset stripping” sales of land and property by NHS Trusts to help them meet the Government’s public spending cuts.

Land is being sold by PFI-built hospitals in London and a growing number of nursing and other jobs are being axed.

They include hundreds of posts at the £256million 1,200-bed Queen Alexandra Hospital in Portsmouth, the campaign group said.

Other hospitals are also facing financial problems but they have yet to announce any cuts, claimed Health Emergency.

The group’s information director, Dr John Lister, said: “PFI means that hospitals face rising bills each year, regardless of their income.

“It means private sector profits are protected by legally binding contracts, taking an increased share of declining Trust budgets, while clinical services, patient care and the jobs of NHS staff are sacrificed in an impossible battle to balance the books.

It means private sector profits are protected by legally binding contracts

Dr John Lister

“Isn’t it significant that Health Secretary Andrew Lansley’s Health and Social Care Bill is seeking to break up almost every structure in our NHS, claiming to make the system more efficient, but leaving PFI intact and instead opening even more ways for the private sector to rip off the taxpayer and undermine the public services?

“The Tories appeared opportunistically critical of their own PFI policy when Labour was implementing it, but they are now happy to see this growing haemorrhage of cash from the NHS.”

A survey of more than 2,000 adults by the public service union Unison said that three out of four people were opposed to having private companies running parts of the NHS Blood and Transplant Service. Dave Prentis, the general secretary of the public sector union Unison, said: “The public have said a very resounding ‘no’ to blood money.
SEARCH UK NEWS for:

“The Blood and Transplant Service is an inspirational service, with millions of people willing to give their blood freely.

“Letting private companies move in breaks that link and taints the whole service with the profit motive.

“There are also very real dangers to the safety of the blood supply if the smooth path from donors to patients is broken.”

Doctors and nurses are furious after most NHS trusts refused to pay overtime on Royal Wedding day, which is a Bank Holiday, to save cash.

All NHS staff will get extra pay in Scotland, but bosses in England and Wales have been allowed to stick to contracts allowing for the usual eight public holidays a year.

While some staff will get a day off in lieu, 53 out of 64 trusts contacted are treating April 29 as a normal day, saving up to £44,000 in wages.

TheUnhivedMind - March 31, 2011 06:05 PM (GMT)

Former NHS director dies after operation is cancelled four times at her own hospital

By Daily Mail Reporter
Last updated at 12:32 PM on 31st March 2011
http://www.dailymail.co.uk/news/article-13...s-hospital.html

Former Mayor of Chelmsford Margaret Hutchon was waiting for a stomach op

A former NHS director died after waiting for nine months for an operation - at her own hospital.

Margaret Hutchon, a former mayor, had been waiting since last June for a follow-up stomach operation at Broomfield Hospital in Chelmsford, Essex.

But her appointments to go under the knife were cancelled four times and she barely regained consciousness after finally having surgery.

Her devastated husband, Jim, is now demanding answers from Mid Essex Hospital Services NHS Trust - the organisation where his wife had served as a non-executive member of the board of directors.

He said: 'I don't really know why she died. I did not get a reason from the hospital. We all want to know for closure. She got weaker and weaker as she waited and operations were put off.'

Mr Hutchon, of Great Baddow, Essex, said his wife, 72, had initially undergone major stomach surgery last June but the follow up procedures were repeatedly abandoned.

The former mayor remained at the hospital for months but her family feared she was becoming institutionalised and decided to bring her home until an operation was a certainty.

Margaret Hutchon waited nine months for an operation at Broomfield Hospital in Chelmsford where she was a non-executive director

Mr Hutchon, 71, said: 'The case has been referred to the coroner because of the long time it has taken. In some ways, I would like the coroner to order a post mortem.'

The pensioner said his wife had been left very weak before her operation because she had been unable to take in nutrients.

'From July to October there was talk of another operation and then between November and December there were three or four postponements and she was becoming so institutionalised we decided to get her home until an operation was certain.

'It was a blessing because although neither of is could have guessed it - it gave us a last month together.

'Nevertheless, she was unable to take proper nourishment and went into the operation on the better side of a low state - she was very weak.'

Mrs Hutchon was well known and respected after serving in local government for the past 30 years and she became mayor of Chelmsford in 2006.

Mike Mackrory, a fellow Liberal Democrat councillor, said: We were all stunned to hear she had died after the operation. There were constant delays she had to endure before surgery.

'We were given the very sad news and as word spread it threw a pall over the civic dinner. Margaret was much loved and respected in this town.'

A spokesman for Broomfield Hospital said it could not comment on individual cases.

Title: Lack of intensive care equipment 'causing deaths'

TheUnhivedMind - March 30, 2011 11:09 PM (GMT)

Lack of intensive care equipment 'causing deaths'

Patients on intensive care are particularly vulnerable to breathing problems and often need assistance

30 March 2011 Last updated at 09:28
http://www.bbc.co.uk/news/health-12892141

The lack of a cheap and simple breathing monitor on NHS intensive care wards is causing unnecessary patient deaths, warn doctors.

According to the Royal College of Anaesthetists, using a capnograph may avoid over 70% of breathing-related deaths on UK intensive care wards.

A capnograph can detect problems as soon as they occur and immediately alert staff to intervene.

It is already used almost universally in operating theatres.

It works by detecting carbon dioxide in exhaled breath to confirm that the patient is breathing sufficiently.

But only a quarter of intensive care units in the UK use the device, according to this latest report.

Report author Dr Tim Cook, who is a consultant anaesthetist at the Royal United Hospital in Bath, said: "The single most important change that would save lives is the use of a simple breathing monitor, which would have identified or prevented most of the events that were reported.

"We recommend that a capnograph is used for all patients receiving help with breathing on ICU.

"Greater use of this device will save lives."

He said the introduction of capnography to more ICUs would require "modest cost" and some training of nurses and those doctors who are not familiar with its use.

Patients at highest risk of breathing complications are those with other health problems, such as obesity.

The report found obese patients had double the risk of airway problems when they needed a general anaesthetic compared with non-obese patients.

It monitored all airway complications recorded between 2008 and 2009 in operating theatres, intensive care units and hospital emergency departments throughout the UK.

Of 184 reports of complications, 38 resulted in a death. Sixteen of these deaths occurred while under general anaesthetic in the operating theatre, 18 occurred on intensive care units and four in emergency departments.

A Department of Health spokesperson said: "We welcome this report and would encourage NHS trusts and staff to take note of the recommendations and take any necessary action to ensure high quality, safe patient care."

View Full Version: Examine Your Stool

Title: Examine Your Stool

TheUnhivedMind - June 27, 2011 04:56 PM (GMT)

Examine Your Stool

http://www.shen-nong.com/eng/lifestyles/tc...exam_stool.html

Normally, an individual is able to defecate once or twice per day without straining. The stool should neither be too hard nor too soft, and should not have a foul odor. There also should be no pus, blood, mucus or undigested food in it. A TCM physician usually notes the frequency, form and color of the stool as well as the accompanying feelings during defecation.

Nature of stool

An offensive odor of stool pertains to heat accumulation.

Dry, dark-brown stool means excessive heat is present in the large intestine.

Loose stools with a fishy odor pertain to excessive cold in the intestines.

Extremely dry and hard stool is often seen in a deficiency of blood or body fluids.

Loose bowels with shapeless stool usually are due to deficiency cold in the spleen and stomach.

Initial discharge of a hard stool and then discharge of a loose stool can be seen in dampness accumulation caused by a spleen deficiency.

Alternate dry and loose stool in irregular patterns are due to disharmony between the liver and spleen.

Stools with partly digested food and a rotten odor are caused by improper food intake, which leads to food retention. Individuals will also pass excessive gas.

Stools containing completely undigested food are due to kidney yang exhaustion.

Stools with yellow mucus accompanied with tenesmus (rectal heaviness) means damp-heat has accumulated in the large intestine.

Pus and bloody stools are seen in dysentery.

Sour stools in children are due to food retention without proper digestion.

Improper food intake leads to food retention; individuals may also pass excessive gas.

Constipation

Constipation refers to infrequency or difficulty in defecation and may be accompanied with dry or hard stool. In TCM, this is usually due to heat accumulating in the intestines or insufficient amounts of body fluids. This leads to the intestines being unable to perform peristalsis (special movements of the intestines by which the contents are moved along the cavity). TCM categorizes the condition into four types:

Heat type: This is caused by excessive heat consuming the body fluid making the content in the bowel unable to flow freely. Individuals defecate dry or hard stools. Other accompanying symptoms are a flushed face, low-grade fever, thirst, foul breath, abdominal fullness and abdominal distention with pain that does not go away with pressure placed on the abdomen.

On examination, the tongue is red, covered by a yellow dry fur; the pulse is rapid.

Cold type: Individuals have difficulty in defecation with dry or normal stool texture. Other symptoms include abdominal distention with pain that does not go away with pressure placed on the abdomen, a pale complexion, cold limbs, an aversion to cold temperatures and a preference to drink hot beverages.

On examination the tongue is pale, and the pulse is deep and slow. This is a pattern of cold evil invasion that results in depression of the yang qi and obstruction of the bowel's qi.

Qi type: The individual presents with constipation or difficulty in defecation even though he or she has an urge. The usual associated symptoms are fullness in the chest and rib sides, frequent belching and a poor appetite.

On examination, the tongue is covered by thin and greasy fur; the pulse is taut.

Deficiency type: Individuals have an urge to defecate but it is difficult, and, many persons will try forceful straining to release the stool. In some cases, extremely dry hard stools like sheep feces are discharged. Other usual symptoms are a pale complexion,

dizziness and fatigue.

On examination, the tongue is pale; the pulse is fine and hesitant. This is a pattern of insufficiency of the blood and body fluids, or, it is due to deficiency of both qi and yin. It is often seen in chronic disease states, in the elderly and women who have just given birth.

Diarrhea

Diarrhea means frequent defecation with loose or watery stools. TCM believes this symptom is mainly caused by an attack of exogenous evils, improper diet or yang deficiency in both the spleen and kidneys, which make water descend and cause dysfunction in the intestines. TCM divides the condition into the following six types:

Damp cold type: Individuals present with diarrhea characterized by loose and watery stools. The stools are pale yellow and have a foul odor. Other accompanying symptoms are a bland taste in the mouth, fullness in the epigastric (the upper middle region of the abdomen), abdominal pain, intestinal rumblings and a poor appetite. There may be alternating chills and fever accompanied by headache, nasal congestion and general soreness.

On examination, the tongue is covered by thick white fur; the pulse is slow and hesitant.

Damp heat type: Individuals usually start with abdominal pain followed by diarrhea, and pass formless and foul odor stools with great frequency. Other symptoms include intestinal rumblings, restlessness, thirst and a burning sensation in the anus.

On examination, the tongue is red and covered by yellow, thick and greasy fur; the pulse is rapid.
The tongue is red and coverd by yellow greasy fur.
Food retention type: Individuals have foul smelling diarrhea with sour and rotten vomit, fullness of the epigastric region, intestinal rumblings, abdominal pain that is diminished after fecal discharge, a poor appetite and fever.

On examination, the tongue fur is thick and greasy; the pulse is rolling. This is often due to eating unhygienic food or an improper diet.

Spleen yang deficiency type: Individuals have diarrhea or may just pass loose and soft stool. There is undigested food in the stool. Other symptoms include poor appetite, increased stooling frequency after eating greasy foods, abdominal distention, a dull pain above the navel, a sallow complexion, fatigue and general weakness.

On examination, the tongue is pale, enlarged and covered by white fur; the pulse is weak.

Poor appetite and abdominal discomfort are associated with a spleen disorder.

Hyperactive liver qi attacking the spleen type: Individuals have abdominal pain and diarrhea following emotional disturbances. The abdominal discomfort will slightly diminish after defecation. Accompanying symptoms include fullness in the chest and rib sides, belching, loss of appetite, a bitter taste in the mouth, acid regurgitation, a sallow complexion and fatigue.

On examination, the tongue is pink with little fur; the pulse is taut. Kidney yang deficiency type: This is due to the kidney yang failing to warm the spleen. Individuals present with abdominal pain at dawn and then pass a loose stool. The abdominal pain is relieved after defecation. There is also coldness and soreness present in the lumbar area and knees. Distension in the abdominal region and aversion of coldness are typically present.

On examination, the tongue is pale and enlarged; the pulse is deep and fine.

Blood in the stool

Stool mixed with fresh blood and foul in odor is often due to an attack of heat evils in the meridians and blood vessels.

Dysentery: Both blood and mucus are present in the stool. Other symptoms include abdominal pain, fever, tenesmus (rectal heaviness) and abdominal urgency. This is a result of damp-heat in the large intestine.

Black, tar-liked stool is due to blood stasis, which indicates bleeding in the upper portion of the digestive system.

Red, bloody stool indicates bleeding in the lower portion of the digestive system..

Blood in the stool should always be evaluated by a physician as it can be a symptom of some serious medical conditions.

Fecal incontinence

This occurs when an individual is unable to control defecation and the stool is discharged out spontaneously. It pertains to yang deficiencies in the spleen and kidneys.

Description: *patients branded hypochondriacs*

TheUnhivedMind - May 30, 2011 03:49 AM (GMT)

Why GPs should be prescribing acupuncture to patients branded hypochondriacs

By Jenny Hope
Last updated at 1:28 AM on 30th May 2011
http://www.dailymail.co.uk/health/article-...d-symptoms.html

Millions of patients with ‘unexplained symptoms’ could benefit from acupuncture on the NHS, it is claimed.

Just 12 sessions led to health improvements for patients taking part in the first study of its kind.

British researchers want GPs to prescribe acupuncture for the one in five patients whose symptoms remain ‘medically unexplained’ despite a battery of tests and investigations.

They deny such patients can be seen as hypochondriacs and claim acupuncture could save the NHS money because it would cut unnecessary work including GP appointments, hospital stays and MRI scans.

The study involved 80 adults who had consulted their GP at least eight times in the past year with problems such as headaches, muscle pain, extreme tiredness, joint and back pain.

Half were sent for acupuncture, up to 12 sessions in six months, while the remainder were given no extra treatment. Those having acupuncture had a ‘significant and sustained’ benefit in their symptoms, says a report in the British Journal of General Practice.

Patients said the change in energy levels was ‘marvellous’.

The study was carried out by a research team from the Institute of Health Services Research, Peninsula Medical School, University of Exeter.

Professor Andrew Gould, who led the study, said it was important to offer patients another option alongside conventional medicine – where it wasn’t working.

He denied it was a charter for hypochondriacs, saying the problem of unexplained symptoms was well recognised.

Studies have shown that treating a patient with 'unexplained symptoms' can cost twice that of a patient who has been diagnosed (posed by models)

Studies have shown the cost to the NHS of managing the treatment of a patient with medically unexplained symptoms can be twice that of a patient with a diagnosis.

Professor Gould said: ‘It’s soul-destroying for the patient and soul-destroying for the doctor when there’s no clear reason for the symptoms they are suffering.

‘We don’t know how acupuncture is making a difference, but it seems to be something to do with the treatment rather than just a placebo or one-to-one care they’re getting.’ In the three months before taking part in the study, the 80 patients from London had been in frequent contact with the NHS.

They accounted for: 21 patient in-days; 106 outpatient clinic visits; 52 hospital clinic visits (for treatments such as physiotherapy, chiropody and counselling); 44 hospital visits for investigations (including ten magnetic resonance imaging – MRI – scans); and 75 visits to non-NHS practitioners such as opticians, dentists and complementary therapists.

Researcher Dr Charlotte Paterson said a cost-effectiveness study would take place, but GPs could be confident that prescribing acupuncture was ‘safe and potentially effective’.

Title: Astragalus herb against Flu (HUANG QI)

craig-oxley - October 23, 2009 02:11 PM (GMT)

Dr. Weil was right: Astragalus herb really helps fight the flu (influenza)

Thursday, October 22, 2009 by: Mike Adams
http://www.naturalnews.com/027302_astragalus_the_flu.html

The FTC and FDA are terrorizing Dr. Andrew Weil over his true statements about the immune-boosting properties of astragalus. According to the FDA, astragalus has no antiviral or antibacterial properties whatsoever and is of absolutely no use in the human body. Sound bizarre?

I thought so too. That's why I asked NaturalNews researchers to assemble a collection of statements in support of Dr. Weil's astragalus statements. This medicinal herb does, indeed, boost healthy immune function and offer protection against influenza. And because it's a multifaceted, complex plant-based medicine, it's not outsmarted by one particular viral configuration... it's useful against any flu (including H1N1 swine flu).

Here's what the experts have to say about astragalus and influenza...

Astragalus beats the flu
Clinical Applications: Astragalus is antiviral, carminative, antispasmodic, and hepatic. It improves glucose tolerance and acts as a vasodilator. In China, astragalus has been used as an energy tonic for deficient spleen qi and yang conditions. It has been used to treat wasting and thirsting conditions, as well as diarrhea, fatigue, and prolapse of the uterus. Astragalus is used to control fluids in cases of excess sweating and to reduce fluid retention.
- Fundamentals of Naturopathic Endocrinology by Michael Friedman, ND

Other Chinese doctors have found that astragalus offers more effective relief than the drug nifedipine (Procardia) for angina pain. More than 80 percent of angina patients

improved on astragalus treatment without the dizziness, giddiness, heartburn, or headache that nifedipine can cause. Animal studies suggest that astragalus can help prevent the development of cholesterol plaques after an arterial wall has been damaged, which can keep the coronary arteries from becoming too narrow. Astragalus also is useful in the treatment of viral myocarditis, a flulike infection that affects the heart.
- Prescription for Herbal Healing: An Easy-to-Use A-Z Reference to Hundreds of Common Disorders and Their Herbal Remedies by Phyllis A. Balch, CNC

Also, since flu vaccines are formulated based on viruses that have caused outbreaks in the past, they may or may not be effective in preventing flu caused by this year's virus. Astragalus helps to build the immune system, and thus make you less vulnerable to the flu. Take 250 to 500 milligrams in the morning three times a week during the flu season. Note: Do not take this herb if you have a fever. American ginseng helps to boost the immune system and strengthen the body. Take 200 milligrams one-half hour before breakfast once or twice a week during the winter months.
- Smart Medicine for Healthier Living : Practical A-Z Reference to Natural and Conventional Treatments for Adults by Janet Zand, LAc, OMD, Allan N. Spreed, MD, CNC, James B. LaValle, RPh, ND

Consider taking ginseng or astragalus to promote health, stamina, and viral immunity. Take colostrum, beta-glucan, and other immune-boosting supplements. Take extra vitamin C and zinc. Follow the recommendations in this book on how to take natural medicines for beating the flu. For frail, older people, reduce the dosage by half.
- Beating the Flu: The Natural Prescription for Surviving Pandemic Influenza and Bird Flu by J. E. Williams

Astragalus alone, however, is effective in preventing depletion of white blood cells during chemotherapy. A clinical study involving 115 patients receiving various forms of chemotherapy found that 83 percent had higher white blood cell counts when given astragalus. Common cold - Chinese studies have shown that using astragalus during cold season reduces the number of colds caught and shortens the duration of those that are caught. If you tend to get colds and flu often, astragalus can help you build up a natural resistance.
- Prescription for Herbal Healing: An Easy-to-Use A-Z Reference to Hundreds of Common Disorders and Their Herbal Remedies by Phyllis A. Balch, CNC

In a study of 28 people, astragalus given orally over a 2-month period significantly increased the production and secretion of interferon compared with controls. Remarkably, the levels of interferon remained high for 2 months after astragalus treatment ended. These results have been duplicated in laboratory studies. Astragalus also increases levels of natural killer (NK) cells, which roam the body via blood and lymph fluid, destroying a wide variety of invaders, including cancer cells and virus-infected body cells.

- The Encyclopedia of Popular Herbs by Robert S. McCaleb, Evelyn Leigh, and Krista Morien

In the exotic language of traditional Chinese medicine (TCM), astragalus boosts the immune system by "stabilizing the exterior" and strengthening the "chi." The Chinese knew thousands of years ago that astragalus could strengthen our shield ("exterior") against disease and increase overall vitality (chi), long before anyone knew about bacteria, white blood cells, or the immune system. You may already be accustomed to taking echinacea at the first sign of a cold or flu, or when people around you are getting sick. How is astragalus different?
- The Encyclopedia of Popular Herbs by Robert S. McCaleb, Evelyn Leigh, and Krista Morien

Adaptogens, which include eleuthero, Asian ginseng, astragalus, and schisandra, are thought to help keep various body systems - including the immune system - functioning optimally. They have not been systematically evaluated as cold remedies. However, one double-blind trial found that people who were given 100 mg of Asian ginseng extract in combination with a flu vaccine experienced a lower frequency of colds and flu compared with people who received only the flu vaccine.
- The Natural Pharmacy: Complete A-Z Reference to Natural Treatments for Common Health Conditions by Alan R. Gaby, M.D., Jonathan V. Wright, M.D., Forrest Batz, Pharm.D. Rick Chester, RPh., N.D., DipLAc. George Constantine, R.Ph., Ph.D. Linnea D. Thompson, Pharm.D., N.D.

The Chinese have been using astragalus for thousands of years for immune-system strengthening. Studies have proven that this herb can reduce the frequency and duration of colds and the flu by boosting the immune system rather than by killing viruses directly. Astragalus can be taken as an extract, or the root can be added to soups.
- The Complete Encyclopedia of Natural Healing: A Comprehensive A-Z Listing of Common and Chronic Illnesses and Their Proven Natural Treatments by Gary Null, Ph. D.

Modern research suggests that astragalus stimulates the immune system (though in my opinion, it's not quite as effective as echinacea), counteracts fatigue, treats many infections (including flu), and supports the kidneys. I grow astragalus, but I don't harvest it. Herbalists recommend taking 3 to 5 milliliters of tincture three times a day, or two 400-milligram capsules three times a day. If I wanted to use astragalus, I'd buy a commercial preparation and follow the package directions for proper dosage. The herb appears to be safe.
- The Green Pharmacy Anti-Aging Prescriptions: Herbs, Foods, and Natural Formulas to Keep You Young by James A. Duke, Ph.D.

Immune System (to Tonify It) General Herbal Treatments: For immunodeficiency and to

accompany chemo and/or radiotherapy, combine 9 grams each of ligustrum berries and dendrobium with 15 grams of astragalus root; if there is digestive upset and nausea, add 9 grams each of pinellia and citrus peel. For immunodeficiency with symptoms of frequent colds and influenza and to prevent colds and influenza, combine 9 grams each of astragalus root, atractylodes bai zhu, and ledebouriella root.
- The Way of Chinese Herbs by Michael Tierra, L.Ac, O.M.D.

I haven't heard of any safety problems with ashwagandha, though the literature says that abdominal cramps are possible. Also known as huang qi, astragalus is one of the premier immune-system boosters in traditional Chinese medicine. Practitioners prescribe the herb to treat colds, flu, bronchitis, sinus infections, and other infectious ailments. They also recommend it for people whose immune systems have been suppressed by chronic illnesses such as AIDS. These uses are supported by modem research.
- The Green Pharmacy Anti-Aging Prescriptions: Herbs, Foods, and Natural Formulas to Keep You Young by James A. Duke, Ph.D.

Investigators at the University of Texas have reported strong immune-restorative effects in test-tube studies of cancer cells treated with astragalus extracts. And certain cells treated with astragalus extracts in culture survive 50 percent longer, according to some U.S. researchers. Chinese studies suggest that astragalus, in addition to boosting immunity and detoxifying a number of drugs and some metals, is also an anti-viral, a diuretic and a coronary artery dilator. They believe it is particularly effective in warding off flu and some other respiratory infections.
- The Doctor's Vitamin and Mineral Encyclopedia by Sheldon Saul Hendler

The antiviral activity of Astragalus is most likely to be due to increased immunity and possibly enhanced interferon production. In support of this, Astragalus demonstrated slight inhibitory activity against adenovirus type 7 in vitro. Natural and recombinant interferon enhanced the inhibitory activity of Astragalus. It also promoted the production of interferon by mouse lung against parainfluenza virus type I and Newcastle disease virus in vitro.
- Principles and Practice of Phytotherapy: Modern Herbal Medicine by Simon Mills and Kerry Bone

Unlike echinacea, astragalus may be taken long-term during cold and flu season. Chinese studies have found it to be an effective preventive against the common cold.
- The Herbal Drugstore by Linda B. White, M.D.

Atmospheric Energy
Slightly Warm

Organ Meridian Systems
Spleen, Lungs and Three Burning Spaces

Primary Functions
Tonify Qi, regulate immune functions, strengthen resistance, build blood, strengthen "upright Qi,"

Qualities
Astragalus ranks as one of the most potent health tonics in the world. For over two thousand years, it has been one of the most popular tonic herbs used in the Orient, and remains so.
Astragalus is said to strengthen the primary energy of the body and to tonify the three burning spaces, or in other words, to strengthen all metabolic, respiratory and eliminative functions. As an energizer, Astragalus is famed for its strengthening effects on the outside of the body, in particular to the musculature. It is therefore beneficial in particular to younger adults, who tend to be physically active and require external abundant external energy. In China, Astragalus is sometimes considered superior to Ginseng as an energizer for younger people. Astragalus is used to strengthen the legs and arms, and is commonly used by people who work outdoors, especially in the cold, because of its strengthening and warming nature.

Astragalus is said to have another effect on the "surface" of the body---that is, it is used to tonify the "protective Qi," known as Wei Qi in Chinese. This protective Qi is a special kind of energy which circulates just under the skin and in the muscle. Wei Qi is a yang energy and is the yang counterpart to the yin (nutritional) energy flowing through the meridian system, nourishing our tissues and organs. This nutritional energy flowing in

the meridians in known as Ying Qi. Both Wei Qi and Ying Qi are generated in the Lungs after the Lungs have extracted Qi from the air we are breathing, and after the Stomach and Spleen have extracted Qi from the food we have eaten. The air and food energies are united in the Lungs to generate the “essential energy.”

Ying and Wei are the two components of the essential energy. Wei Qi circulates in the subcutaneous tissues providing suppleness to the flesh and adaptive energy to the skin. This function is considered essential to life to Asian health practitioners. It is believed that this adaptive energy at the surface of the body is our first line of defense against the offensive forces of nature.. It is the Wei Qi which provides the energy of the flesh to perspire, produce goose bumps or to shiver. The Wei Qi controls the opening and closing of the pores. It Wei Qi is deficient, exhausted or blocked, environmental forces such as heat, cold, dampness and wind (the so-called “vicious energies”) can easily penetrate through the flesh and injure the tissues lying below, including the blood and inner organs. If the Wei Qi is sufficient, strong and unblocked, the body’s resistance is formidable and one can easily adapt to difficult environmental conditions. Astragalus, by tonifying the Lungs, helps the body generate an abundance of free flowing Wei Qi, thus fortifying the defense energy of the body. Consistent consumption of Astragalus is thus used to protect the body and has traditionally been called “the Great Protector.”

Astragalus helps regulate several other important functions. It is used as a blood tonic and is quite effective when combined with primary blood tonic herbs such as Dang Gui, San Qi, Polygonum, etc. Astragalus helps to regulate fluid metabolism, and those who consume it regularly are said to rarely suffer from fluid retention and bloating. Combined with Licorice root, Astragalus helps regulate blood sugar levels.

An important effect of Astragalus is in its ability to fortify the “Upright Qi.” Upright Qi is the energy allocated by the body to maintain upright posture and to maintain the position of the organs in their healthy position in their battle with gravity. As one gets older, or if one experiences chronic fatigue or exhaustion, or during illness, this Upright Qi is easily depleted resulting in the sinking, or “prolapse,” of organs. This can happen almost anywhere in the body, but it is common in the abdominal and pelvic cavities where organs tend to sink. Astragalus provides an abundance of this Upright Qi. Thus Astragalus is used for such conditions as hernias and prolapse of the uterus and stomach, as well as the inability to stand straight due to fatigue.

Astragalus enhances the function of the skin to eliminate toxins. It is commonly used to help sores in the skin to come to a head and suppurate, and thus to heal more quickly and effectively. Astragalus is used by Chinese doctors to help slow-healing sores and wounds heal more quickly. All this activity is related to the Wei Qi which is circulating in the skin, which also improves blood circulation according to the rule of “Qi leads Blood.”

Astragalus has a mild diuretic action and helps to relieve excessive sweating. It is helpful in treating loose stools, chronic diarrhea and chronic or recurring colds. If a cold

lasts too long it can cause a general fatigue syndrome that can itself become chronic. Astragalus is very useful for people who just can't seem to shake a cold, and Astragalus can replace the Qi necessary to regain full strength. In China, there are patent medicines consisting solely or primarily of Astragalus which are targeted specifically at treating low grade chronic colds.

Scientific Data
Astragalus, like many of the major tonic herbs, has a very complex constituent profile. Primarily, the active constituents of Astragalus consist of triterpene glycosides, polysaccharides and flavonoids. Astragalus also contains numerous amino acids, trace elements and various other components.

Astragalus extracts have been proven to have potent immunomodulating effects in both animals and humans. Water extracts of Astragalus significantly enhance macrophage activity and reduce the activity of suppresser T-cells. The herbal extract significantly increases natural killer cell cytotoxicity. It significantly helps antibody response and increases T-helper cell activity. Studies conducted at the M.D. Anderson Cancer Research Center at the University of Houston, the world's largest cancer research institute, demonstrated clearly that Astragalus improves the immune response in humans undergoing radiation and chemotherapy as a treatment for cancer. The FDA, however, has not approved the use of Astragalus for this purpose, although it is approved for exactly that purpose in many other countries. It tends to protect the white cells from leucopenia (destruction of white blood cells due to the chemotherapy or radiation) and maintains the healthy activity of these immune cells. Patients taking Astragalus during such treatment tend to have far fewer side effects and to recover at a higher rate. Astragalus is often used with Ganoderma, Siberian Ginseng, Cordyceps and/or Gynostemma in this fu zheng therapy.

Astragalus extracts have been demonstrated to have significant hematopoietic (red blood cell-building) activity.

The primary active constituents of Astragalus, the triterpene glycosides, are saponins similar to the saponins in Ginseng and Gynostemma, though all of the Astragalus saponins (triterpene glycosides) have their own chemical identities. There are over 30 such saponins in Astragalus membranaceus, for example, of which many are unique to that species. The "total Astragaloside" fraction of Astragalus is an extremely potent health agent. Studies have demonstrated that the total Astragaloside fraction, has a bipolar, biphasic, double direction activity. It is an extremely potent immune modulator, capable of building the immune response while suppressing excessive immune activity, as occurs in autoimmune conditions (including allergies and arthritis). In addition, the total Astragaloside fraction has an extremely potent antioxidant activity, hundreds of times stronger than vitamin E, and stronger than that of grape seed extract, Ginkgo biloba and pine bark extract. New extraction technology allows this total Astragaloside fraction to be extracted. The new high potency Astragalus extract is without doubt

among the most potent health tonics in the world today.

The polysaccharides found in Astragalus are also extremely potent immune enhancers. However, these polysaccharides have been shown to be poorly absorbed in the intestines and therefor have a low bioavailability. Pharmacological studies have shown that injected polysaccharides and injected Astragalus glycosides have approximately equivalent potency relating to the immune system. However, the glycoside component is five times more potent than the polysaccharides when consumed orally.

Both polysaccharide and saponin fractions have shown liver protective action. However, the liver protective action of the saponin fraction is more powerful due to higher bioavailability.

Astragalus contains GABA (g-aminobutyric acid) and has been shown to have a corresponding hypotensive effect as a direct result of that component.

An interesting new area of research on Astragalus concerns its potential as a male fertility agent. Seventy Chinese herbs were studied to determine their effect on sperm motility. Only Astragalus proved to stimulate this activity.

Astragalus is rich in zinc and selenium. They form components of molecules which have shown powerful anti-cancer activity. They are also responsible for Astragalus's ability to treat osteoarthritis deforms. Astragalus is used clinically to treat cancer and osteoarthritis in China.

Astragalus has been found to induce the production in human beings of both b and g-interferon.

Preparation and Utilization
Astragalus may be added to almost any tonic formulation designed to strengthen the entire body. It is superb for young or old people, male or female. It can be the main ingredient or a secondary ingredient. My recommendation here is to consume Astragalus every day, to some degree or another.

Primary Combinations
Combine with:

1. Ginseng Root and Licorice Root to tonify the primal qi
2. Dang Gui to tonify blood and to improve blood circulation at the surface of the body
3. Cinnamon to fortify the flesh, prevent excessive sweating and beautify the skin
4. Dang Gui and Licorice Root strengthen menstrual functions, relieve menstrual and other lower abdominal pain
5. Schizandra and Ophiopogon to tonify the Lung qi and yin
6. Ganoderma to tonify the Lungs, Spleen, Heart and Liver and to protect the body from invasion --- this is the premier protection entity in Chinese herbalism

Varieties and Grading
Astragalus is one of the premium Chinese Tonic herbs that has been a staple of traditional Chinese herbalism for three thousand years. Thus many varieties are available at any Chinese herb shop, ranging in quality and price from very inexpensive to relatively expensive. Prices range from a few dollars per pound up to around $60 a pound for the best sliced Astragalus. The Astragalus we get in America has been sliced and pressed, which makes it appear bigger than it actually was in the ground, and also makes it easier to cook or otherwise extract.

If you compare the best Astragalus with the low end material, it is easy to note a fineness to the quality of the better root slices. Slices that are supple and pliable are more desirable than dry, brittle slices. It usually indicates that the herb is fresher and was more carefully prepared. High quality Astragalus has an inner core which is distinctly earthy-yellow. Lesser grades are characterized by a non-distinct whitish-beige core and rough texture. However, some unscrupulous suppliers actually dye this inside core yellow. The yellow core is essential, but make sure it is natural (it won't turn a wet tissue Ritz yellow).

Good quality Astragalus has a sweet flavor that is pleasant when cooked in tea. Lower grade Astragalus is bland or tasteless, and has a starchy taste.

My recommendation: buy middle or high priced Astragalus. Herb shops don't sell the poor quality stuff for high prices because too many people are experts in Astragalus. At least buy a middle grade, and preferably buy the best---you'll notice the difference.

Contraindications
Being in the legume family, it tends to produce flatulence in those who are prone to this distressing symptom when they eat legumes such as peas. If this is the case, use less and try adding herbs like cardamom to the tea. It should not be used during the acute phase of the flu. There are no known side effects associated with high technology standardized Astragalus extract.

History
Astragalus has been used in China as a tonic herb since deep antiquity. It was described as a superior herb in the Spirit Farmer's Materia Medica, where it was described as an herb which prolonged the years of life without aging." Since that time, Astragalus has been one of the most popular and highly respected tonic herbs, in the class of Ginseng and Ganoderma, though more commonly available.

View Full Version: THE BLACK SESAME [HEI ZHI MA]

Title: THE BLACK SESAME [HEI ZHI MA]

craig-oxley - June 25, 2010 09:59 AM (GMT)

Basic Botanical Data of Black Sesame.

Black Sesame

Semen Sesami Nigrum
Botanical Source: Dry Seed of Sesamum indicum L
Pharmaceutical Latin: Semen Sesami Indici
Family: Pedaliaceae Genus: Sesamum Species: S. indicum
Pinyin:Hei Zhi Ma
Synonyms:Benne Seed.
Black Sesame is the dried ripe seed of Sesamum indicum L. (Fam. Pedaliaceae).
Action: To tonify the liver and the kidney, t replenish vital essence and blood, and to relax the bowels.
Indications: Dizziness, blurred vision, tinnitus, impaired hearing, premature greying of the hair and beard; loss of hair after a serious diseadse; constipation.

Sesame (Sesamum indicum) is a flowering plant in the genus Sesamum. The precise natural origin of the species is unknown, although numerous wild relatives occur in Africa and a smaller number in India. It is widely naturalised in tropical regions around the world and is cultivated for its edible seeds.

It is an annual plant growing to 50 to 100 cm (2-3 feet) tall, with opposite leaves 4 to 14 cm (5.5 in) long with an entire margin; they are broad lanceolate, to 5 cm (2 in) broad, at the base of the plant, narrowing to just 1 cm (half an inch) broad on the flowering stem. The flowers are white to purple, tubular, 3 to 5 cm (1 to 2 in) long, with a four-lobed mouth.

Sesame Seed Description.

Sesame Seeds burst forth from the ripe seed-pods of the sesame plant with a shattering explosion, hence the term "open sesame"! Black and Golden Sesame Seeds

are the un-hulled seeds which may be either black or golden brown. White Sesame Seeds are hulled seeds and are the most popular type to use in cooking. When baked or toasted, Sesame Seeds acquire a delicious nutty, crunchy taste, which makes them popular on biscuits and breads and even sprinkled over ice cream instead of chopped nuts. Black Sesame seeds are used in Chinese recipes and Golden Sesame Seeds garnish and flavour the traditional Turkish bread called simit that is sold by street-side vendors.

Roasted or unroasted, sesame seeds can be used for a variety of culinary dishes. Their sweet, nutty flavor suits rolls, meats, pastas, and vegetables well. Many countries use the seeds to make pastes and sauces for coating and dipping. The oil from the seeds can be used to make sesame oil.

Sesame is an annual herb yielding small, flat, teardrop-shaped seeds, ranging from cream to black in colour. Unhulled 'white' sesame seeds are beige rather than white and extremely high in calcium. Except for some Chinese dishes, it is invariably white, hulled sesame seeds which are used in Asia. Indian vegetarian cookery uses sesame seeds in combination with lentils, milk and rice to maximise protein content. Hulled, toasted sesame seeds are indispensable in certain Chinese sauces and marinades.

In Sri Lanka, one of the most popular confections is a sticky mixture of hulled white sesame seeds and palm sugar pounded together, shaped into bite-sized balls and wrapped in either cellophane or greaseproof paper. These are sold by roadside vendors and known as thala-guli (sesame pills).

Toasting hulled white sesame seeds gives them a wonderful nutty flavour and attractive deep golden colour. It is from toasted seeds that we get oriental sesame oil - rich golden brown and strongly flavoured. See OILS.

Black sesame seeds have an earthy taste in their raw state and are notsuitable for toasting as they become bitter. They are indispensable when making the famous showpiece Chinese dessert, toffee bananas - battered and deep-fried fruit dipped in clear caramel with black sesame seeds stirred through. The caramel-coated pieces of fried fruit are dropped into a bowl of ice and water to harden the caramel, then quickly transferred to a lightly oiled serving dish and eaten without delay. Slices of apple or sweet yam may be used instead of bananas. See recipe for Chinese Toffee Bananas.

Constituents and Phytochemicals of Black Sesame.

Black sesame seed is a very good tonic herb. It builds Yin Jing, and therefore it is a longevity herb. In addition to its essence-building capacity, Black Sesame also builds blood. It acts in much the same way as Polygonum. Black sesame seed is moistening to the intestines and helps move the bowels. It prevents and relieves constipation due

to dryness of the intestines. Black sesame seed is extremely rich in calcium, containing 85 milligrams per gram of seeds. It is also high in protein, phosphorous, iron and magnesium.

Not only are sesame seeds a very good source of manganese and copper, but they are also a good source of calcium, magnesium, iron, phosphorous, vitamin B1, zinc and dietary fiber. In addition to these important nutrients, sesame seeds contain two unique substances: sesamin and sesamolin. Both of these substances belong to a group of special beneficial fibers called lignans, and have been shown to have a cholesterol-lowering effect in humans, and to prevent high blood pressure and increase vitamin E supplies in animals. Sesamin has also been found to protect the liver from oxidative damage.

sesamin. Formula:C20H18O6;0.18%~0.21%.
Oleic acid: 21.60%~28.80%

Other content: fatty oil (45%~60%): including oleic acid (45%); linoleic acid (37%); palmitic acid; stearic acid; arachidic acid;

sesamolin; sesamol; Vitamin E; lecithin (0.65%); planteose; sesamose; cytochrome C; nicotinic acid (0.48mg%); folic acid(18.45mg%); sucrose (0.64%);

Protein (22%): including alpha-glubolin; beta-glubolin; 13s-glubolin; albumin; glutelin; pedaliin; phytosterol; many kinds of amino acid; linolenic acid; sinapic acid; sesame lectin.

Sesamin:

Molecular Formula:C20H18O6; Molecular Weight:354.36; CAS Registry Number: 607-80-7. Melting Point: 122 - 123 degree C.
Pharmacology: Antioxidant,Bactericide,Insecticide,Non-competitive D5-desaturase inhibitor.

Sesamolin:

Molecular Formula:C20H18O7; Molecular Weight:354.36; CAS Registry Number:526-07-8
IUPAC: 1,3-benzodioxol-5-yl (1R,3aR,4S,6aR)-4-(1,3-benzodioxol-5-yl)perhydrofuro[3,4-c]furan-1-yl ether;(1S,3aR,4R,6aR)-5-[4-(1,3-benzodioxol-5-yloxy)tetrahydro-1H,3H-furo[3,4-c]furan-1-yl]-1,3-benzodioxole

Sesamol:

Synonyms:3,4-(Methylenedioxy)phenol; 1,3-Benzodioxol-5-ol; 5-Benzodioxolol;1, 3-Benzodioxol-5-ol;1,3-Benzodioxol-5-ol;1/C7H6O3/c8-5-1-2-6-7(3-5)10-4-9-6/h1-3,8H,4H;3,4-(Methylenedioxy)phenol; 3,4-Methylenedioxyphenol;5-19-02-00532 (Beilstein Handbook Reference);5-Hydroxy-1, 3-benzodioxole;5-Hydroxy-1,3-benzodioxole;533-31-3;AI3-17298;BRN 0127405; C10832;CCRIS 1386;EINECS 208-561-5;Methylene ether of oxyhydroquinone;NSC 59256;NSC59256;Phenol, 3,4-(methylenedioxy)-;Phenol, 3,4-(methylenedioxy)-;SDCCGMLS-0066221.P001;Sesamol; ZINC00164504.
Molecular Formula C7H6O3; Molecular Weight:138.12; CAS Registry Number:533-31-3; EINECS 208-561-5; IUPAC Name:benzo[1,3]dioxol-5-ol; Melting point:63-65 Deg C; Water solubility:slightly soluble.

Rich In Beneficial Minerals:

Sesame seeds are a very good source of copper, and calcium. Just a quarter-cup of sesame seeds supplies 74.0% of the daily value for copper, 31.6% of the DV for magnesium, and 35.1% of the DV for calcium.Black sesame seed is extremely rich in calcium, containing 85 milligrams per gram of seeds. It is also high in protein, phosphorous, iron and magnesium. This rich assortment of minerals translates into the following health benefits:

Copper Provides Relief for Rheumatoid Arthritis:

Copper is known for its use in reducing some of the pain and swelling of rheumatoid arthritis. Copper's effectiveness is due to the fact that this trace mineral is important in a number of antiinflammatory and antioxidant enzyme systems. In addition, copper plays an important role in the activity of lysyl oxidase, an enzyme needed for the cross-linking of collagen and elastin--the ground substances that provide structure, strength and elasticity in blood vessels, bones and joints.

Magnesium Supports Vascular and Respiratory Health:Studies have supported magnesium's usefulness in:

Preventing the airway spasm in asthma;
Lowering high blood pressure, a contributing factor in heart attack, stroke, and diabetic heart disease;
Preventing the trigeminal blood vessel spasm that triggers migraine attacks;
Restoring normal sleep patterns in women who are experiencing unpleasant symptoms associated with menopause.

Calcium Helps Prevent Colon Cancer, Osteoporosis, Migraine and PMS:In recent studies, calcium has been shown to:

Help protect colon cells from cancer-causing chemicals
Help prevent the bone loss that can occur as a result of menopause or certain conditions such as rheumatoid arthritis
Help prevent migraine headaches in those who suffer from them
Reduce PMS symptoms during the luteal phase (the second half) of the menstrual cycle

There is a little bit of controversy about sesame seeds and calcium, because there is a substantial difference between the calcium content of hulled versus unhulled sesame seeds. When the hulls remain on the seeds, one tablespoon of sesame seeds will contains about 88 milligrams of calcium. When the hulls are removed, this same tablespoon will contain about 37 milligrams (about 60% less). Tahini:a spreadable paste made from ground sesame seeds is usually made from hulled seeds (seeds with the hulls removed, called kernels), and so it will usually contain this lower amount of calcium.

The term "sesame butter" can sometimes refer to tahini made from sesame seed kernels, or it can also be used to mean a seed paste made from whole sesame seeds: hull included.

Although the seed hulls provide an additional 51 milligrams of calcium per tablespoon of seeds, the calcium found in the hulls appears in large part to be found in the form of calcium oxalate. This form of calcium is different than the form found in the kernels, and it is a less absorbable form of calcium. So even though a person would be likely to get more calcium from sesame seeds or sesame seed butter that contained the hulls, there is a question about how much more calcium would be involved. It would defintely be less than the 51 additional milligrams found in the seed hulls. And there would also, of course, be a question about the place of hull-containing sesame seeds on an oxalate-restricted diet.

Zinc for Bone Health:

Another reason for older men to make zinc-rich foods such as sesame seeds a regular part of their healthy way of eating is bone mineral density. Although osteoporosis is often thought to be a disease for which postmenopausal women are at highest risk, it is also a potential problem for older men. Almost 30% of hip fractures occur in men, and 1 in 8 men over age 50 will have an osteoporotic fracture. A study of 396 men ranging in age from 45-92 that was published in the American Journal of Clinical Nutrition found a clear correlation between low dietary intake of zinc, low blood levels of the trace mineral, and osteoporosis at the hip and spine.

Sesame Seeds' Phytosterols Lower Cholesterol:

Phytosterols are compounds found in plants that have a chemical structure very similar

to cholesterol, and when present in the diet in sufficient amounts, are believed to reduce blood levels of cholesterol, enhance the immune response and decrease risk of certain cancers.

Phytosterols beneficial effects are so dramatic that they have been extracted from soybean, corn, and pine tree oil and added to processed foods, such as "butter"-replacement spreads, which are then touted as cholesterol-lowering "foods." But why settle for an imitation "butter" when Mother Nature's nuts and seeds are a naturally rich source of phytosterols and cardio-protective fiber, minerals and healthy fats as well?

In a study in the Journal of Agricultural and Food Chemistry, researchers published the amounts of phytosterols present in nuts and seeds commonly eaten in the United States.

Sesame seeds had the highest total phytosterol content (400-413 mg per 100 grams), and English walnuts and Brazil nuts the lowest (113 mg/100grams and 95 mg/100 grams). (100 grams is equivalent to 3.5 ounces.) Of the nuts and seeds typically consumed as snack foods, pistachios and sunflower seeds were richest in phytosterols (270-289 mg/100 g), followed by pumpkin seeds (265 mg/100 g).

Nutrition Note:

Sesame seeds are 25 percent protein and are especially rich in methionine and tryptophan, often lacking in adequate quantities in many plant proteins. One ounce of decorticated or hulled seeds contains 6 grams of protein, 3.7 grams of fiber, and 14 grams of total fat. When toasted they lose nutrients, scoring 4.8 grams of protein, gaining a little fiber at 4.8 grams, and packing 13.6 grams of total fat.

The fat in sesame seeds is 38% monounsaturated, and 44% polyunsaturated which equals 82% unsaturated fatty acids.Natural sesame seeds (unhulled) contain 5 grams of protein per ounce, 3.1 grams fiber, and 14 grams of total fat. When toasted they offer 4.8 grams of protein, 4.0 grams fiber, and 13.8 grams of total fat. Because sesame seeds are a plant food, there's no need to worry about cholesterol. There simply isn't any to be found within the seeds or the oil.

Tahini or sesame seed paste, contains 2.9 grams of protein per tablespoon, .9 grams of fiber, and 8.1 grams of total fat. Tahini also contains the B vitamins, including16 mcg of folic acid. That same tablespoon contains 153.6 mg calcium and 3.07 mg iron. Additional minerals include 57.9 mg magnesium and 93.12 mg potassium.

There is often concern that vegans do not get a sufficient amount of zinc in their diet. Include sesame tahini in your diet often and reap the benefit of plenty of zinc with one tablespoon supplying 1.17 mg.

Sesame oils, whether refined or unrefined, all contain about 14 grams of total fat per tablespoon. Sesame seeds are 44 to 60 % oil. The seeds are prone to rancidity, but the oil is resistant to oxidation, meaning that it is not prone to rancidity because of sesamol, a natural preservative within the oil. Sesame oil is polyunsaturated and high in oleic and linoleic fatty acids that are rich in omega 6.

Natural sesame seeds, those that are unhulled, are high in calcium. One tablespoon provides 87.8 mg while the hulled variety offers only 10.5 mg for that same tablespoon. Comparing sesame seeds to milk turned up some surprising figures in the calcium count. One cup of natural sesame seeds had 1404.0 mg of calcium, while one cup of non-fat milk provided 316.3 mg. and one cup of whole milk contained 291 mg of calcium.

Both natural and hulled sesame seeds contain healthy amounts of the B vitamins riboflavin, thiamine, and niacin. With natural seeds scoring 8.7 mcg of folic acid for 1 tablespoon and plenty of vitamin B6, you can count on sesame seeds for excellent nourishment.

Let's look at some of the mineral values of the sesame seed. One tablespoon of hulled seeds contains .62 mg of iron, 27.73 mg of magnesium, 32.53 mg potassium, and .82 mg of zinc. Figures for the natural, unhulled, are slightly higher. Sesame seeds also contain healthy amounts of phosphorous. If you're lacking iron, turn to the sesame seed. Its iron content is equal to that of liver.

Like all seeds, natural unhulled sesame seeds are living foods capable of producing generation after generation through the process of sprouting. They are nutrient dense in order to trigger the germination process and provide nourishment to the tiny plants as they grow from sprout to maturity.

Nutrients from the sesame seed are best absorbed in the form of sesame oil, tahini or sesame butter. The whole seeds do not break down readily and release all their nutrients.

Origin of Sesame.

Sesame is an erect, annual plant Sesamum indicum L., or Sesamum orientale, of numerous types and varieties belonging to the family Pedaliaceae, cultivated since antiquity for its seeds, which are used as food and flavoring and from which a prized oil is extracted. The name goes back to Greek seesamon, which in turn was probably loaned from an Afro-Asiatic language (cf. Arabic saasim). There are two kinds of sesame, black and white.

Probably originating in Asia, the Chinese used it 5,000 years ago, and for centuries they have burned the oil to make soot for the finest Chinese ink blocks. Records show it has been cultivated in parts of India around 1600 BC. From there it was brought to Europe, grown in Egypt, and its value both medicinally and for cooking gradually spread throughout Europe. The Romans ground sesame seeds with cumin to make a pasty spread for bread. Once it was thought to have mystical powers, and sesame still retains a magical quality, as shown in the expression "open sesame," from the Arabian Nights tale of "Ali Baba and the Forty Thieves." In Africa the seeds, called benne, were eaten as food as well as being used for oil and the seeds were taken by the slaves to America where it has been a cultivated food crop ever since.

The whole seed is used extensively in the cuisines of the Middle East and Asia. Halvah is a confection made of crushed and sweetened sesame seeds. In Europe and North America the seeds are used to flavor and garnish various foods, particularly breads and other baked goods. The aroma and taste of sesame seed are mild and nutlike.

Sesame oil is used as a salad or cooking oil, in shortening and margarine, and in the

manufacture of soaps, pharmaceuticals, and lubricants. It is used as an ingredient in cosmetics. The press cake remaining after the oil is expressed is highly nutritious.

Sesame is now found in most of the tropical, subtropical, and southern temperate areas of the world. Although a major world oilseed crop, sesame is primarily grown by small farmers in developing countries in the southern latitudes.

The plants grow best in tropical climates, from spring to fall. Depending on conditions, varieties grow from about 0.5 to 2.5 m tall. The annual, erect plants, some have branches, others do not. The ovate leaves are opposite, grow alternately up the stem and are deeply veined. The flowers are white and shaped like a trumpet, on short peduncles in axils of leaves. One to three flowers appear in the leaf axils.

The fruit, about 2.5 cm long, is an oblong capsule with small seeds. Each plant may grow 15-20 fruits, which contain 70-100 seeds each. Plants and fruits will reach maturity in 80-100 days after sowing. When the seeds are ripe the capsule bursts open suddenly and scatters its seeds. The hulled seeds are creamy or pearly white and about 3 mm long and have a flattened pear shape. In the Orient, the matured whole plants are harvested and set in the field for 5-10 days under sun, resulting the capsule tips to dry and crack, and then remove the seed capsule for collecting seeds inside. The tiny seeds are flat, shiny and egg-shaped and according to the variety, are either greyish-white, red, brown or black.

Total world production of sesame in 1986 was 2.4 million metric tons, 65% of which was produced in Asia. The U.S. is the largest importer of sesame, importing about 40,000 metric tons per year, mostly from Mexico. Almost all sesame consumed in the U.S. is as a spice for food products such as hamburger buns and other bakery goods. Minor uses of sesame oil include pharmaceutical and skin care products and as a synergist for insecticides.

Sesame grows best in sandy well-drained soil and a hot climate with moderate rainfall. It is propagated by seed sown in Spring and it takes about four months for the seeds to ripen fully. The crop is then cut, tied in bundles and threshed. After threshing the seeds are cleaned and dried and usually hulled.

History:Sesame Seed

Sesame is one of the oldest seeds known to man. Thought to have originated in India or Africa, the first written record of sesame dates back to 3,000 BC. According to Assyrian mythology, sesame's origins go back even farther - there is a charming myth about the Gods imbibing sesame seed wine the night before they created the earth. References can be found to Babylonians using sesame oil, and to Egyptians growing their own sesame to make flour. Of course, Persia, birthplace of the 1001 Arabian

Nights, has long been savvy to sesame's benefits. Ancient Persians relied on it both as a food and for its medicinal qualities.

Farther east, it's unclear when sesame first found its way to China. Some sources claim the Chinese were using sesame oil in their lamps as far back as 5,000 years ago, while others state sesame seeds were introduced into China about 2,000 years ago. It's probably true that the ancients first relied on the sesame plant to provide oil, and only later discovered its value as a food source. In the Oxford Companion to Food, Alan Davidson concludes that sesame "...was probably introduced into China early in the Christian era, but the first firm evidence of it in China dates from the end of the 5th century AD."

While the exact circumstances surrounding sesame's arrival in China may be lost to history, there's no doubt that today it is a mainstay of Chinese cuisine. Toasted sesame seeds are sprinkled on salads, sesame paste is added to sauces, and delightfully aromatic sesame oil is used to flavor everything from dips to marinades.

Sesame seeds may be the oldest condiment known to man dating back to as early as 1600 BC. They are highly valued for their oil which is exceptionally resistant to rancidity. "Open sesame," the famous phrase from the Arabian Nights, reflects the distinguishing feature of the sesame seed pod, which bursts open when it reaches maturity. The scientific name for sesame seeds is Sesamun indicum.

The sesame plant (Sesamum indicum) is a lovely annual shrub with white bell-shaped flowers tinged with a hint of blue, red or yellow. It is grown worldwide, particularly in India, China, South America and Africa. Its present popularity is nothing new, for it has been cultivated for over 4,000 years in Mesopotamia and was found in Tutankhamun?s tomb. The seeds were ground for flour and today they are still used to make tahini, a delicious paste that has a long reputation for increasing longevity. Apparently the women of ancient Babylon would eat halva, a mixture of honey and sesame seeds, to prolong their youth and beauty, while Roman soldiers ate sesame seeds and honey to give them strength and energy.

While sesame seeds have been grown in tropical regions throughout the world since prehistoric times, traditional myths hold that their origins go back even further. According to Assyrian legend, when the gods met to create the world, they drank wine made from sesame seeds.

These seeds were thought to have first originated in India and were mentioned in early Hindu legends. In these legends, tales are told in which sesame seeds represent a symbol of immortality. From India, sesame seeds were introduced throughout the Middle East, Africa and Asia.

Sesame seeds were one of the first crops processed for oil as well as one of the earliest condiments. The addition of sesame seeds to baked goods can be traced back to ancient Egyptian times from an ancient tomb painting that depicts a baker adding the seeds to bread dough.

Sesame seeds were brought to the United States from Africa during the late 17th century. Currently, the largest commercial producers of sesame seeds include India, China and Mexico.

Naming Sesame:

Sesame . . . that engaging, mellifluous word evolved from the Arabic simsim, the Coptic semsem, and the Egyptian semsent. A German Egyptologist, named Ebers, discovered a papyrus scroll 65 feet long that contained a listing of ancient herbs and spices, among them was semsent. Cookery and Dining in Imperial Rome, by Apicius, cookbook author of the Roman era, refers to semsent in his book. The Romans enjoyed ground sesame seeds that they mixed with cumin to make a tasty spread for their bread

Benniseeds or benne seeds, as sesame seeds were called in the Bantu dialect, arrived in the United States with the West African slaves who brought only a few precious possessions with them. During the 17th and 18th centuries slave traders were running slave ships to the Southern States and the Caribbean. In Charleston, South Carolina and New Orleans, Louisiana, benniseeds were considered good luck and incorporated into many dishes that are still used in Southern cooking.

During the 1930s, the major vegetable oil used by Americans was sesame oil. At that time the United States was importing 58,000,000 pounds of sesame seeds a year mostly for producing oil. Two events combined to shift the importing of these huge quantities of sesame seeds to a diminished 12 million pounds by the early 1950s: World War II and the development of inexpensive soybean and cottonseed oils.

A 1956 Pillsbury Bake-off contest winner changed the course of the downward spiraling sesame seed. The Washington, D.C. homemaker created an Open Sesame Pie and started a frenzy with commercial bakers sprinkling the tasty little seeds on all sorts of breads and crackers. It was the hamburger bun, however, that put sesame seeds back into the spotlight. Today, it's difficult to find hamburger buns without sesame seeds.

Traditional Uses:

"The butter of the Middle East," tahini, a smooth, creamy paste made of toasted, ground hulled sesame seeds, is a centuries-old traditional ingredient in Middle Eastern cooking. Hummos, a Middle Eastern appetizer that has become a universal favorite is made of ground chickpeas, garlic, lemon juice, salt, and tahini. Baba ghanoush, another favorite

appetizer known throughout the Middle East, has a base of roasted eggplant seasoned with tahini, lemon juice, garlic, and salt. These sesame-based dishes have been handed down from generation to generation for centuries.

In the ancient Arab world, preparations for a caravan trip meant preparing provisions that would not only sustain them through the hot, dry desert but would offer nourishment that pleasured them as well. Open sesame! They began with a pound of dry breadcrumbs, kneaded them into three-quarters of a pound each of pitted dates, almonds, and pistachios, and added a few spoonsful of sesame oil to moisten the mixture. Then they formed the mixture into balls and rolled them in a coating of sesame seeds. This handy old recipe makes ideal present-day backpacking food as well.

In addition to its popular use as oil for salads or cooking, sesame oil is used in producing margarine, soap making, pharmaceuticals, paints, and lubricants. In the cosmetic field, sesame oil is used as a base in developing perfumes.

After the sesame oil is pressed out of the seed, the resulting residue is referred to as a seed cake that is very high in protein. A portion of this nutritious seed cake is used as animal feed, while the remainder is ground into sesame flour and added to health foods.

Southern Indian cuisine depends on sesame oil for cooking, while in China it was the only cooking oil until quite recently. Today sesame oil is often combined with bland, less expensive oils.

Used liberally in Chinese cooking, sesame oil is added to many dishes as a seasoning just before serving to benefit fully from its unique fragrance. Chinese confectioners have long favored the use of sesame seeds as a coating on their deep-fried sweets, still available in Oriental bakeries today. Korean cuisine combines sesame, garlic, and pimiento as a triad in many of their traditional dishes.

Mythological background:

According to Assyrian legend, when the gods met to create the world, they drank wine made from sesame seeds. In early Hindu legends, tales are told in which sesame seeds represent a symbol of immortality. "Open sesame," the famous phrase from the Arabian Nights, reflects the distinguishing feature of the sesame seed pod, which bursts open when it reaches maturity.

Black Sesame Varieties and Grading,Qualities.

Like any oily seed, sesame ages by becoming rancid. Select sesame that looks, smells and tastes fresh and sweet.

Black sesame seed is a very good tonic herb. It builds Yin Jing, and therefore it is a longevity herb. In fact, Polygonum, when it is dug up from the ground, is boiled in Black

sesame seed soup, which is why Polygonum is dark brown. Raw Polygonum is nearly white underneath its thin, dark skin. To build essence (Yin Jing), Sesame may be combined with Lycium, Polygonum, Ligustrum, Steamed Rehmannia, Eucommia, Placenta or any other combination of Jing tonics.

In addition to its essence-building capacity, Black Sesame also builds blood. It acts in much the same way as Polygonum. As a component of a blood tonic formula, it may be combined with Longan, Dang Gui, Polygonum and / or Lycium. However, since it is generally used in food, it is most often combined with Longan fruit

Black sesame seed is moistening to the intestines and helps move the bowels. It prevents and relieves constipation due to dryness of the intestines. It is combined with Dang Gui, Cistanche, Polygonum and Biota to achieve the best result.

Black sesame seed is extremely rich in calcium, containing 85 milligrams per gram of seeds. It is also high in protein, phosphorous, iron and magnesium.

Sesame Seed in Commercial Class:

Manufacture Suppliers normally classify Sesame into following grade: Natural Sesame Seed,Hulled Sesame Seed,Toasted Natural Sesame Seed,Toasted Hulled Sesame Seed,Roasted Sesame Powder.

Properties,Functions and Applications of Black Sesame.

Functions: Sweet in flavor, mild in nature, it is related to the liver, kidney and large intestine channels. Nourishes the liver, kidney, and all internal viscera, benefits qi and blood, produces yin (body fluid) and lubricates the intestines, promotes lactation.

Applications: Seseme seed benefits the body as a whole, especially the liver, kidney, spleen and stomach. Its high oil content lubricates the intestines and nourishes all the internal viscera. It also blackens one's hair, especially the black sesame. Hence, it is applied to white hair, habitual constipation, and insufficient lactation. Sesame oil is also helpful in treating intestinal worms like ascaris, tapeworm, etc.

Cosmetic properties:Anti-free radical, Moisturises, Nourishes, Regenerates

Sesame is an African plant, well-known for its oil-rich seeds. It was one of the earliest oil-producing plants to be cultivated and was of considerable importance to ancient civilisations. The oil has remarkable cosmetic properties, being very rich in essential fatty acids and vitamin E.

1.For general weakness and infirmity:

Use 30 g black sesame seeds and boil with 100 g sweet rice to make porridge. Add

appropriate sugar after well done.

2.For dizziness due to deficient liver and kidney, and premature white hair:

Decoct black sesame seeds, Chinese wolfberry fruit and tuber of multiflower knotweed, each 15 g, and 9 g chrysanthemum in water for 15 minutes under slow fire. Drink the decoction once daily for a long period of 1-2 months.

3. For constipation due to drying intestines of the blood and yin (body fluid) insufficiency type, vertigo (an illusion of movement, a sensation as if the external world were revolving around the patient--objective vertigo--or as if he himself were revolving in space--subjective vertigo) and dizziness due to deficient liver and kidney:

a) Crush some walnut, and pulverize dry mulberry together with equal amount of black sesame seeds. Mix all ingredients with bee honey. Administer 2-3 teaspoonfuls, 3 times daily.

B) Used with Chinese angelica root, desert living cistanche, hemp seed, etc.

4.For chronic rhinitis (inflammation of the mucous membrane of the nose) with running nose:

Heat 20 ml. sesame oil. Drop few drops of cooled boiled oil to each nostril, thrice daily.

5.For toothache:

Boil 50 g sesame seeds in 500 ml water. Use the solution for gargling.

6.For promoting lactation:

Bake sesame seeds to brown and grind into powder. Eat as one likes.

7.For poor eye-sight and early greying of hair due to insufficiency of liver and kidney blood:

Sesame seed could be used alone, or it could be used with mulberry leaves, prepared Rehmannia root, glossy privet fruit, eclipta, etc.

8.For Baldness or Hairloss:Black Sesame and Foti

Black sesame seed is a very good tonic herb. It builds Yin Jing, and therefore it is a longevity herb. In addition to its essence-building capacity, Black Sesame also builds blood. It acts in much the same way as Polygonum. Black sesame seed is moistening to the intestines and helps move the bowels. It prevents and relieves constipation due to dryness of the intestines. Black sesame seed is extremely rich in calcium, containing 85 milligrams per gram of seeds. It is also high in protein, phosphorous, iron and

magnesium.Combined Black Sesame with Polygonum to keep the hair youthful and dark

9.Longevity herb Black Sesame:

Black sesame seed is a very good tonic herb. It builds Yin Jing, and therefore it is a longevity herb. In fact, Polygonum, when it is dug up from the ground, is boiled in Black sesame seed soup, which is why Polygonum is dark brown. Raw Polygonum is nearly white underneath its thin, dark skin. To build essence (Yin Jing), Sesame may be combined with Lycium, Polygonum, Ligustrum, Steamed Rehmannia, Eucommia, Placenta or any other combination of Jing tonics.

10.Intestines and move the bowels:

Black sesame seed is moistening to the intestines and helps move the bowels. It prevents and relieves constipation due to dryness of the intestines. It is combined with Dang Gui, Cistanche, Polygonum and Biota to achieve the best result.Combine with Hemp seed and Dang Gui to tonify the yin of the intestines and to promote healthy bowel movements.

11.Peanut and Black Sesame:Boost Breast size

Peanut and Black sesame rich in Vitamin E,prompt the mature growth of ovary,increase amount of mature oocyte,stimulate the secretion of estrogen,thus enlarge the galactophore canal growth and enlarge breast size.Antioxidant from sesame release strong anti aging effects and plays as good remedy for women.

Black Sesame Dosage and Administration.

10-30 g.Decoction, or made into porridge along with rice, or used as an ingredient of boluses. Or fried and grinded into powder form, and taken with salt. They can also be eaten by chewing the raw seeds.
Sesame seeds can also be decocted for bathing or pounded for external application.

Add sesame seeds into the batter the next time you make homemade bread, muffins or cookies.

Use the traditional macrobiotic seasoning, gomasio, to enliven your food. You can either purchase gomasio at a health food store or make your own by using a mortar and pestle. Simply mix together one part dry roasted sea salt with twelve parts dry roasted sesame seeds.
Sesame seeds add a great touch to steamed broccoli that has been sprinkled with lemon juice.
Spread tahini (sesame paste) on toasted bread and either drizzle with honey for a sweet treat or combine with miso for a savory snack.

Combine toasted sesame seeds with rice vinegar, tamari and crushed garlic and use as a dressing for salads, vegetables and noodles.
Healthy saut?chicken with sesame seeds, tamari, garlic, ginger and your favorite vegetables for a healthy, but quick, Asian-inspired dinner.

Cautions on Use:

It should be avoided by those who suffer from loose stools due to insufficiency of the spleen.

Safety:

Sesame seeds are not a commonly allergenic food and are not known to contain measurable amounts of goitrogen or purines. However, the hulls of sesame seeds do contain oxalates. In fact, most of the calcium found in the seed hull comes in the form of calcium oxalate. The sesame seed paste (tahini) found in grocery stores is most often made with seed kernels:the part of the sesame seed that remains after the hull has been removed. These products would generally be safe in moderate amounts on an oxalate-restricted diet. However, products containing the seed hulls might have more oxalates than desired on a low oxalate meal plan. Product labels do not always indicate whether the hulls have been removed or not. For this reason, check the color of the tahini carefully and also inquire as to its taste. Most sesame seed butters made from whole, non-hulled seeds are fairly dark in color and have a much more bitter taste than butters made from hulled sesame kernels. For more on the subject of oxalates, please see "Can you tell me what oxalates are and in which foods they can be found?"

Primary Combinations:

1. Polygonum to keep the hair youthful and dark
2. Hemp seed and Dang Gui to tonify the yin of the intestines and to promote healthy bowel movements

Toxicity Study of Sesamol:

RTECS:SM0890000 Chemical Name:Phenol,3,4-(methylenedioxy)-; Beilstein Reference No:0127450.Referene:5-19-02-00532(Beilstein Handbook Reference); Note: Tumorigen,Natural product.

Data of USA: EPA TSCA Section 8(B) Chemical Inventory.

Modern Researches of Black Sesame.

The chief constituent of the sesame seed is its fatty oil, which usually amounts to about 44 to 60 percent. Noted for its stability, the oil resists oxidative rancidity. The excellent stability is due to the presence of natural antioxidants such as sesamolin, sesamine and sesamol. The fatty acid composition of sesame oil varies considerably among the different cultivars worldwide. It also contains much fat, mainly glyceride loneleic acid, sucrose, lecithin, protein, etc. Also vitamins A, D and E.

Sesame oil is mostly composed of triglycerides of the singly unsaturated oleic acid (40%) and the doubly unsaturated linoleic acid (45%), besides approximately 10% saturated fats (iodine index 110). Because of its powerful antioxidant and because triply unsaturated fatty acids are missing, sesame oil has an excellent shelf life.

Oriental sesame oil owes its characteristic flavor to several compounds which form only during the toasting procedure. Most prominent are 2-furylmethanthiol, which also plays an important part in the flavor of coffee and baked meat, guajacol (2-methoxyphenol), phenylethanthiol and furaneol (4-hydroxy-2,5-dimethyl-3 (2H) furanone); furthermore, vinylguacol, 2-pentylpyridine and other N-containing heterocycles are reported.

After oil extraction, the remaining meal contains 35-50% protein, and is rich in tryptophan and methionine. Seeds with hulls are rich in calcium (1.3%) and provide a valuable source of minerals. The addition of sesame to the high lysine meal of soybean produces a well balanced animal feed.

Sesame oil is used in the preparation of Iodinol and Brominol, which are employed for

external internal or subcutaneous use. The best qualities of the oil are largely used in the manufacture of margarine. Sesame oil may be used as a substitute for olive oil in making the official liniments, ointments and plasters in India and Africa. The leaves which abound in gummy matter when mixed with water form a rich bland mucilage used in infantile cholera, diarrhoea, dysentery, catarrh and bladder troubles, acute cystitis and strangury. The oil is said to be laxative and to promote menstruation.

Antioxidant properties of sesame (Sesamum indicum) fractions:

Foods of plant origin are known to provide a complex mixture of natural substances with antioxidative effects. Such antioxidant activity appears to be closely related to the prevention of degenerative diseases such as cancer, cardiovascular diseases, atherosclerosis and the process of aging, among others.

This purpose of the study was to determine total phenolic content, total antioxidant status (TAS), free radical scavenging capacity and inhibition of low density lipoprotein (LDL) by whole black (WB) and whole white (WW) sesame seeds and their respective hull fractions (BH and WH).

Phenolic constituents of sesame were extracted into 80% ethanol. Total phenolic content was determined according to Folin-Ciocalteu procedure and calculated as catechin equivalents. Free radical scavenging capacity of sesame extracts (5-40mg/mL) was measured using 2,2'-diphenyl-1-picrylhydrazyl (DPPH) radical. Total antioxidant activity was determined by trolox equivalent antioxidant capacity (TEAC) assay and expressed as trolox equivalents (TE). Inhibition of LDL oxidation was measured by incubating crude extracts with LDL and CuSO4 at 37C. Formation of conjugated dienes was determined at 25-100ppm levels of phenolics.

Total phenolic contents of whole seed and hull of black sesame were 29.9+-0.6 and 146.6+-0.6 mg catechin equivalents/1g crude extract, respectively. The corresponding values for white sesame were 29.7+-0.9 and 10.6+-1.6 mg catechin equivalents/1g crude extract. TAS was highest with black sesame hulls {65.9+-1.7TE} while white whole seed showed the lowest {4.4+-0.6TE}. DPPH radical scavenging capacity at 40mg/mL was 94.9+-0.8, 25.1+-0.4, 14.4+-0.9 and 2.5+-0.4 for BH, BW, WH and WW, respectively. Inhibition of LDL oxidation at 100ppm level was highest for BH ((96.7) followed by 84.6, 78.4 and 57.3% for WH, BW and WW, respectively.

Results demonstrate considerable antioxidant activity of sesame fractions especially black sesame hulls and their potential health benefits. Thus, sesame and its components may serve as viable natural sources of antioxidants for food and non-food applications.(C. M. LIYANA-PATHIRANA1, D. S. Wall, and F. Shahidi. (1) Department of Biology, Memorial University of Newfoundland, St. John's, NF A1B 3X9, Canada.)

Applications and Properties:

Applications:

Beneficial Nutritions:good source of copper,manganese,calcium,tryptophan, magnesium,iron,phosphorus,zinc,vitamin B1 (thiamin),dietary fiber.
a quarter-cup of sesame seeds supplies 74.0% of the daily value for copper, 31.6% of the DV for magnesium, and 35.1% of the DV for calcium.extremely rich in calcium, containing 85 milligrams per gram of seeds. It is also high in protein, phosphorous, iron and magnesium. This rich assortment of minerals translates into the following health benefits:
Relief for Rheumatoid Arthritis.
Supports Vascular and Respiratory Health.
Calcium Helps Prevent Colon Cancer, Osteoporosis,migraine headaches and PMS.
Zinc for Bone Health and prevent osteoporosis.
Phytosterols Lower Cholesterol.
General weakness and infirmity: a combination detailed in literature.
Dizziness due to deficient liver and kidney, and premature white hair:a combination detailed in literature.
Constipation,vertigo.Toothache.
Chronic rhinitis (inflammation of the mucous membrane of the nose) with running nose.
Poor eye-sight and early greying of hair due to insufficiency of liver and kidney blood.
Antioxidant.Baldness or Hairloss.Longevity.
Intestines and move the bowels.
Promoting lactation and Boost Breast size.
Properties:

Seseme seed benefits the body as a whole, especially the liver, kidney, spleen and stomach. Its high oil content lubricates the intestines and nourishes all the internal viscera. It also blackens one's hair, especially the black sesame. Hence, it is applied to white hair, habitual constipation, and insufficient lactation. Sesame oil is also helpful in treating intestinal worms like ascaris, tapeworm, etc.
Dosage: 10-30 g.
Safety and Toxicity:

Sesame seeds are not a commonly allergenic food and are not known to contain measurable amounts of goitrogen or purines. However, the hulls of sesame seeds do contain oxalates.

semperbry76 - May 18, 2011 04:12 AM (GMT)

Black sesame seed is a very good tonic herb. It builds Yin Jing, and therefore it is a longevity herb. In addition to its essence-building capacity, Black Sesame also builds blood. It acts in much the same way as Polygonum. Black sesame seed is moistening to the intestines and helps move the bowels. It prevents and relieves constipation due

to dryness of the intestines. Black sesame seed is extremely rich in calcium, containing 85 milligrams per gram of seeds. It is also high in protein, phosphorous, iron and magnesium.

More Information:
Other Common Names
Sesame

Page Number In Ancient Wisdom of the Chinese Tonic Herbs
303

Pharmaceutical Latin
Semen Sesami Indici

Pinyin

Treasures
Yin Jing and Blood

Treasure Rating
****

Atmospheric Energy
Neutral

Organ Meridian Systems
Kidney and Liver

Primary Functions
To tonify Yin Jing and blood, to benefit the skin, and to moisten the intestines and promote bowel movement

Qualities
Black sesame seed is a very good tonic herb. It builds Yin Jing, and therefore it is a longevity herb. In fact, Polygonum, when it is dug up from the ground, is boiled in Black sesame seed soup, which is why Polygonum is dark brown. Raw Polygonum is nearly white underneath its thin, dark skin. To build essence (Yin Jing), Sesame may be combined with Lycium, Polygonum, Ligustrum, Steamed Rehmannia, Eucommia, Placenta or any other combination of Jing tonics.

In addition to its essence-building capacity, Black Sesame also builds blood. It acts in much the same way as Polygonum. As a component of a blood tonic formula, it may be combined with Longan, Dang Gui, Polygonum and / or Lycium. However, since it is generally used in food, it is most often combined with Longan fruit

Black sesame seed is moistening to the intestines and helps move the bowels. It prevents and relieves constipation due to dryness of the intestines. It is combined with Dang Gui, Cistanche, Polygonum and Biota to achieve the best result.

Black sesame seed is extremely rich in calcium, containing 85 milligrams per gram of seeds. It is also high in protein, phosphorous, iron and magnesium.

Primary Combinations
Combine with:

1. Polygonum to keep the hair youthful and dark
2. Hemp seed and Dang Gui to tonify the yin of the intestines and to promote healthy bowel movements

Varieties and Grading
Like any oily seed, sesame ages by becoming rancid. Select sesame that looks, smells and tastes fresh and sweet.

Contraindications
Not to be used in cases of diarrhea.

What is Reishi?

user posted image

http://www.reishi.com/what-is-reishi.htm

Red Reishi (Ganoderma Lucidum), commonly known as Ling Zhi in Chinese, is a herbal mushroom known to have miraculous health benefits.

So what's so good about red reishi?

It is non-toxic and can be taken daily without producing any side effects.

When it is taken regularly, it can restore the body to its natural state, enabling all organs to

function normally.

Immune modulator - regulates and fine tunes the immune system.

What are the benefits of Reishi?

user posted image
Red Reishi improves liver function

Red Reishi is primarily composed of complex carbohydrates called water-soluble polysaccharides, triterpeniods, proteins and amino acids. Researchers have identified that water-soluble polysaccharides are the most active element found in Red Reishi that have anti-tumour, immune modulating and blood pressure lowering effects.

Another major active ingredient found in Red Reishi are triterpenes , called ganoderic acids. Preliminary studies indicated that ganoderic acids help alleviate common allergies by inhibiting histamine release, improve oxygen utilization and improve liver functions. Triterpenes are bitter in taste and the level of the triterpene content contained in a product can be determined by the bitterness.

user posted image
Red Reishi enhance our body's immune system

Regular consumption of red Reishi can enhance our body's immune system and improve blood circulation, thus improving better health conditions. Generally, Reishi is recommended as an adaptogen, immune modulator, and a general tonic. Red Reishi is also used to help treat anxiety, high blood pressure, hepatitis, bronchitis, insomnia, and asthma. A full list of reported benefits can be found here.
Is there any evidence?

A considerable number of studies in Japan , China , USA , and the UK in the past 30 years have shown that the consumption of red Reishi has been linked to the treatment of a vast range of diseases, common ailments, and conditions. From asthma to zoster, the applications of red Reishi seem to be related to a multitude of body organs and systems.

However, most of the scientific research that has been conducted appears to strongly support red Reishi's role as a normalizing substance - a nutritional supplement that can yield medical benefits through its normalization and regulation of the body's organs and functions.

user posted image

The role of Red Reishi in maintaining a healthy lifestyle can best be explained through the Traditional Chinese Medicine (TCM) point of view because none of the known active components taken alone is as more effective than the consumption of Reishi itself. Whereas Western medicine focuses on the “cure” after the disease has already occurred, TCM,

established through over 2,000 years of human observation, focuses on disease prevention by sustaining the right balance within the body through proper nutrition, exercise, and meditation. Reishi is an important adaptogenic herb in TCM in helping the body maintain this balance and also restore the balance when one is sick.

Lingzhi mushroom

http://en.wikipedia.org/wiki/Lingzhi_mushroom

Scientific classification
Kingdom: Fungi
Phylum: Basidiomycota
Class: Agaricomycetes
Order: Polyporales
Family: Ganodermataceae
Genus: Ganoderma
Species: G. lucidum
Binomial name
Ganoderma lucidum
(Curtis) P. Karst

Língzh• (traditional Chinese: ••; simplified Chinese: ••; Japanese: reishi; Korean: yeongji, hangul: ••) is the name for one form of the mushroom Ganoderma lucidum, and its close relative Ganoderma tsugae. Ganoderma lucidum enjoys special veneration in Asia, where it has been used as a medicinal mushroom in traditional Chinese medicine for more than 4,000 years[citation needed], making it one of the oldest mushrooms known to have been used in medicine.

The word lingzhi, in Chinese, means "herb of spiritual potency" and has also been described as "mushroom of immortality".[1] Because of its presumed health benefits and apparent absence of side-effects, it has attained a reputation in the East as the ultimate herbal substance. Lingzhi is listed in the American Herbal Pharmacopoeia and Therapeutic Compendium.

Taxonomy and naming

The name Ganoderma is derived from the Greek ganos/γανος "brightness, sheen", hence "shining" and derma/δερ•α "skin",[2] while the specific epithet lucidum in Latin for "shining" and tsugae refers to being of the Hemlock (Tsuga). Another Japanese name is mannentake (•••), meaning "10,000 year mushroom".

There are multiple species of lingzhi, scientifically known to be within the Ganoderma lucidum species complex and mycologists are still researching the differences between species within this complex of species.[3]

Description

Lingzhi is a polypore mushroom that is soft (when fresh), corky, and flat, with a conspicuous red-varnished, kidney-shaped cap and, depending on specimen age, white to dull brown pores underneath.[1] It lacks gills on its underside and releases its spores through fine pores, leading to its morphological classification as a polypore.

Varieties

Ganoderma lucidum generally occurs in two growth forms, one, found in North America, is sessile and rather large with only a small or no stalk, while the other is smaller and has a long, narrow stalk, and is found mainly in the tropics. However, many growth forms exist that are intermediate to the two types, or even exhibit very unusual morphologies,[1] raising the possibility that they are separate species. Environmental conditions also play a substantial role in the different morphological characteristics lingzhi can exhibit. For example, elevated carbon dioxide levels result in stem elongation in lingzhi. Other forms show "antlers', without a cap and these may be affected by carbon dioxide levels as well.

According to The Chinese Herbal Materia Medica (••••), lingzhi may be classified into six categories according to their shapes and colors, each of which is believed to nourish a different part of the body. (Red-heart, Purple-joints, Green-liver, White-lungs/skin, Yellow-spleen, Black-kidneys/brain).

Biochemistry

Ganoderma lucidum produces a group of triterpenes, called ganoderic acids, which have a molecular structure similar to steroid hormones.[4] It also contains other compounds many of which are typically found in fungal materials including polysaccharides such as beta-glucan, coumarin,[citation needed] mannitol, and alkaloids.[4]

Ganoderic acid A, a compound isolated from the Reishi mushroom.

Habitat

Ganoderma lucidum, and its close relative Ganoderma tsugae, grow in the northern Eastern Hemlock forests. These two species of bracket fungus have a worldwide distribution in both tropical and temperate geographical regions, including North and South America, Africa, Europe, and Asia, growing as a parasite or saprotroph on a wide variety of trees.[1] Similar species of Ganoderma have been found growing in the Amazon.[5] In nature, Lingzhi grows at the base and stumps of deciduous trees, especially maple.[6] Only two or three out of 10,000 such aged trees will have Lingzhi growth, and therefore its wild form is generally rare. Today, Lingzhi is effectively cultivated both indoors under sterile conditions and outdoors on either logs or woodchip beds.

History

Shen Nong's Herbal Classic, a 2000-year old medicinal Chinese text [1] states "The taste is bitter, its energy neutral, it has no toxicity. It cures the accumulation of pathogenic factors in the chest. It is good for the Qi of the head, including mental activities... Long term consumption will lighten the body; you will never become old. It lengthens years."

Bencao Gangmu ("Great Pharmacopoeia"), a Chinese medical book published in the 16th century, also shows a possible link between modern research and folk knowledge when describing the Lingzhi mushroom: "It positively affects the Qi of the heart, repairing the chest area and benefiting those with a knotted and tight chest. Taken over a long period of time agility of the body will not cease, and the years are lengthened..."[2]

Depictions of the Lingzhi mushroom as a symbol for health, are shown in many places of

the Emperors residences in the Forbidden City as well as the Summer Palace.[3] The Chinese goddess of healing Guan Yin is sometimes depicted holding a Lingzhi mushroom. [citation needed]

Lingzhi research and therapeutic usage

Lingzhi may possess anti-tumor, immunomodulatory and immunotherapeutic activities, supported by studies on polysaccharides, terpenes, and other bioactive compounds isolated from fruiting bodies and mycelia of this fungus (reviewed by R. R. Paterson[4] and Lindequist et al.[7]). It has also been found to inhibit platelet aggregation, and to lower blood pressure (via inhibition of angiotensin-converting enzyme[8]), cholesterol and blood sugar.[9]

Laboratory studies have shown anti-neoplastic effects of fungal extracts or isolated compounds against some types of cancer. In an animal model, Ganoderma has been reported to prevent cancer metastasis,[10] with potency comparable to Lentinan from Shiitake mushrooms.[11]

The mechanisms by which G. lucidum may affect cancer are unknown and they may target different stages of cancer development: inhibition of angiogenesis (formation of new, tumor-induced blood vessels, created to supply nutrients to the tumor) mediated by cytokines, cytoxicity, inhibiting migration of the cancer cells and metastasis, and inducing and enhancing apoptosis of tumor cells.[4]

Additional studies indicate that ganoderic acid can help to strengthen the liver against liver injury by viruses and other toxic agents in mice, suggesting a potential benefit of this compound in the prevention of liver diseases in humans,[12] and Ganderma-produced sterols inhibit lanosterol 14α-demethylase activity in the biosynthesis of cholesterol .[13] Ganderma compounds inhibit 5-alpha reductase activity in the biosynthesis of dihydrotestosterone.[8]

Besides effects on mammalian physiology, Ganoderma is reported to have anti-bacterial and anti-viral activities.[14][15] Ganoderma is reported to exhibit direct anti-viral with the following viruses; HSV-1, HSV-2, influenza virus, vesicular stomatitis. Ganoderma mushrooms are reported to exhibit direct anti-microbial properties with the following organisms; aspergillus niger, bacillus cereus, candida albicans, and escherichia coli.

Preparation

Due to its bitter taste, Lingzhi is traditionally prepared as a hot water extract.[4] Thinly sliced or pulverized lingzhi (either fresh or dried) is added to a pot of boiling water, the water is then brought to a simmer, and the pot is covered; the lingzhi is then simmered for two hours. [citation needed] The resulting liquid should be fairly bitter in taste, with the more active red lingzhi more bitter than the black. The process may be repeated. Alternatively, it can be used as an ingredient in a formula decoction or used to make an extract (in liquid, capsule, or powder form). The more active red forms of lingzhi are far too bitter to be consumed in a soup.

How To Choose Good Lingzhi

What is good Lingzhi?

According to the results of research conducted by the Microbiological Research Foundation, R.O.C., also known as Ganoderma Organization, consumers who wish to buy superior Lingzhi products should place importance on the following four points:

1. Does the maker possess its own farm and production facility accredited with Food GMP

(Good Manufacturing Practice)?
Only a company possessing its own farm and production plant accredited with Food GMP can give consumers a solid guarantee that Lingzhi quality is controlled throughout the production process, from raw materials to finished products.

2. Technology and grade of Lingzhi extraction and processing equipment:
Only plants possessing technologically-advanced Lingzhi extraction equipment can insure the purity, efficacy, and safety of their Lingzhi products.

3. Products awarded with health food certifications issued by the government:
Only products awarded with health food certifications issued by the government can guarantee to provide consumers quality and efficacy.

4. Company image and after-sales service:
If a company offers poor after-sales service and does not value its image, consumers will be unable to receive timely assistance and attention, and may feel abandoned and cheated after the purchase.

Ling zhi Testimonies

http://www.shuanghor.com/Display.php?UNIT=testimony

[dohtml]<hr>[/dohtml]

Disease: Women's disorders, cranial neurasthenia, frequent colds, migraine, acute nephritis

Name: Ms Hsieh Yueh-E
Born: 1963
Address: Shulin, Taipei County, Taiwan

"I suffered from women's disorders, cranial neurasthenia, frequent colds, migraine, and acute nephritis before I started taking Lingzhi, and I often felt very great discomfort. Whenever I had my period, it would last half a month if I had a cold too. Migraine affected my sleep, and I had to take painkillers to sleep at night. The pain and discomfort was horrible!"

"I eagerly started taking increasing doses of Lingzhi in 1997. After about two weeks, I experienced a dry mouth, burning of the tongue, frequent tears, back pain and stiffness, and much acne on my face. My condition began to improve gradually after two months. Nowadays I feel very good. I have fewer colds, the quality of my sleep has improved considerably, and my migraine has gone away. My friends all say that I look like I'm 20 years old. Thanks to Lingzhi, I don't have to see the doctor very often."

[dohtml]<hr>[/dohtml]

Disease: Cervical Cancer

Name: Ms. Zhan, Shun-Ying
Age: middle age
Address: U.S.

Ms. Zhan bled in considerable quantities suddenly in July of 1999. After hospitalized, she found herself attacked by cervical cancer. Being shocked and notified that the size of her tumor was too large to have a surgery to remove it, she decided to take the electrical and chemistry therapies. The doctor warned Ms. Zhan beforehand that she might very possibly suffer the side effects like losing hair, numbness in finger tips and toes, loss of appetite, damage of hematopoiesis, loss of weight, reduction in hemoleukocte quantity, frequent diarrhea and micturition, deafness etc., for having therapies. Remembering a report regarding Lingzhi's efficacy on preventing the side effects of treating cancer, she asked her friend to send her Lingzhi from Taiwan so that she could take it while having the therapies. After continually taking a large quantity of Lingzhi while and after the treatment, she had only a few reactions such as frequent micturition, minor pain in the belly, and sore in her waist.

What surprised her and the doctor most was the result that her cancer cells were all gone when she went back to the hospital for the checkup one month after the therapies. The doctor made another thorough checkup for her just in case her cancer transferred to other parts of her body. However, the doubt of transformation was overruled by the result. The doctor could hardly believe it. From then on till now, Ms. Zhan has been taking Lingzhi everyday and she can swim everyday without any problem. "Thanks to Lingzhi for saving my life and thanks to my friend for recommending such a wonderful elixir to me." Ms. Zhan smiled and said.

[dohtml]<hr>[/dohtml]

Disease: Colon Cancer

Name: Mr. Hu Shih-Tou
Born: 1926
Address: Tayuan Township, Taoyuan County, Taiwan

"I felt a sudden tightness and pain in my abdomen when I was 73. After getting a checkup at the hospital, I was shocked to discover that I had a tumor in my colon. I had surgery immediately, followed by chemotherapy. I also began taking Lingzhi at the same time, and I never experienced any chemotherapy side effects such as nausea, vomiting, fatigue, or poor resistance. My physician pronounced me cured before I had even completed the normal third course of chemotherapy. I had to use an artificial anus for three months after the surgery, but the wound healed at a rate that surprised even the doctors. Today I am back to normal. Lingzhi not only helped beat cancer with much greater ease than most patients, but it also helps me overcome my original hypertension, myocardial infarction, and cardiomegaly. It has helped me enjoy my retired life."

[dohtml]<hr>[/dohtml]
Disease: Headache, numbness, heart disease, oppressive feeling in the chest, hepatitis B, poor digestion, constipation, urinary incontinence, hematuria, poor metabolism, skin allergies

Name: Ms Hsiung Shih-Min
Born: 1960
Address: Taipei County, Taiwan

Because of a weak physical constitution from birth and lack of proper care, the patient suffered from long-term problems including headache, numbness, heart disease, oppressive feeling in the chest, hepatitis B, poor digestion, constipation, urinary incontinence, hematuria, poor metabolism, and skin allergies. Long-term treatment failed to cure these problems, and the patient was often in pain. After hearing that Lingzhi was very effective, she began taking large doses, and soon experienced obvious improvement of many symptoms. She has continued to take Lingzhi to the present day, and many symptoms have not reappeared. Health checkups no longer detected hepatitis B antigens. Thanks to Lingzhi, the patient has obtained the gift of good health.

[dohtml]<hr>[/dohtml]
Disease: Hepatitis B

Name: Mr. Wang Chin-Ju
Born: 1955
Address: Wenshan District, Taipei, Taiwan>

Mr. Wang was hospitalized for more than one year due to acute hepatitis B at the age of 19, and was unable to work. Because his sales work required socializing, he later drank regularly. After several years his liver function deteriorated and he suffered from frequent fatigue. He began taking Lingzhi in 1991. After several years, he felt strong and vigorous, and had even donated blood on several occasions. This shows that he had recovered normal liver function.

[dohtml]<hr>[/dohtml]
Disease: Hepatitis B antigens, pityriasis versicolor, coldness of the extremities

Name: Mr. Yang Pen-An
Born: 1955
Address: Sungshan District, Taipei, Taiwan

"I'm 46 years old and a civil aviation pilot. Twenty years ago I was diagnosed as having hepatitis B, and I was hospitalized for acute hepatitis. In addition, I frequently had pityriasis versicolor on my cheeks in the summertime, and my hands and feet felt icy cold in the winter. These problems made me miserable for many years."

"I began using Lingzhi in 1994. In the beginning, I often felt sleepy, in poor spirits, and itchy

around the waist. I also excreted old stools. My pityriasis versicolor never recurred during the next year, and the coldness of my hand and feet also improve during the winter of the same year. During the third year, a medical checkup indicated that my hepatitis B was completely cured."

"My confidence in Lingzhi has grown steadily, and I still take it every day as a health tonic. Thanks to Lingzhi that I have been able to escape problems that troubled me for years. I hope that by sharing my experiences I can help even more people recover their health through Lingzhi."

[dohtml]<hr>[/dohtml]

Disease: Hepatitis

Complication : Gastritis, Duodenitis and Kidney problem

Name: Mr. Preecha Kongcharoen
Age: 49 years old
Address: Had Yai, Songkhla Province, Thailand

"I had got liver disease for 5 years and received the treatment from one of Private hospital in Songkhla province. In the latter stage, I got another complication from gastritis and duodenitis, which resulted from the medicines I took. I was suggested to received the treatment from the specialist doctors at one of government hospital in my home town Had Yai. However, I had to subsidize for the treatment costs as I couldn't claim all from the insurance company."

"I suffered from cirrhosis and liver diseases. I had to take diuretic and got kidney problem. I suffered most because of taking too many medicines and got bleeding in gastro-intestinal tract. I got treatment many times from the hospital. The doctor tried to improve my illness by providing blood transfusion around 30 bags, performing endoscopies and blocked the bleeding at the intestine. At that time, I could not move but had to lied down in the bed, looked pale and yellowish in skin and in my eyes. I was hospitalized and the doctor diagnosed the chance to survive was only 20%. The Doctor finally succeeded to block the bleeding in my intestine using endoscopies after 4 trials. After that, I stayed at home."

"One day my wife's sister came to visit and introduced Lingzhi to me. 3 days ffter taking Lingzhi, my stomach ached a lot. However, the pain went away and I could eat normally 5 days late after I continued to take Lingzhi. Two weeks later I went to see the doctor on the appointment date. The doctor performed endoscopic therapy and found no bleeding at the intestine unlike the previous 4 times. I went backed home and continue to consume Lingzhi with increasing doses until present. Finally, I can drive again after stop driving for 8 months."

"Getting motivated and hoping strongly to relieve from the illnesses, I persisted in taking Lingzhi. Two months later, my illnesses were relieved by 70% compared with 5 years before. Thank Lingzhi for saving me from dying and giving me a new healthy life."

[dohtml]<hr>[/dohtml]

Disease: Asthma, allergic rhinitis, atopic eczema

Name: Mr. Wang Yen-Chao
Born: 1984
Address: Wenshan District, Taipei, Taiwan

The patient has suffered from asthma and rhinitis since the age of three. His father was a salesman working for a prominent German pharmaceutical company, and the patient began receiving the sprayed bronchial dilator Berotec at that time. "I had frequent colds, and the colds caused asthma attacks. I had to bring bronchial dilator with me to school every day, and was once hospitalized for 12 days due to pneumonia induced by my colds and asthma. I also suffered from atopic eczema and severe ulcerations of the knee and elbow joints. Later on my father got acquainted with Lingzhi and he went to visit a Lingzhi factory. Seeing that the equipment was not inferior to that of a large GMP pharmaceutical plant, he felt more confident and began letting me take Lingzhi. It helped improve my symptoms, and after taking it for half a year, my nasal allergies, asthma, and atopic eczema had all disappeared. Nowadays I still take Lingzhi to preserve my health. Thanks to Lingzhi, I am healthy and have grown well; today I am even taller than my father!"

[dohtml]<hr>[/dohtml]

Disease: Ossified spondylitis

Name: Mr. Wang Ching-Min
Born: 1958
Address: Hsichih, Taipei County, Taiwan

"I started feeling stiffness and pain in my back when I was 17 or 18, but at that time it was only thought to be arthritis or nerve pain. I had no idea that I would be diagnosed as having incurable 'ossified spondylitis' after being discharged from the Army and preparing to start my career. I had a hard time getting around, and my whole body felt stiff and immobile. I had to get an injection at the hospital once every three days just to be able to walk, and I experienced painful cramps in my spine when I slept at night. I went to all the best physicians, but nothing could help me."

"I happened to try Lingzhi, and I gradually increased the dose. I had a sudden bout of intense coughing during the third month, and after coughing out a lot of very sticky and foul sputum, I felt much greater physical comfort and got colds less often. After taking Lingzhi for seven or eight months, the pain in my joints was much reduced. Because of my anxiousness to cure my condition, I had previously taken too many drugs, which had caused necrosis of the hip joints. The doctors had told me I needed to have surgery to replace three vertebral joints. Today I am cured without having had any surgery."

[dohtml]<hr>[/dohtml]

Disease: Thalassemia

Name: Ms Shih Huai-Ting
Born: 1949

Address: Shuangyuan District, Taipei, Taiwan

"My life has hung by a thread since the time I was born. I frequently had fevers above 40°C as a child, and I was so sick that I didn't even learn to walk until I was five years old. I experienced dizziness and abdominal swelling as I reached adolescence, and I felt extreme discomfort throughout my body after I started menstruating. Although I consulted many doctors, none knew what was wrong with me. It wasn't until I was 25 that I was diagnosed as having 'thalassemia.' From that time on I had to get a blood transfusion at a hospital every month, and this continued until I discovered Lingzhi and started improving in 1992. After taking increasing doses of Lingzhi for three months, I began gradually experiencing increased frequency of urination, greater dizziness, and occasional vomiting. Since I knew that these reactions were a sign that I was improving, I continued to take Lingzhi. I felt gradual improvement after another one or two weeks, and my body started taking a turn for the better. I get a checkup once a year nowadays, and everything has been normal. I no longer need to get a transfusion once a month."

[dohtml]<hr>[/dohtml]

Disease: Stomach ulcer, duodenal ulcer, cranial neurasthenia

Name: Mr. Huang Shao-Tzung
Born: 1957
Address: Sanmin District, Kaohsiung , Taiwan

"When I was around 20, I couldn't eat foods that were too sour, sweet, or spicy. Because I had frequent diarrhea and couldn't absorb nutrition, my weight dropped rapidly. Afterwards stress caused neurasthenia and stomach and duodenal ulcers. Taking drugs did nothing to help my condition."

"I started taking Lingzhi after learning a lot about its benefits. I had diarrhea for a week when I started, but afterwards I felt good and had no discomfort. I have used it up to the present, and my weight has gradually returned to normal. My cranial neurasthenia and stomach and duodenal ulcers have all been cured. Thanks to my confidence in Lingzhi, my condition has improved and my health has been restored."

[dohtml]<hr>[/dohtml]

Disease: Chronic pyelonephritis, myocardial infarction, and hypertension

Name: Mr. Chang Kuang-Chuan
Born: 1965
Address: Tahsi, Taoyuan County, Taiwan

"I needed kidney dialysis, shots, and drugs for my chronic pyelonephritis. My myocardial infarction and hypertension made me feel depressed and lethargic. Because I heard that Lingzhi could clear up kidney problems, I started taking it despite a degree of disbelief. After increasing my dosage, I began experiencing hematuria, fatigue, dizziness, vomiting, and back pain, but I knew this was a natural reaction, and didn't worry. After almost two years, hospital checkups have confirmed that my condition is significantly better, and I can cut

back on the amount of drugs I need to take. I still continue to take Lingzhi, and I am full of confidence in its efficacy."

[dohtml]<hr>[/dohtml]

Disease: Nasal allergies, stomach and duodenal ulcers

Name: Ms Lin Shu-Nu
Born: 1948
Address: Sanhsia, Taipei County, Taiwan

"Because I suffered from nasal allergies and stomach and duodenal ulcers, I had to go to the hospital to get allergy shots once a week. I had to drink stomach milk once every two hours when my ulcers were severe. I had a long-term problem absorbing nutrition. I started taking Lingzhi because of this situation. I experienced such reactions as stomach pain and a continuous running nose in the beginning, but these symptoms soon gradually disappeared. I still continue to use Lingzhi, and my nasal allergies and stomach and duodenal ulcers are completely gone. A variety of other small related problems have improved too, all due to the power of Lingzhi."

[dohtml]<hr>[/dohtml]

Disease: Paralysis

Age: 18 years old
Address: Masuta City, Japan

In the summer of 2001, a 17-year-old girl in Masuta City, Japan was confined to a wheelchair. Due to physical weakness, she could only crawl unless aided by a wheelchair or walking stick. She could barely push herself along a tatami floor with her frail, emaciated arms, and she looked like a third or fourth grader. She was nevertheless an outstanding student at her high school, and was a talented pianist and flutist.

After she applied for sponsorship from Shuang Hor's Japanese sales subsidiary, the company provided free Lingzhi and pollen for her use. She experienced an intensely painful reaction throughout her body after one month, and then felt the first itchiness in her hands and feet that had ever occurred in her 17 years of life. Her mother was extremely moved by these events (her father had passed away in 2000).

After a half year, the girl no longer had to use a cane. She was able to walk up to the podium, share her joy and experiences, and play the flute for everyone. She is indeed a lovely young "child of Lingzhi."

[dohtml]<hr>[/dohtml]

Disease: Chronic illness

Name: Ms. Pakarat Thavornwong
Age: 54 years old
Address: Chiang Mai, Thailand

"Being I am a senior nurse, I got living in Chiang Mai, where located in the northern part of Thailand. I started to get infected with and pneumonia. Since then, I coughed to bleed and the doctor's prescribed expensive medicines did not work out well. After a daetailed checkup, I found I had no pneumonia but bronchitis with allergy. It bothered me a lot and I didn't feel like to continue my life at that time. "

"In May 2001, I was introduced Lingzhi supplement with pollen. Being a person who rejected supplementary food all the time, I decided to try it for my future this time". After consuming, I had symptoms such as high fever, pain in my body, diarrhea, itching around my neck and legs, Painful around the ribs and the chest. However, I started to feel better and could breathe smoother, sleep better, and walk upstairs without grasp."

"After taking Lingzhi for 4 months. I felt like a newborn person and much stronger than before. Thanks to the person who introduced Lingzhi to me and thanks to Lingzhi for regaining my confidence in life. "

MAGIC REISHI OR LING ZHI MUSHROOM CURES CANCER, HIV ETC.82

By einron
http://hubpages.com/hub/magicreishilingzhi...mcurescancerhiv

Our most loving God once again comes to the aid of those who are suffering from cancer, hiv, asthma, high cholesterol, low blood pressure, high blood pressure, diabetes, heart problems, paralysis, psoriasis, rheumatism, ulcers, tiredness, hepatitis A, B, and C, insomnia, sterility, mumps, and epilepsy by supplying us with reishi mushroom (Japanese) or ling zhi (Chinese) mushroom to cure us of our diseases.

There are over 2,500 varieties of mushroom grown today.

Come and worship the one and only God of heaven and the universe. Bow down and acknowledge His goodness and love to all mankind.

REISHI or LING ZHI MUSHROOM

WHAT IS REISHI OR LING ZHI MUSHROOM?

Red Reishi (Ganoderma Lucidum), commonly known as Ling Zhi in Chinese, is a herbal mushroom known to have miraculous health benefits.

Reishi has been used in Japan and China for over 2,000 years. It is the oldest mushroom known to have been used as medicine. Since ancient times, the mushroom was reserved for emperors and royalties and has been revered as nature's rarest and most beneficial herb. In the Superior category of Shen Nung Ben Cao Jing, the oldest and most famous medical text on Oriental herbal medicine. Red reishi is ranked higher than ginseng, because of its following qualities:

1. It is non-toxic and can be taken daily without producing any side effects.

2. When it is taken regularly, it can restore the body to its natural state, enabling all organs to function normally.

3. Immune modulator - regulates and fine tunes the immune system.

What are the benefits of Reishi?

Red Reishi is composed of complex carbohydrates called water-soluble polysaccharides, triterpeniods, proteins and amino acids. Researchers have identified that water-soluble polysaccharides are the most active element found in Red Reishi that have anti-tumour, immune modulating and blood pressure lowering effects.

Another major active ingredient found in Red Reishi are triterpenes , called ganoderic acids. Preliminary studies indicated that ganoderic acids help alleviate common allergies by inhibiting histamine release, improve oxygen utilization and improve liver functions. Triterpenes are bitter in taste and the level of the triterpene content contained in a product can be determined by the bitterness.

Regular consumption can enhance our body's immune system and improve blood circulation, thus improving better health conditions. Generally, Reishii is recommended as an adaptogen, immune modulator, and a general tonic. It is also used to help treat anxiety, high blood pressure, hepatitis, bronchitis, insomnia, and asthma.

MORE BENEFITS OF REISHI, LING ZHI

Reishi or ling zhi mushroom had been widely used in China, Japan and Korea and officially known as Ganoderma lucidum for 2,000 years.

"This immune-boosting action also works wonders in the prevention and treatment of cancer, as the T-cells are then able to fight cancer cells more effectively. However, reishi may help the body defeat cancer in not just one, but four ways. In addition to boosting the immune system, the glucan in reishi helps immune cells bind to tumor cells. Many experts believe that it also actually reduces the number of cancerous cells, making it easier for T-cells and macrophages to rid the body of them.

Another substance in reishi, called canthaxanthin, slows down the growth of tumors, according to "Prescription for Dietary Wellness" author Phyllis A. Balch and other experts. As a result of these amazing anti-cancer abilities, laboratory research and traditional medicinal usage of reishi to fight cancer is so positive that the Japanese government officially recognizes it as a cancer treatment. "

WIDE RANGE OF MEDICINAL APPLICATIONS

Reishi's wide range of medicinal applications

Health Benefits: Reishi indeed sounds like a cure-all. An immunostimulant, it is helpful for people with AIDS, leaky gut syndrome, Epstein-Barr, chronic bronchitis, and other infectious viruses. It is used as an aid to sleep; as a diuretic; as a laxative; and to lower cholesterol. Reishi mushrooms are antioxidants and liver protectants..
New Whole Foods Encyclopedia by Rebecca Wood, page 288

One key function, identified long ago by Eastern medical science, is defense--that is, the body has the need and ability to defend itself against threats to its equilibrium, whether they be physical, emotional, or energetic. Having noted and studied the body's defensive capabilities, Chinese doctors then explored the natural world to find ways of maintaining and enhancing them, and they discovered a number of ways to do so, including the administration of herbal remedies. Among these remedies are ginseng, astragalus, and several mushrooms that grow on trees, such as Ganoderma lucidum (known to the Chinese as ling chih and the Japanese as reishi).

8 Weeks To Optimum Health By Andrew Weil MD, page 15

SIDE EFFECTS

Wikipedia

It has been shown in some studies that long term use of lingzhi (usually four months or so) can result in some mild side effects, including dryness of the nasal passages, mouth and throat, as well as stomach upset and nosebleed[ci. However, these effects were avoided by discontinuing use of the mushroom for one month after taking it for four months, and taking it again for four months, and so on.

HEART DISEASE

HEART DISEASE, ARTHRITIS, ALLEGIES

NATURALNEWS.COM

Besides cancer,reishi can help and treat another of America's top killers: cardiovascular disease. The protection reishi offers against heart disease and stroke is truly remarkable because it helps prevent so many different risk factors, due to its high content of heart-

saving substances like sterols, ganoderic acids, coumarin, mannitol and polysaccharides. Experts believe that the ganoderic acids in particular lower triglyceride levels, remove excess cholesterol from the blood, lower blood pressure, reduce platelet stickiness and even help correct arrhythmia. In fact, for 54 people with hypertension unresponsive to medication, taking reishi extract three times a day for four weeks was enough to significantly lower blood pressure, according to a study reported by Burton Goldberg in "Heart Disease." Just imagine how the incidence of cardiovascular disease could be reduced if using reishi really caught on in the Western hemisphere.

While you protect your body against infectious disease, cancer and heart disease, your use of reishi can also help relieve your everyday discomforts. Do you have allergies? Japanese researchers discovered that the lanostan in reishi acts as a natural antihistamine. Do you suffer from muscle aches or arthritis? Dr. William B. Stavinhoa of the University of Texas Health Science Center found that reishi is as powerful as five milligrams of hydrocortisone, but with minimal side effects. What about anxiety or insomnia? According to "Mind Boosters" by Dr. Ray Sahelia, the reishi mushroom can calm the mind, as well as improve memory, concentration and focus. With all these benefits, reishi truly is the "medicine of kings."

ASTHMA

Asthma is a disease in which inflammation of the airways causes airflow into and out of the lungs to be restricted. The muscles of the bronchial tree become tight and the lining of the air passages swells, reducing airflow and producing the characteristic wheezing sound. This is known as an asthma attack, which can occur as an allergic reaction to an allergen or other substance (acute asthma), or as a part of a complex disease cycle which may include reaction to stress or exercise (chronic asthma).

BIBLICAL EXPLANATION OF MAGIC MUSHROOM

MANNA

Magic Mushroom Bible Sacrament by James Dure

Exodus 16:14-24 indicates that Manna was inevitably a mushroom.

It was a small round thing in the morning dew, it bred larva, and would melt to mush if not dried. [King James Version].

All "wild" mushroom pickers know that mushrooms are most notorious for being infested with worms. This is because flies worldwide of all varieties lay their eggs, which hatch up into the gills causing the larvae/worms to crawl out as the mushroom matures.

Daniel 5:3-5 with Exodus 16:32 and Hebrews 9:4 indicates that the mushroom was a drug. After sacking the temple in Jerusalem and stealing the Ark-of-the-Covenant, the King of Babylon and his table drank from the golden cup containing the holy “Manna” they had visions within the hour….. Psilocybin mushrooms take 30-40 minutes to induce visions.

Hebrews 9:4 makes it clear that Manna was the most holy thing to Israelites, kept in a “Pot-of-Gold” in the Ark Of The Covenant, in the Most Holy of Holys. So sacred is the Manna that

only the High Priest has access to it, and only on one day of the year (Yom Kippur), which comes 3 days before the harvest moon (Hallows Eve).

Psalm 78:24-25 calls Manna Food of Angels, just as Mayan/Inca Priests from Meso-America called it Teonanacatl Food Of The Gods.

Manna is an Egyptian word, not Hebrew or Aramaic, meaning; The Bread of God. This is what Moses called it in Exodus 16:15.

“Bread Of God” means “Food Of God”, which is the same meaning of Teonanacatl (Mayan), and Ambrosia (Greek), and Soma (Hindu) a word for mushroom tea, all these words mean “Spiritual Food”.

Coca and Tobacco Leaves found in Pharaohs tombs suggest it was ancestors of Mayan/ Inca Priests who brought mushrooms to Egypt.

John 2:6-9 indicates that Jesus made water into wine by boiling mushrooms (Mushroom-Tea), the waterpots were made of stone, not clay, (stone pots were used for cooking, clay pots used for storing water). These pots already contained 2-3 firkins of a substance before the pots were filled with water.

A “Firkin” is an Old-English measurement meaning a fourth part. Half to three-quarters of fresh mushrooms with water makes a potent tea. Tea is the safest way to consume field mushrooms, killing dangerous bacteria like E. Coli. In the Atharva Veda, the Hindus called this Tea Soma. Greeks called mushroom jelly Ambrosia.

Those who drank the water made into wine said it was the most potent intoxicant (St. John 2:10). The Bible tells us that Jesus making water into wine was the “beginning of miracles” … in other words no one saw any miracles until drinking the wine made from water. (St. John 2:11).

Certainly for the Israelites Egypt was the origin of Manna, which explains why all the Patriarchs of Israel were educated in Egypt, Moses, Christ, and Joseph [The favorite son of Israel], were all educated in Egypt. Solomon married Pharaoh’s daughter, and Abraham found his God at a place called Shechem (Sekhem). which is another Egyptian word for Manna. Teonanacatl [Maya] = Soma [Hindu] = Ambrosia / Broma-Theon [Greek] = Manna [Egyptian/Hindu] It can be no coincidence that the Mayan, Egyptian, Greek, Hindu, and Israelite words for the mushroom all mean exactly the same thing: “The Bread Of God”.

PEKING LINGCHIH - ROYAL JELLY

It is reported that Queen Elizabeth II takes Peking Linchih Royal Jelly and that Queen Victoria also used Lingchih or Ling zhi.

Peking Lingchih-Royal Jelly

(Ganoderma and Royal Jelly Formula)

Lingchih (Lingzhi; Ganoderma lucidum) is one of the most famous of Chinese medicinal substances. It is the "mushroom of immortality" described in ancient texts. According to legend (and, perhaps, historical fact), the first Emperor of China sent explorers out to sea to seek the ultimate immortality elixir, one that had been reputed to come from the islands to the East somewhere distant from China's shore. Years later, the voyagers returned, having set foot on the land we know today as Japan, bringing back with them the Lingzhi mushroom (called Rei-shi in Japan). It was recorded in China's first herbal, the **Shen Nong Ben Cao Jing**, as a superior remedy. Lingzhi was reputed to calm the agitated spirit, improve the complexion, alleviate stiffness of the joints, and, if taken regularly, prolong life.

With modern technology, this woody mushroom is transformed into a liquid that is packed in sealed vials. The product is manufactured in Beijing (Peking). Each vial (10ml) contains 500 mg Lingchih, 300 mg fresh royal jelly, and a blend of extracts from ho-shou-wu (Polygonum multiflorum), psoralea (Psoralea corylifolia), codonopsis (Codonopsis pilosula), epimedium (Epimedium sagittatum), plus several vitamins.

NOTICE THE PYRAMID AND CAPSTONE

NO WONDER ELIZABETH II LOVES THIS

craig-oxley - April 17, 2010 10:53 AM (GMT)

I thought I'd type this up for you all. -Craig

REISHI MUSHROOM. (Ganoderma lucidum).

Contains glucans of same structure as lentinan, as found in Shiitake. Contains germanium which helps oxygenate cells.

Action. Anti-tumour (animal studies). Hypotensive , antiviral, immunostimulant, antitussive, expectorant. Antihistamine. Antibacterial

Uses. Contains adenosine which inhibits placelet aggregation and thrombocyte formation, High blood pressure. Chronia asthma. Popular Chinese remedy in syrup for bronchitis.

Officially recognised in Japan as a cancer treatment. Candida, chronic fatigue syndrome, and side-effects of radiation and chemotherapy. Helpful for high blood pressure, allergies and to reduce fat.

Preparation. *Powder*. 1 teaspoon daily for immune enhancement. 2 teaspoons for cancer and AIDS to enhance the immune response.

Works well with Shiitake Mushroom. Used for HIV, AIDS and ME. *(Information: International Journal of Alternative and Complementary Medicine, July 1992, p15-16)*

Diet. Reishi is marketed as a food with no claims made.

No known side-effects.

Folks I typed all this up for you all as you will not get much better information than below I assure you. -Craig

Ganoderma Ling Zhi

Reish Mushroom

Botannical source: Ganoderma lucidum (Leyss. ex Fr.) Karsten or G. japonicum/ sinense (Fr.) Lloyd or G. capens Lloyd or G. applanatum (Pers. ex Gray) Patrin or G. tsugae Murray (Polyporaceae)

Pharmaceutical name: Sclerotium Ganodermae

Chinese names: Ling Zhi, Ling Zhi Cao, Yang Shen Zhi, Chi Zhi, Dan Zhi, Qi Zhi (Mand); Ling Ji (Cant)

Other names: Ganoderma, "Spiritual/Shaman's mushroom," "Nourish spirit mushroom," "Red mushroom," "Cinnabar mushroom," "Red pill mushroom," "Soul mushroom"; Reishi (Jap)

Habit: Brown-black saprophytic fungus found in China's coastal provinces and in the Pacific Northwest of North America; grows on roots, trunks and rotting tree stumps of oak and other broad-leaved trees; also cultivated in sterilised sawdust media.

Part used: the fruiting body or cap

[dohtml]<hr>[/dohtml]
Therapeutic category: mild remedy with minimal chronic toxicity

Constituents: (G. lucidum) soluble proteins, 32 amino acids (incl. glutamic acid, alanine), polypeptides, fungal lysozyme, acid protease, sterols (ergosterol, llanosterol, sitosterol ganodosterone), lactones, alkaloids, triterpenes (incl. lucidenic/ganoderic/ganodermic acids), polysaccharides (incl. beat-D-glucans, ganoderans, GL-1, D-6), choline, betaine, stearic/palmitic/behenic/nonadecanoic/ oleic acids, nucleotide adenosine, tetracosane, hentriacontane, cyclooctasulphur, potassium chloride, sulphur, trace minerals (incl. copper, iron, zinc, germanium)

Effective qualities: bland, a bit sweet and bitter, neutral, restoring, calming, relaxing, dissolving

Tropism: nervous, immune, endocrine, digestive, respiratory, cardiovascular systems. Lung, Spleen, Liver, Pericardium, Heart, Kidney, Chong, Yin Wei, Yang Wei channels; Air, Fluid bodies

ACTIONS AND INDICATIONS

***adrenocortical restorative/regulator, adaptogenic*: chronic deficiency conditions with fatigue, weakness, low stamina and vitality; chronic stress, convalescent debility**

***antioxidant (free radical inhibitor), aging-retardant*: toxicosis, premature senility**

***neurocardiac restorative*: cerebral/nervous deficiency, heart weakness, neurasthenia; memory loss, mental capacity loss**

***immune enhancer*: low immunity with frequent or chronic infections; immunodeficiency disorders (incl. CFS, AIDS)**

***immune regulator, broad-spectrum antiallergic*: immune stress with immediate allergies (incl. pollen and drug allergies, rhinitis, bronchial asthma, urticaria, purpura, angioedema, atopic dermatitis); cell and antibody mediated allergies and immune complex disorders (incl. food allergies, atopic dermatitis, nephritis, chronic hepatitis, chronic bronchitis and pneumonia, autoimmune disorders [incl. hemolytic anemia, multiple sclerosis, serum sickness, rheumatoid arthritis, lupus, psoriasis, celiac sprue, Grave's disease, vasculitis, Chrohn's disease])**

[dohtml]<hr>[/dohtml]
***metabolic restorative:* metabolic disorders, esp. anabolic deficiencies (incl. debility, malnutrition, malabsorption, glycogen storage disorders, anorexia, muscular dystrophy, myasthenia gravis)**

***anastative nutritive, liver trophorestorative/protective, detoxicant:* liver congestion; all chronic liver and spleen conditions (incl. hepatitis, liver degeneration/necrosis); loss of endurance and immunity, toxicosis**

***oxygenator:* altitude sickness, shallow breathing, tissue hypoxia**

neurocardiac sedative, hypotensive: **nervous and cardiac stress with unrest and insomnia; neurocardiac syndrome, anxiety states, phobias, neurosis; hypertension**

coronary restorative/dilator, antilipemic: **coronary deficiency/disease, hyperlipidemia**

hypotensive: **hypertension**

parasympathetic nervous antagonist

expectorant, antitussive: **wheezing, coughing; acute bronchial asthma, chronic bronchitis**

immunostimulant anti-infective: antibacterial, antiviral, phagocyte/lymphocyte stimulant: **infections in general (incl. viral conditions, pneumonia [Strep. and Staph.], EBV and HIV infection)**

antitumoral, interferon inducent: **tumors, early stage of cancer**

radiation-protective, leukocytogenic: **radiation sickness (therapeutic or environmental), leukopenia**

SYMPTOM PICTURES

liver and adrenal Yin deficiency (Blood and Qi deficiency): chronic or frequent infections, underweight, fatigue, loss of motivation and stamina, exhaustion at night

heart Qi constraint (heart Blood and Spleen Qi deficiency): unrest, sleep loss, palpitations, feeling stressed

heart blood and Qi stagnation: chest tightness or pain, palpitations, fatigue

lung Qi constraint: wheezing, tight chest, coughing, palpitations, allergies, feeling stressed

lung phlegm cold: chronic coughing with thin white sputum, wheezing, cold extremities

PREPARATION

Use: The mushroom Ganoderma Ling Zhi is decocted on low heat exactly at boiling point (without any bubbling) for at least two hours, until 1/3 of the water remains. Break up into small pieces, powder or liquidize the mushroom cap first (do not use the inactive stem). Tinctures are somewhat less effective, but still viable.
Taking Vitamin C together with Reishi mushroom may increase Reishi's effectiveness in resolving viral infections and early cancers.

Dosage: Long decoction: 1-5 g. The single dosage generally reserved for more serious disorders is 4-5 g. All other conditions respond well to 1-3 g per dose. For example, to make a three-day average supply (9 doses), use nine cups (just over 3 pints) of water to 27 g (just under 1 oz) of the dry Reishi mushroom cap. Through low heat decoction reduce the water down to three cups (just over a pint). Take 1/3 cup dose three times a day on an empty stomach 20 minutes before eating. Refrigerate between use and reheat if needed.
Tincture: 0.5-2.5 ml (i.e. 12-70 drops)

Caution: As with most *detoxicant* remedies, very minor side effects (such as loose stool, dry mouth and skin rash) may occasionally be experienced because of the body's cleansing reaction.

NOTES

There are several Chinese herbs that, being integral to the almost prehistoric shamanistic and alchemical practices of China's early Daoists, are hallowed with claims of their being elixirs of immortality. Today, these claims naturally arouse our skepticism or downright disbelief. Still, the hyperbolic reputation of some of these botanicals should not discourage us from keeping an open mind, especially when modern clinical research widely supports their stellar status.

Reishi mushroom is one such remedy. The various names given this particular fungus, for example--many of them code names for spiritual or yogi practices--clearly are a reflection of this. Its usefulness in treating a wide variety of today's most serious disorders is being increasingly realised. In my experience, conditions involving compromised metabolic and immune functioning are essentially its two target areas. Reishi's amino acids are important to its nutritive and restorative actions on the liver and metabolic process in general. For example, the mushroom has specifically been shown to increase liver protein synthesis and nucleic acid and protein metabolism (Chang and But 1987). Here, as with many another Chinese super-remedy--be it an *Essence, Blood or Qi tonic*--the liver and adrenal cortex Yin functions are the hidden crucible of Reishi's *metabolic restorative* effects.

On the other hand, both long-term immune enhancement and immediate immune stimulation may be achieved through the use of this mushroom. Immune health is given a boost, not only to prevent infections, but also to the point of a preventative effect on cancer. The mushroom is a traditional folk remedy for early cancer. Its polysaccharides play a major role in modulating immunity for both immune deficiency and immune stress conditions, suggesting routine inclusion in treatment protocols for the entire range of today's elusive viral infections, as well as allergic and autoimmune disorders in general. At the current state of the herbal art, Reishi is the premier, if not the only, antiallergic remedy able to address the whole spectrum of hypersensitivity disorders (types I through V).

Beyond Reishi mushroom's *restoring* and *regulating* effects on metabolism and immunity, however, lies a deeper power. Its adaptogenic effect not only offers a

wide range of protection from unproductive stress, but also directly modulates metabolic and immune functions themselves. By enhancing our adaptation response to stressors, Reishi will finely calibrate these intricate and delicate functions.

The name *ling* for this remedy, difficult though it is to translate, actually refers to the spiritual insight and potency achieved by shamans. It is very probable that the mushroom was traditionally used by early shamans and Daoists as an aid for journeying and meditation practices. Reishi generates a sense of inner calm and harmony, whilse also heightening mental perception, both logical and intuitive. Perhaps this is why Reishi can be seen as an elixir of immortality.

Reishi Mushrooms Offer Help for Those with Rheumatoid Arthritis

Thursday, May 27, 2010 by: William Rudolph,
http://www.naturalnews.com/028874_reishi_arthritis.html

One of the key measures of a long and well lived life is adaptability. A person`s ability to adapt to changing circumstances goes a long way toward predicting longevity. This involves the responsiveness and functionality of the immune system. A robust immune system capable of adjusting to ever-changing situations is a key factor in preventing the manifestation of a cold or cancer, or anything in between. One important aspect of immune function is its ability to self-regulate downward when needed so that it doesn`t become hyperactive and attack your own tissues, as in the case with Rheumatoid arthritis. Fortunately, nature has delivered an amazingly versatile herb in the Reishi mushroom with the proven capacity to deliver relief and even assist in reversing this condition.

Rheumatoid arthritis (RA) is an autoimmune disorder that can be characterized by chronic inflammation of the tissues and organs, but it usually attacks the joints. This hyper-inflammatory response can lead to the destruction of cartilage and the loss of mobility. Symptoms of RA can include swollen and stiff joints, accompanied by considerable pain and loss of function. It is three times more common in women than men, with the first onset of symptoms usually occurring between the ages of 40 and 60. RA is usually treated by mainstream medicine with cortisone-like steroids that suppress the immune system. Even in low dosages, these drugs can cause osteoporosis, cardiovascular disease, weight gain, or high blood sugar. Most importantly, this unnatural and dangerous approach to artificially suppressing the immune system can leave you susceptible to infections.

Reishi mushroom, also known as Ganoderma lucidum, is one of the oldest known herbal medicines in traditional Chinese medicine (TCM). It is native to China, Japan, and North America, has been used for thousands of years, and is revered for its longevity-promoting capabilities. Reishi influences cells that regulate the immune system - namely, lymphatic cells and interferon alpha and interferon beta cells - and has the ability to "educate" these cells of immunity so that they better respond to the body`s needs. In other words, with the

help of Reishi, if cells of the immune system are not responsive enough, they will be called to action, or if they are hyperactive such as in the case of an autoimmune disorder such as RA, they will back down.

In a 2007 study published by the University of Hong Kong, the polysaccharide peptides in Reishi were found to "significantly inhibit the proliferation of Rheumatoid Arthritis Synovial Fibroblasts (RASF)." Read more on the results of this study here: http://www.ncbi.nlm.nih.gov/pubmed/..

Where steroid medications suppress the immune system, Reishi doesn`t stimulate or suppress but rather educates, helps modulate, and teaches the cells of the immune system how to self-regulate more effectively. When your white blood cells graduate from the School of Reishi, they are better equipped to manage your immune system.

Reishi capsules or a Reishi tea that you consume today may have been one hundred years or more in the making. First, a tree grows and lives for decades, absorbing energy and nutrients from the sun and the soil. Then, when the tree begins to die, mushrooms will attach to the tree, absorb the life force and further concentrate the nutritional content and medicinal qualities that the tree has acquired throughout its life. Once the mushrooms are harvested and encapsulated or made into powders or teas, this concentrated life force is transferred to its end user. This process represents unleashing the power of Mother Nature onto your immunity.

Teeguarden, Ron. The Ancient Wisdom of the Chinese Tonic Herbs. New York, NY: Warner Books -1998.

semperbry76 - May 18, 2011 04:04 AM (GMT)

The Reishi mushroom, also known by its formal name of Ganoderma and its Chinese name Lingzhi, has attained an unparalleled reputation in the Orient as the ultimate herbal substance. For over three thousand years it has been the most sought-after product of nature by mountain sages and by the emperors and empresses of all Eastern nations. In the first Chinese herbal text (Shennong’s Pharmacopeia) written about 2400 years ago, Reishi was classified as a "superior herb" which is defined as one that "serves to maintain life, promote radiant health and long life because of its normalizing action, and to cause no side effects, even when used continuously." That ancient book said that "continuous consumption of Reishi makes your body light and young, lengthens your life and turns you into one like the immortal who never dies." Thus Reishi was traditionally called "the mushroom of immortality."

The Reishi Mushroom grows wild only upon old trees and roots of certain types of trees in remote mountain forests of China, Japan and Korea. Only in the fifteen years have we seen the cultivation of Reishi, and thus the commercial availability of this amazing health product. Reishi has been the object of intensive scientific studies to discern its many health functions

from a modern perspective. Traditionally, Reishi is believed to be a tonic to all of the body's energies. It was revered as a major tonic to each of the three Treasures, Jing, Qi and Spirit.

As a Jing (Essence) tonic, Reishi is believed to have major life lengthening effects when consumed over a long period of time. It is believed to build primal power and to replenish energy spent handling stressful situations.

As a Qi tonic, Reishi is used to build energy, although it is slightly sedative in the short run. It is most famous as an herb used to build the immune system. Many studies done in Japan have shown Reishi to have a powerful effect on the body’s overall resistance to disease. Reishi is believed by Japanese and Chinese researchers to have a regulatory effect on the immune system, bringing up immune functions in cases of immunodeficiency and reducing the excesses associated with auto-immune conditions. Reishi is a superb tonic for people who suffer from chronic allergies. Reishi is also believed to have major benefits on the lungs and liver. Studies done in Japan have shown that Reishi protects the liver from damage due to toxic chemicals, including pharmaceutical metabolites. Furthermore, studies done in Japan and elsewhere have also demonstrated that Reishi is beneficial to the cardiovascular system, since it appears to help regulate coronary and cerebral blood flow and also seems to help reduce levels of blood lipids and in lowering elevated cholesterol.

As a Spirit tonic, nothing compares to Reishi. It is simply the greatest Spirit tonic of them all. It is believed by the Chinese to protect the Spirit and to nurture the growth of intelligence, wisdom and spiritual insight. Reishi is a superb anti-stress herb. Everyone who takes Reishi notices the peacefulness that seems to accompany its use. Many people are able to stop using chemical drugs. And Reishi seems to be cumulative, gradually strengthening the nerves and actually changing how we perceive life. It has routinely been used by mountain hermits, monks, adepts and spiritual seekers throughout Asia because it was believed to help calm the mind, ease tension, strengthen the nerves, improve memory, sharpen concentration and focus, build will power and, as a result, help build wisdom. That is why it was called the "Mushroom of Spiritual Potency" by these seekers. The people of Asia believe more than ever in Reishi's power to improve the quality of life by improving the inner life of a human being. All the scientific validation only explains the physical nature of Reishi, but it is the profound ability of Reishi to improve one's life on every plane that makes it so incredible.

Studies done in Asia indicate that Reishi is a supreme health food supplement that has virtually no toxicity or side effects.

There are many Reishi products coming to the market at this time, but very few are truly excellent. Reishi must be extracted to be digestible and assimilable. Unfortunately, most Reishi products are not extracted and most are made from inferior quality hot house mushrooms or use inferior cultivated Ganoderma mycelium.

Nourishing tonic, tonic to the three treasures (Jing, Qi and Spirit), builds body resistance, detoxifying, aphrodisiac, sedative, prolongs life and enhances intelligence and wisdom

Qualities
Ganoderma is arguably the most revered herbal substance in Asia, certainly ranking with ginseng as the elite substance for the attainment of radiant health, longevity and spiritual attainment. It has maintained that position for at least 2000 years, and its reputation and value are only increasing. Numerous legends provide a rich and extensive record of Ganoderma in Asian society.

Reishi has traditionally been used as an anti-aging herb and has been used for many diseases and disorders as well. It has long been a favorite tonic food supplement by the Chinese Royal family and virtually any one who could obtain it. Ganoderma was particularly revered by the followers of the tradition as the "Elixir of Immortality."s have continuously claimed that Reishi promotes calmness, centeredness, balance, inner awareness and inner strength. They have used it to improve meditative practices and to protect the body, mind and spirit so that the adept could attain both a long and healthy life and spiritual immortality. Due to its rarity, the common people could rarely obtain a Reishi mushroom, but it was popularly revered as a greater treasure than any jewel.

Since Reishi has been known to have many functions, it has been the subject of a great

deal of research in recent years. It is absolutely safe, being non-toxic. It ranks in Asia with Ginseng, deer antler, Astragalus and Cordyceps as a pre-eminent tool in the attainment of radiant health.

Its health benefits of Reishi are extremely broad and it is virtually non-toxic. Though it is now used much like ginseng, Eleutherococcus and Astragalus as a general tonic to help develop energy, to improve digestion and to improve sleep, scientists are exploring its potential in their terms

Ganoderma is a profound immune potentiator. It has been found to significantly improve the functioning of the immune system whether the immune system is deficient or excessive. In this sense, it is an immune "modulator"---that is, it helps to modulate, or regulate, and fine tune the immune system. Our immune system is a virtually miraculous network of activities designed over millions of years to protect us from viruses, bacteria, parasites, molds, dust, pollen and malignant cells. It is the responsibility of the immune system to detect the intrusion, or invasion, of these entities and to mount a defense in order to eliminate them. A healthy immune system is capable of resisting most such intruders and a very hardy system may be able to resist invasions that many other people's systems cannot. If the immune system is weakened or malfunctioning, the invading microbes can easily establish a foothold in our body and disease sets in. Antibiotics can often be used to stop the invasion at this time, but chronic use of antibiotics further weakens the immune response. Furthermore, antibiotics are useless against viruses, pollens and most parasites. They are certainly useless against malignant (cancerous) cells generated in our own bodies. It is much better to resist the invasion from within with a fully fortified immune system and not become ill in the first place. This is where herbs like Reishi our now attracting the attention of scientists and consumers alike.

Many chemical constituents play a role in GL's immune modulating capacity. The polysaccharide components in particular seems to play an important role in attacking cancerous cells, but not healthy ones, while simultaneously strengthening the body's overall immune functions. The polysaccharides appear to help the body attack microbial invaders such as viruses, bacteria and yeast.

But Reishi does not just "stimulate" the immune system. It regulates it. And that is what makes Reishi so precious. If the immune system is excessive, as is the case with auto-immune diseases and allergies, Reishi can have significant positive influence. A group of chemicals known as the ganoderic acids help fight auto-immune diseases such as allergies. Ganoderic acids inhibit histamine release, improve oxygen utilization and improve liver functions. Ganoderic acids are also potent antioxidant free-radical scavengers.

Still another component, Beta-1, 3-glucan, helps regulate and stabilize blood sugar levels. Not only that, but these same components have been shown to have powerful anti-tumor properties.

Reishi is widely used in Asia to improve the cardiovascular system. It helps lower HDL (the "bad" cholesterol) and reduce excess fatty acids. It has been found to prevent and treat

hardening of the arteries, angina and shortness of breath associated with coronary heart disease.

In 1977 it was discovered in Japan that Reishi had potent anti-cancer activity. It was first used to treat, and quite successfully, hairy-cell leukemia, which is caused by a retrovirus closely related to HIV, the virus that causes AIDS. It has been an approved drug for cancer in Japan since that time and has been used safely and effectively, often in conjunction with other drugs or radiation. It has been demonstrated that Reishi can help reduce the side-effects of many kinds of chemotherapy and radiation treatment and simultaneously contribute to the rebuilding of the immune system---an essential part of the recovery from cancer. Ganoderma stimulates the production of interferon and interleukins I and II, all being potent natural anti-cancer substances produced in our own bodies. Reishi may well prove to be the greatest prevention against cancer because it helps us to protect ourselves by our own power.

It has also been approved in Japan and China for the treatment of myasthenia gravis, a serious auto-immune disease. Besides that, it is commonly prescribed by Md.'s in Japan for chronic bronchitis, memory loss, insomnia, hyperlipidemia and a whole range of degenerative diseases of the elderly, including disorders associated with senility.

Reishi is a superb anti-stress herb. Throughout history it has been used to bring balance into the lives of people who needed help in this department, and that means most everyone. Deep in antiquity, it was routinely used by mountain hermits, monks, adepts and spiritual seekers throughout Asia because it was believed to help calm the mind, ease tension, strengthen the nerves, strengthen memory, sharpen concentration, improve focus, build will power and, as a result, help build wisdom. That is why it was called the "Mushroom of Spiritual Potency" by these seekers. The people of Asia have never lost their faith in Reishi. They believe more than ever in Reishi's power to improve the quality of life by improving the inner life of a human being. All the scientific validation only explains the physical nature of Reishi, but it is the profound ability of Reishi to improve one's life on every plane that makes it so miraculous. Reishi is indeed calming and centering. Everyone who takes Reishi notices the peacefulness that seems to accompany its use. Many people are able to stop using chemical drugs. And Reishi seems to be cumulative, gradually strengthening the nerves and actually changing how we perceive life.

Reishi is a substance that builds health on all levels. It is the rarest of jewels in Nature. Life itself is based on the ability to adapt to the stresses, the attacks, the challenges that come our way every day. Reishi seems to provide an incredible resource of the full range of energies we need to meet these challenges. Reishi is indeed "the great protector," protecting us on every level---physically, immunologically, mentally, spiritually. It helps us adapt to the world and provides additional power for us to achieve a superior level of life. When we are so protected and so provided for, we can achieve things that otherwise would be impossible. That is why Reishi has been called the "herb of good fortune."

Scientific Data
1. Constituents

1.1. The primary constituents responsible for Ganoderma's medicinal actions are polysaccharides and highly oxygenated lanostanoid triterpenes, including multiple pairs of C-3 stereoisomers and C-3/C-15 positional isomers. More than 100 different triterpene molecules have been identified in Ganoderma. In addition, constituents of Reishi fruiting body include: b & x glucans, beta sitosterol, heteropolysaccharides composed of D-glucose, D-galactose, D-mannose, L- (or D-)arabinose, D-xylose, and L-fucose (soluble in water), heteroglycans, steryl esters, adenosine[, ergosterol, uridine, oleic acid, cyclooctasulphur[4], fungal lysozyme, acid protease and amino acids. Amino Acids: Serine (15.2), alanine (14.8), glycine (12.7), threonine (12.4), aspartic acid (9.9), glutamic acid (8.1), proline (6.9), valine (5.3), and other minor amino acids. (Upton)

1.2. Constituent Variation: Constituent content varies between different strains of Ganoderma. Differentiation's include a change in both the amount and pattern of triterpenes. Several triterpenes, not present in the mycelium, increase in concentration as the cap of the fruiting body develops. This includes ganoderic acid A. Quantitatively, the caps provide the richest source of triterpene acids, followed by the stem and then the spores. The underside of the outer layer of the cap yields a higher concentration of triterpenes than the other sections of the cap. Qualitatively, the HPLC patterns are similar for each. Samples grown on cherry wood yield higher amounts of triterpenes but grow more slowly and produce less than samples grown on the oak Quercus variabilis. During the initial fruiting stage of an antlered strain (Saegusa), ganoderic acids and lucidenic acids were not present, however they began to develop within one week of fruiting, subsequently becoming major constituents. (upton)

1.3. Comparative constituent analysis was conducted on three strains of Reishi; red (sekishi), purple (shishi) and black (kokushi). The red and purple strains analyzed had similar triterpenoid patterns. The black Ganoderma analyzed contained little acid material. Others have also reported on the significant constituent variation in the different parts of the mushroom including the pileus, stalk and underground portion. (upton)

1.4. Germanium fortification. In an effort to yield higher organic-germanium contents of Ganoderma, some producers enrich the growing substrate with germanium dioxide. Wild Ganoderma yields
1.3-17.8 ppm of germanium. Enriching the substrate with germanium dioxide at 1.5 ppm, 5 ppm and 10 ppm yielded germanium contents of 5.1 ppm, 15.3 ppm and 24.6 ppm respectively. (upton)

1.5. At least two particular characteristic constituent patterns have been identified in Ganoderma-C27 strains richer in lucidenic acid, and C30 strains richer in ganoderic acid. The fruiting body has also been classified as being rich in ganoderic acid A, while the mycelium has been most noted for its concentration of ganoderic acid T [18]. Two other strains, an antlered form and a full cap (Nagano) were rich in ganoderic acids, but showed no definitive signs of lucidenic acid. (upton)

1.6. Identification: The mapping of twenty-five well characterized triterpenoid using high-

performance liquid chromatography (HPLC), has been used as a standard reference for compositional comparison of constituents between different strains and species of Ganoderma. (upton)

2. Effects on Cardiovascular System

2.1. Ganoderma contains a water soluble derivative of adenosine (5'deoxy-5'-methylsulphinyladenosine), a platelet aggregation inhibitor. At 50 mg/ml-1 5'deoxy-5'methylsulphinyladenosine exhibited a 20-50% inhibitory rate. This action is reportedly due to the activation of platelet phospholipase. Adenosine content varies dramatically among different strains of G. lucidum. (upton)

2.2. Angiotensin Converting Enzyme (ACE) Inhibition: ten lanostane triterpenes with ACE inhibiting effects have been identified in Ganoderma. Ganoderic acid F exhibited the highest inhibitory effect, while the others were relatively mild. These were identified in a 70% MeOH extract of Ganoderma. (upton)

2.3. Effects on cholesterol biosynthesis & absorption: A sterol derivative of Ganoderma identified as sterol IV with 7-oxo and l5x-hydroxy groups potently inhibited cholesterol synthesis [48]. One mechanism of action is due to the ability of Ganoderma triterpenes, which contain oxygenated functionalities at C- I5 and a hydroxyl group at C-26' to effectively inhibit the rate-limiting enzyme 3-hydroxy-3-methylglutaryl-co-enzyme A reductase (HMG-CoA) in the cholesterol biosynthesis pathway. This has been demonstrated in both in vitro and in vivo assays using mevinolin as a positive control. HMG-CoA also begins the synthesis of coenzyme Q. Some researchers consider low levels of coenzyme Q to be a cardiovascular disease risk factor in itself. Therefore, it may be advantageous to supplement with coenzyme Q when using Ganoderma. In addition, other similar triterpenes are structurally similar to the post-lanosterol intermediates in the cholesterol biosynthetic pathway of mammals, and inhibit lanosterol 14x-methyl-demethylase. Compounds 1, 8 & 9 have been shown to be more effective at reducing cholesterol absorption than b-sitosterol. However, these triterpenes are poorly absorbed in the gastrointestinal tract. (upton)

2.4. The tincture of fruiting body extract of G. lucidum had a significant cardiotonic effect on the isolated frog heart, as well as on the pentobarbital sodium-inhibited heart. Using an i.p. injection of 3g/kg of an alcohol extract of both the fruiting body and mycelium, the following actions were observed: increased contractility of the in situ rabbit heart, an increase of 41.08% in contraction amplitude, reduction of the heart rate, an increase of 44%-66% in coronary blood flow with concomitant increase in cerebral blood flow, and coronary dilation. (upton)

2.5. At 0.8 mg/kg-1, 5'deoxy-5'methylsulphinyladenosine lowered blood pressure in cats by 30%.(upton)

2.6. In a clinical study at Tokyo University hospital, patients with essential hypertension (genetically inherited) were given six 240-mg Reishi tablets each day. After six months on this regimen, they showed normal systolic and diastolic readings. (upton)

2.7. Searching for herbs that benefit the heart, researchers at the Cardiology Research Center at the Academy of Medical Sciences in Moscow tested 21 herbs to see which most effectively prevented and corrected the buildup of atherosclerotic plaque in the arteries.

2.8. Ninety-two patients with myocardial infarction and chest pain were treated with GL extract and 72% of these patients felt the symptoms were relieved. Hyperlipemia patients treated with GL extract also showed decreased blood cholesterol levels in 14 out of 15 patients. (Tsung)

2.9. It has been reported that Ganoderma lucidum has cholesterol-lowering properties (Xian Medical College, 1978; Shanghai Medical Supply Station, 1978; Peng,1983; Chen, Liao, Xiao, 1988). The effective rate was about 86% for 12 weeks to 6 months of treatment for hyperlipidemia patients. Arichi, et al (1979), also reported that the extract of Ganoderma lucidum is clinically effective for hyperlipemia treatment. (tsung)

2.10. Morigiwa, et al (1986) have isolated 10 antihypertensive lanostane triterpenes from Ganoderma lucidum. Among the 10 triterpenes, ganoderic acid F had the highest anti-hypertensive effect. However, Anchi, et al (1979) have found that compounds responsible for anti-hypertensive activity have molecular weights of more than 100,000 daltons. (tsung)

2.11. Isolation of an Inhibitor of Platelet Aggregation. The water-soluble fraction of Ganoderma lucidum was found to suppress platelet aggregation. From physico-chemical and biochemical analysis, this fraction was identified to be adenosine. (tsung)

2.12. GL also markedly improved pancreatic blood flow rate in rats (18). GL was also effective in treating abnormal cardiac impulse in rats (18). By using radioactive 86Rb uptake as a marker in the rat heart muscle, the blood flow in the rat heart muscle was increased with the increase of the administration of GL. (tsung)

3. The Effect on the Central Nervous System

3.1. The extract of GL was able to suppress the central nervous system and relaxed the muscles in an experimental mouse. An hour of sleep induced by cyclohexabarbital was extended after injection of GL extract. The extract also had an anodyne effect on animal subjects. (tsung)

4. Immunostimulating Activity

4.1. The injection of GL extract or GL polysaccharides in mice resulted in the activation of the phagocytic activity of macrophages. Macrophages play an important role in the immune system. The increase of immunoglobulin A was observed in the phlegm of chronic bronchial asthma patients after oral administration of GL for four months. (tsung)

4.2. Immunostimulating Polysaccharides and Anti-Cancer Activity. The immunostimulating polysaccharides isolated from Ganoderma lucidum have shown b-(123) and b-(124) linkages in the polysaccharide structures Miyazaki et

al, 1981, 1982). The functions of the polysaccharides include intensified phagocytosis of reticuloendothelial systems, activation of macrophages, activation of T-lymphocytes, enhancement of cell-mediated immune response, and activation of the alternative pathway of the complement system. The most immunologically active polysaccharides have an anti-cancer activity. Miyazaki, et al (1981) showed that the anti-cancer arabinoxyloglucan has (123)-b-D-glucan moiety in the structure. Mizuno, et al (1984) also showed that the anti-cancer water-soluble b-D-glucan contains a backbone of (123)-linked D-glucose residues having single D-glucosyl branches. The attachment of polyol groups to the (123)-linked backbone significantly enhances its host-mediated anticancer activity (Sone, Okuda, et al 1985). However, Mizuno, Kato, et al (1984) showed that the host-mediated anti-cancer polysaccharides fraction was composed of a backbone of b(123)-linked-D-glucosyl residue with a single branch of b-(126)-linked-D-glucosyl group in every four to six residues of backbone chain. Acidic b-glucan isolated from Ganoderma lucidum also showed an anti-cancer activity. (tsung)

4.3 Natural Killer Cell Activating Factor. In most of the cancer-host relationships, cancer cell destruction is accomplished by many different ways. The one mechanism of immunoactivation and anti-cancer action is to kill cancer cell through activation of natural killer cells. The hot-water extract of ganodenna lucidum showed the ability to activate natural killer cell activity (Murai, Yamashita, et al, 1987). The natural killer cell activating factor is distributed in the fruit body of Ganoderma lucidum. The concentration of natural killer cell activating factor is higher in the early budding stage and in the completion of fruit body growth stage (Tsubokura, Ogita, et all, 1988). (tsung)

4.4 Interferon-Inducing Activity. Interferons are a family of small protein molecules secreted naturally by human cells to fight viral and other infections. Interferon has been touted as a potential cancer-treating drug for nearly 30 years. Ganoderma lucidum has been found to have interferon-inducing activity (Meng, 1983). (tsung)

4.5 Fifty-two leukopenia patients were treated with GL extract and 44 patients showed increased leukocytes of about 1028/mm3 after treatment. The effective rate was 84.8%. (tsung)

4.6. The extract of Ganoderma lucidum has been used for leukopenia patients (Jiangsu New Medical College, 1978). Since AIDS patients frequently develop leukopenia, it is worthwhile to research which component of Ganoderma lucidum is the functional compound. (tsung)

4.7. Liu, et al (1980) reported that the extract of Ganoderma lucidum was effective for the treatment of muscular dystrophy. (tsung)

4.8. The effect of Ganoderma lucidum on induction of differentiation in leukemic U937 cells. Ganoderma (G.) lucidum is a herbal medicine with tumoricidal activity capable of inhibiting the proliferation of mouse Sarcoma 180 cells both in vitro and in vivo. In this study, we investigated the effect of the polysaccharide fraction of G. lucidum (PS-G) on the proliferation and differentiation of human monocytic leukemia cell line, U937. Using an in

vitro liquid culture system, we found that the conditioned medium from PS-G-stimulated human blood mononuclear cells (PSG-MNC-CM) contained a activity that could significantly inhibit the growth of U937 cells and induce them to differentiate into mature monocytes/macrophages which had functions of phagocytosis and producing cytoplasmic superoxide. Neither PS-G nor normal (untreated) MNC-CM was found to have a differentiating effect on the target cells. The optimal condition for stimulating the in vitro production of MNC-derived differentiation-inducing activity was to use PS-G at a low concentration of 50 micrograms/ml and to incubate MNC for a short period of 24 hours. Long-term (greater than 3 days) incubation resulted in a decrease in the differentiating activity of the conditioned media. (Internet 1)

4.9. Effect of Japanese Ganoderma Lucidum on production of interleukin-2 from murine splenocytes. The purpose of this study was to determine the effect of Ganoderma lucidum (GL) planted in Japan on the production of Interleukin-2 (IL-2) from murine splenocytes. It was observed that hydrocortisone (HC) 0.025-1 microgram /ml could significantly antagonize the inhibitory activity of HC and CSA to increase the production of IL-2 in vitro, $P < 0.01$. When the splenocytes pretreated with GL alone or in combination with HC, it was shown that pretreatment alone had no significant effect on IL-2 production, but preincubating splenocytes with HC and GL resulted in a significant increase of IL-2 production when compared with that of HC group, $P < 0.01$. In vivo, GL 300 mg/kg could increase the production of IL-2 when oral taken GL alone or in combination of HC. (Internet 2)

4.10 Effects of Ganoderma polysaccharides on the activity of DNA polymerase alpha of splenocytes and immune function in aged mice. The activity of DNA polymerase alpha in splenocytes of 24-month-old mice was about 35.6% lower than that of 3-month-old mice. Aged mice were intraperitoneally administered Ganoderma polysaccharides (GL-B) once a day for 4 days and then the activity of the enzyme was assessed. The results showed that GL-B at doses of 25 and 50 mg/kg-1 enhanced the activity of the enzyme in aged mouse splenocytes by 44.0 and 58.8% respectively. In addition, the mixed lymphocyte response to alloantigen, automatic proliferation and IL-2 production of splenocytes in aged mice declined as compared with that in young adult mice. GL-B (50, 100, 200 micrograms.ml-1) was found to restore those parameters to the levels of that of young mice in vitro. (Internet 3)

4.11. Ling Zhi-8: a novel T cell mitogen induces cytokine production and upregulation of ICAM-1 expression. Ling Zhi-8 (LZ-8) is a protein purified from Ganoderma lucidum, a Chinese medicinal fungus thought to possess potent effects on the immune system. When examined for its effects on lymphocytes, LZ-8 exhibited potent mitogenic effects on human peripheral blood lymphocytes (PBL), inducing a bell-shaped dose-response curve similar to that caused by PHA and other lectin mitogens. Fractionation experiments indicated that the proliferative response in the PBL cultures was primarily due to T cells, but was monocyte dependent. Stimulation of PBL with LZ-8 resulted in the production of IL-2 and a corresponding upregulation of IL-2 receptor expression. In addition to T cell proliferation, microscopic examination of LZ-8-stimulated PBL revealed that LZ-8 induced cellular aggregate formation. The aggregate formation correlated with a dramatic rise in ICAM-1

expression and an increased production of IFN-gamma, TNF alpha, and IL-1 beta, molecules associated with regulation of ICAM-1 expression. Both the aggregate formation and the proliferative effects of LZ-8 were blocked by addition of monoclonal antibody to either CD18 or CD11a, the counter-receptor complex components for ICAM-1. Furthermore, addition of neutralizing antibodies to both IL-2 receptor and TNF alpha blocked aggregate formation, cellular proliferation, and ICAM-1 expression. These findings demonstrate that LZ-8 is a potent T cell activator, mediating its effects via cytokine regulation of integrin expression. (Internet 4---Genentech)

4.12. Effect of Ganoderma polysaccharides on T cell subpopulations and production of interleukin 2 in mixed lymphocyte response. Mixed lymphocyte response was used as a main model through all the experiments. In a series of concentrations (25, 50, 100, and 200 micrograms/ml), Ganoderma polysaccharides (GL-B) promoted the production of interleukin 2 (IL-2) in a concentration-dependent manner after initiation of culture for 12 h and increased the total cell recovery as well as that of Lyt 2+ and L3T4+ cells after 4 days of culture. The data also show that the polysaccharides markedly enhanced the cytotoxicity of cytotoxic T lymphocytes, which was increased by 100% at the concentration of 200 micrograms/ml. (Internet 5)

4.13. Ganoderma tsugae mycelium enhances splenic natural killer cell activity and serum interferon production in mice. Effects of the water-soluble extract of Ganoderma tsugae mycelium (GT), its alcohol-insoluble subfraction (GTI), and its alcohol-soluble subfraction (GTS) on splenic natural killer (NK) cell activity and serum interferon (IFN) production were assessed in mice. Intraperitoneal administration of GT (4-200 mg/kg) or GTI (1-50 mg/kg), but not GTS, augmented the NK cytotoxic activity in a dose-dependent manner in C3H/HeN mice. This augmentation of splenic NK cytolytic activity was not mouse-strain-dependent. The serum IFN titers of mice were also elevated after i.p.-doses of GTI. The GTI-induced serum IFN was reduced by either IFN-(alpha+beta) antiserum or IFN-gamma monoclonal antibody in vitro. The treatment with antiserum neutralizing IFN-(alpha+beta) resulted in a 70% reduction of GTI-induced IFN, while monoclonal antibody against mouse IFN-gamma, moderately neutralized the GTI-induced IFN (50%). These results demonstrated that both the splenic NK activity and serum IFN [IFN-(alpha+beta) and IFN-gamma] titers are elevated by Ganoderma tsugae mycelium extracts in mice. (Internet 6)

4.14. Chemical studies on immunologically active polysaccharides of Ganoderma lucidum (Leyss. ex Fr.) Karst. BN3B, the polysaccharide component of the fruit of Ganoderma lucidum, has been shown to have immune activity. From BN3B four homogeneous polysaccharides were separated and purified. Chemical studies on the main components BN3B1 and BN3B3 indicated that BM3B1 contained only glucose and should be a glucan containing beta-(1----6) and (1----3)glycoside bonds and that BN3B3 was an arabinogalactan containing beta-(1----6) and (1----3)glycoside bonds. (Internet 7)

5. Anti-allergic Activity

5.1. GL suppressed histamine and other chemical mediator release from mast cells.

Hirai, Takase, et al (1983) showed that the extract of Ganoderma lucidum has an inhibitory action on histamine release from rat mast cells. A Japanese research group at Kinki University also found that the hot-water extract of Ganoderma lucidum has a strong suppressive activity on histamine release from mast cells (Kubo Lab, 1984). The extract also suppressed the passive cutaneous anaphylaxis (PCA) reaction. Since the Ganoderma extract can suppress histamine release from mast cells and suppress PCA reaction it is expected to do well against type I allergies, including anaphylactic shock, atopic dermatitis hay fever, hives, drug allergies, and bronchial asthma.

5.2. In the animal model for immune-complex disorders (type III allergies), nephritis is induced by successive injections of rabbit serum protein into rats, causing antigen-antibody complexes to develop in the blood stream and to be deposited in the kidneys. In nephritis, both protein concentration in urine and cholesterol concentration in serum are increased. With treatment by Ganoderma extract, protein and cholesterol concentrations were reduced to normal levels. Morphological observation of the kidney also showed recovery, and hypertension due to nephritis was returned to normal.

5.3. Ganoderma extract also did well against such cell-mediated allergies as picryl chloride-induced dermatitis in mice. Cell-mediated allergies include contact dermatitis, tubercular lesions, chronic hepatitises, auto-immune disorders and Hashimoto thyroiditis. In addition, the extract showed great enhancement of steroid-drug effect in the treatment of dermatitis. Due to steroid drug's considerable side effects, any herb which could bring about a decrease in steroid dosage is beneficial to patients. The anti-allergic activity of Ganoderma lucidum extract has been identified to be four triterpenes ganoderic acids: A, B, C, and D (Kohda, Tokumoto, et al, 1985). (tsung)

6. Antioxidant Activity

Free radical reactions are believed to be the cause of various aging-associated diseases. The anti-oxidant activity in the body decreases with age. In order to keep us younger for a happier and healthier life, we need an antioxidant substance to suppress the aging process. GL extract has been found to have an antioxidant activity. (tsung)

7. Effect on the Respiratory System

7.1. The GL extracts showed anti-asthmatic effects during experiments with guinea pigs' 12-14)- The GL extracts also showed anti-histamine and anti-acetylcholine effects. (tsung)

7.2. There was also a decrease of blood cholinesterase activity in 29 chronic bronchitis patients after treatment with GL for 4 months. (tsung)

7.3 Peritoneal injection of GL extract for 14 days resulted in an increase of cyclic AMP in serum and heart muscles of experimental rats (18) (Table 2 and 3). Cyclic AMP is a regulator of many metabolic systems. GL extract also showed a stimulatory effect on the production of 2, 3-Diphosphoglyceric acid in human erythrocytes (27). This indicates that aerobic metabolism can be improved by the use of GL extract. (tsung)

7.4. Two hundred and eighty-eight patients were treated with GL extract for 1-3 months. The effective rate was 88.2%. In 27 cases of pediatric bronchial asthma, 23 patients showed that cough and asthmatic symptoms were gone after one month of treatment with GL extract injection. The effective rate was 85%. A similar result was obtained when GL extract was used to treat allergic asthma. (tsung)

8. Effect on the Liver

8.1. GL extract showed anti-hepatotoxic activity with administration of the extract to mice with carbon tetrachloride-induced liver damage (3). An alcohol extract of GL also stimulated regeneration of liver cells after part of liver was removed by surgery. (tsung)

8.2. Twenty-one hepatitis patients were treated with GL extract. For nineteen patients the major symptoms were gone within 10 days after GL extract treatment and the hepatitis marker enzyme serum glutamic-pyruvic tansaminase value was returned to normal 45 days after the GL extract treatment. The effective rate was 90.5%. (tsung)

8.3. Antihepatotoxic Activity. Six triterpenoid, ganoderic acids U, V, W,X, Y, and Z, isolated from Ganoderma lucidum have been found to have cytotoxic activity in vitro on hepatoma cells (Toth, Lu, et al, 1983). Hirotani, et al, (1986) also observed that ganoderic acids T, S, and R, isolated from Ganoderma lucidum, have a strong antihepatotoxic activity. (tsung)

9. Radiation Protection Effect

Radiation protection can be obtained with administration of GL extract to mice prior to irradiation. (tsung)

10. Effect on Total Oxygen Consumption

The administration of GL to mice for 14 days
resulted in decrease of whole body oxygen consumption (3). The result suggests that GL can help the body to have more endurance capability during oxygen deficient conditions. (tsung)

11. Effect on Adrenocortical Hormone Secretion

After administration of GL extract to rabbits for a week, the serum cortisol concentration was increase from 1.21 + 0.2897 ug/100 ml to 3.47 + 0.548 ug/100 ml (18). The increment of cortisol secretion was about 2.9-fold in GL extract-treated rabbits. (tsung)

12. Protective Effect on Burns

In burn experimentation mice, the survival rate of GL extract-treated mice was 40% in comparison to a 0% survivor rate in non-treated mice. (tsung)

13. Anti-microbial Effect

Water extract of GL has an antibacterial and anti-virus effect on pneumococcus, streptococcus, staphylococcus and influenza virus. Alcohol and acetone extract of GL also have an antibacterial effect on Escherichia coli Shigella dysenteriae, and Bacillus. (tsung)

14. Hypoglycemic Effect

14.1 Blood Sugar Reducing Agent. Ganoderans A and B, a glycans of Ganoderma lucidum, was shown to have blood sugar reducing properties (Hikino, Konno, et al. 1985). Later the same group demonstrated that ganoderan B has a molecular weight of 7400 and contains D-glucopyranosyl b(123) and b(126)) linkages in the polysaccharide structure (Tomoda, Ganda, et al. 1986). They also isolated ganoderan C with molecular weight of 5800 and containing D-glucopyranosyl b(123) and b(126) linkages and a D-galactopyranosyl b(126) linkage in the polysaccharide structure. (tsung)

14.2. Kimura, et al, (1988) also showed that the water extract of Ganoderma lucidum reduces the blood glucose level in experiments with rats. (tsung)

15. Dental Caries Preventive

A primary cariogenic bacterium has been identified as Streptococcus mutans (Montville, Cooney and Sinskey, 1978; Hamada and Slade, 1980). Membrane-bound or extracellular glucosetransferase from Streptococcus mutans produces water-soluble and water insoluble glucans from sucrose. The glucans facilitate the accumulation of microorganisms on smooth tooth surfaces and subsequently dental caries is developed (Montville et al, 1778; Hamada and Slade, 1980). Ganoderic acids S 1 and C2, isolated from Ganoderma lucidum, have been identified to have inhibitory activity on glucosyltransferase from Streptococcus mutans (Hada, Hattori and Namba, 1989). The result suggests that the anti-plaque activity of Ganoderma lucidum is due to ganoderic acids S 1 and C2 if not all. (tsung)

16. Comparative Polysaccharide Bioavailability:

It appears that Ganoderma polysaccharides are better absorbed orally than those from most other mushrooms. When the edible mushroom Shitake (Lentinus) was provided to laboratory animals with tumors, tumor regression could be induced at a significant levels only when they were provided as 20-30% of the diet. By contrast, Ganoderma seems to be highly effective at relatively low oral dosages in both animals and humans.

Primary Combinations
Reishi is commonly consumed by itself. In addition it may be combined with other tonic herbs. Combine with:

1. Astragalus to protect the body and to strengthen the immune system
2. Zizyphus, Pearl, Asparagus Root and Polygonum Stem to build the Spirit
3. Cordyceps to tonify primal essence and to fortify immune functions
4. Schizandra to tonify and cleanse the Liver and beautify the skin

5. Schizandra and Polygonatum Sibericum to strengthen the mind

Varieties and Grading
Shen Nung said that there are at least six varieties of Ganoderma. He noted red, purple, black, white, green and yellow. Currently, one mainly finds red and black Reishi available in herb shops. Occasionally, a purple Reishi can be obtained, but usually not through normal channels. Purple Reishi is extremely rare.

The Black Reishi, Ganoderma sinensis, is fairly commonly available and can be found in most Chinese herb shops that carry bulk herbs. The older it is, the larger it becomes. But old age is not necessarily a virtue in Reishi. Reishi is at its best when it is still fresh and moist inside, not when it is old, dry and brittle. This species of Ganoderma tends to be unevenly shaped and can measure up to ten inches in diameter, though about six inch diameters are more common. If its skin is still highly glossy, it is good enough to use.

This variety is considered inferior, though it is certainly still a fine herbal tonic. Its polysaccharide content is low in comparison to the high quality red Reishis. Though the black variety is wild, it lacks potency and should be used only if higher quality Reishi is not available. The majority of Reishi products that claim to be using "wild" Reishi are using this black variety.

Wild Red Reishi is rare, but not as rare as Purple Reishi. This Reishi, which is the Reishi that Shen Nong was talking about, is much more potent and effective than the black variety. Red Reishi is Ganoderma lucidum, the primary Reishi. It is unlikely that you will find wild Red Reishi for sale in herb shops in America, but there are a few superior products available which utilize these mountain-collected mushrooms. The extraction yield from wild red Reishi tends to be very low, so the extracted products tend to be very potent. This is a sublime product. The Red Reishi commonly found in Chinese herb shops is not wild Red Reishi---it is most likely hot house Reishi.

Hot house Reishi can be of good quality or poor quality, but most of it is poor. Reishi can now be grown in hot houses in a medium of saw dust and a nutrient such as rice. Most Reishi products sold in America are of the hot house variety. In my opinion, most of this hot house Reishi is almost useless. These mushrooms tend to be small and lumpy in appearance and often grow irregularly. They are not really red, but tend to be a light, dull brown. They are inexpensive, but are worth almost nothing. Don't waste your money.

There are a few superior sources of hot house Reishi available in America. These are from folks that have obtained special strains of Reishi from the Japanese scientists such as Yoshi, who first developed the modern strains of Red Reishi. Then they are grown in superior media. These mushrooms tend to be large and red and look like real Reishi mushrooms. They smell fresh and rich. When you break one open, they have a pulpy interior that has a more subtle texture than the cheap cultivated varieties. These mushrooms can even be obtained in their mycelial state from some mushroom mail order houses, in which case you can grow your own fresh Reishi mushrooms. This is a real treat that I recommend very highly.

Reishi Mycelium: The actual fungus is not in fact the mushroom that we associate with Reishi. The mycelium is a whitish blob that grows into a piece of wood or consumes some sort of nutrient until the nutrient is gone. At a certain time of year, the mycelium puts out its marital apparatus, which is the mushroom that we see projecting out of the ground. The function of the mushroom is to reproduce. Reishi mycelium was not traditionally used as a tonic herb by the Chinese or Japanese. However, it has recently been discovered that the mycelium is very rich in the same polysaccharides that make the mushroom an effective health product. In fact, the mycelium has been found to contain much more polysaccharide than the mushroom, since the mycelium is much larger than the mushroom. This has led to many people using the mycelium in products. These products usually do not include the mushroom, but are simply ground mycelium. This has been widely accepted in America, but is looked upon with disdain in China and Japan. Specialists there point out that all the research has been done on the mushroom, not the mycelium and that the virtually miraculous health benefits of Reishi are found primarily in the mushroom. The mycelium is, to this day, not used in China or Japan. Though the mycelium may be useful, it does not match the efficacy and balance of the mushroom. They are not in the same league. This is especially true since virtually all mycelium is grown in hot houses on less than optimum nutrients.

Duan Wood Reishi. The real deal, when it comes to Reishi mushrooms, lies in the domain of what is known as "Duan Wood" Reishi. Reishi that is grown on certain specific varieties of wooden logs, without any chemicals, in a pristine mountain environment, is known as "Duan wood" Reishi. In nature, Reishi grows on a large variety of trees in mountain forests throughout Asia. Just as "we are what we eat," a Reishi mushroom, too, is what it eats. Depending upon the kind of wood a Reishi grows upon, the Reishi may be powerful and medicinally marvelous, or it may be weak or even useless. The best Reishi grows on certain kinds of old hardwood trees that are indigenous to certain regions of China. The Chinese have made a very thorough study of this, including conducting years of pharmacological studies on laboratory animals to determine which Reishi is the most potent, based on what kind of wood it is grown on.

The appropriate Duan wood trees are cut down and cut into short logs, usually about ten inches long. They are inoculated with Reishi spores that have been specially prepared to assure successful growth. These logs are then planted in soil in mountainous regions of China. In the spring, Reishi mushrooms shoot up through the soil in great abundance. Gradually over the period of a few months they mature. Growing Duan wood Reishi requires no pesticides or chemicals of any sort. In fact, chemicals ruin Reishi, so the government forbids it. Farmers who try to use chemicals are not allowed to grow Reishi again. All Duan wood Reishi is tested. The farmers I have talked to all say they don't ever use chemicals because they are totally unnecessary. Therefore, all Duan wood Reishi is totally organic.

Eventually the mushrooms produce a thick coating of spores. In June, one day in a great unison, all the mushrooms release their spores into the air. It is at this moment that the Reishi is perfectly ripe for harvesting. The farmers stay with the mushrooms day and night collecting them, and collecting the spores on plastic tarps that they spread out over the

Reishi. I have seen the farmers during this harvest, and they become completely brown as they are coated by spores. This is perhaps the most joyous harvest I have ever witnessed. The farmers seem to be in some kind of ecstasy during this ritual. The mushrooms are then sun dried and they are now ready for consumption. A second, but smaller harvest takes place about two months later.

Duan wood Reishi is grown from a genetic stock that was developed in Japan about twenty years ago by a Professor Yoshi. The Japanese government supported Dr. Yoshi's research to determine the most powerful genetic line of Reishi after it was discovered that Reishi could cure a type of cancer that was prevalent in Japan at that time. Yoshi collected hundreds of samples of wild Red Reishi from China and led a research team that studied the pharmacological effects of the various strains. The most potent strain, the champion of Reishi genotypes from a health promoting and medicinal perspective, was then made available to Chinese farmers by contract with the Chinese government. The farmers were taught a new method of cultivating Duan wood Reishi by these Japanese scientists. The Japanese subsequently bought all of the Duan wood Reishi for use in Japan. Only recently has a small amount of this extraordinary Reishi become available outside of China.

Duan wood Reishi is more than twice as potent as any other variety of Reishi mushroom available anywhere, with the possible exception of some wild Red or wild Purple Reishi. The Chinese and Japanese make extracts of it for injection and use it as a treatment for various forms of cancer. They also use it to treat hepatitis, arthritis and other immunological dysfunction's. It is also sold as a premium, and rather expensive, tonic for domestic use in China and Japan, and more recently in America. Research revealed the exact moment to harvest the Reishi to maximize the quantity and potency of the active constituents. These Reishi, however, should be used within one year of harvest or they lose much of their potency.

Wild Purple Reishi. These wild mushrooms grow in the Chang Bai Mountains, north of North Korea in Jilin province. They are extremely rare. They are beautiful specimens. They are not entirely purple. They have both red and purple elements. In fact they look like red Reishi at first glance, but upon examination they have a significant purple coloration in the heart of the mushroom cap. These are revered in much the same way as wild Chang Bai Mountain Ginseng. Many people believe that Reishi originated in the Chang Bai Mountains and that Purple Wild Reishi is the great ancestor of all Reishi. It is a Purple Wild Reishi upon which the White Snake legend was based. It is considered to be the ultimate Spirit tonic.

Reishi Spores have recently become a major source of interest in China and Japan. Reishi spores contains huge quantities of polysaccharides and other ingredients which strengthen the immune system. The spores are now being used to treat liver and stomach cancer in China. As a health tonic, it is believed that the spores are even more potent that the mushroom cap itself. The spores, being seed, are believed to contain an abundance of Jing and are therefore considered to be an anti-aging substance. The spores are considered to be the virtual "elixir of life" to Asian herbalists. Spores are just now becoming commercially available in the West, albeit in small quantities and only through special sources. The spores must be purified, which is a difficult task because of their fineness. Traditionally,

spores were believed to not only provide Jing, but to be the most subtle aspect of the Reishi and thus to develop Shen.

History
Ganoderma was first described more than 2400 hundred years ago during the Shu Dynasty. The first detailed description was written in Shen Nong's Herbal, attributed to the legendary herbalist-emperor Shen Nong (Han Dynasty, 206 B.C.~ 8 AD). Reishi was classified by Shen Nong as a superior herb that may be taken continuously without side effects. A "superior herb" was defined as a substance that serves to maintain life, causes no side effects by continuous use, and promotes radiant health and long life by helping to harmonize the functions of the body, mind and spirit.

Shen Nong said of Reishi that "if eaten customarily, it makes your body light and young, lengthens your life and turns you into one like the immortal (a hermetic adept) who never dies."

Specifically, regarding Red Reishi (which is the variety that is prevalent today), Shen Nong said:

"The taste is bitter, its atmospheric energy is neutral, it has no toxicity, it cures (removes) the accumulation of pathogenic factors in the chest, it is good for the Qi (functional activities) of the heart including mental activities, it tonifies the Spleen, increases wisdom, improves memory so that you won't forget, long-term consumption will lighten your body, you will never become old, it lengthens years, it has spiritual power, and it develops Shen so that you become a "spirit-being" like the immortals."

The first Emperor of the Chin Dynasty, sometime around 214 BC heard rumor that the "herb of immortality," which was considered to be one and the same as Ganoderma, grew abundantly in the "Eastern Paradise." The Emperor sent 500 men and 500 women (the women being selected for their beauty), by ship to find this mystical island and its magical herb. The party never returned, but legend asserts they landed in Japan and colonized the island.

Reishi was further immortalized as the ultimate healing substance and spiritual herb of China in the classic Chinese fairy tale, "The White Snake," wherein a magical Reishi is stolen from the gods by a magical female being in order to save the life of her human lover. The celestial battle for the Reishi rivals the battles portrayed in Homer's Iliad and is a story known by virtually every Chinese.

In the 16th Century pharmacopoeia Ben Cao Gang Mu, which contains hundreds of natural medicines the Chinese have used for thousands of years, compiler Li Shi Chen described the uses of Reishi. "It benefits the life energy, or qi of the heart, repairing the chest area and benefiting those with a knotted and tight chest." He wrote that it also increases intellectual capacity and banishes forgetfulness. "Taken over a long period of time, agility of the body will not cease, and the years are lengthened to those of the Immortal Fairies."

Reishi can be seen depicted everywhere in Asian art, architecture and design. Paintings, embroideries, buildings, sculpture and carvings of the gods and immortals virtually always included Reishi as a symbol of the divine, as a symbol of longevity and good luck. Reishi was a favorite ornamental design feature of the royalty and the wealthy, sometimes as much for good luck as for its actual health benefits. Depiction's of Reishi are seen everywhere in the Forbidden City and the Summer Palace in Beijing, a testimony to how highly valued it was everywhere in Chinese society throughout history. Even the traditional scepter of the emperors of China was a stylized Reishi, called a Ru Yi. Undoubtedly, the first scepter was indeed a real Reishi. There is a display in the Summer Palace of the history of the imperial scepter. It displays scepters back to deep antiquity, and sure enough the earliest existent scepters were precise wooden copies of a Reishi mushroom. Traditionally in China, Ganoderma was considered to be among the most valuable possessions a new bride could bring into a marriage because of its many benefits.

Chinese mushroom found to have powerful anti-aging benefits

Monday, October 11, 2010 by: Jonathan Benson
http://www.naturalnews.com/030008_cordyceps_anti_aging.html

The cordyceps mushroom is back in the spotlight again, except this time for its anti-aging properties. Researchers from Nu Skin Enterprises, Inc., and LifeGen Technologies have found that Cordyceps sinensis (Cs-4), a traditional Chinese mushroom, is a powerful anti-aging food with the ability to improve energy metabolism, decrease fatigue, bolster endurance levels and lengthen lifespan.

Back in March, NaturalNews covered breakthrough research on the power of cordyceps to treat cancer (http://www.naturalnews.com/028409_c...), but the new research has found even more beneficial uses for this emerging superfood. By encouraging human genes to express in ways that promote longevity, cordyceps has incredible potential in helping to reverse the negative effects of aging.

"We're making great breakthroughs in gene expression science that have application in the fields of health and longevity," explained Joe Chang, Ph.D., chief scientific officer and executive vice president of development at Nu Skin. "These studies ... help validate the critical role gene expression modulation plays in the aging process. We believe that the future of anti-aging is in developing consumer solutions that support youthful gene expression."

In tests, cordyceps successfully altered the expression of certain gene clusters that typically begin to slow down their production of cellular mitochondria around the age of 30. The mushroom's compounds sparked them back to youthful production levels.

Other results included a demonstrated lengthening of the maximal and average lifespans of the populations on whom the mushroom was tested, as well as significant increase in antioxidant activity that reduced oxidative damage from free radicals.

Presented at the recent Oxygen Club of California 2010 World Congress, the two studies received the renowned DSL Nutraceutical Research Award.

semperbry76 - May 18, 2011 03:58 AM (GMT)

Cordyceps is one of the absolute superstars of the Chinese Tonic herbal system. It is an extremely effective and powerful life enhancing agent, ranking right up there with Ginseng, Reishi and Deer Antler. Because it is rare, potent and highly treasured, like Deer Antler, it is very expensive. This rare and precious herb is considered to be a moderately Yang primal essence (Jing) tonic of the highest stature. It is a mushroom that consumes the body of a particular kind of caterpillar in mountainous regions of China, Mongolia and Tibet. It has enormous renown as a supersonic, and is said to build marital and physical power, mental energy, the immune system and is universally believed in the Orient to prolong life.

Cordyceps is used to strengthen the body and mind at a fundamental level. It is said to be able to increase the "primary motive force for life activities." Because it contains both Yin and Yang it can be used by anyone safely and over a long period of time. It replenishes Yin Jing, restoring the deep energy expended as a result of excessive exertion, adapting to stress or from aging. Cordyceps is thus one of the primary herbal substances used in tonic herbalism as an anti-aging agent and for the purposes of rejuvenation.

Cordyceps is very widely used for the purposes of strengthening the primal Kidney functions, which include marital functions, brain power, structural integrity and healing ability. It is a very powerful Yang tonic. As a marital tonic, Cordyceps is considered to be one of the best. It is not as quick acting as the best of the Yang tonics like Deer Antler, Epimedium and Sea Dragon, but it has a profound long range strengthening capacity. It is commonly used for impotence, marital malaise, frigidity and infertility.

Consistent use of Cordyceps helps to strengthen the skeletal structure, and specifically benefits the lower back region, the knees and ankles. It is used for backache due to injury, fatigue, stress or simple aging.

Cordyceps is also a major Lung tonic. It can be used to strengthen respiratory power in those who require extra energy in order to perform physical work (e.g. labor, sports or exercise) or it can be used by those who suffer from deficiency of Lung power. It is especially beneficial to those who suffer chronic Lung weakness with cough, wheezing or shortness of breath.

Cordyceps is considered in Asia to be a powerful athlete's tonic. It has no steroidal constituents, but greatly improves performance and muscle building capability.

Cordyceps is highly regarded in China as a tonic for those who are recovering from an illness or an operation, or after giving birth. In these cases, the Cordyceps helps the patient recover their physical power, to improve their appetite, and to protect the body from infection.

Many studies now indicate that Cordyceps can help the body resist a wide range of pathogenic bacteria, fungi and viruses. Cordyceps is used in Asia to help treat fungus and yeast infections, and intensive research is being conducted at dozens of institutions in China and Japan relating to the potential of Cordyceps to treat certain varieties of cancer.

Treasures
Yin and Yang Jing and Qi.

Treasure Rating
*****

Atmospheric Energy
Yin and Yang Jing and Qi.

Organ Meridian Systems
Kidney and Lungs

Part Used and Form
Natural, wild Cordyceps includes the complete fungus (mushroom) which is attached to the forehead of the carcass of a caterpillar. Occasionally, insects form the growth substrate instead of the more common caterpillar. Modern fermentation type of growth includes just the fungus, and does not include the caterpillar. The "caterpillar" has actually been totally transformed into fungal mycelial mass by the time the herb is

collected. There is no animal matter left and therefor the herb is vegetarian.

Primary Functions
To nourish Jing (both Yin and Yang), to strengthen the Kidneys and Lungs and to tonify Qi. To relieve depression of Liver Qi.

Qualities
Cordyceps is one of the absolute superstars of the Chinese Tonic herbal system. It is an extremely effective and powerful life enhancing agent, ranking right up there with Ginseng, Ganoderma and Deer Antler. Because it is rare, potent and highly treasured, like Deer Antler, it is very expensive. It is the main ingredient in a number of expensive elixirs and tonic formulations.

Cordyceps is used to strengthen the body and mind at a fundamental level. It is said to be able to increase the "primary motive force for life activities." Because it contains both Yin and Yang it can be used by anyone safely and over a long period of time. It replenishes Yin Essence (Yin Jing), restoring the deep energy expended as a result of excessive exertion, adapting to stress or from aging. Cordyceps is thus one of the primary herbal substances used in tonic herbalism as an anti-aging agent and for the purposes of rejuvenation.

Cordyceps is very widely used for the purposes of strengthening the primal Kidney functions, which include marital functions, brain power, structural integrity and healing ability. It is a very powerful Yang tonic. As a marital tonic, Cordyceps is considered to be one of the best. It is not as quick acting as the best of the Yang tonics like Deer Antler, Epimedium and Sea Dragon, but it has a profound long range strengthening capacity. It is commonly used for impotence, marital neurasthenia, frigidity and infertility.

Consistent use of Cordyceps helps to strengthen the skeletal structure, and specifically benefits the lower back region, the knees and ankles. It is used for backache due to injury, fatigue, stress or simple aging.

Cordyceps is also a major Lung tonic. It can be used to strengthen respiratory power in those who require extra energy in order to perform physical work (e.g. labor, sports or exercise) or it can be used by those who suffer from deficiency of Lung power. It is especially beneficial to those who suffer chronic Lung weakness with cough, wheezing or shortness of breath.

Because of Cordyceps' powerful deep tonifying action, it is used for a wide range of problems due to weakness. Cordyceps has always been used to fortify the defensive system of the body and large amounts of recent data indicate that Cordyceps is a very potent immune system potentiator. Many studies now indicate that Cordyceps can help the body resist a wide range of pathogenic bacteria, fungi and viruses. Cordyceps is used in Asia to help treat fungus and yeast infections, and intensive research is being

conducted at dozens of institutions in China and Japan relating to the potential of Cordyceps to treat cancer and HIV infection. Researchers in Japan and China have isolated a number of polysaccharides in Cordyceps which strengthen the immune system, and at least one, CO-1, has been shown to have strong anti-tumor activity. Maintaining the immune system is one of the mechanisms that can slow down aging and prevent both degenerative and acquired diseases.

Other studies have shown that Cordyceps can have a benefit in the vascular system as well. Cordyceps improves the function of the micro-circulation and improves efficiency at the capillary level. Cordyceps has been shown to help regulate blood pressure and to strengthen heart muscle.

A Cordyceps compound (70% Cordyceps, 15% Lentinus, 10% Gyrophora, etc.) was tested by the Medical Research Institute of the China National Physical Culture and Sports Commission. They reported that:

"the formulation (known as LCOL)...can increase stamina in exercising, stimulate heart and lung functions, relieve fatigue from excessive exercise and mental work, improve the capacity of brain and body cells to resist toxins from entering the cells, improve appetite, improve sleep and ultimately prolong life. In addition, LCOL boasts another remarkable function, the ability to arrest cancer cells miraculously, which has been proven by the Basic Medical Science Research Institute of the Chinese Academy of Medical Science.
LCOL is one of the best tonics to relieve uneasiness of body and mind, promote the function of lung and kidney, make one strong and healthy and recover from illnesses promptly. It is suitable for all ages and persons, old or young, men or women, especially for daily health care of the middle-aged and the old. If middle-aged couples use it, they will enjoy romance fully. If the examinee uses it, it will make them energetic and calm close to the examination. LCOL is suitable for any season and any state of the human body, without any side effect."

This quotation fully reflects how the Asian world perceives Cordyceps.

As described above, Cordyceps is considered in Asia to be a robust and virtually miraculous athlete's tonic. Cordyceps has attained even greater fame in the last few years since the quintessentially successful track coach, Ma Jia Jun, created a secret formula, based on Cordyceps and Tortoise Shell, which he gave to his China National Women's track team. Subsequent to their taking this formula, which was made with Cordyceps as the dominant ingredient, the women of this team came to dominate the world track scene for more than two years. The members of the team broke many world records, most of which they still hold.

During their reign, they were accused of taking steroids or other illegal drugs, since their rise to dominance was so quick. But all drug testing proved negative. No trace of any

illegal substances have been detected in their blood. None of Ma's track women were ever found to be consuming anything other than his secret Chinese Tonic herbal formula. Due to a number of reasons, mostly associated with personality conflicts between Ma and his track stars (he refused to let them grow their hair, to keep much of their prize money or to keep the luxury cars they won as prizes on the world track circuit, for example), virtually all the women refused to stay in Ma's camp and they all went independent. No longer having access to his secret Cordyceps recipe, all of the stars have lost their dominating athlete prowess. In 1995, a year after leaving Ma, only one of the former superstars qualified for the National Team which represented China at the World Championships.

Ma's recipe is still secret, although the whole world knows of its existence. We only know that the two dominant ingredients are Cordyceps and Tortoise Shell, a major Yin Jing tonic.

Cordyceps is highly regarded in China as a tonic for those who are recovering from an illness or an operation, or after giving birth. In these cases, the Cordyceps helps the patient recover their physical power, to improve their appetite, and to protect the body from infection. When blended with other tonics such as Ginseng, Ganoderma, Lycium or Astragalus, Cordyceps' power is just increased as the synergy of the various herbs results in an even more powerful tonic.

Primary Combinations
Can be used by itself, but almost always combined with other tonic herbs. Combine with:

1. Ginseng Root to build qi, yin and yang
2. Dang Gui to build blood and yin
3. Gecko and Morinda to tonify Kidney yang and yin
4. Lycium, Polygonum and Rehmannia (steamed) to tonify blood and Kidney and Liver yin
5. Glehnia, Donkey skin glue and Fritillary bulb for chronic cough and asthma due to lung deficiency

Varieties and Grading
Cordyceps is one of the most rare and expensive herbs in Chinese Tonic herbalism. It is primarily collected wild in the high mountainous regions of Tibet, and on the high peaks of Yunnan, Sichuan, and Gansu Provinces of China. It can also be grown in a semi-wild manner, but this Cordyceps will be of lower quality (it is still very good). A rule of thumb---low cost Cordyceps is not wild. The wild Cordyceps will always be the most expensive. Generally, the larger the whole Cordyceps (caterpillar and mushroom), the more expensive---but not always. There are occasional species of caterpillar which are larger but not of high quality. In buying Cordyceps you have to trust your herbalist. Fortunately, all Cordyceps is good---it's just that some is better than others. High grade Cordyceps is light brown in color and neat. The caterpillar should have eight pairs of

legs, the four middle ones being predominant. The mushroom, or stroma, should be slightly longer than the larva's body and will be slightly twisted. In good quality Cordyceps, most of these stroma will be intact. Cordyceps possesses a rich and not unpleasant flavor.

Cordyceps grows in Tibet, and in Yunnan and Sichuan Provinces of China. Tibetan Cordyceps is considered to be the best. It is highly sought after and is more expensive than that from other sources. Wild Cordyceps from Tibet is the best Cordyceps in the world. The very best Cordyceps, the kind the emperor would want, is called "King Cordyceps." It is graded according to size, the larger the better. Large ones command a hefty price, in the same league with premium Ginseng and Deer Antler.

However, the difference between Tibetan Cordyceps and wild Yunnan or Sichuan Cordyceps is actually not that significant so you should worry about it. However, there is a big difference between wild and cultivated Cordyceps. They look alike, but studies have shown that wild Cordyceps is richer in certain components and that the proportions of components is different, which probably makes a difference in the activity. However, cultivated Cordyceps is still a premium tonic herb, and if this is what you can find, its still great (««««). The Cordyceps most commonly found in Chinese herb stores is cultivated. It comes in neat packages. But wild Cordyceps from Sichuan and Yunnan are readily available if you ask for it. Tibetan, however, is rare and precious.

In the last several years, it has become possible to grow a number of fungi by "fermentation" technology. The fungus is literally grown in large tanks, and in just a matter of days a large quantity can be produced. The technology has now become highly advanced and is making previously rare herbs like Cordyceps and Ganoderma much more accessible. Many studies indicate that the chemical nature of this biotechnology Cordyceps is almost identical to that of the wild variety and pharmacological and clinical studies seems to farther confirm this. The Cordyceps contained in most commercial products is produced by this technology.

Personally, I am a firm believer that there is something special in the wild variety that may not be testable in a laboratory. The same holds true for wild Ginseng, wild Ganoderma, wild Astragalus, or the antler of wild deer, etc., when compared to their cultivated cousins. It may be the stress the wild plant or fungus or animal had to endure which creates some of the micro-chemistry that ultimately has subtle but profound effects on the body and mind of the one who consumes the final herbal substance. Though each batch may be slightly different, this is the way nature meant herbalism to be. The advantage of the wild variety lies precisely in this attribute---its slight variability and subtle wildness. This subtle advantage is important to the true tonic herbalist, who expects variation both in life and in his or her herbs.

However, the new biotechnological approach to growing Cordyceps possesses two truly great advantages. The greatest advantage of the new technology is that the herbal

substance, in this case Cordyceps, can be highly controlled by scientific means during its growth and "standardized" so that every batch is virtually identical---and in a sense, "perfect." This is very important in pharmaceutical terms because without standardization, it is difficult or impossible to develop drug-type standards for substances like Cordyceps. Once an herb can be standardized, all kinds of studies can be conducted that will be accepted by the scientific community, including our FDA. However, standardization itself does not make a product effective, or great or anything else. What makes a product great are its benefits and safety, and both wild Cordyceps and cultured Cordyceps alike possess both these qualities.

The second benefit of growing Cordyceps by fermentation technology is that it is far less expensive to grow a ton of Cordyceps in a tank in just a matter of days than it is to collect of ton of wild Cordyceps off the dangerous cliffs of a Tibetan and Sichuan peak. Collecting wild Cordyceps is dangerous work, resulting in deaths every year as collectors fall off cliffs trying to collect this valuable treasure. True, high quality wild Cordyceps now sells for well over a thousand dollars a pound in cities like Hong Kong, Tokyo, New York or London. The culture-grown Cordyceps is available at a third of the cost, with approximately the same benefits. Fermentation technology makes this substance available to anybody who wants it, and this is great news for the world. Until now, few people have even heard of Cordyceps because of its rarity. In the next decade, as a result of the new fermentation technology, Cordyceps will become known throughout the world.

There is one more advantage, at least by some people's standard, to the new fermentation Cordyceps. There's no worm! Wild Cordyceps, by weight, is mostly caterpillar. Americans generally don't eat caterpillars. Certainly, even if wild Cordyceps was readily available, most Americans would be turned off by the sight of what is obviously a caterpillar (most people call it a "worm") or even just the thought of it. Frankly, it doesn't matter at all. The caterpillar is clean and healthful (it's full of protein and special nutrients). But for vegetarians and those who simply don't want to consume caterpillars, the new technology provides the solution. The fermentation technology does not include the caterpillar in the growing process. The fungus is grown without the use of animal nutrients and the result is a 100% pure "vegetarian" health product.

View Full Version: Red Dates [JUJUBE DATES]

Title: Red Dates [JUJUBE DATES]

craig-oxley - October 1, 2009 03:16 PM (GMT)

Red Dates Tea Tthis recipe was published in Ng Siong Mui's book, "The Chinese Pregnancy and Confinement Cookbook.")

8 red dates, stoned
50g (2oz) black beans, pan fried without oil
10g (0.3oz) dried longan flesh
20g (0.7oz) Codonopsis pilosula (Franch) Nann (tong sum)
4 slices of old ginger

1. Bring 1.25 litres (7.5 cups) of water to boil. Add all the ingredients and keep boiling for 15 minutes.
2. Reduce heat and simmer for 1.5 hours until it is reduced to approximately 800 ml (4 cups)
3. Sieve the tea and keep the tea in a flask. Discard cooked ingredients. It may be drunk as often as you wish.

Here is another red date tea recipe I found from www.holisticmasters.com:

Herbal Indications:
Red date tea is a mild tonic for the circulation and Qi system; anemic; indigestion; loss of appetite; short of breath; insomnia due to nervousness; lack of strength and energy; diarrhea; depressive moods.

Contraindications:
Allergic reactions to the red date.

Others:
Usually the seed is removed from the red date because it causes dryness of mouth. It is a very common ingredient in vegetarian cooking.

Common Dosage:

10 grams

Ingredients:
10 seedless Red dates, 30g Dangshen (comes from the same family as Sage and is used for blood stagnation and regulating periods).

Preparations:
Simmer the ingredients in 500 - 800ml water for 45 - 60 minutes. Filter. Use as a fluid supplement.

Others:
This recipe is helpful for depression , especially before childbirth; promotes energy; general weakness with anemic symptoms; frequent palpitation and shortness of breath; menopause symptoms.

Jujube General Information

Jujube has been a part of Chinese medicine for at least 2,500 years. The Chinese used it as a qi tonic to strengthen liver function. Jujube has a pleasant taste as well as a high nutritional value. The fruit contains vitamins A, B2, and C, and saponins, flavonoids, sugars, mucilage, calcium, phosphorus, and iron. Though the West had dismissed Jujube as having any medicinal qualities, since the 17th century, Europeans have recognized its usefulness as a tonic for all parts of the body, especially the lungs and kidneys.

Jujube Uses & Scientific Evidence For

Today, depending on the culture, all parts of the tree are used. Pits that have been aged for 3 years can be used to treat wounds and abdominal pain; the leaves for typhoid fever and parasites in the intestinal tract. The heartwood is a powerful blood tonic; the Jujube root is used to promote hair growth and for treating fevers caused by smallpox, measles, and chickenpox. Jujube fruit is often prescribed for weight gain and increased muscular strength and stamina. The bark is used to make an eyewash for inflammations. A Jujube tonic is said to have positive effects when used in part of a treatment plan for hepatitis and cirrhosis, and tones the spleen and stomach. It has mildly sedative effects and can be taken for restlessness and irritability. Jujube fruit is used to treat coughs and congestion, soothe internal organs, and reduce water retention.

Jujube Dosage Information

Jujube is an ingredient in many products. For best results, read and follow product label

directions.

Jujube Safety & Interaction Information

Jujube is general regarded as safe when taken in the recommended doses; however, using it to treat hepatitis and cirrhosis should only be done under the supervision of your physician. It is not meant to replace the quality healthcare a licensed physician can provide. Safety in young children, or pregnant or nursing women is not known.

JUJUBE

food and herbal formula ingredient

by Subhuti Dharmananda, Ph.D., Director, Institute for Traditional Medicine, Portland, Oregon

Jujube is known in China as zao; it has a history of use there that can be traced back continuously to the Han Dynasty, about 2,000 years ago. The usual English term for the

fruit is “Chinese date” and that is because it shares a similar size, stone, and sweetness with the date that we know of from the Date Palm, but it is entirely unrelated botanically. The Chinese fruit is commonly called “jujube” and the botanical name reflects this: Zizyphus jujuba. The plant belongs to the Rhamnaceae, the Buckthorn Family, so-named because of the prevalence of thorny species (rhamnos is the Latin for a thorny bush).

There are two types of the fruit commonly found on the Chinese market: red and black. The red one is called hongzao (hong= red); this one is used for food, and it is collected in vast quantities. The dark brown or black one is heizao (hei= black), more often called dazao (da=large), since this one is somewhat larger. These are not different species but different types, just as one can find, for example, a variety of small red apples and another of large green apples. The black date is steamed, dried, and then smoked; the last part of the processing gives it the characteristic smoky fragrance and flavor.

The fruit is incorporated into the medical tradition in two ways. As a nourishing food, it is thought to tonify qi and strengthen those who are weak and it is especially given to children who would not tolerate a bitter or acrid herb formula, but can consume these fruits. It is used in medicinal formulas to moderate the taste and effect of potent herbs.

In the book The Food of China (1), this description of the fruits is given:

…the main fruit of China’s core area is the jujube or Chinese date. A thorny bush or small tree of the dry parts of North China, this buckthorn takes over railroad embankments, city yards, factory dumps, loess cliff breaks—anywhere too poor and dry for anything else to grow. A favorite yard tree, it bears fruits that look and taste so much like dates that the Western term “Chinese dates” is matched by the Chinese term “foreign jujube” for the true date, known in China as an import since the early Middle Ages. Jujubes are brown or black. Believed to be so powerfully strengthening and health giving, these fruits are fed to infants and used as nutritional aids. Red ones are believed particularly good for the blood [because of their color], black ones for the body in general. A delightful paste of walnuts and jujubes is often eaten for health—the brain-shaped walnut kernels strengthen the brain.

The Indian Materia Medica (2) says of it: “Fruits of the cultivated varieties resemble the crab-apple in flavor and appearance and the pulp is mealy and sweet; they are more palatable and less acid than the wild varieties. When ripe and dried, it is a mild laxative and expectorant. Fruit is often eaten with vegetables; it is also made into a preserve by removing the stone and adding chilies and salt, and the whole fruit is made into a cake.”

The desiccated fruit has been analyzed for nutritional qualities; per 100 grams, it has (3):

Calories: 350; from fat, protein, carbohydrate as follows:

Protein: 7.3 g

Fat: 1.2 g

Carbohydrate: 84 g

Fiber: 4g

Ash: 3.0 g; this is minerals, mainly the following of interest:

Potassium: 1,050 mg

Phosphorus: 168 mg

Calcium: 130 mg

Sodium: 12 mg

Iron: 3.5 mg

Vitamins: about 0.5 g, mainly the following

Vitamin C: 300 mg

Vitamin A: 125 mg

Niacin: 2.8 mg

Riboflavin: 0.2 mg

Thiamine: 0.1 mg

The fruit without water is 84% sugar, which explains its very sweet taste. In a “serving” of 10 grams of desiccated fruit pulp (derived from about one-half ounce of edible dried fruit with the pit removed), the only significant nutrients for a modern diet would be 3.6–3.7 grams of protein and 30 mg of vitamin C.

There may be very little of any “active constituents” in the fruit. Most of the reports of such active ingredients are actually due to errors of interpretation, in that data is mistakenly taken from the analysis of seeds of Zizyphus spinosa (Chinese: suanzaoren) rather than the fruit pulp of Zizyphus jujuba. Zizyphus spinosa, known as spiny zizyphus, wild zizyphus, or sour jujube, yields glycosides that may have significant pharmacological action.

Jujube became a major component of herbal formulas largely from the influence of the Shanghan Lun (ca 200 A.D.). About one third of the Shanghan Lun formulas in

decoction form utilize a group of three herbs in support of the main ingredients of the formula: fresh ginger (2–3 liang), seared licorice (2–3 liang), and jujube (4–12 pieces, cut or shredded). The unit of liang at this time in China's history was around 15 grams; 12 pieces of the jujube fruit (dazao) would be about 1 liang. According to the traditional view, jujube and licorice aid in harmonizing the formula; jujube and ginger regulate the spleen and stomach and harmonize the ying and wei qi. Jujube, a moistening agent (this is mainly because of its sugar content), may cause some abdominal distension, which is prevented by ginger. Ginger, which is stimulating and drying, is toned down by jujube. From the modern view, ginger and licorice would be the main active components of the trio, while jujube would add to the sweetness and, presumably, reduce the sharp spiciness of ginger, at least by taste.

The sweet taste of jujube (and licorice) was thought to counteract toxicity of potent herbs. Jujube is described in the Annotation of Shen Nong's Herbal: "The herb, being sweet in taste, removes poison of any substance, and is used to harmonize drugs in a prescription (4)." The book Chinese-English Manual of Commonly Used Herbs in Traditional Chinese Medicine (5) lists this action of jujube: "to moderate the potency of drugs: for counteracting the toxicity or side effects of potent drugs, such as genkwa, euphorbia, lepidium, etc." The use of jujube to counter side-effects of genkwa, euphorbia, and lepidium was evident in the Shanghan Lun formulas. In Commonly Used Chinese Herb Formulas with Illustrations (6), the traditional formula Tingli Dazao Xiefei Tang (Lepidium and Jujube Combination) is listed, and this is mentioned: "To prevent its violent action from harming the lungs, lepidium is subordinated to jujube, which soothes the stomach and harmonizes the action of lepidium so that normal respiration is not harmed." Genkwa and euphorbia appear together in a single prescription of the Shanghan Lun called Shizao Tang, literally, Ten Jujubes Decoction. According to Formulas and Strategies (7), "The name of this formula is a tribute to the importance of the ten jujubes which are taken to moderate the harsh, downward-draining action of the other herbs, and thereby protect the stomach qi." The hot, spicy herb evodia is a key ingredient of Wuzhuyu Tang (Evodia Combination); according to Formulas and Strategies: "The envoy, sweet jujube, moderates the acrid, drying properties of the chief and deputy ingredients [evodia and ginger].

What is it about jujube that might have these functions? Based on our modern knowledge, there is probably no actual effect on toxicity of herbs, but only the action of making the decoction seem less drastic in taste, basically by adding sugar. Similarly, the "harmonizing effect" may actually refer to moderating the taste in decoctions, so that they could be better tolerated, rather than suggesting some other integration of the herbal actions. It is possible that the powerful taste of the strong decoctions—when taken without jujube— overpowered some individuals, making them react promptly—not just to any toxicity (which might be there because of the ingredients used) but also because of the nauseating flavor.

Proper Use of Jujube Today

Jujube is included in some traditional style formulas that are made in pill form, but it is probably not an essential ingredient in those cases: it is present in very small quantities and not a factor in the taste of the formula (since it is swallowed without tasting it). However, for those prescribing decoctions, or dried decoctions (granules) taken in tea form, jujube may still serve the same purpose as in ancient times: for affecting the taste. Most of the toxic herbs are no longer used, so that there is not necessary to worry about counteracting their toxicity, but several herbs with very strong taste are still present, such as coptis, phellodendron, and evodia. The amount of jujube used must be adequate to the task: about 10 grams of the fruit or 2 grams of the granules for a one-day dose.

The ancient claims about its extraordinary nutritive qualities may reflect two aspects of jujube: first, persons who were especially weak and unable to eat ordinarily might find the mild and sweet taste of jujube acceptable and at least get some calories (e.g., about 40, still very little) and a small amount of protein, especially valuable if jujube was added to a nutritional dish to make it more palatable; second, persons who did not have much fruit in their diet might have had a low vitamin C level, which could be corrected with a relatively small quantity of jujube fruit or its extract.

There is some tendency to think of herbs listed as qi tonics in the Materia Medica to be rather potent in their effect on qi. However, this is not necessarily the case. If jujube was mainly used to ameliorate the taste of decoctions and to lower the toxicity of potent herbs, it would be relied upon heavily, but not necessarily because it would be a potent qi tonic. Its inclusion in that section of the Materia Medica comes about mainly because of its sweet taste (and lack of other dominant tastes that might shift it to another category).

We may examine one of the more famous formulas with jujube, the combination of licorice, wheat (floating wheat grains), and jujube (Gan Mai Dazao Tang), for treatment of emotional distress (8):

Wheat (fuxiaomai) 15 g, Jujube (dazao) 14 g, Licorice (gancao) 9 g

The main ingredient is the wheat, but we would be unlikely today to consider this food to be a useful sedative. In the same manner, considering the relatively innocuous nature of jujube, it would not be considered a strong sedative (but the seed of the “spiny zizyphus” would).

Unlike some of the other mild herbs of Chinese medicine, jujube would not become more potent by using a larger dose. At a certain point, the sweetness simply becomes overwhelming, but there is not a large amount of another active component that comes along with it. Therefore, its usual dosage, which would correspond to about 6–15 grams of dried fruit, is adequate. A 15 gram portion would provide the equivalent of about 3

teaspoons of table sugar.

Treasures
Qi and Spirit

Treasure Rating
***1/2

Atmospheric Energy
Neutral

Organ Meridian Systems
Spleen and Stomach

Part Used and Form
Dried ripe fruit

Primary Functions
Replenishes Qi in the middle burning space (Spleen and Stomach), nourishes blood, soothes the mind, moderates the actions of other herbs in a formula

Qualities
Jujube is a very commonly used herb, especially in formulas that use Ginseng. It is the classic side-kick to Ginseng. Anytime you use Ginseng, you can use Jujube. The date is believed to enhance the activity of Ginseng while smoothing out any rough edges the Ginseng may have. It harmonizes the ingredients in a formula, making the whole formula smooth in both taste and action. However, it is much more than just an adjunctive herb. It provides excellent energy and is a powerful Qi tonic in its own right.

It is an excellent tonic to the Spleen and Stomach, helping these organs extract the energy from food and drink at maximum efficiency. It is also an excellent blood tonic. Jujube also has an emotionally calming effect. It is a mild Spirit stabilizer.

Primary Combinations
Combine with:

1. Ginseng to tonify the Spleen and to build qi
2. Dang Gui and White Peony Root to tonify blood

Varieties and Grading
The smaller the dates, the better. Be sure that the dates are fresh and free of insects. They are highly nutritious and are easily and readily infested with moths and other creatures. Throw them out if you find any larvae. Where there's one, there are usually many more hidden away. The skin of a good quality Jujube should be firm, radiant and deeply wrinkled. If the dates are too large or too most, they will not be powerful. Remember, an herbalist can judge you by how you pick your Jujubes. If you select small ones, they will know that you know what you are doing, they will respect you and they will start showing you better quality goods. Most novices, of course, think that big, juicy dates are best.

Contraindications
Do not use when you are suffering from excessive phlegm, food retention, abdominal bloating and parasites.

View Full Version: Elderly people should take up T'ai Chi, say academ

Title: Elderly people should take up T'ai Chi, say academ

TheUnhivedMind - May 17, 2011 04:04 AM (GMT)

Elderly people should take up T'ai Chi, say academics

Elderly people should take up the gentle martial art of T'ai Chi for the sake of their physical and mental health, according to academics.

By Martin Beckford, Health Correspondent 11:30PM BST 16 May 2011
http://www.telegraph.co.uk/health/healthne...-academics.html

A new study has found that the ancient Chinese exercises, enjoyed by millions of people every morning, can help pensioners avoid falling injuries and boost their psychological well-being.

This is because its slow movements improve balance while its deep breathing techniques aid relaxation.

The authors of the paper, published online in the British Journal of Sports Medicine on Tuesday, conclude: "Our overview showed that T'ai Chi, which combines deep breathing and relaxation with slow and gentle movements, may exert exercise-based general benefits for fall prevention and improvement of balance in older people as well as some meditative effects for improving psychological health.

"We recommend T'ai Chi for older people for its various physical and psychological benefits."

T'ai Chi was developed hundreds of years ago in China as a series of graceful physical movements combined with deep breathing, and is now thought to be practised by 2.5million people around the world.

It is based on the Confucian and Buddhist philosophy that the exercises can balance

the opposing life forces of “yin and yang” that govern our health.

But Dr Myeong Soo Lee at the Korea Institute of Oriental Medicine and Prof Edzard Ernst of the Peninsula Medical School at the University of Exeter, say that “regardless of these assumptions”, the slow movements and short postures undoubtedly affect the muscles and circulatory system.

Because the “slow motion” martial art is now backed by several charities and support groups for sufferers of different diseases, the researchers looked back at the “uncertain” evidence for its clinical effectiveness.

They found 35 existing systematic reviews of T’ai Chi papers published between 2002 and 2010, which examined whether or not the exercises helped conditions ranging from breast cancer to heart disease, as well as the ailments of old age.

Overall, 20 of the reviews concluded that T’ai Chi “might be effective” while eight said it was not and seven were inconclusive, but some of the previous studies were said to be flawed.

There was a “relatively clear consensus” that T’ai Chi “was effective for improving the general health of older people, improving psychological health, and for preventing falls”.

Of the four studies that looked at fall prevention, a key concern for the elderly, three showed that T’ai Chi had positive effects.

Four reviews found that the martial art was good at “improving psychological health” while one was inconclusive.

In addition, “all three SRs that evaluated healthcare in older people drew equivocal positive conclusions”.

However, the review of previous papers found little evidence that T’ai Chi can relieve symptoms of cancer or rheumatoid arthritis. The researchers also found that T’ai Chi may not effectively treat inflammatory diseases.

And there were “contradictions” in the evidence regarding improvements in lung capacity and lowering risk of heart disease.

However a separate paper to be discussed at the Royal College of Nursing’s research conference on Wednesday has found that T’ai Chi sessions may “help those with rheumatoid arthritis to gain increased self-efficacy and confidence through greater control over their mobility and condition within a supportive environment”.

The report, carried out by researchers at the University of Leeds based on interviews with 19 people, concludes: “T’ai Chi may offer psychological as well as physical

benefits."

map - April 18, 2011 03:36 AM (GMT)

i believe this to be demonic and not of the true living God, wonder why it's called the land of the DRAGON.

also, I've heard Bill Schnoebelen speak on martial artists having powers faltered in presence of Godly man or woman.

phillipJfry - April 20, 2011 04:16 AM (GMT)

It sure makes you wonder

map - April 20, 2011 06:49 PM (GMT)

demon chi...

TheUnhivedMind - April 21, 2011 05:55 PM (GMT)

So when Eric Phelps tells you that Chinese medicine including acupuncture isn't occult would you argue with him Marco? What you're claiming here would be going against Eric's information and not many come close to Eric in being a true-Christian. This is a natural force to produce life on this Earth utilising it to our advantage can't be demonic can it? If we don't we can die so are we meant to just die? Without Qi for half a second you're dead so does that mean oxygen is demonic what about water? Its exactly the same thing, someone just being able to manipulate this energy isn't demonic just aware more than others of what God provided for life on this planet. Is magnetism demonic? This rules our biochemistry, without it all functioning is destroyed quickly. Do you use anything in your home for heat and cooking with a flame? Is that demonic? It was supposedly Prometheus who stole this from the God's to give to man as highlighted outside the Rockfeller Center on the land of the Queen in New York City.

map - April 21, 2011 08:00 PM (GMT)

it would really go back to what god that chi master worships, that would speaks numbers.

Prometheus = lucifer.
http://en.wikipedia.org/wiki/Lucifer_and_Prometheus

http://www.themystica.com/mystica/articles...t_the_gods.html

> http://www.themystica.com/mystica/articles...t_the_gods.html

Its means diddly squat who the Qi master follows as his God. The energy he uses comes from thee God and nothing changes this whether you can manipulate that energy or not.

map - April 22, 2011 07:09 PM (GMT)

this is where discernment comes into play... which God is providing the service to the believer or non-believer. Thee God JEHOVAH or the god of this world.

i've heard of Buddhists that can levitate... but so can occultist/hindus and etc...

Don't forget about Satan being able to even transport Jesus to a high mountain, he can do SOME great wonders as well that God can also do (if allowed by the Father).

who's the dragon?

Title: Mother's verdict after tearaway son, 14, is given
Description: *free ACUPUNCTURE*

TheUnhivedMind - May 3, 2011 06:16 PM (GMT)

'He's a lot calmer but still a menace': Mother's verdict after tearaway son, 14, is given free ACUPUNCTURE

By Daily Mail Reporter
Last updated at 12:57 PM on 3rd May 2011
http://www.dailymail.co.uk/news/article-13...-boot-camp.html

A 'one-boy wave of terror' who has stolen cars, committed arson and terrorised residents is being given free acupuncture in a bid to stop his behaviour.

Sonny Grainger, 14, is notorious in his Hull, East Yorkshire, neighbourhood for smashing windows, attacking passsers-by with sticks, stones and bottles and was just 12 when he was given an Asbo.

He has already been expelled from three schools.

Now the Hull Youth Justice Service has agreed to pay for a course of 45-minute acupuncture sessions costing around £40 each to try to calm him down.

His mother, Nadine West, 40, says the holistic approach is showing signs of working, but admits he remains a menace to neighbours and passers-by - and has urged police to be tougher on her son.

She said: 'Sonny loves the acupuncture. He is definitely a lot calmer when he walks out after the sessions, but he is still a menace.

'His school agreed to only have him for three days a week but that was not good enough for Sonny.

'He only needs to attend school on a Wednesday, Thursday and Friday. They have been absolutely fantastic. But he won't go to school now. He has not been since February.

'He spends his days hanging out with his friends or playing his computer. I am really worried I will end up getting prosecuted, but he just won't go to school. What more can I do?'

Last November, Sonny breached his Asbo when he was caught with cannabis on the school premises and assaulted another pupil.

His mother believes her family is not being given adequate help and accuses the authorities of biding their time before they throw her son in jail.

She said: 'Giving him another Asbo when this runs out is not the answer. I honestly believe now it is only a matter of time before he is locked up and they will just throw away the key. Sonny has to learn to meet people halfway, but he is just not interested.

'I would love it if the police could make him attend some kind of boot camp. He might stand a chance.'

Nadine previously claimed Sonny's misbehaviour was down to him suffering from a Oppositional Defiant Disorder (ODD), meaning he does the opposite of what he is told.

He has visited a child psychologist and took tablets in a bid to sedate him in the evenings with little success.

His crime sheet includes stealing cars and motorbikes, starting fires on his estate and even smashing the windows in his own home when his mother tried to tell him off.

After he was handed the Asbo in July 2009, PC Trevor Needham, the neighbourhood beat officer, said: 'Sonny Grainger has caused untold misery for the people of the estate. He has been a tyrant to people here.

'On a daily basis we received complaints about his behaviour, it is actually unbelievable just how bad this lad was.

'He has been a one-boy wave of terror and the way he was going about driving cars and setting fires, I honestly believed it was only a matter of time before he would have killed someone.

'The boy does know the difference between right and wrong and this Asbo is a last ditch attempt to change his behaviour.'

View Full Version: Traditional Chinese Medicine and Our Christian Fai

Title: Traditional Chinese Medicine and Our Christian Fai

semperbry76 - May 2, 2011 03:06 PM (GMT)

Traditional Chinese Medicine and Our Christian Faith
(Please also see My Statement Of Faith)

So many well meaning pastors and other Christians have requested to know how I "justify" what I practice with my Christian faith. You will hopefuly see that there is nothing to justify at all but a correcting of some misunderstandings is sure needed! I believe that God wants to bless His people with true God given healing through His plants and without Big Pharma. Traditional Chinese Herbal Medicine is a truly great and God given way to do this!
Please read carefully . . . . .

cults out there. A mission to stop the lies that lure us into a false sense of security that something is of God when it is really of Satan. Well God knows there is a lot of that kind of thing out there. However, where is TCM in all of this? Are "deities" and demons involved? Is a carefully orchestrated satanic plan to lead us away from salvation in Jesus Christ at the helm? Are years of superstition and sacrificing virgins to the fire part of TCM? Well not the TCM I know. However, the Bible says, “Judge them by their fruits”. Let's take a look at their fruits:

TCM has a long and strong record of healing and bringing about balance in peoples lives. It is still the preferred medicine by the people of China simply because unlike Big Pharma, it heals and does no harm.

You may have just noted that we (The US) had to borrow an ungodly amount of money

from China to try and bail our own country out of debt. Yes, part of China may be an “evil empire” but other parts of that nation are yielding fruits that we can sadly not survive without.

The true root of TCM goes back about 4,000 years to the Taoists who came up with the theory of yin and yang, of a life force in God’s creation called Qi, (Or Chi) a defining of the five elements in God's creation (Water, wood, fire, earth and metal) and most importantly the concept of a creator for all of these things (The One who holds Yin an Yang and everything in the universe together) whom they called the Sheng Di which translates into "Heavenly Father/Creator."

So are we stating that Qi is one in the same with the Holy Spirit? Absolutely and definitely not! I have heard this bizarre statement before from some very confused people and then I begin to understand why some think TCM is a cult! Qi is just the flow of God’s creative energy living within us and all that He created. I believe it is the created force of life that God breathed into Adam and all the living creatures God created before man. In TCM there are two kinds of Qi in our bodies: These are what the TCM herbal doctor calls “Earth Qi” or digestive Qi derived from what we eat and “Heaven Qi” derived from the air we breathe

Now Please Note! These concepts (Yin,Yang, Qi, and the 5 elements) from these great philosiphers truly did point to God and his wonderful creations in many ways. Also these concepts became a wonderful foundation for the greatest medical system on earth. However, This does NOT mean I stand behind everything in the Book Of Tao! (Quite the contrary) They did not know God as did the Rabbis in Israel at the time. I simply find it amazing that they Reasoned that there was a loving creator! Also I would like to point out that these wise men (The Taoists) were just philosiphers and were not any kind of "religeous cult" as many would have you believe. Remember, Traditional Chinese Medicine has nothing to do with Aryuveda (The traditional medicine of India) which truly does have ties to a demonic world. (although there herbs are fine - just more of Gods creation)

Qi or Chi (pronounced chee) is a difficult concept to translate. It’s usually left un-translated because there is no single English word that conveys all parts of the Chinese concept. The word that comes closest is energy. Qi flows throughout the body in currents or conduits called channels or meridians or in Chinese; the Jing Luo. There are fourteen main channels and these possess the most commonly used acupuncture points. Twelve of these channels connect to a yin or yang organ from which they derive their name.

For example, the wood element's yin organ is the liver. The liver channel runs from the foot (Between the big toe and the next) up the inside of the leg, along the center of one-half of the abdomen and goes inside below the sixth rib. Inside it connects to the liver and the gallbladder, goes up through the diaphragm, up to the throat, then the eyes and terminates at the vertex of the skull. There are two branches from the liver channel. One which connects to the inside of the lips and one which connects with the lung.

This is simply a study of the flow of the energy created in us. There is nothing "spiritual" in it at all except for a wonderful acknowledgment that a loving Heavenly Father created all this within us. This is nothing different than the western knowledge of anatomy being known and then being thankful to our loving God for His wisdom in creating it.

Then there are, of course, God's first living creations on Earth to be considered: These are what we call the plants and herbs. Just like all creation in the universe, Animal, vegetable or mineral, water wood fire earth and metal, these created plants are all subject to yin and yang. Aha! Yin and yang! Now we are getting to the cult material right?Well if day and night, hot and cold, big and small, wet and dry, in and out, servant and master etc. is a sign of a cult then we are all in big trouble! Yin and yang are simply a completed "ball of energy" called the Tai Qi by the Taoists symbolizing all that is under Gods creation from one end to the other. Is that so hard and mysterious to understand?

OK, now we gotcha! What about that "satanic pentagram" looking thing you always see in TCM books? This is simply a chart explaining the way the body's five main systems symbolized by the five elements affect each other. The 5 systems genarate (Support) each other as a continuing circle eg. Liver (Wood) supports heart (Fire) as heart supports stomach and spleen (Earth) etc. The lines inside the circle show the organs that can overcome (Work against) each other in disharmony. Since there are five organ systems the lines inside will naturally form a "star". This chart simply explains the functions of TCM diagnostics and is quite a valuable learning tool.

The Taoists certainly did not '"worship" the five elements. If anything they worshiped the Sheng Di (Heavenly Father/creator) who created the 5 elements. However cults like the druids and wiccans who worship satan and the 5 elements perverted this wonderful early medical chart and used it for their symbol drawing the head of a goat (Symbolizing satan) within the "star". Satan will always try to pervert a good or Godly thing.

As with everything in existence, all herbs are subject to yin and yang and have hot or cold, wet or dry (etc.-etc.) energies. A good herbalist can taste and determine these energies on his tongue or feel a hot or cold energy in his body after ingesting part of the plant. This is how over the last 3,000 years eight thousand plants were grouped into their categories of yin and yang and also how the organ systems that the plants affected were determined.

In its very basics TCM states that a healthy body will have a perfect balance of yin and yang. When there is any disease or disorder there is a yin or yang factor that is out of balance. As an example, fever is yang (heat) overtaking yin (cold) . The answer is to ingest a plant with strong yin energy or cooling factors. There is nothing “spiritual” here, just good common sense.

So what about those “evil” acupuncture needles? Is this some kind of "Chinese Voodoo"? Remember the pathways that Qi (our God given life energy) flows through? Well the herbs are the medicine to change, within our bodies, hot into cold, wet into dry, etc., and these herbal energies travel through these pathways or meridians carrying energy that can correct many imbalances. (This is why TCM herbal medicine is often called “Energy Medicine” It is only logical, nothing “deep" and "out there”) Tracing the flow of the plant’s energy through the meridians we find there are some places where it can get a bit “stuck” sometimes. Inserting needles into these points just helps get things unstuck. Again there is nothing “spiritual” involved, just plain logic. What is not logical is these modern “acupuncturists” that don’t know the first thing about TCM herbal medicine. The first and foremost tool in TCM is our God given plants. I have no Idea how or why so many “acupuncturists” have put the cart before the horse. The TCM doctor is considered the herbal doctor, period. (However many of these acupuncturists have become very good with un-sticking Qi)

Now when we consider other kinds of “alternative” medicine besides herbs and TCM do we give it all the same pass? Not on your life! Aryuveda (The traditional medicine of India) definitely has ties to deities and demons and was originally based on the dung and urine of animals for treatment mostly. However, now they use mostly herbs and their herbal medicine does work but.... "No thanks just the same!" Heres why:

Deepak Chopra (The self proclaimed modern "guru" of aryuveda writes, ". . . the seeds of God are inside us. . . . When we make the journey of the spirit, we water these divine seeds. . . . In the eyes of the spirit, everyone is innocent, in all senses of the word. Because you are innocent, you have not done anything that merits punishment or divine

wrath." . . . I'm sorry folks but that just sounds like satan to me! - "All our righteousness are as filthy rags" (Is. 64:6), "There is none righteous, no not one" (Rom. 3:10). These scriptures refer to our self-righteousness, which can never bring us into fellowship with God because "all have sinned and come short of the glory of God" (Rom. 3:23). I am afraid Deepak is in for a very nasty suprise!

TCM herbal medicine is truly a gift from God (No mater who came up with it) It is a gift to all mankind and therefore I believe Christians should benefit from it the most! There is, however, also a whole cesspool of “gobbly-gook” out there in the world of "alternative medicine" so we must be very careful to not let any of the wrong hands be laid on us. However nothing comes as close to the root of all evil as our very own Big Pharma! Think about it! This is the most important part of the story and can be read by going here: Big Pharma And Our Christian Faith

View Full Version: Gynostemma

Title: Gynostemma

semperbry76 - May 2, 2011 02:26 PM (GMT)

Gynostemma is widely believed to have the following health benefits: to slow down aging and to prevent feebleness at all ages, and in particular to prevent senility; to reduce fatigue, to increase vigor; to reduce oxygen deficiency at high altitudes; to improve digestion; to strengthen the mind; and to improve marital functions. It is also believed to help calm the nerves and to ease pain. Gynostemma is generally reinforcing to overall health, and has a strong anti-fatigue effect. It is also used as a virtual "cure-all." To the local people who collect it wild, grow it and consume it, it is simply called "Magical Grass."

The ultimate greatness of Gynostemma lies in its broad spectrum adaptogenic quality. It has double direction activity, and has the ability to bring balance to the body under a wide range of stressful circumstances. Constant consumption of Gynostemma tends to have a highly protective quality because it strengthens the adaptive capacity of the person at every level of their life.

Japanese studies have indicated that Gynostemma has a double-direction, regulating, adaptogenic influence on the central nervous system. It is calming when one is overexcited and stimulating when one is depressed. Japanese studies have shown that Gynostemma is clinically useful in a number of mental and neurological conditions, including simple depression, anxiety and schizophrenia.

Gynostemma contains many amino acids, vitamins and minerals that are healthful to the human body, including selenium, magnesium, zinc, calcium, iron, potassium, manganese, phosphorus, and more.

Though Gynostemma is regarded as a tonic herb, it is also perceived by many Asian people to be a "cure all." In China, Gynostemma is being used to treat inflammation, stop cough, as an expectorant remove sputum, to treat chronic bronchitis, and much more in actual clinical practice.

Gynostemma has developed an enormous reputation in Asia as a major aid in weight

control programs. It has a double direction activity with regard to weight. It will help reduce weight in overweight people, and can help athletes, bodybuilders or excessively slim people to gain weight. As a diet herb, it helps by accelerating the body's metabolism. It also helps adjust blood sugar and reduce blood fat. Adjusting blood sugar and blood fat are critical steps in attaining healthy metabolic function, whether one wants to lose or gain weight

It has been found that athletes who consume Gynostemma put on more lean muscle than those who do not. Athletes find that their appetites are actually improved and that assimilation is much more efficient.

Gynostemma is strengthening to the human immune system. It is used to potentiate immune response and is used to treat a wide variety of infectious conditions.

Studies into the anti-cancer activity of Gynostemma have shown a very significant (20-80%) inhibition rate on a wide range of cancer cells. Intensive studies are now being conducted into both its anti-cancer activity and its potential as an immune protection/ prophylactic agent for individuals with suppressed immune systems. There is recent research indicating that Gynostemma likely prevents cells from becoming cancerous.

Spleen, Lung, Kidney, Liver, Heart

Part Used and Form
Leaf (and stems)

Primary Functions
Adaptogenic, antioxidant, immune modulating, anti-inflammatory, anti-ulcer, respiratory tonic, platelet regulator, anti-hyperlipidemic, cholesterol regulator, anti-obesity, liver protecting, triglyceride lowering, cardiovascular protectant, anti-thrombic, anti-aging agent

Qualities
Gynostemma pentaphyllum is a remarkable herb growing in the southeastern provinces of China, as far north as northern Anhui, and it is found in lesser quantities in South Korea and Japan. in the past decade, it has become one of the most popular tonic herbs in Asia and has become a rage in Japan. It is popularly believed to be a major anti-aging, longevity tonic, and a virtual "cure-all." Gynostemma is considered to be a major adaptogenic herb, in the same league as Panax Ginseng, Panax Acanthopanax (Siberian Ginseng), Schizandra, Astragalus, etc. There is a saying in China that Gynostemma is "Ginseng at tea price."

The ultimate greatness of Gynostemma lies in its broad spectrum adaptogenic quality. It has the ability to bring balance to the body under a wide range of stressful circumstances. Constant consumption of Gynostemma tends to have a highly protective quality because it strengthens the adaptive capacity of the person at every level of their life. The chemical constituents responsible for the adaptogenic characteristic of Gynostemma are saponins called gypenosides.

Gynostemma contains more than eighty different gypenosides. This is the broadest range of saponins in one plant in nature. These gypenosides are very similar to the ginsenosides of Panax Ginseng and to the eleutherosides of Radix Acanthopanax (Siberian Ginseng). In fact, four of Gynostemma’s saponins are precisely the same chemical structure as the saponins found in Ginseng and eleven more are almost identical. The similarities are so close and so extensive that Gynostemma is now called “Southern Ginseng.” To the local people who grow it and consume it, it is simply called “Magical Grass.”

Gynostemma is generally reinforcing to overall health, has a strong anti-fatigue effect. Gynostemma contains many amino acids, vitamins and minerals that are healthful to the human body, including selenium, magnesium, zinc, calcium, iron, potassium,

manganese, phosphorus, and more. Gynostemma is universally believed in Asia to be an anti-aging herb.

Japanese studies have indicated that Gynostemma has a double-direction, regulating, adaptogenic influence of the central nervous system. It is calming when one is overexcited and stimulating when one is depressed. Japanese studies have shown that Gynostemma is clinically useful in a number of mental and neurological conditions, including simple depression, anxiety and schizophrenia.

In China, Gynostemma pentaphyllum is widely believed to have the following health benefits: to slow down aging and to prevent feebleness at all ages, and in particular to prevent senility; to reduce fatigue, to increase vigor; to reduce oxygen deficiency at high altitudes; to improve digestion; to strengthen the mind; and to improve marital functions. It is also believed to help calm the nerves and to ease pain.

Though Gynostemma is regarded as a tonic herb, it is already perceived by many Asian people to be a “cure all.” In China, Gynostemma pentaphyllum is being used to eliminate inflammation, remove endogenous heat, stop cough, remove sputum (an expectorant), to treat chronic bronchitis, and much more in actual clinical practice.

Gynostemma has developed an enormous reputation in Asia as a major aid in weight control programs. It has a double direction activity with regard to weight. It will help reduce weight in overweight people, and can help athletes, bodybuilders or excessively slim people gain weight. As a diet herb, it helps by accelerating the body’s metabolism. It also helps adjust blood sugar and reduce blood fat. Adjusting blood sugar and blood fat are critical steps in attaining healthy metabolic function, whether one wants to lose or gain weight. Gynostemma has been shown to have profound effects at reducing simple obesity. Japanese and Chinese studies indicate that Gynostemma lowers low density lipoprotein (LDL---”bad cholesterol”) while increasing high density lipoprotein (HDL---”good cholesterol”). Its total efficacious rate has reached 94.8% after pharmaceutical and clinical application. It also exerts the effects of fat metabolism accommodation, lipoid peroxide depression and fat sediment reduction in the blood vessels. Therefore, GP is efficacious against arteriosclerosis, coronary heart disease, simple obesity, etc. It is an excellent natural choice for these symptoms, providing that such treatment is conducted under the supervision of a qualified primary health care provider. As a result it has been demonstrated to have anti-atherosclerotic and anti-plaque activity in humans.

It has been found that athletes who consume Gynostemma put on more lean muscle than those who do not, probably due to the high saponin content of Gynostemma. Athletes find that their appetites are actually improved and that assimilation is much more efficient.

Although Gynostemma is not a laxative, it will help in the case of constipation and helps

maintain healthy bowel movements in people with no problem. It acts as a scavenger in the stomach and intestines, ridding the body of toxins, microbes and waste that otherwise may become lodged in the intestines. All of these benefits are important to people who are trying to lose or gain weight.

Gynostemma is strengthening to the human immune system. Studies into the anti-cancer activity of Gynostemma have shown a very significant (20-80%) inhibition rate on a wide range of cancer cells. Intensive studies are now being conducted into both its anti-cancer activity and its potential as an immune protection/prophylactic agent for HIV infected individuals. There is recent research indicating that Gynostemma likely prevents cells from becoming cancerous.

Recent medical literature, both in China and Japan, is full of reports on the consistent clinical effectiveness of Gynostemma for an incredibly wide range of health problems, including: high blood pressure, coronary heart disease, migraines, diabetes, insomnia, the common cold, gum inflammation, gastric ulcers, gastritis, hemorrhoids, arthritis, rheumatism, neuralgia, hypertrophy of the prostate, chronic pneumonia, acne, warts, gout, various allergies, asthma, otitis media, chronic headaches, and premature graying or loss of hair, among others.

Many older individuals in Asia claim that after consuming Gynostemma for several months, their gray hair becomes black. Gynostemma pentaphyllum may resist and alleviate the side effects induced by glucocorticoids and similar steroid drugs.

What is more important, GP does not cause any side effects and can be taken orally for a long time.

CHINESE “CURE ALL”

The following is a fairly complete list of ailments for which Gynostemma is currently being used clinically in China, Japan and Korea, that is, by actual doctors and in hospitals and other clinics:

acne
arthritis
asthma
athlete’s foot, Hong Kong foot (beriberi)
cancer
cholelithiasis
cholitis
chronic headache
common cold
constipation
coronary heart disease

cough
diabetes
excessive phlegm
frostbite
gastric ulcer
gastritis
gastroptosis
gout
gum inflammation
hair loss
halitosis (bad breath)
hemorrhoids
high blood fat
high cholesterol
hypertension
hypertrophy of the prostate
impotence
insomnia
leg and foot cramps
liver diseases
loss of appetite
loss of concentration
low vigor
lumbago
neuralgia
obesity
oral cavity inflammation
otitis media
plaque
premature ejaculation
rheumatism
rough skin
scars
schizophrenia
shoulder ache
slow in movement
spasms
speckles on skin
swelling pain
tumor
warts
weariness
white hair

Varieties and Grading: Widely distributed (grows) in China, Korea, Japan and Southeast Asia, Gynostemma pentaphyllum is a perennial, deciduous, creeping herb. There are 13 varieties under this genus, all in Asia---China has 11, and among the 11 there are 7 that grow only in China. China has a rich wild resource of Gynostemma pentaphyllum. It is broadly distributed over Qin Ling and the 15 provinces to the south of the Changjiang River. The highest quality Gynostemma pentaphyllum is said to come from the banks of the Changjiang River (the Changjiang Gorge region), from the Spirit Nong Jia region, from Wu Shan and from the Xing Dou Shan range.

Over the past several years, all the provinces in China in which Gynostemma grows or which are capable of growing Gynostemma pentaphyllum have carried out investigations on the wild resources of the herb. Many comparative studies of different varieties from different regions have been done on both wild and cultivated Gynostemma. The Research Institute of Traditional Chinese Medicine has done quality analysis from seven different species, comparing appearance, taste, chemical constituents, etc. They concluded that the taste and the content of the total saponins are the major differential indicators. Therefore, the content of the total saponins can be used as a main standard in the determination of quality. Not surprisingly, studies indicate that the content of total saponins in Gynostemma pentaphyllum was different in different species, varieties, growing localities and time of collection.

In addition, studies have shown that the content of the total saponins in the leaves is three times higher than that in the stems. Hubei, Zhejiang and Fijian Provinces have all introduced the Japanese "201" sweet taste variety and have started growing it over an extensive area.

The wild resources of Gynostemma has decreased significantly in recent years due to over harvesting. China is therefore actively building a cultivation basis of production. Gynostemma is best cultivated in forest lands. Recent studies have shown that to build an agra-forestry ecosystem for the extensive management of Gynostemma under forest is advantageous, the major factors are the selection of forest land and its shadow density. The cultivated Gynostemma is rich in saponins, with a content of gypenosides of more than 5.0%.

Gynostemma, as it comes to market, thus comes in several grades. The best Gynostemma grows wild in pristine mountain areas of southeastern China, away from cities and industrial pollution. Wild Gynostemma is much more rare than the commercially grown product. Wild Gynostemma is quite bitter, but with a sweet aftertaste. It is hardly ever used in beverages because of its strong bitter flavor. However, connoisseurs appreciate it because it is the highest quality Gynostemma. Wild Gynostemma contains approximately 15% gypenosides, which is quite high. Therefore, wild Gynostemma is primarily used for pharmaceutical extraction of gypenosides; however, a few exclusive sources sell wild Gynostemma as tea or in

capsules.

Commercially farmed Gynostemma is much sweeter than the wild variety. The Japanese developed a strain of Gynostemma known as “Variety 201,” or “Sweet Gynostemma.” Gynostemma has a “sweet gene” which was accentuated during development of the particular strain that the Japanese came to favor. This Sweet Gynostemma is now the primary variety of Gynostemma grown commercially in China. Sweet Gynostemma is widely farmed in China and is consumed throughout Asia. It has a light, pleasant flavor with a slight bitter overtone. Cultivated Gynostemma contains around 4 to 5% gypenosides.

Gynostemma is rare in America in bulk form and is mostly available pre-packaged. Most of the world’s supply is sold to Japan or domestically in China. Mountain grown wild Gynostemma is considerably more expensive than the farm grown variety because it is more potent and is much more rare. Mountain grown wild Gynostemma is the connoisseur’s choice, whenever possible. This is one of the great health products available in the world today.

Scientific Data
Following are the results of studies done in China, Korea and Japan on Gynostemma pentaphyllum (GP) and its gypenosides:

1. Gypenosides have been shown to protect vascular endothelial cells from oxidant injury. The data thus suggest that gypenosides may be beneficial for the prevention and treatment of atherosclerosis and for retardation of the aging process. Studies have shown that the water extract of GP can decrease the activity of multiple coagulation factors. This extract can accelerate the erythrocyte electrophoresis rate. The studies revealed that GP is an antithrombotic agent affecting the links of thrombotic chain.

2. The total saponin of GP can markedly act against the immunity inhibition due to Cy management in experimental animals. The total saponin showed a definite bi-directional immunomodulatory action in normal healthy mice, recovering the immune indices to normal value from either originally lower or higher than the medium figure, by significant difference in comparison with the Cy groups. The total saponin also had actions to prevent from fatigue and to tolerate hypoxia under usual atmospheric pressure. These data indicate that the total saponin of GP is an effective immunomodulator, similar in action to Ginseng, Astragalus, Ganoderma and several other Chinese herbs.

3. GP can improve exercise endurance of white rats, especially healthy and trained rats. Studies showed that the muscle cells of rats having taken GP for 45 days were less injured after physical exhaustion than those of the control group. Both phosphate and liciferase assays showed that GP saponin could to some extent extend or activate (Na plus -K plus) ATP-ase in membrane.

4. Gypenosides regulate lymphocyte transformation and DNA synthesis by regulating DNA polymerase II activity.

5. In search of new products for the treatment of hyperlipidemia with a low frequency of side effects, a decoction of Crataegus cuneata, Nelumbo nucifera and GP has been tested. A reduction of triglyceride and cholesterol was seen.

6. The action of gypenosides as an antioxidant was studied using various models of oxidant stress in phagocytes, liver microsomes and vascular endothelial cells. It was found that GP decreased superoxide anion and hydrogen peroxide content in human neutrophils, etc. It was also found that GP protected biomembranes from oxidative injury by reversing the decreased membrane fluidity of liver microsomes and mitochondria, increasing mitochondrial enzyme activity in vascular endothelial cells and decreasing intracellular lactate dehydrogenase leakage from these cells. The extensive antioxidant effect of GP may be valuable to the prevention and treatment of various diseases such as atherosclerosis, liver disease and inflammation.

7. GP water extract was shown to have significant anti-inflammatory and liver-protective effects in rats.

8. The immunopotentiating effects of gypenosides in relation to the network of neuroendocrine-immune modulation (NIM) were examined. The results indicate that the mechanism of immunomodulating effects of gypenosides may be mediated through the NIM network, and suggest a close relationship between the neuroendocrine activities and the immunofunctions.

9. A study on rabbits indicates that GP has the protective effect on acute cerebral ischemia injury.

10. A comparison study between the effects of gypenosides and ginsenosides (from Panax Ginseng) on cardiac function and hemodynamics was done on dogs. It was found that the coronary flow was raised and the heart rate lowered by both gypenosides and ginsenosides. The lowering of myocardial oxygen consumption after the administration of gypenosides and ginsenosides could be explained by the decreasing of cardiac tension-time index and the slowing of heart rate. Nevertheless, it was insignificant that gypenosides and ginsenosides affected the myocardial contractility and heart pump function. The effects of gypenosides are slightly more potent than ginsenosides.

11. Gypenosides is a potent inhibitor to platelet aggregation and its action mechanism may be related to inhibiting the platelet from releasing reaction and increasing the platelet cAMP level.

12. Gypenosides was shown to have a platelet aggregation factor which was

completely inhibited by prostaglandin 12, but was not affected by aspirin. Studies indicate that the active principle is most likely a kind of glycoside or polysaccharide.

13. Crude saponins isolated from GP were tested for their effect on lipid metabolism in corn oil-containing, high sugar diet-fed rats. Oral administration of such high sugar and fat diet caused hyperlipemia, liver injury with increased serum level of glutamic pyruvic transaminase (GPT), and accumulation of lipid peroxide in the liver. Administration of the crude saponins from GP reduced serum levels of triglycerides, lipid peroxide, total cholesterol, phospholipids and GPT in such high sugar and fat diet-fed rats. Japan.

14. Pharmacological and clinical investigation has pointed out that gypenosides(also called "gynosaponins" by Hu) can effectively inhibit cancer cells in the liver, stomach, lung, skin and uterus.

15. The basic chemical structure of the gynosaponins is of the dammarane type.

16. The sweet flavor in the leaves of GP is due to phyllodicin. Other constituents of GP include Vitamin B1, Vitamin B2, Vitamin C, calcium, sodium, iron, phosphorus, carotene, protein, fat, fiber and sucrose.

17. Animal tests proved that crude gynosaponins possessed obvious anticancer and antiulcer action, inhibited the side effects of glucocortico-hormones, promote cell metabolism, benefit sleep and lover blood lipids. Gynosaponins might be able to inhibit the multiplying of cancer cells in liver, uterus, lung, etc. by as much as 20~80%. In mice with experimental sarcoma-180, the cancer may be reduced by 40% at the dose of 50 mg/kg of GPS every day for seven days.

18. If mice were injected with dexamethasone beforehand i.p. at the dose of 10 mg/kg a day for 10 days and then injected with gypenosides at the dose of 10 mg/kg a day for 10 days, GPS might prevent the side effects of dexamethasone, such as atrophy in the adrenal gland and thymus.

19. Gypenosides 22, 30 and 41 have obvious antiulcer activity.

20. Extended administration of GP might inhibit the forming of experimental cholelithiasis, lowering the cholesterol in blood and bile. In the experimental group was used the feed containing 1.2% cholesterol and into it was added the fine powder of Gynostemma. The mice were fed with this kind of feed. In the control group was used the feed containing 1.2% cholesterol with the addition of flour. The mice in the control group were fed with this feed. Three weeks later, cholesterol value, total bile acid value and phospholipids value were determined in animal bile and observation was made to see if any stone was formed in the gall bladder. The results indicated that in 3 mice of the experimental group, stone was formed; and in 6 mice of the control group, stone was formed. In 2 mice of the experimental group, more than 11 stones were formed, but

in 4 mice of the control group, 11 stones were formed. In the mice of the controlled group, were found mucous membrane multiplying, bleeding and swollen fat liver. In the experimental group the cholesterol value and total bile acid concentration in blood and bile were markedly decreased in comparison with the control group.

21. In a swimming test in which mice fed gypenosides at the dose of 200 mg/kg had obviously better body force and tolerance than those in the control group that were not given GPS.

22. The LD50 of mice i.p. GPS is 755 mg/kg. The LD50 of rats i.p. is 1.85 g/kg. Oral administration at the dose of 10 g/kg was non-toxic which was more than the determination limitation of LD50. Thus gypenosides are very safe for consumption.
23. Gynostemma contains trace elements, of which 5 are fundamental to human body. Mineral analysis indicates that GP contains: Se, Mg, Zn, Ca, Fe, K, Mn, P, etc.(See table 3. Content determination of trace element)

Table 3. Content Determination of Trace Elements

Trace elements Content (mg/g)
calcium, Ca 19475.00
zinc, Zn 178.75
iron, Fe 786.30
manganese, Mn 87.50
magnesium, Mg 2045.00

GP contains water-soluble amino acids, various vitamins, protein.

Table 2. Content Determination of Amino Acid
Amino Acid Content (mg/g)
leucine, Leu 0.0549
histidine 0.0473
lysine, Lys 1.5563
glutamic acid, glutaminic acid 0.6872
glycine, glycocoll 0.8600
methionine, Met 0.3289
aspartic acid, ASP 0.0929
threonine 0.1425
serine 0.1629
cystine 1.1325
isoleucine 0.2127
arginine 0.0559
phenylalanine 0.9758

24. The use of glucocorticoids in therapy can preserve life. However the side effects

may include excessive appetite, lack of energy, dropsy or obesity, keratitis, pigmentation and hypertension, etc. It is usually accompanied by severe damage to the adrenal glands, thymus and other organs, resulting in early aging syndrome. The thymus is the center of the immune system, though it atrophies with age. Therefore protecting the thymus and adrenal glands from atrophying is essential in anti-aging efforts. Gypenosides can prevent these side effects from happening and restore the organs that have atrophied due to the damaging effects of glucocorticoids. GP and gypenosides can greatly improve the suppressed immunity caused by steroids abuse. It can also strengthen the phagocytosis of the phagocytes in the abdominal cavity of mice, it increases the weight of the spleen and adrenal gland. This is why GP is called an "immunity strengthener." Researchers (Ma Bing Xuan, et.al) believe that GP has strong preventive and curing effect against the damage due to steroids. The use of gypenosides to prevent and cure the side effects of steroid use has been granted a patent in Japan. The patent recommends dosages for adults of 5~500 mg/day, usually 10~250 mg/day, 3~4 times, orally.

25. The adrenal cortex is a superbly developed organ for the regulation of homeostasis. It is essential for life. The hormones of the adrenal cortex can be divided into two main categories: (1) glucocorticoids which affect carbohydrate metabolism, and (2) mineralocorticoids which affect water and salt metabolism. It is fairly well established that GP influences the glucocorticoids produced in the innermost zone of the adrenal cortex, the zona reticularis, and has a regulatory influence on the secretion of the glucocorticoids, hormones that influence carbohydrate and protein metabolism. Cortisol, also known as hydrocortisone is the most important glucocorticoid, its secretion being regulated by ACTH. The drug cortisone is the synthetic cortisol analogue. GP may help regulate the secretions of the outermost zone of the adrenal cortex as well, including the mineralocorticoids, the most important of which are aldosterone and deoxycorticosterone, which regulate the water and electrolyte metabolism of the body.

26. GP can help adjust and regulate blood sugar levels.

27. In the test in vitro where 0.38-0.75% Gypenoside is used directly to kill S-180 sarcoma cell, the killing rate is 54~87.5% while control group only has 28.84% death rate.

28. Zhe Jiang Traditional Medical Research Institute used Gynostemma instant granule (each bag contains 400mg Gypenoside) on cancer patients after their operation. All the patients improved their conditions. The total effectiveness rate reaches 89.47%. It improves the cell immune function, lowers the IgG. IgM. It can also induce the thymus-dependent lymphocytes to differentiate and sensitize so that they can kill the relevant target tumor cells on contact.

Gynostemma has real potential as a biological reaction regulator in treating malignant tumor. Gypenoside can not only directly kill cancer cells, it also increases the titer of

PFC plaque forming cell and hemaglutination antibody, strengthens the delayed hypersensitivity of mice and therefore improves the immunity of tumor carrying animals. These might be some of the reasons why Gypenoside has anti-cancer and anti-tumor effects and can prevent the growth of tumors.

29. It was reported in Yunnan Province that it was used to treat senile chronic bronchitis in 537 cases. The total effective rate was 79% after the treatment of one therapeutic period. It was found that the stemona was more effective in treating bronchitis than the leaves. It was taken 2.5 - 3.9 g tid, for ten days as one therapeutic course.

30. The gypenosides 3,4,8 and 12 are virtually identical to ginseng saponins Rb1, Rb3, Rd and F2 in structure, respectively.

Preparation and Utilization
Consuming Gynostemma will not result in any side effects even if taken in considerable quantities over a long period of time. It is an ideal herb to take on a daily basis. Since it is available in the American market as both tea and as concentrated powders in capsules, it is easy to consume. Many varieties are quite delicious due to its natural sweetness. It is suitable for both the sick and the healthy, for young and old, for males and females. Children can drink it at will. One cup of Gynostemma tea or two capsules of concentrated powder (about 1000 mg) a day will have many benefits. The author drinks two or more cups of Gynostemma tea every day religiously. Twice this amount will not be harmful. Drink Gynostemma as you desire. Remember that this is at the top of the list of the greatest herbs in the world.

Some people prefer consuming standardized extracts. Gynostemma saponins, gypenosides, are available in some products. Recommended dose for gypenosides ranges from 25 - 200 mg. per day.

Gynostemma is usually available in tea bags. Steep these tea bags for at least five minutes to obtain the full benefit of the tea. Drink several cups a day as a health tonic. For the relief of various conditions, drink five or six cups a day.

Primary Combinations
Gynostemma is commonly used as a single herb, but may also be combined with other herbs. Combine with:
1. Astragalus to tonify qi
2. Crataegus fruit and leaf extract to reduce cholesterol
3. Schizandra to tonify the Kidney and Lungs and to cleanse the Liver
4. Ganoderma to build defensive qi

Varieties and Grading
Korea: "Mi Yang Jong is the highest quality. It is wild and is noted for its somewhat sweet taste.

History
Gynostemma has been used as a local tea in the southeastern provinces of China for many centuries. It was first described in the Ming Dynasty "Famine Ben Cao." People used the wild Gynostemma as a “famine food.” Gynostemma has been used traditionally to treat jaundice and chronic bronchitis. It has the classic function of clearing away heat and toxic material as well as being tonic which a reputation as a longevity herb.

It was reported in 1972 that Gynostemma pentaphyllum was used in the Qu Jing region of Yunnan Province to treat senile chronic bronchitis. This drew the attention of researchers from around the world, and Japanese researchers in particular took note. Japanese investigators soon visited Yunnan to study the situation. They found that the reports were accurate. Further investigation indicated that the Yunnan people used Gynostemma not only to treat chronic bronchitis, but to treat a wide variety of problems and health conditions, and even more importantly, as a longevity herb. It was discovered by these Japanese researchers that many Chinese octogenarians drank Gynostemma daily. This led the Japanese to do research into the constituents of Gynostemma, which in turn led to the confirmation that Gynostemma pentaphyllum possesses a an incredibly broad range of health benefits.

A wide market soon developed in Japan for Gynostemma, which led to an increase in farming of Gynostemma in China. Since the 1980's, Japanese and Chinese researchers have developed a large scale investigation on the plant and its saponins. Japanese botanists developed an especially sweet variety of Gynostemma pentaphyllum. They Japanese herb industry sent these seeds to China for mass cultivation and by the late 1980’s, the majority of cultivated Gynostemma pentaphyllum in China was of this sweet variety. In recent years, numerous products have been developed in both Japan and China. The Japanese have patented dozens of products using Gynostemma and its active constituents, called “gypenosides,” Gynostemma has become one of the most popular tonic herbs in Asia.

View Full Version: Polyrachis Ant

Title: Polyrachis Ant

semperbry76 - May 2, 2011 02:20 PM (GMT)

Ant tonics are widely consumed in Asia to promote strength, marital vigor and as a powerful antiaging agent. Over 70 years of research has proven that certain species of ants are highly nutritious and have powerful medicinal effects. As a matter of fact, ant is considered a premium adaptogenic substance in the same ranks as Ginseng, Siberian Ginseng, Rhodiola, Schizandra, Cordyceps and Gynostemma, the adaptogenic superstars of Chinese Tonic herbalism. Ant has been historically considered a superior herb of the highest order.

Ant has been widely used and very highly regarded in China as a tonic for over 3000 years. Ant has been refered to in a number of famous Chinese medicinal classics, including Li Shi Chen’s Ben Cao Gang Mu, where the great master praised ants as a superior tonic with excellent curative powers. It has been universally tauted as a superb Liver and Kidney tonic of the highest order. Its name, which it received in ancient times, means "black horse." Imperial records indicate that numerous emperors and other noblemen have consumed ant tonics to promote maritality and to increase longevity.

Polyrachis, the multi-spined tonic ant, is widely used to boost the immune system, or to maintain already strong immune functions. It has been established to have double-direction benefits on the immune system, so it may be used by anyone with any immune disorder to regulate immune functions.

Polyrachis is widely believed to prevent common symptoms associated with aging, such as lumbago, memory loss, joint problems, fatigue, climacteric symptoms, cardiovascular disease, etc. Ant strengthens the entire Kidney system, including the marital functions, skeletal structures and renal system. It also strengthens the nervous system, digestive functions, detoxification functions and muscular system. Therefore ant products have become extremely popular with middle aged and elderly consumers in Asia. Ants are being called the "forever young" nutritional supplement.

Young people in China are major advocates of ant as well. Young men and women use

it to increase energy on a daily, as well as long-term basis. Both physical and mental energy seems to be supplemented by consuming ant. Ants can carry a load of over 100 times there own weight, and people have long felt that consuming non-toxic varieties of ants can increase physical and mental strength. Students in particular have made ant elixirs a virtual craze in cities like Shanghai, Hong Kong and Beijing. It is commonly used by those who have become fatigued or exhausted due to excess workloads or other forms of stress, including mental sources. Ant is noticeably energizing when consumed for a short period of time and builds long-term energy if used continuously for awhile.

Ant has a big reputation in Asia for increasing libido and virility. Both men and women claim that after using ant for even a short time that their interest in marital increases significantly and that their marital performance improves in numerous ways. This reputation has contributed to the explosion of ant products available in the Hong Kong, Taiwanese, Southeast Asian and Japanese markets.

As a result of modern technology and vastly improved manufacturing capabilities, previously not possible, ant is now being widely used in China for the first time. There has been a genuine explosion of interest in ant tonic products now that it is, for the first time, not a product reserved just for emperors, rich nobles and their wives and families.

Varieties and Grading: Several varieties of ants are used in Chinese Tonic herbalism, all with virtually the same attributes. These different varieties come from different regions in China. Each region claims that its ants are superior. Both black ants (primarily from southern and central China) and red ants (primarily from northeastern China) are used. Ants from high, pristine mountain ranges such as the Himalayas in southern China and Tibet, or the Changbai Mountains in northeastern China are considered the finest and most potent. Most of the tonic ants are large ants.

A primary concern in using ant as a tonic supplement is that the ants or ant product is from a reputable company that specializes in ant tonic preparation. The ants must be collected from, or raised in, a pure, pristine environment. Certainly, using ants that have been exposed to Raid is not a good idea. In other words, it is not a good idea to try collecting your own from the basement or back yard. The ants used in Chinese Tonic supplements are raised or collected from mountainous regions and are absolutely chemical free. Ants are rare in raw form, but is extremely valuable if you can obtain it. It should be light in weight, dark and consistent in color and fluffy, with no obvious impurities, degradation or discoloration. Most sources of ant as a tonic supplement will be ant products made by a number of ant specialty houses out of China. Ant comes in both capsules and oral liquid elixirs. At this writing all the ant products I have tested have been excellent and have met my every expectation. The ant industry is extremely heavily regulated in China and there is no indication that less than quality ant products are now being produced in mainland China.

Primary Functions
Promotes, maintains and prolongs life, replenishes Qi, nourishes blood, increases vitality, adaptogenic, regulates yin and yang, antiaging, enhances immunocompetence (bipolar immune regulation), improves marital function and increases virility and fertility, strengthens musculoskeletal system, calms anxiety, promotes sound sleep, improves digestion and assimilation

Qualities
Ant tonics are widely consumed in Asia to promote strength, marital vigor and as a powerful antiaging agent. Over 70 years of research has proven that ants are highly nutritious and have powerful medicinal effects. As a matter of fact, ant is considered a premium adaptogenic substance in the same ranks as Ginseng, Acanthopanax, Schizandra, Cordyceps, Astragalus, Ganoderma and Gynostemma, the superstars of

Chinese Tonic herbalism.

Polyrachis is widely used to boost the immune system, or to maintain already strong immune functions. It has been established to have double-direction benefits on the immune system, so it is used by anyone with any immune disorder to regulate immune functions.

Polyrachis is widely believed to prevent common symptoms associated with aging, such as lumbago, memory loss, joint problems, fatigue, climacteric symptoms, cardiovascular disease, etc. Ant strengthens the entire Kidney system, including the marital functions, skeletal structures and renal system. It also strengthens the nervous system, digestive functions, detoxification functions and muscular system. Therefore ant products have become extremely popular with middle aged and elderly consumers in Asia. Ants are being called the “forever young” nutritional supplement.

Young people in China seem to be major advocates of ant as well. Young men and women use it to increase energy on a daily, as well as long-term basis. Both physical and mental energy seems to be supplemented by consuming ant. Ants can carry a load of 100 times there own weight, and people have long felt that consuming non-toxic varieties of ants can increase physical and mental strength. Students in particular have made ant elixirs a virtual craze in cities like Shanghai , Hong Kong and Beijing. It is commonly used by those who have become fatigued or exhausted due to excess workloads or other forms of stress, including mental sources. Ant is noticeably energizing when consumed for a short period of time and builds long-term energy if used continuously for awhile.

Because of its long and short term energy boosting quality, ant tonics are becoming popular as pre-workout elixirs in Hong Kong and Taiwan, where many adults visit health clubs regularly. Ant is an ideal tonic for athletes, especially when combined with Ginseng, Acanthopanax and other similar tonics.

Ant has a big reputation in Asia for increasing libido and virility. Both men and women claim that after using ant for even a short time that their interest in marital increases significantly and that their marital performance improves in numerous ways. This reputation has contributed to the explosion of ant products available in the Taiwanese, Hong Kong, Southeast Asian and Japanese markets.

As a result of modern technology and vastly improved manufacturing capabilities previously not possible, ant is now being widely used in Asia for the first time. There has been a genuine explosion of interest in ant tonic products now that it is, for the first time, not a product reserved just for emperors, rich nobles and their wives and families.

Scientific Data
Ants are extremely rich in nutrients, including significant amounts of vitamins B1, B2,

B12, D and E. Ant contains more than 42% protein and provide 8 essential amino acids. It contains enzymes and other active substances. The ATP in ants can provide energy directly to the human body. Ants are rich in more than 20 trace elements such as magnesium, calcium, phosphorus, iron, selenium, and especially zinc.

Polyrachis is extremely rich in zinc. The zinc content of Polyrachis is the highest among all known living organisms. Every gram of dried ants contains 180 mg. of zinc. This undoubtedly explains part of ant's strong beneficial influence on maritality, as zinc is a critical element in the human marital function. In Japan, Zinc has been called "harmony element" because it creates harmony between couples---it is a powerful marital-improving element. These chemicals seem to have an influence on the way that zinc is utilized. Studies have shown that regular use of ant tonics can prevent and treat disorders associated with zinc deficiency, including senile cataract, night blindness, incontinence, and marital dysfunction, including impotence, spermatorrhea and premature ejaculation in men and menorrhagia, frigidity and climacteric symptoms in women.

Ant has a bipolar (double-direction) immuno-regulatory activity. It thus fortifies a weakened immune system and modifies an overactive immune system. Ant can have a very beneficial effect on autoimmune disorders such as osteoarthritis, rheumatoid arthritis, gouty arthritis, alkolyzing spondylitis, scleroderma, psoriasis, and some studies indicate significant tumor reducing effects when ant is consumed in therapeutic dosages. Ant has been used clinically for the following disorders in China and other Asian nations: rheumatoid and other forms of arthritis, sciatic neuralgia, hepatitis B, neurosis, insomnia, diabetes mellitus, tuberculosis, asthma, dermatomyositis, tumor, hypertension, and more.

Polyrachis vicina, Polyrachis lamellidns and other species of nutritional ant have been demonstrated to have liver protective activity by lowering the activity of SGPT, a liver enzyme (detail). It can also, to a certain degree, prevent liver cells from turning into fat. Polyrachis has been demonstrated to be very useful in the treatment of both acute and chronic hepatitis B. Recent research indicates that hepatitis B, both chronic and acute, is due to immune deficiency and that the hepatitis virus is itself opportunistic. Therefore, strengthening the immune system as a whole is essential and invaluable in treating hepatitis B. Ant serves this role very effectively because of its dual role as an immune tonic and a liver protector.

Polyrachis also has anxiolytic, anti-cough, analgesic, anti-spasmotic, anti-asthmatic, anti-inflammatory, anti-bacterial, anti-fungal, anti-oncologic and anti-arthritic functions in studies done throughout Asia.

Recent research demonstrated that Polyrachis can promote the growth, and prevent the shrinkage, of the thymus gland, which generally shrinks as one grows older. The thymus is one of the important immune system organs of the body. Ants can stimulate

the production of lymphocytes when the body is under microbial attack, and can improve replication of the lymphocytes. Ants increase the amount of active immune cells. Extensive research now verifies that ant has a bipolar immune function.

Ant can increase the amount of DNA and RNA inside of human cells. This is believed to slow down aging and to aid in the regeneration, and even rejuvenation of tissue.

A unique set of aldehyde compounds found in all edible species of Polyrachis has been demonstrated to have a stronger tonic action than ginseng, and it has thus far been impossible to synthesize this chemical. These aldehydes compounds include geranicaldehyde (C10H16O) and formalindehyde (HCHO, C10H14O). It is believed to be a result of these and several similar aldehydes, as well as some other chemicals in ant, that give ants their enormous physical strength---and ultimately give the consumers of ant the well-established increase in strength.

Polyrachis is not a source of hormones and are absolutely free of synthetic chemicals.

Some facts about ants: Ants can lift up to 400 times their own weight and pull up to 1700 times their own weight, making them the world champions in terms of strength. Ant contains 8-13 times the protein of milk, chicken, duck, beef, mutton and fish.

Primary Combinations
Ant may be consumed by itself or may be combined with other herbs. Combine with:

1. Ginseng Root and Astragalus to build qi
2. Astragalus and Ganoderma to fortify the defensive qi
3. Dang Gui, White Peony and Rehmannia (steamed) to build blood, regulate and fortify the female reproductive system
4. Deer Antler, Cordyceps and Placenta to tonify the original qi and to fortify the Kidney yin and yang
5. Silk moth, Gejie, Sea Dragon, Sea Horse, Morinda, Cuscuta, Epimedium, etc. to tonify male marital functions

Varieties and Grading
Several varieties of ants are used in Chinese Tonic herbalism, all with virtually the same attributes. These different varieties come from different regions in China. Each region claims that its ants are superior. Both black ants (primarily from southern and central China) and red ants (primarily from northeastern China) are used. Ants from high, pristine mountain ranges such as the Himalayas in southern China and Tibet, or the Changbai Mountains in northeastern China are considered the finest and most potent. Most of the tonic ants are large ants.

A primary concern in using ant as a tonic supplement is that the ants or ant product is from a reputable company that specializes in ant tonic preparation. The ants must be

collected from, or raised in, a pure, pristine environment. Certainly, using ants that have been exposed to Raid is not a good idea. In other words, it is not a good idea to try collecting your own from the basement or back yard. The ants used in Chinese Tonic supplements are raised in sealed ant farms and are absolutely chemical free. Ant is rare in raw form in the United States, but is extremely valuable if you can obtain it. It should be light in weight, dark and consistent in color, and fluffy, with no obvious impurities, degradation or discoloration. Most sources of ant as a tonic supplement will be ant products made by a number of ant specialty houses out of China. Ant tonics come in both capsules and oral liquid elixirs. At this writing all the ant products I have tested have been excellent and have met my every expectation. The ant industry is extremely heavily regulated in China and there is no indication that less than quality ant products are now being produced in mainland China.

Contraindications
Polyrachis vicina is non-toxic and without clinically significant side-effect.

However, minor side effects are sometimes noticed by users who are extremely allergic or debilitated, in which case there may be minor abdominal distention, diarrhea, skin rash, etc. after initial use. Experts in China recommend that if this occurs, you should stop taking ant for 1 or 2 days, and start taking it again after the symptoms subside. Take a lower dose for a few days and then increase to a full dosage. In almost all cases, the reaction will not repeat itself.

Those who have taken hormone type drugs (steroidal compounds such as birth control pills, cortisone, anabolic steroids, etc.) for a prolonged period of time will not experience the overt benefits of ant for a period of from 1 to 3 months, although the ant will be helping the body to re-establish its healthy hormone balance during this period. Do not withdraw yourself from steroids abruptly and without the supervision of a physician.

Ant is considered to be very safe and, in Asia, large quantities are often consumed by those seeking extra benefit. Always consume extra water immediately after consuming ant.

History
Ant has been widely used and very highly regarded in China as a tonic for over 3000 years. Ant has been refered to in a number of famous Chinese medicinal classics, including Li Shi Chen’s Ben Cao Gang Mu, where the great master praised ants as a superior tonic with excellent curative powers. It has been universally tauted as a superb Liver and Kidney tonic of the highest order. Its name, which it received in ancient times, means “black horse.” Imperial records indicate that numerous emperors and other noblemen have consumed ant tonics to promote maritality and to increase longevity. Ant has been historically considered a superior herb of the highest order. In fact, it has been said that “Ginseng may be the King of Herbs, but Ant is the Herb of Kings!".

View Full Version: Chicken Eggs in Chinese Medicine

Title: Chicken Eggs in Chinese Medicine

TheUnhivedMind - April 18, 2011 04:26 PM (GMT)

May I remind you that the most prized egg in Chinese medicine is the egg of the Duck. Do you still believe we're meant to fear eggs? Why would the Chinese who know far more about health than anyone, love to use eggs if they were bad? Please, lets stop listening to this modern Western junk science and eat correctly and in balance. We need to copy the Chinese in all ways and any negatives from certain foods are buffered by another food or herb added. Time to wise up because our enemy is playing trickery upon us to lower our life spans. They're tainting these types of foods to help demonize them further. May I remind you that the white of the Chicken egg will bring Qi downwards which is good in cases of too much heat and hyperthyroidism and Asthma etc. The whole Egg as the opposite effect with Qi and makes it rise. Duck eggs is floating thus neutral on the Qi movement which can be of much use like neutral temperature foods. If you ate the Duck itself you'd have a nice downward Qi effect where as eating a Chicken will produce and upward Qi effect. May I remind people that I've been a vegan for many years and I've not cheated. I've seen the errors of my thoughts that I was brainwashed with by this mind reframing crowd trying to deceive us. Veganism has its uses for a short period for a cleansing period but I no longer follow it for long periods. If we eat in balance and correctly we will function correctly as the Chinese do who also add their Tai Chi to the mixture.

QUOTE

Chicken Eggs

http://tcmhealthtalk.com/?p=776

Chicken eggs are nutritious, and according to Chinese health culture and Chinese traditional medicine, have high therapeutic value. In everyday life, eggs are considered invaluable for physical fitness, longevity, and skin care. I even came across a Chinese book that includes 555 ways to use the egg (mostly chicken eggs) in food therapy.

According to the Five Flavors theory of Chinese medicine, egg white is considered Sweet, and has a Cooling effect according to the Four Attributes. Its function is to nourish Yin (all that has to do with fluids and moisture in the body) and the respiratory system, to clear away excessive Heat, to eliminate and counteract toxins that have entered the body, to resolve Blood stasis and stop pain. It may be used as first-aid to relieve pain and swelling caused by low-level, common burns. It is also helpful in relieving diarrhea in children;make a lightly fried pancake from the white of an egg and green onion roots;one egg white to 7 finely chopped green onion roots (its okay to include a small amount of the white base of the onion stalk as well), cooked over a low fire without stirring to make a small pancake that is cooled to a safe, moderately warm level (not hot!) and placed on a paper towel on your childs stomach;repeat 3-4 times as needed. The beneficial effect should be obvious.

The egg yolk is considered Sweet, and has a lightly Warming effect according to Chinese medicine theory. Its function is to nourish Blood and Vitality. It benefits Qi of the Stomach and Spleen, and thus also benefits digestion. It is useful for calming stomach aches that arise from sudden fright.

When the yolk and egg white are eaten together, the egg is considered Sweet and Neutral (neither Cooling nor Warming). They are thought to bring harmony to body organ functions, to nourish the emotional functions attributed to the Heart and calm the Mind, to enrich the Blood and other body fluids, to balance moisture (Yin) throughout the body, to clear away excessive Heat, and to help eliminate toxins. Eggs are recommended for those who suffer from insomnia, anxiety and depression, long term dry coughing, night-blindness, and for postnatal mothers who seem to have a deficiency of milk.

Recommended consumption is one or two eggs per day especially for older individuals (who, depending on their digestive health, should avoid pan-fried eggs. Chinese medicine does not consider eggs in the negative way that some modern nutritionists do.

Here is a tasty egg-based soup that is especially beneficial for women. Chinese women eat it before or after there periods not during. It is believed to reduce swelling and help with irregular menstruation and related blood flow problems.

Ingredients:
30-50 grams of Motherwort (Leonurus artemisia or L. heterophyllus Sweet yìm•c•o, in Chinese).
2 eggs
Some brown sugar to taste
1. Wash the 2 eggs and Motherwort. Then allow the Motherwort to soak in one cup of fresh water (stainless steel or porcelain may be used).
2. Boil the 2 eggs until hard, drain, and remove the shells.
3. Pour the cup of Motherwort and water into a pan for cooking, add the eggs, and bring to a boil.
4. Reduce the fire to a mid-low level, and simmer for 25-30 minutes.
5. Add brown sugar to taste, and allow the soup to cool slightly.

Enjoy the delicious soup and its pleasing aroma!

semperbry76 - April 19, 2011 03:45 AM (GMT)

Greeting Craig, I too am coming to the understanding that you have come to. I have been a mucusless diet person for a couple years, and it has helped me most definetly in the short term. I found that after only the end of the second year i felt like i was deficient in something that i wasn't when i was eating meat and eggs. I started getting into TCM shortly after you and though i certainly am no where near your understanding, i can definetly see the benefits practicing it myself. Thanks for the push in the right direction once again.

-Bryan

TheUnhivedMind - April 21, 2011 05:48 PM (GMT)

Thats good to know my friend. Yes its great understanding the body properly via the Chinese medical and diet system. We don't need all this complicated medical crap of the West and even the nonsense being spread by much of the so-called good guy nutritionists who have no clue about Chinese medicine. As I've said these vegan type diets are good for short term cleansing and everything needs a full clean at some point and you're one of them. Even with a nice Spleen etc you will never be clearing all the filth from the body like if you were on a Vegan diet but its not a long term diet I no longer believe and also many do not eat what they should whilst on these diets. I've been a Vegan for many years but now I've started back on meats using the Chinese diet system and I hope to give good results to you all when I feel its time, I've already seen a difference already. We must though try to get foods as close to nature and in their real form so for instance if you want butter you must get real butter made as it was years ago. As I said before much of the butter today isn't butter and its more margarine as you'll see its very little butter and in fact more vegetable oil which is lethal to the Spleen and Thyroid function. Making sense now why theres so many illnesses related to weight problems which is of course the Spleen? What happens next? Meat and dairy get blamed instantly for the problem which suits the Knights of Malta future agenda of a vegan population with shorter lifespans nicely. Time to wake up people and see the deceit in front of our eyes. The Chinese prize meats like rabbit and duck along with eggs especially duck eggs. The Knights of Malta will force you from meats by pricing you out of the market as they're doing with cigarettes and tobacco right now. One of the other doctors who's made me always wonder about Veganism was Dr. Don Donsbach. Don has some great common sense information especially on the scams of cholesterol. The only thing I don't like about Don is how he's fond of using supplements but

he does get the results he wants so thats up to him and good on him for aiding the people he has.

semperbry76 - April 24, 2011 04:22 PM (GMT)

Looking forward to hearing about your results and protocol. Yes, about the dairy i have to drive forty minutes to a get raw milk and truly organic entirely grass fed beef. They do make it quite difficult to obtain and i am in upstate new york where there is no shortage of farms (big shortage of respectable farms). My herbal protocol right now is Fo-ti (prepared), Gogi berries,Gynostemma, Bupleurum root, Astragalus root, White peony root, Licorice rt and Schisandra berries. I make a strong tea of the gynostemma and gogi berries then i take a tsp of the very good quality whole herb(or whatever part of the plant in use) powdered extracts of the other herbs and chase it with a tsp of shisandra berry tincture.. Not the most pleasantly tasting tea but well worth the off taste. The shisandra after it is perfect (one of my favorite tasting herbs by far). I have been on this herb protocol for 2 months now along with eating meals prepared the TCM way (as best i can for now) and my energy and mental focus have been quite noticeable. I have also gained some good weight, and i have not gained weight ever since i started mucusless.

TheUnhivedMind - April 30, 2011 05:36 PM (GMT)

What I will say is that I don't see animals in nature having milk they were weaned off as a child. What I do see is how prized eggs are in natural by most animals who're always trying to steal them for food. Therefore if I had a choice between the two I'd be taking the egg over the milk any day especially as Cow's milk was designed for a Calf not a Human child. You will note the lack of DHA in Cows milk because their calves don't need it for brain development as they're not smart like we are and in need as much as our brain. If you look at Human breast milk it has a good amount of DHA to grow the child's brain. Therefore what does this tell us? Well if we want milk we should ideally be getting it from properly nourished baby producing human feminines. I was once told that the best milk behind the human milk is goats milk but I've been also told that long term usage is no good and that sheeps milk would be more advised long term. You have some nice herbs there my friend and you might want to look into the wonderful Rehmannia root (Shu di huang). Your Astragalus will do you much good especially your Spleen and Immune system. Well you've removed a lot of the filth by the mucusless diet and now on the Chinese medical system your improvements in health should come quicker thanks to the cleanse. As I've said I have no problems with vegan/muculess diets short term say 2 times a year but not long term.

semperbry76 - May 1, 2011 11:35 PM (GMT)

Thanks Craig, i will definetly consider your advice about the milk. I have heard some

positive things from Mercola about raw milk and one of his guests Ori Hofmekler. The way i use it now is in the morning i will take 2 cups raw cow milk(thats it till the next day) and put in maca powder, colostrum from "Surthrival", whey protein from Mercola(I will not touch whey protein from another source) and i will add some raw cocao powder, and soon to add some raw eggs to the mix. I know your not a fan of much supplementation and i am not either, but i wanted to test these out because i'm looking to add some lean muscle as healthy as possible obviously. I suppose if i saw some adverse effects from the milk i could use a nut milk that i would make myself. I have to get more Rehmannia, i had a months supply of it and am all out, but when i added that to my tea i could feel it go right to my kidneys, great herb. I recently purchased some 6 yr old red ginseng that i'm going to tincture up with some red dates and cornus (i'll have to balance this properly because i am of a hot constitution). On a side note, when you eat meats, what do you prefer? and do you prefer it in a soup, stew or separate with the veggies next to it?

TheUnhivedMind - May 2, 2011 03:53 AM (GMT)

I personally believe Duck is one of the best meats around as its very nutritious indeed and loaded with fats unlike Rabbit and Chicken. I'll have mind with vegetables my friend as I have my herbs etc separately before and after if need be. If you've got heat issues then rather than taking red Ginseng you should take American Ginseng which is cooling and actually the best Ginseng most prized by Chinese and expensive.

semperbry76 - May 2, 2011 01:56 PM (GMT)

I will have to look around for some proper duck and learn how to prepare it, thanks. I could probably find it at a nearby asian market, but not sure how chemical free it would be. Yes, now that i think about it i should take the american ginseng as you say. I will let my tincture sit till winter when it could be more useful. Thanks again.

View Full Version: BLACK BONE CHICKEN

Title: BLACK BONE CHICKEN

TheUnhivedMind - March 20, 2011 10:28 PM (GMT)

Chicken, Black-bone 烏骨雞

http://www.e2121.com/food_db/viewherb.php3?viewid=218

Latin: Gallus domesticus

Origin:
In China, there is a special species of rooster, the black-bone chicken Gallus gallus domesticus (var.) Linnaeus, of the Phasianidae family. The black-bone chicken is short, with a small head but a short neck. The black-bone chicken is originated in Taihe County, east of Wushan mountain in the Jiangxi province of China. It has been raised for over 2,000 years there. It has evolved, however, and is now grown in many countries. In some countries the black-bone chickens are cultivated as pets for their silky, fur-like appearance.

In China, depending on the location that the chicken is raised, it could be differentiated into different kinds, such as white-feather-black-bone, black-feather-black-bone, black-bone-black-meat, white-meat-black-bone, and so on. In other countries, the colors of the feathers are becoming much better in quality and has different variety through

breeding. Other than the original white, nowadays one can spot it in black, blue, buff, grey and brown.

In Chinese folklore, there is a fairy tale that goes with the black-bone chicken. It is said that the celestial Lu Dongbing made pills of immortality on Tiger-nose Peak long, long ago. Tiger-nose Peak is also known as Two-finger Peak of the Wushan Mountain in Taihe. On the day when the pills of immortality were successfully made, Lu Dongbing invited other celestial beings to the celebration party, including Tie Guaili, Han Zhongli, Zhang Guolao, He Xiangu, Lan Caihe, Han Xiangzi, and Cao Guojiu.

When the celestial beings were drinking wine, a pair of wild chicken flew from the forest into the pill-making pool and ate the pills of immortality. The chickens then became a pair of white phoenix. Lu Dongbing was not glad and reported to Buddha Guanying, but Buddha Guanying smiled and said: "It's a good opportunity for them to live on earth." Buddha Guanying pointed at the Tiger-nose Peak, and the white phoenix immediately became silky fowl.

The site for making pills of immortality in the fairy tale can still be seen at the Two-finger Peak of Wushan. There is a spring, known as "pill-making pool." The pool is about 20 cm deep. The spring water there is clear and sweet. In summer, tourists and passers would come by and drink the water there. What is strange is that the Spring Pool never overflows and cannot be depleted even drunk by many people.

The orthodox Taihe Black-Bone Chicken has ten apparent characteristics: blue comb, green earlobes, five toes, bearded, feathered shanks, white silky feathers, crest, black bones, black muscles and black skin. The white silky feather is the unique feature of the Taihe chicken when compared to the other black-bone birds.

In the Tang Dynasty, the 'maifengdanyao,' which has the black-bone chicken as the main ingredient, was thought to be the cure-all medicine for the gynecological diseases. The famous medicinal book written during the Ming Dynasty titled Compendium of Materia Medica says that Taihe Old Chicken is a tonic and nourishing food to treat women's diseases. It enriches blood and builds up the health.

Taihe chicken was named 'Wushan Chicken' by Emperor Qian Long of the Qing Dynasty. The story goes that in the early years of the Qing Dynasty, there was a person whose name was Tu Wenxuan in Wushan, Taihe. This person sent the silky fowl to the Emperor Qian Long. The Emperor ate the chicken and found it delicious. Then Tu Wenxuan was appointed as an official and the Taihe Chicken was named as 'Wushan Chicken' by the Emperor.

Taihe chicken also has been distinguished and admired abroad. In 1915, China sent the silky fowl to Panama Pacific & International Fair and won a gold prize for the silky fowl due to its unique characteristics.

When the Chinese leaders visited Thailand in 1983, they presented 20 eggs from the Jiangxi Taihe Wushan Original Chinese Farm as diplomatic gifts.

Taihe chicken is also favored as food. Its muscle fiber is fine and tender. Chicken soup made with it is tasty and refreshing. Its unique flavor makes it a special dish in a banquet. It could also make a precious medicinal dish when cooked with herbs.

Why does the Taihe chicken has such outstanding nutritional and medical value? Research conducted by the Chinese Academy of Sciences shows that it is due to the peculiar natural conditions in Wushan, especially due to Wushan spring water which contains various minerals. It is said that the original silky fowls drink spring water, eat worms in the forest and wild grass there. There is a local saying that it is impossible to raise Wushan chicken without Wushan water.

For many years Taihe people have made many kinds of products and benefited from Taihe chicken. They have made a series of tonic liquors and nourishing foods, such as 'Wuji Baifen Wan', 'Wuji Shenjijing' (refinement of black-bone chicken with ginseng and wolfberry fruit), 'Wuji Bujiu' (black-bone chicken tonic liquor), 'Wuji Mairujing' (black-bone chicken with extract of malt and milk), etc. The 'Taihe Wuji Bujiu' is one of the four famous Chinese gift liquors. In the Taihe country brewery, black-bone chicken mixed with Chinese angelica, dangshen and 14 other traditional Chinese medicinal herbs are steeped in liquor for three to four months, then stored for six months. It takes ten months to make Taihe Wuji Bujiu.

In the late Qing Dynasty, there was a disaster that killed almost all people and silky fowl in Wushan. In the 1930's, two scientists in Jiangxi province collected 10 Taihe Silkie, with 2 cocks and 8 hens from the peasants, in order to save the silky fowl which was on the brink of extinction.

Until 1938, silky fowls that remained in Taihe only numbered in the hundreds. In 1944, the Japanese attacked and occupied Nanchang, then bombed Taihe. The original Taihe silky fowls were almost totally wiped out. In order to protect the original Taihe silky fowl, scientists there disguised as peasants, at the risk of life, to raise the silky fowl until the end of the war.

In 1959, the Jiangxi Taihe Wushan Original Chinese Farm was established. Located in Wushan, the farm is set up with the unique purpose of raising the original Taihe silky fowl.

Wushan Chicken is the original Taihe Silky Chicken, or the China Taihe original silky fowl. Within Taihe County, other than Wushan, the silky fowl is raised in other places; but these chickens are named 'Taihe Chickens,' and cannot be named as 'Wushan Chickens.' When the silky fowl is raised in other districts besides Taihe County, it is

usually named as Zhusi Chicken.

An original adult Wushan chicken weighs 1,250 grams with a growth period of 180 days on the average. It is maintained that this chicken is far more nutritious as a tonic than the ordinary chicken, especially for women.

To identify a black-bone chicken, just examine its tongue. A black tongue indicates it is a black-bone chicken.

Researchers in poultry breeding and genetics have discovered that the unusual pigmentation in the black-bone chicken breed--in the skin, bones, connective tissues, muscles and tendons, and some other internal parts--is due to the combination of two genes. It happens when the dominant fibromelanosis gene, 'Fm', which causes the black pigment (melanin) in black-bone chicken, works in combination with the recessive allele of the sex-linked inhibitor of dermal pigment gene with the symbol 'id'. As a result, modern breeders should be able to make any breed of chicken "black-boned," by incorporating these two genes. See R.D. Crawford, ed., Poultry Breeding and Genetics, Elsevier, 1990.

Also spelled as Black-boned Chicken, or called Silky Fowl, Silkie Bantam.

See also The American Silkie Bantam Club, which has been established since 1923; as well as Food, Animals, Birds and Meat, Chicken and Rooster.

Properties:
Sweet in flavor, warm in nature, it is related to the channels of the spleen and stomach.

Functions:
Warms the middle region, benefits the spleen, nourishes qi and the blood, tonifies the kidneys and semen, brings down heat of the deficiency type.

Applications:
Black-bone chicken is used for treatment of hectic fever, diabetes, lingering diarrhea due to hypofunction of the spleen, dysentery, metrorrhagia (profuse uterine bleeding especially between menstrual periods) and leukorrhagia (whitish discharge from the vagina resulting from inflammation or congestion of the mucous membrane.)

It can also be used for the treatment of asthenic diseaese, soreness of waist, leg pain, etc.

Dosage and Administration:
To be eaten stewed, stir-fried, in soup or used as an ingredient of a prescription. It is used in most of tonifying medicated diets.

Cautions on Use:

Reference Materials:

Toxic or Side Effects:

Modern Researches:
Black-bone chicken contains many kinds of amino acids (18 kinds of amino acids including the 8 essential amino acids for human body), vitamins B1, B2, B6, B12, C and E, niacin, protein, fat, calcium, phosphorus, iron, nicotinic acid, etc.

Laboratory tests show that the Taihe chicken contains certain hormones, blue pigment and amino acids which are required by the human body. These factors can increase blood cells and hemoglobin. Abundant clinical experience has indicated that Taihe chicken has a peculiar effectiveness in treating women's diseases, sterility, menoxenia (abnormal menstruation), habitual abortion, blood leucorrhoea, metrorrhagia, and sickness after giving birth to offspring, and also aids in curing pulmonary problems--tuberculosis (TB), heart diseases, neurasthenia (a condition of nervous debility supposed to be dependent upon impairment in the functions of the spinal cord), and chidren's osteomalacia (a condition marked by softening of the bones).

The eggs of Taihe chickens can be used effectively to treat severe headaches, headaches after giving birth, faintness, asthma and nephritis (acute or chronic inflammation of the kidney). The eggs are also an ideal nutritive, especially for old people and high blood pressure victims, since the cholesterol content is lower and free amino acids are higher than that of other kinds of birds.

Taihe chicken can be used as an ingredient of Chinese-made medicines. For instance, Taihe chicken is a major ingredient in 'Wuji Baifeng Wan', made by the famous Beijing Tongrentang Pharmacy.

Title: TAI CHI...THE KEY TO A HAPPY OLD AGE

TheUnhivedMind - March 18, 2011 04:23 PM (GMT)

TAI CHI...THE KEY TO A HAPPY OLD AGE

Friday March 18 2011 by Daily Express Reporter
http://express.co.uk/posts/view/235245/Tai...a-happy-old-age

FORGET bowls and bingo, the best way to stop the elderly getting depressed is to introduce them to the 2,000-year-old Chinese martial art of tai chi.

A series of exercises once a week can lift depression, raise energy levels and even improve your memory, according to a medical study.

The over-65s, particularly those living in care, are six times more likely to suffer from depression than the general population. And drugs can help only an estimated one in three patients, say psychiatrists at the University of California.

But adding a tai chi class, based on a gentler, Westernised version of the martial art, once a week for 10 weeks can make a significant difference.

The results of the study, to be published in the American Journal of Geriatric Psychiatry, show a marked fall in levels of depression. Researcher Dr Helen Lavretsky said: “This is the first study to demonstrate the benefits of tai chi in the management of late-life depression.

“It shows that adding a mind-body exercise like tai chi that is widely available in the community can improve the outcomes of treating depression in older adults. We may be able to treat them without exposing them to additional medications.”

View Full Version: TCM, Spleen, Stomach and body weight

Title: TCM, Spleen, Stomach and body weight

Ken Ardel - February 26, 2011 08:04 PM (GMT)

http://www.china.org.cn/english/health/220996.htm

TCM Take on Fat: Vent Your Spleen

If you want to fight fat the TCM way, you should eat foods to promote a healthy spleen — like Chinese pearl barley, known as Job's tears — and drink lots of Pu'er tea. Both are also diuretics.

A sun top, miniskirt and high-heel sandals - that's the outfit that catches men's attention and other girls' envy on the streets in summer. In order to show off their figures in skimpy clothes, girls started their weight-loss battles months ago, but it's never too late to lose weight.

Drinking slimming tea (a laxative), staying on a diet, and going to the gym frequently are widely used weight-loss methods. But eating certain foods or being pierced by fine silver needles may also help you to get rid of excessive weight.

Most people believe that obesity results from eating too much, which is certainly true in most cases. But it fails to explain why some people gain weight even though they eat little and drink lots of water while others keep slim though they eat a big dinner every day.

"It is not simply the case that the more you eat, the more weight you gain," says Dr Zhang Zhongyi, deputy director of the Acupuncture Department of Yueyang Western and Traditional Chinese Medicine Hospital. "Whether your stomach and spleen work well plays a much more important role."

According to traditional Chinese medicine (TCM), the spleen, together with the

stomach, digest and absorb nutrients (the spleen function in TCM differs from that in Western medicine). TCM holds that the spleen is responsible for sending the nutrients from the stomach to all the organs, and also for expelling excessive body fluid. If the spleen doesn't function well, excessive body fluid will collect and turn into fat.

Fat not only collects on muscles, destroying a nice figure, but also on organs and in the blood, which can cause health problems.

Fatty liver is common among fat people and can lead to cirrhosis if patients fail to correct their diet. Links are also found between obesity and the "three highs" (hypertension, high blood cholesterol and high blood sugar), which may contribute to cerebral vascular disease.

"The function of the organs, including the spleen, declines with aging. That's why most middle-aged and old people find themselves gaining weight easily," says Dr Zhang. "As for young people, unhealthy eating habits may cause malfunction of the stomach and spleen and leads to fat collection."

Not eating regular meals, but having continuous between-meal nibbles, according to Dr Zhang, is a bad diet habit that causes a weight problem among many young ladies. Besides, sitting all day long and not getting regular physical exercise can also lead to body fluid accumulation, which is typical among office ladies.

Dr Zhang suggests taking a five- to 10-minute break every hour, relaxing, doing some exercises and eating foods that are good for the spleen and are diuretics as well, such as Pu'er tea.

If these methods can't help you reach your ideal figure, you may try acupuncture therapy. It will help improve the function of stomach and spleen, and reduce the appetite by piercing fine needles into certain acupoints.

"Acupuncture works well in reducing excessive weight, yet doesn't seem so effective when girls of normal weight insist on losing more," says Dr Zhang, "especially when some girls only want their legs slimmer."

Dr Zhang says that generally the normal weight for a man is his height minus 100, while that for a woman is her height minus 105. People weighing five kilograms more or less are all within the normal range.

The ingredients listed in the recipes below are available at major supermarkets, such as Carrefour, City Market, Hualian Supermarket and Lianhua.

One of the dishes should be eaten once a day.

Herbal teas

Chen Pi tea (Tangerine peel)

Portion: 4 grams chen pi

Function: Improves spleen and liver function; expels toxins and fluids (diuretic).

Pu'er tea

Portion: 10 grams Pu'er tea

Function: Aids digestion, expels fat, diuretic, laxative.

Foods to help you lose weight

Yi Mi (Job's tears) congee

Ingredients: Job's tears (30g), sugar

Function: Improves the function of the spleen and expels excessive body fluid (diuretic), thus aiding to weight loss and relieving swelling. It helps reduce hypertension and lower blood sugar. Also known as coix seed or Chinese pearl barley, it tastes like barley.

Method:

1. Put Job's tears into a saucepan, bring quickly to a boil. Reduce heat, simmer for 30 minutes until Job's tears become soft.

2. Add sugar and stir.

Dried shrimp and white gourd soup

Ingredients: Dried shrimp (15g), white gourd (400g), lard (25g), green onion (8g), salt,

gourmet powder, and sesame oil

Function: Expels excessive body fluid (diuretic), thus promoting weight loss and relieving swelling. It also helps expel toxins and phlegm.

Effect is best if prepared with only 30g white gourd with peel and drink as tea several times a day.

Method:

1. Wash the dried shrimp, and soak it in warm water. Peel the white gourd, and chop it into slices.

2. Boil the water in saucepan, and then add white gourd, dried shrimp and salt. Wait 8-10 minutes, then add green onion, gourmet powder and sesame oil.

Title: Tai Chi prevents elderly falls say geriatrics soci

TheUnhivedMind - January 13, 2011 07:29 PM (GMT)

Tai Chi prevents elderly falls say geriatrics societies

By James Gallagher
Health reporter, BBC News
13 January 2011 Last updated at 05:01
http://www.bbc.co.uk/news/health-12170441

Tai Chi lessons and reduced medication should be used to prevent falls in the elderly, according to experts in the UK and the US.

The latest thinking on tackling falls is included in new guidelines for doctors, published in the Journal of the American Geriatrics Society.

Falls are one of the leading causes of death for old people.

Age UK said implementing the recommendations was crucial for improving services.

A third of over 65s and half of over 80s will fall each year, and it is thought that 14,000 people in the UK die as a result.

Treatment costs the NHS in England around £4.6m a day.
New guidance

Experts from the British and American Geriatrics Societies have reviewed the medical research since the last set of guidelines was published in 2001.

The updated advice recommends exercises which improve strength and balance such as the Chinese martial art Tai Chi.

It also acknowledges that medications which affect the brain, such as anti-depressants

and sleeping pills, are strongly linked with falls.

Researchers says falls are as serious as heart attacks

These drugs should now no longer be prescribed or the dose reduced. In 2001, this was only recommended when patients were taking more than four drugs.

When doctors assess the risk of falling they should now also examine feet, home safety and the fear of falling.

Other recommendations include prescribing vitamin D supplements, raising low blood pressure and cataract surgery.

Doctor Mary Tinetti, who revised the guidelines and is from Yale University School of Medicine, said: "Falls are one of the most common health problems experienced by older adults and are a common cause of losing functional independence.

"Given their frequency and consequences, falls are as serious a health problem for older persons as heart attacks and strokes."

Andrew Harrop, director of policy and public affairs at Age UK, said: "Currently there are large variations in the quality of falls prevention services provided across the UK and it is crucial that these guidelines are put into practice to ensure that future falls are prevented.

"With research showing that programmes for improving strength and balance can reduce the risk of falls by as much as 55%, the recommendation that interventions for preventing falls should include an exercise component is particularly welcome."

Description: *prevention of influenza prevention and c*

TheUnhivedMind - January 11, 2011 10:19 PM (GMT)

Beijing Traditional Chinese Medicine published the prevention of influenza prevention and control manual home side paid millions

Source: Qianlong
At 19:53 on November 7th, 2009
http://news.sohu.com/20091107/n268036053.shtml

Prevention of Influenza Chinese side announced the city millions of home control manual issued

Qianlong November 7 (Reporter Wang Ling) This morning, the Beijing Traditional Chinese Medicine Administration, China Medical Health Development Foundation held a "prevention of influenza in the capital of the public medical Guide home" distribution ceremony, and also to the public of the adult , children, pregnant women and the elderly against influenza prevention programs for different groups of people.

Influenza A H1N1 influenza prevention and control in the previous phase of work, the capital of Chinese medicine has played a role in its unique advantages and the municipal government invested 10 million yuan in funds for the medical technology research, clinical and laboratory studies carried out, after more than 420 cases clinical research and utilization of influenza A H1N1 influenza virus strains were screening studies in Chinese medicine, Chinese medicine for influenza confirmed the efficacy of influenza H1N1, and applied to the clinical and research work of Chinese reserves.

November 1, the city launched a 20 pediatric tertiary hospital for Chinese medicine units, to the public a "clear sense of children II side," Pieces of the Chinese Medicine Hospital and on behalf of the decoction to provide unified services to effectively triage the children were at the same time also to the display of Chinese medicine in the

prevention and control of the important role of influenza.

Influenza prevention and control of the situation as grim, Beijing Traditional Chinese Medicine Administration, China Medical Foundation for Health Development of Chinese medicine take full advantage of Influenza H1N1 influenza prevention and control research, follow the "prevention, scientific control" principle, the organization of Chinese medicine experts the preparation of the "prevention of influenza in the capital of the public medical Guide home."

Home to the residents of the book the main line of influenza prevention and control is divided into adult preventive health care articles, children's preventive health care articles, home articles in the medical treatment, flu medicine small medicine chest of four parts, from acts of prevention, therapeutic prevention, preventive medicine, home medicine therapy, family medicine and other aspects of standing to the public prevention and treatment of people of Chinese medicine at home, into scientific, practical and universal, in one community use of Chinese medicine on prevention and control of influenza-home practical recommendations for the public home applications Traditional Chinese Medicine provides scientific guidance to the prevention and control of influenza.

Meanwhile, the authorities organized a well-paid manual work, through community health services, hospital released to the public. And to strengthen the team on the application of the guidance manual, the establishment of a "family health workers," team around for the public knowledge of prevention of influenza in family medicine education, publicity, asked Chinese medicine hospitals and community health services take many forms, increase the manual the content of propaganda, and actively contact the television media, arranging expert interpretation, multi-channel, multi-channel to carry out the medical knowledge and methods of influenza prevention and control publicity, so the epidemic prevention and control manual to play a real role for science, for the protect people's health.

In order to meet the coming winter changes in climate and disease, better play in medicine, "treating disease," the advantage of Beijing Traditional Chinese Medicine Authority on the basis of previous research, from the "from place to place, from person to person, and the time," starting for adults, the elderly or physically weak, pregnant women, children and other vulnerable situation of different groups of people, organizations, medical experts on prevention of influenza in the city's program was revised and improved for public use when the whole family to prevent influenza.

Chinese side is to prevent special groups for special times enacted against influenza, the general public in the influenza pandemic of influenza of patients there may be situations in close contact, such as the care of influenza patients or patients with influenza and other live together, you can choose according to their , healthy people do not need to take.

Shrimp Tea (For Strengthening the Immune System)
Description
The shrimp this tea is tiny, dried, and orange color shrimps in plastic package from Chinese markets.

Ingredients
30 dried shrimps
3 teaspoon of Wuyi Rock Tea
3 cups (850 ml) of water
Instruction
Rinse the 30 shrimps in boiling water.
Put the shrimps and tealeaves in a mug.
Pour boiling water into mug.
Allow tea to stand for 2 to 3 minutes.
Stir and drink tea.

Red Date Tea (For Restoring Blood)
Description
This is a popular tea among Chinese used in a restorative tea for after childbirth or menstruation, or for anyone who has suffered blood loss. The Chinese red date is also known jujube.

Ingredients
3 teaspoon of Jujube Honey Concentrate
1 teaspoon of Emerald Petals Green Tea
3 cups (850ml) of water
Instruction
Put 3 teaspoon of Jujube Honey Concentrate and 1 teaspoon of green tea into teapot.
Pour boiling water into teapot and stir.
Allow tea to stand for 3 to 4 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Ginger & Onion Tea (For Common Cold)
Description
This great tasting tea is for your common cold.

Ingredients
5 slice of ginger
2 small spring onion
2 teaspoon of Dragon Well Green Tea
3 cups (850ml) of water
1 pinch of salt
Instruction
Wash and cut 5 slice of ginger.
Wash and cut 2 small piece of spring onion.
Put ginger, onion, salt, and green tea into teapot.
Pour boiling water into teapot.
Allow tea to stand for 3 to 4 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Sweet Ginger Tea (For Cold & Feverish Headache)
Description
This tea only helps with cold and feverish headaches, it also stimulate the heart and improves the circulatory system

Ingredients
3 teaspoon of Ginger Honey Concentrate
2 teaspoon of Chun Mee Green Tea
3 cups (850ml) of water
Instruction
Put 3 teaspoon of Jujube Honey Concentrate and 1 teaspoon of green tea into teapot.
Pour boiling water into teapot and stir.
Allow tea to stand for 3 to 4 minutes.
Pour tea into cup and allow to cool slightly before drinking.

White Radish Tea (For Coughs)
Description
White radishes are often called daikon in supermarkets. Use a fresh white radish for this tea. The flavor is quite strong so you will only need to use a small piece.

Ingredients
1 inch long piece of white radish
2 teaspoon of Hairy Crab Oolong Tea

1 pinch of salt
3 cups (850ml) of water
Instruction
Cut and peel a 1 inch piece of radish and discard the skin.
Put radish, salt, and tea into teapot.
Pour boiling water into teapot.
Allow tea to stand for 2 to 3 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Licorice Tea (For Itchy Throat But No Cough)
Description
Chinese licorice (Glycyrrhiza Uralensis) taste good and benefits all the body organs. It is particularly soothing for the lungs and throat.

Ingredients
6 - 7 pieces of dried licorice root
3 teaspoon of Ginseng Oolong Tea
3 cups (850ml) of water
Instruction
Put licorice and tea into teapot.
Pour boiling water into teapot.
Allow tea to stand for 5 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Honey & Lemon Tea (For Dry Sore Throat)
Description
This is one of the most delicious tea. Lemon and honey is very good for treating the throat. This tea can also be served cold with ice.

Ingredients
Half a lemon
2 teaspoon of Keemun Black Tea
Citron Honey Concentrate
3 cups (850ml) of water
Instruction
Wash and cut half of lemon.
Crush and put lemon into teapot.
Add black tea and honey into teapot.
Pour boiling water into teapot.
Allow tea to stand for 2 - 3 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Lei Cha Tea (For Flu)
Description
This very famous tea is used to treat flu or flu like symptoms. There is a story about this tea, which dates from the Three Kingdom period (A.D. 221-277). A famous general was with his army in a mountainous district when he and all of his soldiers fell ill with flu. The local people knew of a special tea to treat the illness, but the recipe was closely guarded secret. Nonetheless, the villagers decided that they have to try and help the army and gave them the tea to drink.

Ingredients
2 teaspoon of Dragon Well Green Tea
1 teaspoon of uncooked long grain white rice
3 slice of ginger
3 cups (850ml) of water
Instruction
Wash the rice and the ginger
Chop 3 slice of ginger.
Put tea, rice, and ginger into mortar with a little cold water.
Use a pestle to grind them into a fine paste (may use a food processor instead).
Put paste into teapot.
Pour boiling water into teapot.
Allow tea to stand for 2 - 3 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Cold Chrysanthemum Tea (For Quenching Thirst & Mild Sunstroke)
Description
This is an ideal drink for hot summer parties. As well as helping to prevent sunstroke it is also an excellent thirst quencher.

Ingredients
60 - 80 White Chrysanthemum Flowers
3 teaspoon of Jasmine Yinhao Green Tea
Rock sugar or honey
4 liters of water
Instruction
Wash the chrysanthemum.
Put chrysanthemum and tea into a cooking pot.
Pour in 4 liters of water and bring it to boiling.
Reduce heat and continue to cook for 20 minutes.
Put in rock sugar or honey.
Remove pot from the heat and allow to cool till room temperature.
Strain the tea and put into refrigerator.

Serve the tea when it is chill.

Tomato Tea (For Improving Appetite)
Description
In the summer when it is very hot it is all too easy to lose your appetite. This tea will perk up your appetite.

Ingredients
¼ of a tomato
2 teaspoon of Imperial Huangshan Maofeng Green Tea
1 pinch of sugar
3 cups (850ml) of water
Instruction
Wash and cut out a ¼ piece of tomato.
Put tomato and tea into a cooking pot.
Pour in 3 cups of water and bring it to boiling.
Put in sugar.
Pour tea into cup and allow to cool slightly before drinking.

Mung Bean Tea (For Diarrhea)
Description
Mung beans are small beans with green skins and yellow flesh. For this recipe buy pale yellow mung bean flour from Asian stores, or grind your own with a grinder.

Ingredients
1 teaspoon mung bean flour
1 teaspoon of Lichee Black Tea
White sugar
3 cups (850ml) of water
Instruction
Put mung bean flour and tea into a cooking pot.
Pour in 3 cups of water and bring it to boiling.
Add white sugar and stir.
Pour tea into cup and allow to cool slightly before drinking.

Rice Vinegar Tea (For Bowel Pain)
Description
This is a very effective tea for relieving pain in the lower bowel.

Ingredients
3 - 4 teaspoon white rice vinegar
3 teaspoon of Dragon Well Green Tea

3 cups (850ml) of water
Instruction
Put green tea in empty teapot.
Pour boiling water on to tea leaves.
Add 3 - 4 teaspoon of white rice vinegar.
Allow tea to stand 2 - 3 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Ginseng Tea (For Restoring Energy)
Description
This refreshing tea is great at restoring energy. To increase the effect of this you can add ginseng powder or ginseng mix.

Ingredients
3 rounded teaspoons of Ginseng Oolong Tea
3 cups (850ml) of water
Ginseng powder (optional)
Instruction
Put Oolong tea and ginseng powder in empty teapot.
Pour boiling water on to tea leaves.
Allow tea to stand 2 - 3 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Rose Green Tea (For Relieving Stress)
Description
This tea looks, smells, and taste good. It is color in red and green with a strong floral aroma and a light sweet taste.

Ingredients
30 Rosebuds
2 teaspoon of Emerald Petals Green Tea
3 cups (850ml) of water
Instruction
Put 30 rosebuds and green tea in empty teapot.
Pour boiling water into teapot.
Allow tea to stand 2 - 3 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Imperial Kuding Tea (For Reducing High Cholesterol & High Blood Pressure)
Description
In Chinese medicine this rare and expensive tea is known to be extremely effective for

lowering cholesterol and lowering high blood pressure. Researcher found that people who drank this tea daily has a lower chance of getting a stroke or a heart attack.

Ingredients
1 stick of Imperial Kuding
1 ½ cups (430ml) of water
Instruction
Put 1 stick of Imperial Kuding in empty teapot.
Pour boiling water into teapot.
Allow tea to stand 2 minutes.
Pour tea into cup and allow to cool slightly before drinking.

Wild Bitter Tea (For Helping With Weight Loss)
Description
This is a rare and expensive tea grown in Zhejiang province. In Chinese medical journals the Wild Bitter Tea is known to lower cholesterols and help with weight loss.

Ingredients
3 teaspoon of Wild Bitter Tea
3 cups (850ml) of water
Instruction
Put tea into empty teapot.
Pour boiling water into teapot.
Allow tea to stand 2 - 3 minutes.
Pour tea into cup and allow to cool slightly before drinking.

View Full Version: THE LANULA

Title: THE LANULA

TheUnhivedMind - December 21, 2010 06:36 PM (GMT)

WHITE LUNULA

The normal colour of the Lunula is usually described as 'whitish'.

This implicates that a WHITE LUNULA is not associated with medical problems!

BLUE LUNULA

Blue Lunula are an indiation for circulatory problems, or a lack of oxygen. More rare causes can be: the use of medical drugs (such as: hydroxyurea & sparfloxacin), Argyria, or Wilson's disease.
NOTICE: A bluish tinge just above the lunulae but not on the rest of the nail, might be an indication for heart disease, heavy metal poisoning or lung disease.

Synonyms: Bluish Lunulae, Azur Lunula, Purple Lunula

RED LUNULA

Red Lunulas are a non-specific finding in such disparate conditions as: congestive heart (cardiac) failure, rheumatoid arthritis, and pulmonary disorders (lung disease). Less common causes are: alopecia, lupus erythematosus, and poisoning (carbon monoxide, heavy metal). The pathogenic cause of unula erythema is unknown.

Additional info: diffuse reddish lunula

Synonyms: Redish Lunulae

YELLOW LUNULA

Yellow Lunulas can be the result of tetracycline therapy. Yellow Lunulas are as well a common feature of the Yellow Nail Syndrome, though in this disease the growth of the nails slows down and the Lunula often disappear.

NOTICE: Yellow nails can be caused by the dye in nail polish.

Synonyms: Yellow Lunulae

SPOTTED LUNULA

Redness of the pale arched area: your doctor may call this SPOTTED LUNULA. It occurs when the capillaries under your nail are congested. SPOTTED LUNULA is commonly seen in (Nail) psoriasis; SPOTTED LUNULA dyschromia: in patients with alopecia areata, psoriasis vulgaris and lichen planus.

Additional info: red spots in nail bed (lunula)

Synonyms: Spotted Lunulae, Spotted Lunular Dyschromia

LARGE LUNULA

Abnormally LARGE LUNULA suggests an overactive thyroid, while the absence of a lunula can mean an under-active thyroid.

ALTERNATIVE: Terry's nails, in this condition (frequently caused by liver disease) most of the nail plate turns white with the appearance of ground glass, and the lunula is obliterated.

TRIANGULAR LUNULA

TRIANGULAR LUNULA might suggest an excessive manicure and pushing on the cuticle.

Multiple TRIANGULAR LUNULA is a specific finding for the (rare) nail-patella syndrome.

SYNONYMS: Tented-like Lunula, Piramidal Lunula.

RAISED LUNULA

Typically the lunula is raised more than the distal part of the nail.

This condition is frequently seen in lichen planus (and in 10% of cases of disseminated lichen planus).

OBLITERATED LUNULA

In OBLITERATED LUNULA the proximal portion of the nail bed can turn white, obliterating the lunula and giving a half-brown, half-white appearance, also called 'half-and-half nails'. OBLITERATED LUNULA are frequently seen in patients with severe renal disease.

SYNONYM: half-and-half nails

ABSENT LUNULA

ABSENT LUNULA are natural on the little finger. For most people have 8 Lunula, though some of them might be hidden under the cutticles.
Fewer than 8 lunula can signal various vulnerabilities such as: poor circulation, heart disease, protein deficiency, Vitamin A deficiency, numbness, or not enough oxygenation.

No Lunula can be a feature of chromosome abnormalities.

DIMINISHED LUNULA

DIMINISHED LUNULA are more often seen in older people.

When the process of diminishing occurs fast, this might signal medical problems. DIMINISHED LUNULAR are frequently seen in Down's syndrome (Trisomie 21).

SYNONYM: obliterated Lunula, half-and-half nails

- NAIL DISORDERS IN DISEASES -

An overview of common diseases:

>> PSORIATIC ARTHRITIS is frequently (90%) accompagnied with at least one the following nail disorders: Nail Pitting, Onycholysis, Nail dystrophy, (Horizontal) Nail ridges, and Yellowish-orange discoloration.

>> RHEUMATOID ARTHRITIS is frequently (60%) accompagnied with at least one the following nail disorders: Longitudinal nail ridges, Clubbing Nail, nail beading, the Yellow nail syndrome, Isolated nail fold vasculitis (NFV).

>> PSORIASIS is frequently (55%) accompagnied with at least one the following nail disorders: Oil drop or salmon patch/nail bed, Nail Pitting, Beau Lines, Leukonychia,

Subungual hyperkeratosis/hyponychium, Onycholysis, Splinter hemorrhage, Spotted lunula/distal matrix, Onychomycosis, and Paronychia.

>> DIABETES is frequently (33%) accompagnied with at least one of the following nail disorders: Opaque white nails with a dark band at the fingertip, Yellowing of the nail bed, Terry's nail (half white, half pink nails), Onychomycosis, Slight blush at bottom of the nail, Fungus Nail, and Infection Nail.

COMMON DISEASES CAUSING NAIL CHANGES IN CHILDHOOD

The most important 18 known diseases that frequently cause nail changes in children:

• 1 - Acute Paronychia:

Acute paronychia may present as a symptom of nail biting or other local injuries caused by Staphylococcus aureus and herpes simplex virus (HSV) or, less often, by Gram-negative organisms (Pseudomonas, Proteus). This condition presents with pain of the distal phalanx followed by redness and dry swelling.

Infection by HSV is distinguished by grouped vesicles containing clear fluid that becomes turbid, although rarely purulent. Tzanck smear reveals multinucleated ballooned giant cells that establish diagnosis.

Soft-tissue changes in acute paronychia may lead to onycholysis, Beau's lines or onychomadesis.

Distal phalanx also may be involved by impetigo. Vesiculopustular with honey-crusted lesions, usually due to B-hemolytic streptococci, is the pathognomonic clinical feature. Topical and systemic antibiotics or antiviral agents are the treatment of choice.

• 2 - Chronic Paronychia:

Chronic paronychia is a difficult but very common problem, especially in children who are thumb suckers and nail biters. It presents as a dull-red swelling of the nail fold, that is indurated and raised, with loss of the cuticle margin. Yeasts are the most common causes of this condition (81%) and Candida albicans can be identified by culture in approximately 55% of cases.

• 3 - Herpetic Whitlow:

Herpes simplex infection, often due to HSV1 in children, may affect the terminal phalanx of the finger and produce acute, painful paronychia with a vesicular eruption, surrounded by an erythematous border. The vesicles often coalesce into large, honeycombed bullae and sometimes may be located in the nail bed, producing an area of onycholysis.

In most cases, this condition is secondary to autoinfection with HSV gingivostomatitis as a result of nail biting or finger sucking. Herpetic whitlow must be differentiated from other vesiculopustular eruption, (e.g., impetigo, blistering distal dactylitis and Hallopeau's acrodermatitis). Oral acyclovir is the treatment of choice and may prevent recurrences.

• 4 - Blistering Distal Dactylitis:

Blistering distal dactylitis, which is usually caused by B-hemolytic streptococci, affects the fingers of children, aged 2-16 years. This condition characterized by large painful tense blisters, with purulent content, at the tip of the digits. Topical antiseptics and systemic antibiotics (e.g., erythromycin or amoxicillin) are the treatment of choice.

• 5 - Nail Biting (Onychophagia):

Two-thirds of children under 12 years of age bite their nails. The etiologies suggested for nail biting include anxiety, stress, loneliness, imitation of a family member, heredity, inactivity and transference from a thumb-sucking habit.

Nail biting involves one, many or all nails. Nail biters more often bite the periungual skin and, therefore, paronychia, distal ingrowing or periungual warts are the most frequent complications. The nails appear short and irregular. Longitudinal melanonychia due to activation of matrix melanocytes is a consequence of this habit. Application of distasteful topical preparations (solutions) discourages children from biting their fingernails. It is not clear whether nail biting is related to psychological disorders or not, but most of the experts consider that this condition is not usually associated with psychological problems.

• 6 - Onychomadesis:

Onychomadesis is the complete separation of the nail plate from the nail bed, beginning at the proximal nail fold that induces nail shedding.

Severe intrauterine distress may be a cause of onychomadesis in infants, although idiopathic familial onychomadesis has been reported.

When it is inherited as a dominant trait, shedding may be periodic. In addition, when this condition affects most or all nails, it usually results from generalized diseases, such as bullous dermatoses, acrodermatitis enteropathica, Kawasaki disease, measles, hand-foot-mouth disease, Stevens-Johnson syndrome, Lyell's syndrome, high fever or drugs.

Onychomadesis limited to one or few digits or the toenails is usually caused by trauma, eczema or paronychia. Temporary nail loss may also result from severe onycholysis.

• 7 - Leukonychia (Total/subtotal):

White nails (leukonychia) are the most frequent form of chromonychia. In this condition nails are partially or totally milky, ivory or porcelain, white in colour and are evident at birth or during childhood. This disorder can be temporary or permanent, depending on their etiology, idiopathic, caused by a great number of diseases, both congenital and acquired or drug induced (e.g., LEOPARD syndrome, Kawasaki disease, Darier's disease, anemia, zinc deficiency, AA, psoriasis, sulfonamides and retinoids).

• 8 - Melanonychia:

Melanonychia describes the presence of a brown or black color change of the nail plate. Many causes induce this discoloration, including nevi, drugs, hemorrhage, onychomycoses, dyes, Peutz-Jeghers-Touraine syndrome, Addison's disease and, the most serious, malignant melanoma.

Longitudinal melanonychia may be caused by activation or hyperplasia of the nail matrix melanocytes. In children, the most common cause of longitudinal melanonychia is a nail matrix nevus. Most of the nevi in children are junctional. Dermoscopy is a useful method for differentiating between nevi, melanoma and hemorrhages of the nail apparatus. Management of longitudinal melanonychia is generally still debated.

• 9 - Trachyonychia:

Trachyonychia (or '20-nail dystrophy') describes a spectrum of nail-plate surface abnormalities that give the nail plate a rough appearance.

This condition usually occurs sporadically, affects one, most, or all nails and is idiopathic or associated mainly with AA or, less commonly, with psoriasis, lichen planus, ichthyosis vulgaris and atopic dermatitis.

Two clinical varieties of trachyonychia have been described:

Opaque trachyonychia: the nails are thin, opaque and give the impression of having been sandpapered in a longitudinal direction. Some degree of koilonychia is often present

Shiny trachyonychia: the nail plate is shiny with opalescent longitudinal ridging. This variety is less severe, resulting by a myriad, diffuse regular, superficial pitting Trachyonychia is generally a benign condition that never produces nail scarring and tends to regress spontaneously over the years. For this reason, there is no need to treat trachyonychia in children.

• 10 - Eczema:

Eczema affects the skin of the phalanx and periungually, causing inflammation of the nail matrix and, therefore, pitting, Beau's lines and transverse ridges of the nail plate. The proximal and lateral nail folds may be red, swollen with small vesicles and with loss of cuticle. Acute or chronic paronychia is also present.

• 11 - Psoriasis:

Psoriasis of the nails is quite common in childhood, its occurance ranges from 7 to 40% in children and varies in severity of involvement. Nail changes include pitting, onycholysis, subungual hyperkeratosis, yellowish green-brown spots under the nail plate (oil spot), splinter hemorrhages, multiple transverse grooves, splits, atrophy, fragility and trachyonychia (roughened nail). Periungual involvement may be severe, giving rise to a disruption of the nail matrix. The nail fold may be scaly and the cuticle is lost.

Treatment of nail psoriasis is always disappointing. Topical calcipotriol or topical/ intralesional steroids are, however, moderately effective.

• 12 - Acropustulosis (Acrodermatitis Continua of Hallopeau-parakeratosis Pustulosa):

Acropustulosis is a clinical form of psoriasis and affects few or only one of the digits, especially in young girls. It is characterized by a relapsing pustular eruption. Often, for no apparent reason, (or, according to some authors, after a minor trauma), a suppurative process begins with the formation of crops of pustules on an erythematous base, particularly on the fingertips and, rarely, on toes. Nails of the involved digits may show onycholysis, subungual hyperkeratosis or partial nail-plate destruction. Pustulation of the nail bed and nail matrix may lead to severe onychodystrophy or even to onychomadesis. The distal pulp in most of cases shows mild erythema and scaling. It is often misdiagnosed as onychomycosis. Acropustulosis usually regresses spontaneously, although some children may develop later nail psoriasis.

• 13 - Alopecia Areata:

Pitting, fragile distal edge, roughened surface ('sandpaper nail'), onychomadesis, trachyonychia and loss of lunula are present in 10-66% of children with AA.

Pits on the nail plate are shallow and wider than those in psoriatic nails (1-2 mm). Nail involvement is generally considered a bad prognostic marker for AA.

• 14 - Lichen Planus:

Lichen planus of the nails in childhood is very rare and may overlap with the 20-nail dystrophy of this age. Lichen planus affects fingernails more frequently than toenails and the most common changes include slight thinning of the nail plate, brittleness, onychorrhexis, longitudinal ridging and trancient or permanent longitudinal

melanonychia. Rarely, a fibrotic band of tissue fusing the dorsal nail fold with the nail bed, causes partial destruction of the nail plate (pterygium unguis).

• 15 - Onychomycosis:

Onychomycosis is rare in early childhood and has been examined in a few studies. The prevalence of childhood onychomycosis is estimated 0.2%. The age range for onychomycosis in children is 6-14 years of age. Older children and teenagers are affected more frequently.

• 16 - Candida Onychomycosis:

Biting or sucking of digits from the first months of life can lead to maceration of the digits and exposure to C. albicans. Candida infection of the thumb nail with associated paronychia is common in children with mouthing. The fingernails are usually affected and the nail-fold inflammation leads to deformity of the nail plate, appearing as irregular Beau's lines, opaque milky white or yellow-brown discoloration, thickening and onycholysis. In most cases, the disease of newborns resolves spontaneously in a few months and rarely tends to be chronic and interrupted by subacute exacerbations.

• 17 - Dermatophyte Onychomycosis:

Dermatophyte onychomycosis presents in children after the age of 6 years, usually with distal thickening whitish yellow discoloration of the free edge of the nail and subungual hyperkeratosis. Distal subungual onychomycosis is due to infection with Trichophyton rubrum. This feature is attributed to the subungual accumulation of friable keratinous debris and entrapment of air between the nail plate and nail bed due to onycholysis.

Proximal subungual onychomycosis occurs when the cuticle of the proximal nail fold is disrupted and fungal invasion raises, and it is extremely uncommon in children.

Superficial white onychomycosis appears as a white, sharply outlined area on the nail plate and is considered more common. It is frequently due to T. mentagrophytes and usually involves one-to-two digits.

A careful clinical examination is required, as a fungal skin infection can usually be detected elsewhere (tinea pedis or tinea of the scalp mostly). Potassium hydroxide examination and culture of the subungual debris confirms the diagnosis.

A family history of onychomycosis is present in few cases. There appears to be an increased incidence of onychomycosis in children when there is a large number of older siblings and when parents are affected. This familial pattern may be an opportunistic infection or a genetic predilection for fungal infection.

Severe onychomycosis in children raises suspicion for immunosuppression, such as

mucocutaneous candidiasis or HIV infection. Psoriasis, lichen planus, 20-nail dystrophy, trauma and AA mimic onychomycosis and should be considered in the differential diagnosis.

Treatment of onychomycosis in childhood is similar to that in adults and usually requires systemic antifungal agents. However, as children appear to respond faster than adults, there is a tendency to use topical therapy, including amorolfine 5% lacquer, ciclopirox 5% lacquer or imidazoles. Griseofulvin is still the drug of choice worldwide. Experience with the newer systemic drugs is relatively limited in children.

Itraconazole (5 mg/kg/day), terbinafine (3-6 mg/kg/day) and fluconazole (6 mg/kg/day), for 6 weeks for fingernail infection and 3 months for toenails, have been used for the last 15 years but their optimal treatment schedules and toxicity in young children are not yet accurately determined.

• 18 - Tumors:

Periungual and subungual tumors are very rare in childhood, with the exception of warts and pyogenic granulomas. Warts originate from the hyponychium or the nail folds and spread to the nail bed. Subungual warts cause onycholysis and may be painful. Aggressive treatments are often not necessary because warts in many cases disappear spontaneously. Pyogenic granulomas are common and almost always follow a minor trauma or ingrown nails.

Subungual exostoses, especially in the big toe of teenagers, are diagnosed by x-ray examination. Koenen tumors are uncommon in children. In Hand-Schuler-Christian and Letterer-Siwe disease, periungual and subungual pustules and hemorrhage are common findings. In addition, juvenile xanthogranuloma of the nail is very rare

Examining Fingernails in elderly patients

Abnormalities of the nail are often caused by skin disease, infection & medical conditions.

Author: Mark E. Williams - Medscape.com

INTRODUCTION

Human fingernails, located on the dorsal aspect of the terminal 40% of the distal phalanx of each finger, are complex structures involving 3 different layers:

The nail plate (the nail). This is the keratinized structure, which grows throughout life;
The nail bed (ventral matrix, sterile matrix). This is the vascular bed that is responsible

for nail growth and support. It lies protected between the lunula (the "half moon" seen through the nail) and the hyponychium (the posterior part of the nail bed epithelium); The eponychium (cuticle). The epidermal layer between the proximal nail fold and the dorsal aspect of the nail plate.

The primary purpose of the nail is protection. Abnormalities of the nail are often caused by skin disease and infection (most often fungal) but may also indicate more general medical conditions.

This discussion does not address localized trauma or nail infections but offers examples of nail abnormalities that may occur with systemic disease.

Check to see whether the nails are normal by looking at the following (Figure 1):

Softness and flexibility of free edge;
Shape and color;
Quality of paronychial tissue;
Growth rate (about 6 months from cuticle to free edge). Time of events can be estimated from location.

Figure 1: The Normal Nail

Examining The Nails:

Elderly people carry the last 6 months of their medical record on the approximately 10 square centimeters of keratin comprising the fingernails. Examining the fingernails can help the clinician detect a number of general and specific factors, including the following:

Overall vitality;
Inner emotional state;
Cerebral dominance;
Occupations and hobbies;
Medical history;
Nutritional status;
Cardiovascular function;
Rheumatic conditions; and
Dermatologic problems.
The patient's manicure can reveal state of health, nutritional status, past events, personality, occupation, and one's inner state. Systemic illness should show the nail changes in each of the nails on one hand. The thumb may reveal more extensive changes given its increased size.

It is useful to follow the following sequence when examining the nails:

Check the nail shape;
Examine the nail color;
Survey processes around the nails;
Compare hands; and
Note skin conditions.

It is critical to examine the nails in adequate light. Gently rotate the nail in the light so that the reflection highlights all aspects of the nail. Notice the lunula, the pale crescent moonlike coloration at the base of the nail. Leukonychia stria and a pointed tent-like lunula suggest an excessive manicure and pushing on the cuticle. Paronychias suggest stress and poor attention to hand hygiene. This can reflect depression, dementia, or psychiatric illness.

Nail Growth:

Nail growth is continuous. It takes about 6 months for a fingernail in an elderly person to completely grow out. Cold temperature can slow growth rates but not to any clinically significant degree (pun intended). The middle finger nail grows the fastest, followed by the forefinger and ring finger. Aging slows the growth rate from approximately 3 months in childhood to 6 months in 70-year-olds. Nails in elderly people are also thicker than in younger people. Thin nails in a postmenopausal woman raise the possibility of metabolic bone disease. The nails of the dominant hand grow slightly more quickly than the nondominant nails, probably because minor trauma accelerates nail growth. Conversely, immobility slows the growth rate of fingernails. Understanding the growth rate is important because the time interval from a critical event can be estimated from the location of a nail lesion. For example, a white line appearing transversely halfway up the nail suggests an acute illness 3 months earlier. Regular observation will demonstrate its progression to the end of the nail edge.

Nail Polish:

Distance from base and line of polish gives approximate date of application (nails grow 0.1 mm/day). Picking at polish reflects nervousness and agitation. Toenail polish suggests unusual flexibility or a friendly helper.

OBSERVING THE NAIL SHAPE AND SURFACE

Clubbed Fingernails:

Clubbing involves a softening of the nail bed with the loss of normal Lovibond angle between the nail bed and the fold, an increase in the nail fold convexity, and a thickening of the end of the finger so it resembles a drumstick.

To determine whether nails are clubbed, have the patient place both forefinger nails together and look between them. If you can see a small diamond space between them (Schamroth's window) then the nails are not clubbed (Schamroth's sign) (Figure 2).

Causes of clubbing (not exhaustive) include the following (Figure 3):

Figure 2: Schamroth's sign

Figure 3: Example of clubbed fingernails.

Pulmonary and cardiovascular causes (80%):
Lung cancer, pulmonic abscess, interstitial pulmonary fibrosis, sarcoidosis, beryllium poisoning, pulmonary arteriovenous fistula, subacute bacterial endocarditis, infected arterial grafts, aortic aneurysm

Gastrointestinal causes (about 5%):
Inflammatory bowel disease, sprue, neoplasms (esophagus, liver, bowel)

Hyperthyroidism (about 1%):
Note: Chronic obstructive pulmonary disease does not cause clubbing.

Koilonychia:

Koilonychia are spoon-shaped concave nails (Figures 4). This occurs normally in children and usually resolves with aging. To determine whether a nail is spooned, perform the water drop test. Place a drop of water on the nail. If the drop does not slide off, then the nail is flattened from early spooning. An experienced clinician can look at the nail and perform a "mental" water drop test. Causes include the following:

Iron deficiency
Diabetes mellitus;
Protein deficiency, especially in sulfur-containing amino acids (cysteine or methionine);
Exposure to petroleum-based solvents;
Systemic lupus erythematosus; and
Raynaud's disease.

Figure 4: Spooned nail.

Beau Lines:

In 1846, Joseph Honoré Simon Beau described transverse lines in the substance of the nail as signs of previous acute illness. The lines look as if a little furrow had been plowed across the nail. Illnesses producing Beau's lines include the following:

Figure 5: Two Beau's lines suggest illnesses about 2 months apart.

Severe infection;
Myocardial infarction;
Hypotension, shock;
Hypocalcemia; and
Surgery.

Intermittent doses of immunosuppressive therapy or chemotherapy can also produce Beau's lines. Severe zinc deficiency has also been proposed as a cause of Beau's lines. By noting its location on the nail, the approximate date of the illness associated

with it can be determined (Figures 5A, 5B). Moreover, the depth of the line provides a clue to the severity of the illness.

Thin Brittle Nails:

Thin, brittle nails can indicate the following (Figure 6):

Metabolic bone disease (nail thinness is correlated with osteopenia);
Thyroid disorder;
Systemic amyloidosis (indicated by yellow waxy flaking);
Severe malnutrition.

Figure 6: Note the thin nails in this woman with severe osteopenia.

Onychorrhexis:

Figure 7: Example of a central nail ridge. Onychorrhexis is the presence of longitudinal

striations or ridges
(Figure 7). It can simply be a sign of advanced age but it can also occur with the following:

Rheumatoid arthritis;
Peripheral vascular disease;
Lichen planus;
Darier's disease (striations are red/white).

Central ridges can be caused by:

Iron deficiency;
Folic acid deficiency; and
Protein deficiency.

Central Nail Canal (Median Nail Dystrophy):

When a central nail canal is present, the cuticle is usually normal. Central nail canal is associated with:

Severe arterial disease ("Heller's fir tree deformity" -- a central canal with a fir tree appearance -- may occur with peripheral artery disease (Figure 8);
Severe malnutrition;
Repetitive trauma.

Figure 8: Central nail canal with Heller's fir tree deformity.

Nail Pitting:

Nail pitting -- small punctate depressions -- are caused by nail matrix inflammation, which can be the result of:

Psoriasis (random appearance of pits)
(Figure 9);
Alopecia areata (geometric rippled grid) (Figure 10);
Eczema;
Lichen planus.

Figure 9: Indication of psoriasis.

Figure 10: Alopecia areata.

Nail Beading:

With nail beading, the beads seem to drip down the nail like wax (Figure 11). It is associated with endocrine conditions, including the following:

Diabetes mellitus;
Thyroid disorders;
Addison's disease;
Vitamin B deficiency.

Figure 11: Nail beading.

Rough Nail Surface:

When nails look sandpapered and dull, consider (Figure 12):

Autoimmune disease;
Psoriasis;
Chemical exposure;
Lichen planus.

Figure 12: Example of a rough nail surface.

Nail Thickening:
Slow nail growth produces thickness (Figure 13). In such cases, the following should be considered:

Onychomycosis;
Chronic eczema;
Peripheral vascular disease;
Yellow nail syndrome;
Psoriasis.

Figure 13: Example of nail thickening.

Onycholysis:

Onycholysis is distal separation of the nail plate from the underlying nail bed (Figure 14). It is associated with the following:
Thyrotoxicosis;
Psoriasis;
Trauma;
Contact dermatitis;
Tetracycline;
Eczema;
Toxic exposures (solvents);
Blistering from autoimmune disease; and
Porphyria cutanea tarda (onycholysis and skin blistering from sun exposure).

Figure 14: Traumatic onycholysis (involving only 1 nail).

Severe Nail Curvature (Beaked Nails):
Curved or beaked nails are caused by resorption of distal digit (Figure 15). Consider the following:

Hyperparathyroidism
Renal failure
Psoriasis
Systemic sclerosis

Figure 15: Example of nail thickening.

Complete Nail Destruction:

Complete local nail destruction can be caused by local mechanisms, including trauma and paronychia. Generalized conditions that might cause complete nail destruction include the following:
Toxic epidermal necrolysis;
Chemotherapy;
Bullous diseases;
Vasculitis.

OBSERVING THE NAIL COLOUR

Abnormalities of the Lunula:
If the lunula is absent, consider anemia or malnutrition (Figure 16). A pyramidal lunula might indicate excessive manicure or trauma (Figure 17). A pale blue lunula suggests diabetes mellitus. If the lunula has red discoloration, consider the following causes among others (Figure 18):

Cardiovascular disease;
Collagen vascular disease; and
Hematologic malignancy.

Figure 16: Absent lunula.

Figure 17: Pyramidal lunula.

Figure 18: Lunula with red discoloration.

Transverse White Lines (Mee's lines)

Any acute illness can produce transverse milky white lines. In addition, they might be caused by heavy metal toxicity (classically arsenic) or chemotherapy. The time of event may be determined from the location of the lines on nail (Figure 19).

Figure 19: Note the Mee's line approximately one third of the way up the nail, suggesting a significant illness 2 months previously.

Leukonychia Striae

Leukonychia striae are white splotches caused by minor trauma to the nail matrix (Figure 20). The timing can be determined by the location of the splotches on the nail.

Figure 20: Example of leukonychia striae. Note location of white splotches, which can indicate timing of the traumatic event.

Longitudinal Brown Lines

Longitudinal brown lines form because of increased melanin produced by nail matrix melanocytes (Figure 21). They are associated with:

Addison's disease;
Nevus at the nail base;
Breast cancer;
Melanoma (check for periungal pigmentation);
Trauma.

Figure 21: Longitudinal brown lines.

Splinter Hemorrhages

Splinter hemorrhages are caused by hemorrhage of the distal capillary loop (Figure 22). Note the thickness of these areas. They are associated with the following:

Subacute bacterial endocarditis;
Systemic lupus erythematosus;
Trichinosis;
Pityriasis rubra pilaris;
Psoriasis;
Renal failure.

Figure 22: Splinter hemorrhages tend to be fat.

Terry's Half and Half Nails

With Terry's half and half nails, the proximal portion is white (edema and anemia) and the distal portion is dark. These nails imply either renal or liver disease (Figures 23).

Figure 23: This example of Terry's half and half nails suggests liver disease (no brown lines).

White Nails

White nails can be caused by anemia, edema, or vascular conditions (Figure 24). Consider the following:

Anemia;
Renal failure;
Cirrhosis;
Diabetes mellitus;
Chemotherapy; and
Hereditary (rare).

Figure 24: Example of white nails.

Pink or Red Nails

With pink or red nail discoloration, the following should be considered (Figure 25):

Polycythemia (dark);
Systemic lupus erythematosus;
Carbon monoxide (cherry red);
Angioma;
Malnutrition.

Figure 25: Example of pink and red nails.

Brown-Gray Nails

Brown-gray nails may suggest the following (Figure 26):

Cardiovascular disease;
Diabetes mellitus;
Vitamin B12 deficiency;
Breast cancer;
Malignant melanoma;
Lichen planus;
Syphilis;
Topical agents, including hair dyes, solvents for false nails, varnish, and formaldehyde (among many others)

Figure 26: Example of brown-gray nails.

Yellow Nails

Yellow nails suggest the following (Figure 27):

Diabetes mellitus;
Amyloidosis;
Median/ulnar nerve injury;
Thermal injury;
Jaundice.

Consider yellow nail syndrome if a patient has lymphedema and bronchiectasis.

Figure 27: Example of yellow nails.

Green or Black Nails

Green or black nails indicate the following (Figure 28):

Topical preparations, including chlorophyll derivations, methyl green, and silver nitrate (among others);
Chronic Pseudomonas spp infection; and
Trauma.

Figure 28: Example of black nails

PROCESSES AROUND THE NAIL

Paronychial Inflammation:

Paronychia is associated with separation of the seal between the proximal nail fold and the nail plate that provides entry for bacteria and leads to a localized infection of the paronychial tissues of the hands (Figure 29). Symptoms may include inflammation, swelling, and/or scaling.

Figure 29: Example chronic paronychial inflammation.

Mucus Cyst:

A mucous or myxoid cyst is a collection of degenerative collagen that can cause swelling and ridging of the nail above the cyst, forming a "gutter" (Figure 30).

Figure 30: Example of a mucus cyst.

Periungal Telangeictasia:

Periungal telangeictasia is caused by dilated capillary loops and results in atrophy of the cuticle (Figure 30). It is strongly associated with collagen vascular disease, including the following:

Systemic lupus erythematosus;
Dermatomyositis (especially with Gotton's papules over knuckles);
Scleroderma.

CASES

The following are examples of patients in whom examining the fingernails may help identify their conditions:

CASE 1: 78-year-old with multiple conditions.

CASE 2: 84-year-old man with a painful ankle.

CASE 3: 68-year-old man with esophageal cancer.

CASE 4: 62-year-old woman with dermatomyositis.

Acknowledgments by Mark E. Williams

The author would like to thank the University of Virginia GME Office for funding support; Jim Thomas, MD, of www.Dermnet.com for permission to use images from their extensive dermatologic atlas; and the internal medicine residents at the University of Virginia for pre-testing and their helpful feedback.

Title: Acupuncture can help treat lazy eye

TheUnhivedMind - December 17, 2010 04:57 AM (GMT)

Acupuncture can help treat lazy eye

Tue Dec 14, 2010 5:4PM
http://presstv.ir/detail/155468.html

Acupuncture can be an effective treatment for amblyopia, also known as lazy eye, especially in older children with a poor response to the common patching therapy, a new study says.

Amblyopia, a state of miscommunication between the brain and the eyes, is characterized by vision problems in one eye. About 5 percent of individuals around the world suffer from lazy eye, considered as the most common cause of poor vision in children.

According to the study published in the Archives of Ophthalmology, visual acuity with eyeglasses improved in more than 66 percent of the children receiving two hours of daily patching therapy, compared with more than 75 percent of the acupuncture group.

"These results suggest that the treatment effect of acupuncture is equivalent to that of patching for anisometropic amblyopia in older children," said lead researcher So Dennis Lam.

Chinese researchers failed to explain the mechanism through which acupuncture improved lazy eye. They, however, suggested that the treatment may have affected the regional blood flow in these children.

Previous studies have shown that acupuncture increases the blood flow in the brain and eye, stimulating the release of retinal nerve growth factors and subsequently leading to metabolic changes in the central nervous system.

While the findings of the present study have surprised many ophthalmologists, they still do not recommend parents to swap patches for acupuncture. Many of them believe further researches are needed to confirm these results.

Title: BLEEDING PERIPHERAL POINTS: An Acupuncture Techni

TheUnhivedMind - December 14, 2010 10:13 PM (GMT)

BLEEDING PERIPHERAL POINTS:

An Acupuncture Technique
by Subhuti Dharmananda, Ph.D., Director, Institute for Traditional Medicine, Portland, Oregon
http://www.itmonline.org/arts/bleeding.htm

Piercing a vein or small artery at the tip of the body-finger tips, toes, or top of the ears-is a technique well-known among acupuncturists. To the uninitiated Westerner, this therapy may seem even stranger than standard needling that is explained as a method of adjusting the flow of qi in the vessels. In this case, a few drops of blood let out from one or more peripheral points by quickly stabbing the skin with a lance is said to have significant effects. As mentioned in Fundamentals of Chinese Acupuncture (1), "The procedure should be thoroughly explained to the patient before it is performed to allay his or her fears."

Letting out blood is among the oldest of acupuncture techniques. Indeed, it has been speculated that acupuncture started as a method of pricking boils, then expanded to letting out "bad blood" that was generated by injuries or fevers, and finally allowing invisible evil spirits and perverse atmospheric qi (most notably "wind") escape from the body (2). Only later, perhaps as the needles became more refined and as scholars developed of a more subtle theoretical framework, were thin filiform needles used as the primary acupuncture tools for the purpose of adjusting the flow of qi and blood, without necessarily releasing something from the body.

The Lingshu (Spiritual Pivot) and its companion volume, the Suwen (Simple Questions), written around 100 B.C., established the fundamentals of traditional Chinese medical

ideas and acupuncture therapy (3, 4). Originally, there was a set of 9 acupuncture needles, which included the triangular lance, sword-like flat needles, and fairly large needles (see Figure 1). In the Lingshu (3) these ancient needles are numbered and the needle designs and qualities are associated with what the numbers represent. Regarding the fourth needle, which has a tubular body and lance-like tip, the text states: "This can be used to drain fevers, to draw blood, and to exhaust chronic diseases." The seventh needle is described as being hair fine (corresponding in form to the most common of the current needles); it is said to "control fever and chills and painful rheumatism in the luo channels." In modern practice, using the lance as a means to treat chronic diseases has been marginalized (except to treat acute flare-ups of chronic ailments), while the applications of the hair-fine needle has been greatly expanded beyond malarial fevers and muscle and joint pain.

The Lingshu has several references to the use of blood-letting. In the chapter on hot diseases, it states:

For a hot disease with frequent frights, convulsions, and madness, treat the blood channels. Use the number four lance needle. Quickly disperse when there is an excess. When there is insanity and a loss of hair, treat the blood and the heart.

The use of the lance needle to treat the blood channels is a reference to blood-letting. The indications of blood-letting for alleviating heat, convulsions, and mental distress has persisted to modern times. For example, when treating the jing (well) points at the beginning or end of the meridians, the general indication that has come down to us today is for fevers and mental illness.

The lance needle is also recommended, in the same chapter of the Lingshu, for treatment of a hot disease where the whole body feels heavy and the center of the intestines is hot, and when there are spasms around the navel, and the chest and ribs are full. Among the points suggested to be bled are "those points on the cracks of the toes." Drawing blood, which is mentioned repeatedly in this chapter of the Lingshu, is usually accompanied by instructions that one should drain it from the luo vessels, which are described in this text as visible vessels, apparently corresponding to veins. For example, it is said that one should examine above the anklebone to see if the luo channels are full; if so, drain until blood is seen.

An entire chapter of the Lingshu is devoted to the luo vessels in which questions are answered about blood-letting therapy. It is said that: "When the blood and qi are both abundant and the yin qi is plentiful, the blood will be slippery so that needling will cause it to shoot out." On the other hand, "When much bleeding takes place with needling, but the color does not change and there are palpitations and depression, it is because needling the luo channel causes the channel to empty." The change in color that is anticipated occurs when the bad blood, which is described as thick and black, has been eliminated and normal red blood appears.

The Suwen (4) also has a chapter on treating the luo vessels. It makes three references to blood-letting, all in association with the point ranggu (KI-2); in general, the ranggu point is needled, and then the capillary in front of the point is to be bled. This is used in treatment of swollen throat and for abdominal swelling and fullness that accompanies either heart pain or injury. Similarly, in the Lingshu chapter on water swelling, a case of abdominal swelling-where the skin is tight like a drum-is described; the therapy recommended is to draw blood from the luo channels. The location of blood-letting is not specified, though it is stated that the problem should be treated in the lower part of the body.

In the Suwen chapter about needling of the channels properly, it is said that:

When one administers acupuncture during the spring, it is appropriate to needle shu (stream) points. In fact, bloodletting is a preferred technique....In the summer, one can also practice bloodletting, but it is preferable to use superficial luo points. Allow the bleeding to stop by itself, so that the pathogen will be completely eliminated."

In the Suwen chapter on seasonal organ pathology, blood-letting is mentioned for excess conditions, and the key therapeutic technique is usually to address an entire channel, which is sometimes done at or near its peripheral points. Thus, it says, for excess of the liver, bleed the jueyin and shaoyang channels; for excess of the spleen, one is instructed to bleed points of the taiyin, yangming, and shaoyin; for excess of the lung, bleed the shaoyin channel; for excess of the kidney, bleed the shaoyin and taiyin channels. Only the excess of the heart is treated somewhat differently: one is instructed to needle and bleed points under the tongue (jinjin and yuye) and at yinxi (HT-6).

The Suwen chapter on malaria-like illnesses has an interesting instruction for needling the finger tips:

When malaria begins to flare-up, it will start at the extremities. If the yang has already been injured, the yin will be affected as well. Before the flare-up, therefore, one should tie the ten fingers with string. This way, the pathogen cannot enter more deeply and the yin cannot come out. After tying the fingers, observe the luo channels. Where purple stagnation appears in the channels, perform blood-letting.

Thus, one looks for those specific veins that are congested in order to apply this therapy, rather than picking certain points or channels theoretically. The particular practice described here, of trying to avert the flare-up by locating the stagnation and draining the blood is described as "ambushing the enemy before being confronted." The approach to making the veins stand out is one that is still mimicked today, with massaging and pressing to assure that when the vein is lanced blood will flow out, though the original purpose was also diagnostic-determining which vessel had the pathogen to be let out.

The most comprehensive traditional text on acupuncture is the Jia Yi jing (Systematic Classic of Acupuncture), published in 1601, though attributed to work originally done by Mi Huangfu in the 3rd century (5). It includes an extensive explanation of the #4 needle used for blood-letting:

The number four pertains to the four seasons. When a person, after having been struck by one of the winds of the eight directions and four seasons, develops a chronic illness where the evil has invaded and penetrated the channels and connecting vessels [luo], then this condition is treated by the sharp needle....It has a cylindrical body and a pointed end of three blades and is one cun and six fen in length. It is used to drain heat and let out blood to dissipate and drain chronic diseases. Accordingly, it is said that, if the disease is securely housed within the five viscera, the sharp needle should be selected and draining technique applied to the well [jing] and brook [shu] points according to the seasons.

As with the earlier texts, blood-letting is mainly recommended in Jia Yi jing for conditions of abdominal swelling, malarial-type diseases with alternating fever and chills (Chinese: nue), and certain painful conditions, particularly lower back pain. The main idea is to eliminate bad blood, as in this case of treating an injury:

The unraveled vessel causes people to suffer from splitting lower back pain with irascibility....Needle the unraveled vessel at weizhong (BL-40), pricking the binding connecting vessel there which is like a millet grain. Upon being pricked, the vessel will ejaculate black blood and, once the blood turns red, the treatment may be stopped.

In sum, for excess type syndromes, bleeding is recommended because it can drain the excess, alleviate congestion and stasis, and remove the pathogens. As described in Fundamentals of Chinese Acupuncture, the function of blood-letting therapy is "to drain heat or quicken the blood and qi and relieve local congestion." The method of carrying out blood-letting is described:

This procedure is done by first applying pressure to restrict the blood flow of the area, to increase the visibility of the veins and to cause the blood to flow out more easily when the vein is pricked. The point is then swiftly and decisively pricked to a superficial depth of about 0.1 cun and a few drops of blood are allowed to escape. Lastly, the point is pressed with sterile cotton until the bleeding ceases.

The last instruction, which is a modern practice, differs from the ancient one in which the bleeding is allowed to continue until it stops on its own. In the Jia Yi jing, there is a discussion of treating alternating chills and fever, in which blood-letting is recommended and the amount of blood to be let out is "appropriate to the fatness or thinness of the patient," thus a relatively larger amount for heavier persons.

In Essentials of Acupuncture (6), the use of the three-edged needle (lance) is said to be used for high fever, mental disorders, sore throat, and local congestion or swelling. As to technique, the point to be bled is pricked superficially, just 0.05-0.1 cun (inches) deep, which should be light and superficial and the amount of bleeding to be "determined by the pathological condition." Vigorous pricking is not permissible. In general, acupuncturists are cautioned about using bleeding therapy for persons who have weakness of their yin or yang qi, because the treatment can "strip" away these essences. Virtually all acupuncture texts mention contraindications for blood-letting therapy in persons who have already suffered from hemorrhage (including post-partum) and for those who are quite weak. This method is not recommended for pregnant women. Today, blood-letting is most often recommended for peripheral points.
PERIPHERAL POINTS BLOOD-LETTING

Peripheral blood-letting today is mainly carried out at the fingers and toes (7). At the tips of the toes, for example, are the qiduan points, located 0.1 cun behind the nails (see Figure 2). These are said to be useful for emergency treatment for stroke or for numbness of the toes, also for redness, swelling, and pain of the instep of the foot. Near the toe webbing, there is another set of points, the bafeng (eight wind) points, four on each foot (see Figure 2). These can be needled either by standard procedure with shallow oblique insertion, or they can be pricked to cause bleeding. The points are indicated for swelling of the legs, toe pain, snake bite to the foot or lower leg, and swelling and pain of the dorsum of the foot.

Similarly, at the tips of the fingers are the shixuan points, located 0.1 cun behind the nails (see Figure 3). Pricking these points to let out blood is said to be useful for coma, epilepsy, high fever, and sore throat. A little further down, at the finger creases (the lower of the two creases along the finger joints), are the sifeng points (four wind points; the thumb, which has only the one crease, is not included; see see Figure 4). Pricking these to let out plasma fluid that is yellowish white, is said to treat malnutrition and indigestion in children and whooping cough. Finally, points between each pair of fingers, at the top of the webbing joining the fingers, are the baxie points (see Figure 5). These can be acupunctured with shallow insertion of 0.5-0.8 cun depth or pricked to cause bleeding, used to treat snakebite of the hand.

The terminal jing points, known by some as ting points, are also pricked to let out blood. These "well" points, of which there are 12, are mainly located at the tips of the fingers and toes (the exception is KI-1); below are some of the indications for bleeding these points:
Shaoshang) LU-11: thumb, radial side): sore throat, epistaxis, pain of fingers, febrile disease, mental disorders, loss of consciousness.
Shangyang (LI-1: index finger, radial side): toothache, sore throat, numbness of fingers, febrile disease, loss of consciousness.
Zhongchong (PC-9: middle finger, at fingertip): cardiac pain, irritability, loss of consciousness, aphasia with tongue stiffness, febrile disease, heat stroke, infantile

convulsions, feverish sensation of the palm.
Guanchong (TB-1: ring finger, ulnar side): headache, redness of eyes, sore throat, stiffness of the tongue, febrile disease, irritability.
Shaochong (HT-9: little finger, radial side): cardiac pain, pain in chest, mental disorder, febrile disease, loss of consciousness.
Shaoze (SI-1: little finger, ulnar side): febrile disease, loss of consciousness, sore throat, corneal disease.
Yinbai (SP-1 : big toe, medial side): abdominal distention, uterine bleeding, mental disorder, dream disturbed sleep, convulsions.
Dadin (LV-1: big toe, lateral side): prolapse of uterus, hernia, uterine bleeding, enuresis.
Lidui (ST-45: 2nd toe, lateral side): facial swelling, toothache, distending sensation of chest and abdomen, cold in leg and foot, febrile disease, dream disturbed sleep, mental confusion.
Yonguqan (KI-1: sole of foot, between metatarsals 2-3): pain in vertex of the head, dizziness, blurring of vision, sore throat, aphonia, dysuria, dyschesia, infantile convulsion, loss of consciousness, feverish sensation in the sole.
Qiaoyin (GB-44: 4th toe, lateral side): one-sided headache, ophthalmalgia, deafness, pain in the hypochondriac region, dream disturbed sleep, febrile disease
Zhiyin (BL-67: little toe, lateral side): headache, nasal obstruction, epistaxis, ophthalmalgia, feverish sensation in the sole.

Finally, there is pricking of the ear apex (tubercle) to let out blood, as a similar basic technique. All these peripheral point bleeding treatments are used for heat and excess syndromes. As an example, treating the ear apex by bloodletting has been recommended to treat hordeolum, an eye infection (8).

Peripheral blood-letting is distinguished from a practice of pricking the skin to release blood prior to applying cups, that provide an additional stimulus to the area and cause more blood to be extracted. However, like the peripheral point bleeding, it is used to let out pathogens and heat. A report on treatment of acute diseases with blood-letting followed by cupping suggested that the technique would remove toxic heat from the interior (9). In general, the author believed that:

The combination of bleeding and cupping aims at eliminating the toxic factors and removing stagnation, promoting resuscitation, and clearing heat, activating qi and blood circulation in the meridians and collaterals, relieving swelling and pain in order to facilitate the elimination of pathogenic qi and the restoration of good health.

He gave examples of blood-letting and cupping at dazhui (GV-14), taiyang (Extra-2), and weizhong (BL-40). Weizhong, at the back of the knee, is probably the most frequently mentioned non-peripheral point for bleeding therapy, with or without cupping; quze (PC-3), at the corresponding point in the crease of the elbow, is next most frequently used. Dazhui (GV-14), the meeting point of all six yang channels with the governing vessel, is treated for many acute heat syndromes, with standard

acupuncture, blood-letting, and cupping.

Some of the peripheral blood-letting applications are easy to understand, at least theoretically, from the basic concept of letting out tainted blood; for example, to treat a poisonous snake bite where venom has been injected into the nearby portion of the limb. Similarly, swelling and pain of the foot by letting out blood at the toes is conceptually understandable within this paradigm. The treatment of stroke (apoplexy), coma, mental dysfunctions, and epilepsy by this method may be related to the concept that a vicious wind penetrates to the center and causes severe disruption to the normal brain function; the wind turbulence generates heat in the blood; alternatively, a disease with high fever can cause these damaging sequelae. This heat may be released by causing bleeding from these points, under the concept that the blood is a vehicle for carrying out the excess heat. In the English-Chinese Encyclopedia of Practical Traditional Chinese Medicine (10) under the condition called wind-stroke, in addition to several acupuncture points to be treated by standard needling, the authors mention using a three-edged needle to cause bleeding at the jing-well points. The Encyclopedia states that "pricking the 12 jing-well points helps to eliminate heat and bring resuscitation."

The problems of high fever, bleeding, sore throat, and headache might also be understood in terms of being treated by letting out heat via the removal of bad blood or excess blood. In the English-Chinese Encyclopedia, pricking the jing-well point shaoshang (LU-11), is mentioned as one of the treatments for severe cough due to wind-heat affecting the lungs; the jing-well point zhongchong (PC-9), as well as the non-peripheral points at the limb joints, quze (PC-3) and weizhong (BL-40), are indicated for pricking to release blood for treatment of high fever with heat in the ying and blood levels. shixuan points at the fingertips, as well as PC-3 should be pricked, the book suggests, for treatment of heat stroke (summer heat disturbing the heart and requiring resuscitation). Bleeding at the jing-well point zhongchong (PC-9) is also suggested for treatment of syncope of the excess type, while pricking of the 12 jing-well points is part of the therapy for severe sun stroke. Another recommendation for treating sunstroke is the combination of quze (PC-3), weizhong (BL-40), and dazhui (GV-14) as well as the 12 jing-well points all being pricked to cause bleeding.

MODERN VIEWS

Blood-letting is a method of therapy that is difficult to explain in modern terms. Aside from the traditional theoretical basis for these treatments in letting out heat and excess factors, a key issue is whether it actually produces the claimed effects. Many Western acupuncturists have stated informally that they get dramatic results from this treatment method, but, unfortunately, there is no evidence presented to support such contentions. Despite the frequent mention of treating peripheral points by blood-letting in both ancient and modern Chinese medical texts, there is little reference to this technique in Chinese medical journal reports. Very few articles focus specifically on use of this technique. Further, descriptions of therapies for the disorders that peripheral blood-

letting is supposed to successfully treat rarely include that method. Instead, standard acupuncture techniques without blood-letting, as well as herbal therapies, are described. Therefore, the effectiveness of the technique must be questioned, at least until further evidence has accumulated.

When the method of peripheral blood-letting is used, it is usually combined with other therapies (e.g., standard acupuncture or even Western drugs) that might be sufficient to explain the claimed beneficial effects. In a report on treating hordeolum by bleeding the ear tubercle mentioned in the previous section, the eyes were also treated with antibiotics. In an article on treatment of patients with persistent hiccup (1 to 15 days) with bleeding of jing-well points, the treatment was accompanied by standard acupuncture at several points (BL-13, BL-17, BL-21, ST-44, ST-45, LI-1, and LI-4). It was reported that 95 out of 131 patients were cured after one treatment (9). It is difficult to know how much of a contribution was made by the peripheral blood-letting.

A Chinese physician who has used the blood-letting at the hand jing-well points extensively for emergency cases wrote a report on his experience (see Appendix 1). In his general analysis of treatment strategies and in two case presentations, he described use of standard acupuncture therapy, particularly needling of LI-4, along with bleeding the hand jing-well points bilaterally. It was not possible to tell whether the same results could have been attained without the blood-letting portion of the treatment. One of the claims commonly made by Western acupuncturists is that blood-letting at the jing-well points or at the ear can rapidly decrease blood pressure. Yet, in a clinical study conducted in Beijing with patients carefully monitored for responses to acupuncture therapy for hypertension, blood-letting was not a technique employed (10). The author claimed a good effect with standard acupuncture, using such points as LI-4, LI-11, GB-20, LV-3 and BL-17. In all these cases, hegu (LI-4) was needled; it is possible that this is the most effective point. Blood-letting at the ear apex was mentioned only in passing as one ear acupuncture technique in the book Traditional Chinese Treatment of Hypertension (14), but was reported to be highly effective for hypertension in a single case report (15).

Today, we know that the peripheral blood has the same content as the rest of the blood that circulates in the body, and that there is no reason to expect that the blood let out by this method is "bad blood," other than in a purely symbolic role. While standard acupuncture therapy is depicted as being effective, in part, by releasing various transmitter substances (e.g., endorphins), by stimulating local blood flow (e.g., by dilating vessels), and by producing changes in the brain that may have both systemic and highly specific effects, letting out a small amount of blood (usually just a few drops) remains without a suitable explanation for the potent effects claimed. The technique used to let out the blood is one of quick and light pricking to pierce the skin and vein. Unlike standard acupuncture, this method does not involve getting a qi reaction or other evidence that the body is responding on a deep level.

Blood-letting occurs in numerous contexts in the modern world. Millions of people donate a pint of blood, sometimes regularly; millions more prick fingertips every day to get a blood sample for diabetes testing. While these experiences are not as specific as aiming for certain acupoints to release blood, the large number of points at the periphery indicated for blood-letting in the Chinese literature, often with overlapping indications, suggests that the technique does not necessarily require a high degree of specificity for the location. Do diabetics and blood donors suffer substantially less from syndromes of heat and excess?

Therefore, acupuncturists should be somewhat cautious in making claims of effectiveness and should request clinical trials to evaluate the method, especially now that funding for acupuncture trials is being provided in the U.S. Since many of the applications of this method are for acute syndromes or disorders easily measurable, it should be possible to compare the effects of blood-letting at acupoints versus non-acupoints, or blood-letting by pricking versus pricking without releasing blood, as well as to compare standard acupuncture to blood-letting for treating a particular disorder.
SUMMARY

Blood-letting is an ancient therapy that was an essential part of traditional acupuncture practice described in the original texts and which persists today, particularly for treatment of emergency cases, such as loss of consciousness, high fever, and swellings. Most of the blood-letting therapy relies on treating peripheral points of the fingers and toes. Its purpose is to alleviate excess conditions, particularly heat syndromes and fluid swelling, and to promote resuscitation. A traditional concept was that the release of blood would draw out the excess. This therapy is somewhat difficult to explain in modern terms, and, therefore, requires some investigation and research before any substantial claims of effectiveness can be made. Practitioners often note what appear to be prompt and dramatic results from the therapy, suggesting that its efficacy should be easy to confirm using short-term trials. In most cases, peripheral blood-letting (or other blood-letting therapy) is accompanied by standard acupuncture, especially with points that are not far from the blood-letting points, such as the hand/wrist points LI-4, LU-7, and PC-6 and the foot/ankle points LV-2, LV-3, and KI-3, suggesting that these other points may contribute significantly to the observed therapeutic outcome. As a symbolic therapy-of letting out excess, bad blood, toxins, or heat-blood-letting is a potent technique for both the practitioner and the patient, and its use represents a continuation of the earliest traditions of acupuncture.
APPENDIX 1. Clinical Application of Twelve Well Points by Duan Gongbao.

The following brief report (12) was edited slightly for readability and to avoid repetition:

In many years' clinical practice, I used blood-letting method of "Twelve Well-Points" to treat emergencies such as coma, syncope, acute infantile convulsion, wind-stroke syndrome, hysteria, epilepsy, etc., and have achieved immediate results. Twelve Well-Points refer to bilateral hand well points: shaoshang (LU-11), shangyang (LI-1),

zhongchong (PC-9), guanchong (TB-1), shaochong (HT-9) and shaozhe (S-I 1) which belong to the three yin and three yang meridians of the hand and are located at the finger tips. The 6 well-points of the yang meridians belong to metal and are the beginning points of the three yang meridians of the hand, while the other 6 well-points of the yin-meridians belong to wood and are the ending points of the three-yin meridians of the hand.

The indications of the Twelve Well-Points are acute febrile diseases, cerebrovascular diseases, wind-stroke syndrome, syncope, acute infantile convulsion, manic and depressive psychosis, etc. The Twelve Well-Points can be used for eliminating heat, resolving phlegm, restoring consciousness, and promoting resuscitation. It is recorded in the classic book Lingshu that psychiatric diseases are related to the five zang-organs, so, the well-points are often used. It also says that blood diseases are related to the heart, thus, blood-letting can eliminate pathogenic heat and cause resuscitation. Therefore, pricking for bleeding and twirling-reducing or twirling-pricking of the well-points can be used to treat mental disorder, excess type of wind-stroke syndrome, acute infantile convulsion resulting from attack of pericardium by heat, heart disturbed by phlegm-fire, or mental confusion due to phlegm, syncope due to high fever, etc. After routine sterilization with 75% alcohol, hold a sterilized three-edge needle to prick these well-points rapidly, then squeeze the local point forcefully to let a few drops of blood out.

When the patient falls into sudden mental changes, loss of consciousness or mental disorder, the Twelve Well-Points are treated to induce resuscitation, as follows:
Accumulation of phlegm-heat in the lung and heart confused by phlegm: in case of invasion of the pericardium by pathogenic factors, it is treated by ventilating the lung and resolving phlegm, clearing away pathogenic heat from the heart to cause resuscitation. The 12 well-points are used in combination with chize (LU-5), shenmen (HT-7) and daling (PC-7), which are punctured and stimulated with the reducing method.
Attack of the pericardium by pathogenic summer-heat: in case of heatstroke due to accumulation of pathogenic heat to block qi flow, it is treated by clearing away pathogenic heat from the heart to cause resuscitation, restoring the consciousness. The well-points are selected in combination with reducing shenmen (HT-7) and pricking quze (PC-3) to let a bit blood out.
Wind-stroke: in case of excess syndrome of stroke, it is treated by clearing away heat, inducing resuscitation and waking up the patient from unconsciousness. The 12 well-points are punctured in combination with needling by the reducing method yongquan (KI-1) and hegu (LI-4).
Interior heat-syndrome: in case of acute infantile convulsion due to high fever and wind stirring inside, it is treated by clearing away heat and toxic materials, eliminating pathogenic heat from the heart, calming the liver to stop the wind, and by using well-points combined with needling by the reducing method hegu (LI-4) and taichong (LV-3).

As an example, Mr Wang, aged 58 years, a farmer, suddenly fell into coma; he had flushed complexion, lockjaw, deviation of the eyes, rigidity of both hands, rattling sound in the throat due to phlegm, full and taut pulse. His syndrome was heart stirred by phlegm-fire, producing an excess type of wind-stroke syndrome. Therapeutic principles applied were eliminating heat, resolving phlegm, causing resuscitation, and restoring consciousness. Acupoint selection included the Twelve Well-Points pricked to let a bit of blood out; hegu (LI-4) and taichong (LV-3) were punctured and stimulated with reducing method (needles retained for 10 minutes). After treatment, the patient was restored to consciousness immediately, accompanied with slight deviation of the mouth and eyes, weakness of the upper and lower limbs on the left side. Thereafter, acupoints on the face and limbs were punctured continuously. Half a month later, he returned to normal.

As another case, a male baby, aged 2 1/2 years, experienced high fever, convulsion, lockjaw, muscular spasm of the four limbs, and loss of consciousness. Differentiation of syndromes indicated acute infantile convulsion due to excessive interior heat and wind stirring inside. Therapeutic principles applied were dispelling wind and removing heat, calming the internal wind and relieving convulsion and spasm. Acupoint selection included the Twelve Well-Points which were pricked to let a bit of blood out, combined with puncturing and stimulating hegu (LI-4), taichong (LV-3), and jiexi (ST-41) with the reducing method. After treatment, the baby was restored to consciousness immediately. Half an hour later, his fever abated and he spoke and laughed as usual.

The effects of the Twelve Well-Points in causing resuscitation, clearing away heat from the heart and tranquilizing the spirit, ventilating the lung, and regulating yin and yang are derived mainly from the combined application of the Three Yin and Three Yang Meridians of the hand. Shaoshang (LU-11) and shangyang (LI-1) serve to ventilate the lung, remove heat from the throat, regulate the wei qi to relieve the exterior syndrome, and reduce fever. Zhongchong (PC-9) can function in clearing away heart-fire and accumulated heat of the pericardium, tranquilizing, inducing resuscitation and restoring consciousness. Guanchong (TB-1) can clear away the pathogenic fire of the upper-jiao and remove the accumulated heat in the shaoyang meridian. Shaochong (HT-9) is used to clear away heart fire, tranquilize, and regulate heart qi. Shaozhe (SI-1) serves to remove heart fire, ease mental anxiety, and eliminate accumulation of heat in the taiyang meridian. The aforementioned acupoints are only suitable for recuperating depleted yang and rescuing the patient from collapse, rather than for prostration (deficiency) syndrome due to sudden exhaustion of yang of emergence or due to exhaustion of qi from chronic disease because of excessive weakness of the primordial qi. Therefore, the Twelve Well-Points should be used according to differentiation of syndromes. Otherwise, erroneous application of these acupoints will bring the patient with unfavorable influence and even miss the opportunity for emergency treatment because of delay.

APPENDIX 2. Clinical Application of Blood-Letting Therapy by Yang Haixia

The following report (15) includes the full text of the physician's instructions on treatment, and then his case reports, which are shortened considerably for presentation here.

The operator needs to massage the determined area for blood-letting to cause local congestion, and clean the skin area for disinfection according to the routine procedure. Fix the acupuncture point or vein in the blood-letting area with one hand, and hold a sterilized three-edged needle with the other hand to prick the point or vein 1-3 mm deep quickly and then remove the needle immediately. Press and squeeze the muscle around the pricked point or vein to cause bleeding. The amount of bleeding caused for each treatment varies from a few drops to several milliliters of blood according to the individual cases, the areas for blood-letting, and the patients' conditions. Clinical practice has proved that this therapy has the functions of inducing resuscitation, reducing heat, invigorating blood, removing stagnation and obstruction in the channels, and can be mainly applied to treat excess, heat, and acute syndromes.

Case 1. Chronic headache caused by hyperactivity of yang. Extra points taiyang and yintang were pricked to let out a few drops of blood. Shortly after treatment, the pain disappeared suddenly, without relapse.

Case 2. Apparent small stroke, causing sudden deviation of mouth, left eye being closed, and chewing dysfunction. An obviously distended vein in the mouth was pricked to cause bleeding, once per week. Body acupuncture with electric stimulation was used additionally, every other day. After 30 days treatment, facial muscles returned to near normal.

Case 3. Apparent small stroke with rigidity, pain, and numbness of tongue accompanied by dysphasia. Extra points jinjin and yuye of the lingual vein were pricked for bleeding. Two treatments resolved the disorder.

Case 4. Intermittent dizziness, tinnitus, and heaviness of the head due to hypertension. Blood-letting was done on the ear apex on both sides and the groove on the back of the ears to let out a few drops of blood. After five treatments, the blood pressure was stabilized at a lower level with relief of symptoms.

APPENDIX 3. Summary of Major Blood-Letting Points

The following tables are derived from the Advanced Textbook on Traditional Chinese Medicine and Pharmacology (13).

Summary of Peripheral Points for Blood-Letting

This table does not include the jing-well points, which are manly used for the same indications as the other points listed here, except for the unique pediatric therapy of the

Acupressure Provides Many Benefits to Dogs and Other Pets

Thursday, October 21, 2010 by: Luella May
http://www.naturalnews.com/030117_accupressure_pets.html

When most people think about acupressure they tend to think only about the benefits it can have for people. However, acupressure can also provide great benefits for dogs and other pets. Dogs, for example, love to be touched, petted and massaged, and they respond very well to this type of therapy. Used alone or in conjunction with alternative remedies, acupressure may result in significant improvement in your pet's health.

Acupressure is an ancient Chinese healing art that has been practiced for 5,000 years. Based on the same principles of acupuncture, acupressure is the application of pressure on certain points of the body. In a gentle and non-invasive way, this pressure balances and releases the flow of blocked energy, enhancing health and mental stability.

Acupressure helps to improve the quality of life in elderly dogs suffering from hip dysplasia, arthritis, as well as every day aches and pains. At the same time, it can calm a new puppy and help ease the transition period when the puppy is brought into a new home.

Although acupressure is commonly used to relieve pain and discomfort, this ancient art has many more benefits which include:

* Strengthening the immune system

* Strengthening, muscles, tendons, joints, and bones

* Releasing natural cortisone, which alleviates inflammation and swelling

* Releasing endorphins instrumental in calming and relieving pain

* Sharpening mental focus

* Increasing circulation

* Removing toxins

* Alleviating anxiety

* Helping with behavioral issues

* Improving digestion

Applying acupressure to your pet is actually a very simple technique. The most important thing to remember is that there must be a loving, calming, and trusting atmosphere. Acupressure is not a difficult process. It can be applied in the position that your dog likes best: standing, sitting, or lying down.

When starting the session, begin slowly by petting and massaging your dog in his favorite spots. When you are ready and the dog is in a relaxed state, you can maneuver to the pressure points that you need to focus on.

The next step is to determine what pressure points relate to your pet's condition you wish to address. The chart found at the following link provides an illustration of the various acupressure points on dogs as well as an explanation of what the points relate to:

http://www.luckydoghealth.com/dogac...

Once you have located the point, apply steady gentle pressure with your thumb or index finger. As you do this, visualize an even flow of energy going through that point into the body. The purpose of this visualization technique is to help you focus and not make any sudden movements that may distract the dog. With a steady and gentle hand, increase the pressure and release it after five to fifteen seconds, always paying close attention to your dog's body language. If your dog feels uncomfortable, release the pressure. However, please note that the maximum amount of time to hold the pressure is fifteen seconds. If you come across a tender spot, simply massage the tender area and as the dog relaxes, then slowly apply pressure to that point.

The key is to make these sessions an enjoyable activity for your dog. Many pets look forward to this activity while experiencing improvement in health. You may find that

acupressure will not only positively impact your dog's life, but it will also enhance the bond and loving relationship that you already have with your cherished companion.

Pumpkins Remedy Seasonal Ailments

Wednesday, October 13, 2010 by: Melissa Sokulski
http://www.naturalnews.com/030021_pumpkins_remedies.html

In Traditional Chinese Medicine, autumn is represented by the metal element, which corresponds to the Lungs and Large Intestine. Weakness in this element shows up as ailments in the Lung and Intestines: allergies, asthma and constipation. The remedy can be found in this season's most notable food: the pumpkin or squash.

The pumpkin is round, orange and sweet. It corresponds to the earth element in the five element cycle. Earth is the mother of metal. In Chinese medicine there is a saying: when there is weakness in the child (in this case metal: lungs and large intestine), nourish the mother (in this case earth.)

Weakness in the lungs will show up as:

allergies
asthma
bronchitis
pneumonia

Because the lungs open onto the skin, one may also see acne, eczema and psoriasis. The paired organ to the Lungs is the Colon, so weakness here will show up as constipation, diarrhea, or IBS.

In Chinese medicine, the pumpkin is known to relieve damp conditions such as dysentery and eczema. It promotes discharge of mucus from the lungs, bronchi and throat, easing bronchial asthma. (1)

Not only does the flesh of the pumpkin benefit the Lungs and Large Intestine, the seeds are especially good for the intestines, easing constipation and acting as a parasite cleanse. Known as nan gua zi, pumpkin seeds are especially known to alleviate tapeworm and roundworm. For this purpose pumpkin seeds are taken by boiling into a strong tea known as a decoction or grinding into a powder to be taken with water.

Nutritionally, pumpkins are high in beta carotene which is converted by the body to vitamin A. Beta carotene protects the mucous membranes of the body and has been shown to protect both the lungs and large intestine against cancer. (2)

Soup is an excellent way to nourish the body this time of year. The following soup can be made with pumpkin or any kind of yellow winter squash. Make sure to save and wash the seeds, which can then be salted and baked at 350 degrees until dry.

Nourishing Pumpkin Soup

1 pumpkin or squash, halved, seeded, and baked face down on baking sheet at 350 until soft (1/2 hour to an hour depending on thickness of squash.)
1 onion, chopped
2 cloves garlic, chopped
2 carrots, chopped
1 Tbsp olive oil
2 Tbsp maple syrup
Salt and pepper to taste
6 cups water

In soup pot, saute onions, garlic and carrots in olive oil until softened.
Add water, flesh of the squash scraped from the skin, maple syrup, salt and pepper and mix well.
Bring to boil and simmer for 20 minutes.
Cool and blend until smooth.
Reheat and serve.

craig-oxley - September 27, 2010 06:19 PM (GMT)

Chinese Herbal Medicines for the Common Cold

By Joel Harvey Schreck, L.Ac.
http://www.acupuncture.com/newsletters/m_s...oldfluherbs.htm

We've all heard it said “We can land spaceships on Mars, but can't even cure the common cold.” The cold seems to be a humbling curse that is mankind's burden forever.

Despite the frustrations of science, some people claim to cure a cold with an amazing variety of stuff like garlic, ginger, zinc, and vitamin C. These never worked for me. I found that once my cold started, I was in for a week of suffering.

That is, until an acquaintance gave me a vial of Chinese pills and told me to take them if I felt a cold coming on. A few days later, I awoke with a sore throat. Before leaving for work, I remembered the pills and took them. That evening, I realized that my budding cold had vanished, gone without a trace. What was that stuff?

The stuff tuned out to be Yin Chiao. Was this a fluke? How could no one know about this? As it turns out, it was no fluke. Since that day, Yin Chiao and similar Chinese remedies have ended most of my colds. Perhaps medical science hasn't cured the common cold, but it appears that Chinese herbalists did it hundreds of years ago. The formula for Yin Chiao was first published in the eighteenth century. It's hard to understand why it would take the West so long to discover them. I imagine if bad news travels quickly, good news must travel slowly.

Different ideas, no matter how good, are met with resistance. That’s why it took us about a thousand years to discover Chinese food. With pharmaceutical cold medicines proving to be harmful, let's hope it doesn't take another thousand years to discover

Chinese herbal medicine. Not only are they safer, but Chinese herbs are simply more effective. When you discover them, you'll never even think about drugs for colds or visiting the doctor for a cold. When Western civilization discovers them, it could turn our medical establishment upside down, easing suffering and preventing millions of needless trips to the doctor. This might be bad news for doctors, but it's very good news for everyone else.

Though ancient Chinese herbalists knew nothing about germs, they knew that respiratory diseases were caused exterior wind evils. Evils that caused serious diseases like influenza and measles were called wind-heat evils. Common colds were caused by wind-cold evils.

Our bodies are protected from wind evils by defensive energy, known as wei qi. With adequate wei qi, you can be exposed to disease without getting sick. Herbs such as astragalus can be used to boost the wei qi, protecting us from invaders. They block the entry of wind evils.

Expelling these evils requires herbs that release exterior conditions. Some of these are ginger, mint, kudzu root, and many others. Some of these herbs protect against wind-heat evils; others defend against wind-cold invaders. These herbs are rarely taken alone, but are combined in formulas that greatly increase their potency. Some of the most popular Chinese cold formulas appear to work on any kind of wind invasion, hot or cold. However, I have found that certain formulas work better on different parts of the body.

For example, colds originating in the throat seem to respond best to Yin Chiao, which is taken at the first sign of cold. Keep them with you during cold season; the sooner you take them, the better they work. Yin Chiao contains remarkably simple and safe herbs. They are: honeysuckle, forsythia, balloon flower, peppermint, edible burdock, crested grass, schizonepeta, fermented soybean, and Chinese licorice root.

For colds that begin in the nose, I prefer Gan Mao Ling. Use it alone or combine it with Yin Chiao when nasal or sinus congestion is present at the onset. Gan mao ling contains: Ilex Root, Chrysanthemum Flower, Vitex Herb, Isatis Root, and honeysuckle flower.

To relieve colds which are too far developed to stop, or to relieve colds that begin with body aches, fever, and chills, I believe the best remedy is Zong Gan Ling which contains: kudzu root, hairy holly root, vervain, woad root, wormwood, gypsum, and notopterygi.

Preventing a cold requires a different formula altogether, one that strengthens the body's defensive energy. The most famous of these formulas is called Yu Ping Feng San, or otherwise known as, Jade Windscreen or Jade Shield. This formula is used to

build defensive energy (wei qi) and protect against cold, flu, and other invasions. Jade Screen contains astragalus, Atractylodis, and Siler.

Many of these formulas are available in natural food stores, particularly on the West Coast. If you can't find them at your local health food store, you can certainly find them on the web. I strongly suggest that you try them. They will open your eyes to the potency and reliability of Chinese herbals. And unlike many of the drugs at your drugstore, all of these are safe for children.

Remember that a mere hundred years ago, no one in the West had even heard of Chinese food. Today there are Chinese restaurants everywhere. I can assure you that Chinese cold medicines work, and will become as valuable to our culture in the 21st century as Chinese food became in the 20th century.

Title: CHINESE MEDICAL DIETARY RECOMMENDATIONS

craig-oxley - September 27, 2010 03:10 PM (GMT)

[dohtml]
BLOOD</
font>
STAGNATION
<h1 align="left" style="text-align: left"><span style="font-size:
12.0pt">
INTRODUCTION:</h1>

Barbara and I see many patients manifesting
the Chinese medical condition
known as Blood Stagnation or Blood Stasis. We get very good results
treating this condition with a combination of craniosacral acupuncture, hara
visceral work, herbs, dietary and lifestyle modifications. We have written
this article to identify for you those foods which you can incorporate into your
diet to resolve Blood Stagnation as well as to identify certain foods which
should be avoided.

<h2><u>CLINICAL MANIFESTATION OF BLOOD
STAGNATION:</u></h2>

Dark complexion, purple lips, pain which is
boring, fixed and stabbing in
character, abdominal masses that do not move, purple nails, bleeding with dark
blood and dark clots. These are only the general symptoms of Blood
stagnation or Blood stasis without reference to particular organs.

<h2><u>USEFUL FOODS</u>:</h2>

Vinegar, turmeric, chives, garlic, basil, scallion, leek,
ginger, chestnut, rosemary, cayenne, nutmeg, kohlrabi, eggplant, white pepper, adzuki bean, sweet rice, spearmint, butter, lotus root, hawthorn berry, brown sugar, squid, crab, rose, peanuts, lotus root, spinach, peach, peach seed, peach flower powder, wood ear (black fungus) and cinnamon.

Precautions:

·   Warming foods such as garlic and ginger should be used carefully
if at all in cases of heat signs.

·   Butter is most useful in cases of emaciation and weakness and a
dietary history low in animal products. It is contraindicated in cases of liver excess, dampness and mucous conditions.

·   Vinegar and sweet rice are contraindicated in patterns of
deficient digestive fire with signs such as watery stools and a feeling of coldness.

<u>NUTRITIONAL SUPPORT</u>:

·

Vitamin E – is helpful in reducing blood stagnation as well as

painful inflammation.
<h3> </h3>

D<a
name="DAMP_HEAT"><span style="font-weight:700; text-decoration:
underline">AMP
HEAT
<h1>DAMP HEAT CONSTITUTIONS:</h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Persons with Damp Heat
constitutions easily develop skin sores; and if they are young - acne. Their
face is often shiny and oily. They have a dry mouth and there will be a
slightly bitter taste in the mouth. There is a tendency towards anger and
irritability. Often they feel fatigued and have a lack of energy. They will
be somewhat impatient and anxious. They like eating oily, sweet and fried
foods. Their stools are usually dry. There will be scanty urine that is more
yellow in color. If they get sick it is often associated with emotional upset
or associated with the food that they have eaten. Their pulse is slippery and
fast and their tongue has a red body and a sticky yellow coat.

<h1> </h1>
<h1>USEFUL FOODS:</
span></h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Majority of foods should
be vegetables and foods that remove dampness and heat such as: Adzuki
beans,
lima beans, mung beans, black beans, celery, carrots, winter squash, potatoes
with skins, asparagus, mushrooms, corn, peas, amaranth, Chinese barley, day
lily, bamboo shoots, wax gourd, white gourd, cucumber and duck

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Lemon (diluted juice),
cranberry juice, huckleberries, bananas, Chinese pears and watermelon.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Useful herbal teas: Uva
ursi, dandelion leaf, plantain leaf, flax seed, watermelon seed and pipsissewa
(pipsissewa is good for chronic bladder infections).

<u>FOODS TO AVOID</u>:
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Refined sugar and other concentrated sweeteners, meat, greasy, oily foods, too much starch, and overeating.

DAMPNESS
<h1 align="left" style="text-align: left">
INTRODUCTION:</h1>

Barbara and I see many patients manifesting the Chinese medical condition
known as Dampness. We get very good results treating this condition
with a combination of craniosacral acupuncture, herbs, dietary and lifestyle
modifications. We have written this article to identify for you those foods
which you can incorporate into your diet which counteract Dampness as well as to
identify certain foods which when avoided will help you in reducing Dampness.

<h1>GENERAL CLINICAL MANIFESTATIONS OF DAMPNESS:</h1>

A feeling of heaviness of the body or head, muzzy
headedness, no appetite, stuffy feeling in the chest and/or epigastrium, a
sticky taste in the mouth, cloudy urine, vaginal discharges, certain types of
oozing skin diseases, a sticky tongue coating and a slippery pulse. Dampness can
obstruct the circulation of Qi in the
abdomen and, besides affecting the intestines, it can affect the Spleen and the
Liver. This causes abdominal pain, a feeling of fullness and heaviness and
possibly diarrhea. Long term stagnation of Dampness in the Middle Burner

can also gradually spread upwards filling the head causing a sensation of heaviness of the head, dull headache and a difficulty in thinking.

<h1>USEFUL FOODS WHICH COUNTERACT DAMPNESS:</h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Lettuce, Amaranth, Asparagus, Wild Blue Green Algae, White Pepper, Vinegar, Papaya, Chaparral, Pau d'arco, Valerian, Chamomile, Celery, Turnip, Rye, Barley, Adzuki Beans, Alfalfa, Pumpkin

<u>Useful Foods for Spleen Dampness</u>:
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Celery, Turnip, Rye, Barley, Adzuki Beans, Alfalfa, Pumpkin, Chinese Cabbage, Watermelon, Corn, Anchovy, Kidney Beans, Button Mushrooms, Shrimp, Chestnuts, Kohlrabi, Mustard Greens, Radish, Chicken, Chicken Gizzards, Mackerel.

<u>FOODS TO AVOID IN
CASES OF DAMPNESS</u>:

·

Dairy Products, Meat, Eggs, Tofu, Pineapple, Salt and Concentrated Sweeteners, Peanuts, Ice Water, Ice Cream.
<u>Foods to Avoid for Spleen Damp Conditions</u>:

·

Salt, Milk, Cheese, Eggs, Sugar, Soybean, Pine nuts, Asparagus,
Cucumber, Seaweed, Tofu, Bamboo Shoots, Kelp, Agar, Cabbage, Coconut Milk, Spinach, Olives, Black Sesame, Goose, Duck, Pork, Shellfish, Clams, Mussels, Crabs, Sardines, Octopus, Shark Meat, Red Meat, Excessive Watery Foods. Also

use sour foods sparingly.

<u>LIVER QI CONSTRAINT</u>
(Liver
Qi Stagnation)
<u>
WHAT IS LIVER QI
CONSTRAINT?</u>

Liver Qi Constraint, also known as Liver Qi Stagnation, is by far the most common Liver pattern and also one of the most common patterns in general. It manifests clinically as distending pain the hypochondriac region, stuffiness of the chest, sighing, epigastric and abdominal distention, nausea, vomiting, poor appetite, sour regurgitation, belching, borborygmi, diarrhea, feeling of being "wound up", feeling of a lump in the throat, irregular periods, painful periods, distention of the breasts prior to periods, pre-menstrual tension and irritability, melancholy, depression and moodiness. We hope the suggestions given below are helpful in your quest for optimal liver health.

<h1>THESE ARE USEFUL FOODS IF YOU HAVE LIVER QI CONSTRAINT:</h1>

Lemon, lime or grapefruit, moderately pungent foods, spices and herbs, members of the onion family, mustard greens, cardamom, cumin, fennel, horseradish, various mints, lemon balm, angelica root, prickly ash bark. Also sweet rice, strawberry, peach, cherry, pine nuts, cabbage, turnip root, cauliflower, broccoli and brussel sprouts. Also sprouted grains, beans and seeds, fresh vegetables and fruit. Mushrooms, rye, asparagus, amaranth, quinoa,
alfalfa, radish leaves, citrus peel, chaparral, bupleurum, chamomile, peony root, dandelion root.

<u>Foods

that relax the
Liver</u>: Beef, chicken, liver, mussels, black sesame, kelp, plums, mulberries, celery, nori, lotus seeds, Chinese red dates and gotu kola.

 <u>Foods that activate Liver
Qi</u>: Vinegar, amasake, beets, coconut
milk, garlic, leeks, marjorams, safflower, basil, black pepper, dill seed, ginger, longan, rosemary, scallions, by leaves, cabbage, litchi, kohlrabi, saffron, peaches, oregano, tumeric, eggplant, chives, chestnuts.

<u>Foods that also detoxify
and cool the Liver</u>: Celery, seaweed, watercress, mung beans, lettuce, cucumber, tofu, millet, plum, rhubarb root or stem, daikon, radish, carrots, spinach, Swiss chard, kale, parsley.

<u>THESE ARE FOODS TO AVOID
IF YOU HAVE LIVER QI CONSTRAINT</u>:

Foods high in saturated fats (such as lard, mammal meat, cream cheese and eggs), hydrogenated or poor quality foods (such as shortening, margarine, refined and rancid oils), deep fried, greasy, fatty foods, coffee, alcohol, food preservatives, excessively spicy foods, sugar and sweets, peanut butter, excesses of nuts and seeds, chemicals in food and water, all intoxicants and highly processed refined foods (refined flour products are hard on the Spleen and make it easier for the Liver to invade it).

SPLEEN QI DEFICIENCY
<h1>CLINICAL MANIFESTATIONS OF SPLEEN QI DEFICIENCY</h1>

No appetite, abdominal distension after eating, tiredness, lassitude, sallow complexion, weakness of the limbs, loose stools, pale or normal colored tongue, empty pulse. If Spleen Qi Deficiency gives rise to Dampness there may also be nausea, stuffiness of the chest and epigastrium and a feeling of heaviness.

<h1>USEFUL FOODS FOR TREATING SPLEEN QI DEFICIENCY:</h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
(These should be cooked or taken at room temperature. Limit the number of cooked fruits.)

Quinoa, parsnip, adzuki beans, black beans, pine nuts, garbanzo beans, cooked squash, cooked turnips, oats, rice, cooked cherries, cooked carrots, cooked leeks, mussels, shrimp, cardamom, black pepper, cooked strawberries, ginger, tapioca and custards, cooked yams, cooked onions, cooked rutabagas, cooked pumpkin, cooked peaches, dried litchi, cinnamon, arrowroot, dried figs, nutmeg, sweet potato, garlic, fennel.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Moderate amounts of: honey, molasses, barley malt, maple syrup and raw sugar.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Small amounts of: chicken, lamb, beef, turkey and anchovies.

<u>FOODS TO AVOID IN
CASES OF SPLEEN QI DEFICIENCY</u>:

Too many sweets, seaweed, milk, chilled, iced or frozen foods or liquids, citrus fruits and citrus juices, tofu, cheese, salads, too much salt, millet, too many liquids

with meals, raw foods, hard to digest food, undercooked grains, buckwheat, agar.

YANG DEFICIENCY
<h1>CLINICAL MANIFESTATIONS OF YANG DEFICIENCY:</
font></h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Includes those of Qi deficiency (pale face, a weak voice, slight sweating in daytime, slight breathlessness, tiredness, lack of appetite and an empty pulse) plus chilliness, a bright pale face, cold limbs, no thirst, a desire for hot drinks, loose stools, frequent-pale urination, a weak pulse and a pale wet tongue.

<h1> </h1>
<h1>USEFUL FOODS FOR YANG DEFICIENCY:</h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Rice, sweet brown rice, oats, spelt, quinoa, corn, buckwheat and rye.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Sunflower seeds, sesame seeds, fennel, dill, anise, caraway, carob pod, cumin, peanuts, chestnuts, cinnamon bark and pine nuts.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
<span style="font-size: 12.0pt">Yellow onions, Chinese yam, Chinese cabbage, parsnip, winter squash, sweet potato, kale, leek, scallion, mustard greens and carrots.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">

<li class="MsoNormal">
Chives, garlic, ginger, cloves, basil, rosemary, angelica root and parsley.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Lychee, pumpkin, cherry, citrus peel, dates and raisins.

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Hot peppers and cayenne (caution: use hot peppers and cayenne in small pinches or they can have a strong cooling effect).

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Walnuts (start eating one walnut a day, then add one more each day, not to exceed 20 per day).

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Coffee and cocoa (caution: coffee and cocoa damage the yin in Yin deficient persons, and they are contraindicated in insomnia).

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Chicken, goat’s milk, beef, lamb, shrimp, mussels, fish (e.g., anchovy and trout).

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
In general, use warming foods and methods of preparation.

<u>FOODS TO AVOID IN
CASES OF YANG DEFICIENCY</u>:
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Use fewer cooling foods
and fruits and raw foods.

YIN DEFICIENCY
<h1>MAIN MANIFESTATIONS OF YIN DEFICIENCY:</h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">General symptoms include
low-grade fever or a feeling of heat in the afternoon, a dry throat at night,
night sweats, emaciation, a floating-empty pulse and a red, peeled and dry
tongue. Other symptoms will depend upon which organ is mostly involved.

<h1> </h1>
<h1>USEFUL FOODS:</h1>
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Millet, barley, wheat
germ, wheat, rice, seaweed, micro-algae, tofu, black beans, kidney beans,
adzuki beans, mung beans and their sprouts, beets, string beans, kuzu,
potatoes, whole salt, spirulina, chlorella, wild blue green algae, lettuce,
kamut, lily root, cucumber, soybean milk, spinach, tomato, radish and mushroom

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Persimmon, grapes,
blackberries, raspberries, mulberries, watermelon, plums, pears, strawberries,
lemons and pineapple, kiwi and banana (use banana with caution in case of
Spleen Qi Deficiency with Dampness).

<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">
Crab, clam, mussels, sardines, sea cucumber, beef, dairy products, yogurt, cheese, abalone, oyster, duck, chicken eggs, duck eggs, ham and pork.

<u>FOODS TO AVOID</u>:
<ul style="margin-top: 0in; margin-bottom: 0in" type="disc">
<li class="MsoNormal">Alcohol, cigarettes, coffee, shrimp, excessive and poor quality meat.

Build Strong Teeth From the Inside Out

Wednesday, September 22, 2010 by: Melissa Sokulski
http://www.naturalnews.com/029806_teeth_kidney_energy.html

According to Chinese medicine, the Kidneys store essence (jing) and control growth, development and reproduction. In the Five Phase Theory of Chinese medicine they correspond to the Water element and reflect the winter season, cold climate, black color, emotion of fear and the taste of salt. Weak kidney energy will show itself in dental caries, as well as in infertility, growth and maturation issues, weak bones, low back and knee pain, premature gray hair, and ringing in the ears among other things.

Dental health is a reflection of one's kidney essence or jing. Two factors determine the strength of one's kidney essence: Prenatal or inherited jing and post natal jing. Post natal jing means that kidney essence can be built by food and conserved by lifestyle. Kidney essence is naturally depleted as we age, turning into wisdom. Physically it can be conserved by eating right, taking replenishing herbs and having a healthy lifestyle.

Ways to Boost Kidney Energy:

It is possible to boost our kidney energy and improve the health of our teeth. Jing-building foods such as sea vegetables - arame, wakame, hijiki, kelp, and dulse - are beneficial. Herbs such as He Shou Wu (Polygonum multiflorum) also build kidney energy and are especially helpful when we also have signs of graying hair or hair loss. A diet rich in fresh raw fruits and vegetables, nuts and seeds can benefit our kidneys. Finally, consuming unpasteurized dairy foods such as raw milk and yogurt can be very beneficial to our teeth and bone development, according to pioneering dentist Weston Price.

To Conserve Kidney Energy

It is also possible to conserve the kidney energy we have. Specific lifestyle choices can benefit our kidney essence and keep our bodies and teeth strong and healthy.

Do not overwork physically: too much exercise and heavy lifting drains kidney energy. In men too much ejaculation weakens kidney energy. For women childbirth is taxing on the kidney energy.
Avoid processed foods like white flours, sugar, hydrogenated oils.
Engage in energy building exercises such as Tai Chi or Qi Gung.

Some people are born with ample kidney jing and naturally have strong teeth and bones. Most people in America have an inherited weakness of kidney energy, and the standard American diet and lifestyle depletes it even more. Today dental caries are considered an epidemic problem, and most dentists do not realize that dental health is a reflection of a deeper issue: the health of the whole body. Proper care and cleaning of teeth are essential and rinsing with a baking soda solution can be helpful to keep the mouth from becoming acidic, an environment in which bacteria thrive. Keeping our bodies balanced and strong is the best thing for us to do for our overall health, which includes strong teeth.

View Full Version: Couples increasingly seeking out alternative

Title: Couples increasingly seeking out alternative
Description: *infertility treatments such as acupunctu*

craig-oxley - August 24, 2010 03:33 PM (GMT)

Couples increasingly seeking out alternative infertility treatments such as acupuncture

Tuesday, August 24, 2010 by: David Gutierrez
http://www.naturalnews.com/029548_infertil...cupuncture.html

Alternative fertility treatments are becoming increasingly popular among certain segments of the U.S. population, according to a study conducted by researchers from the University of California-San Francisco and published in the journal Fertility and Sterility.

The researchers used interviews and questionnaires to follow 428 couples who were undergoing conventional fertility interventions at eight reproductive clinics in Northern California. Over the course of 18 months, the researchers found that 29 percent of study participants used at least one alternative fertility treatment.

Twenty-two percent of study participants used acupuncture, 17 percent used medicinal herbs and 1 percent used meditation. Another 5 percent used some form of body work therapy, such as massage or chiropractic.

Couples who failed to achieve pregnancy with conventional fertility treatments were almost 150 percent more likely to used alternative therapies than those who succeeded. The older a prospective mother was, the higher a couple's chance of using complementary treatments. Even after researchers adjusted for potential confounding factors such as the number of prior children or the use of other fertility treatments, use of alternative therapies increased 29 percent with every five years of the mother's age.

"We suggest that couples struggling to achieve pregnancy are more likely to seek out any treatment that offers hope," lead researcher James Smith said.

The researchers also found that couples with positive views on alternative therapies were 85 percent more likely to use them than couples with more negative views.

Wealth was also a major predictor of a couple's use of alternative therapies; couples with a combined income of more than $200,000 per year were almost three times more likely to use such therapies than couples with a combined yearly income below $100,000.

"Couples with higher incomes were more likely to have the financial resources to seek out [complementary therapies]," Smith said.

A single acupuncture visit in Northern California averages $100, Smith noted. While inexpensive compared to a $16,500 in-vitro fertility treatment, the cost may still place such therapies out of range of poorer couples.

View Full Version: Tai Chi beats stretching in fibromyalgia study

Title: Tai Chi beats stretching in fibromyalgia study

craig-oxley - August 20, 2010 01:44 PM (GMT)

Tai Chi beats stretching in fibromyalgia study

By Gene Emery
BOSTON | Wed Aug 18, 2010 5:33pm EDT
http://www.reuters.com/article/idUSTRE67H5I520100818

(Reuters) - The slow, flowing movements of tai chi are better for relieving pain and other symptoms of fibromyalgia than conventional stretching exercises, doctors reported on Wednesday.

The improvements continued throughout the three months of lessons for 33 volunteers receiving the movement and breathing exercises, study leader Dr. Chenchen Wang of the Tufts University School of Medicine in Boston said in a telephone interview.

"Week by week they changed. The pain and depression improved, and a lot of people were depressed," said Wang, whose study is published in the New England Journal of Medicine.

"They feel better. People said it changed their life. Only two or three feel it didn't help."

Although they said the study should be repeated with a larger group to see if, for example, the enthusiasm of the instructor played a role, Dr. Gloria Yeh and her colleagues at Beth Israel Deaconess Medical Center in Boston said it might be time to give tai chi a chance.

"Aside from reductions in pain, patients in the tai chi group reported improvements in mood, quality of life, sleep, self-efficacy and exercise capacity," Yeh's team wrote in a commentary in the same journal.

"The potential efficacy and lack of adverse effects now make it reasonable for physicians to support patients' interest in exploring these types of exercises, even if it is too early to take out a prescription pad and write 'tai chi,'" they wrote.

Fibromyalgia, which may affect 200 million people worldwide, is difficult to diagnose and hard to treat, with no clear guidelines for symptoms that include pain, fatigue, stiffness and sleep difficulties.

There is evidence that it may be caused by a heightened sensitivity to pain.

Patients often turn to alternative therapies such as tai chi, yoga, acupuncture or massage.

Tai chi originated as a Chinese martial art that focuses on slow, graceful movements, breathing and relaxation in an effort to move a hypothetical energy throughout the body.

Volunteers in the tai chi group took 60-minute classes twice a week for three months from a tai chi master and were encouraged to practice at least 20 minutes per day.

Another group got health lectures and stretching classes, comparable to what people do when they wake up in the morning. "This was not real exercise," Wang said. Further tests comparing exercise to tai chi are planned.

To assess the effectiveness of both treatments, the Wang team used several assessment tools, including one that measured fibromyalgia symptoms on a 100-point scale. The people taking tai chi saw their scores improve by an average of 28 points, compared to a nine-point improvement in the stretching group.

Researchers should test the technique with a larger group for a longer period, compare different styles, and see if it is better than other forms of exercise, such as yoga, Yeh said.

craig-oxley - August 5, 2010 11:09 AM (GMT)

Heart failure breakthrough: placebo controlled study shows major improvement with acupuncture

Thursday, August 05, 2010 by: S. L. Baker
http://www.naturalnews.com/029377_acupunct...rt_failure.html

Heart failure is a progressive condition marked by a worsening of the heart's ability to pump enough blood to supply the body's needs. It is most often caused by a heart attack, years of high blood pressure or other injuries to the cardiovascular system and kills about 250,000 people in the U.S. each year, according to the Heart Failure Society of America. One of the most debilitating results of heart failure is shortness of breath and severe fatigue with exercise. But a new study by German scientists shows an ancient non-drug therapy -- acupuncture -- can dramatically improve exercise tolerance in patients suffering from chronic heart failure.

The new research, just published in the medical journal Heart, involved two groups of heart failure patients who were being treated with conventional medications and were in stable condition. Both groups of research subjects believed they were receiving ten authentic acupuncture treatments. However, only one group was given real acupuncture based on traditional Chinese medicine. These treatments focused on acupuncture points believed to boost general strength, influence the sympathetic and parasympathetic nervous systems and reduce inflammation markers. The other control group was treated with special placebo needles that only simulated acupuncture needle pricks but did not break the skin.

The results? After the real acupuncture treatments, the patients could walk far longer than those in the placebo group. What's more, even though the measurable work capacity of the heart was found to be unchanged, the acupuncture treated heart

patients recovered more quickly after exercise and reported they felt far less exhausted.

So what was the acupuncture actually doing to improve heart failure symptoms? The research team, headed by cardiologist Dr. Johannes Backs of Heidelberg University Hospital, pointed out in a press statement that previous studies have shown that the ability of heart failure patients to tolerate exercise is independent of the pumping function of the heart and appears to stem primarily from the muscles. Inflammation chemical messengers in the blood are increased in chronic heart failure and that's what makes muscles tire easily, causing extreme fatigue.

"The blood level of a certain messenger, tumor necrosis factor alpha (TNF alpha) actually drops after the real acupuncture treatment. Since TNF alpha leads to a reduction of muscle mass and muscle strength among other things, this would explain the positive effect (of acupuncture) on skeletal muscle function," Dr. Arnt Kristen, one of the authors of the study, said in a statement to the media.

The research team also noted that heart failure is much more complex than previously assumed and involves an imbalance of the autonomic nervous system and various nerve transmitters. "This is precisely where acupuncture may intervene, by bringing these processes back into balance -- it influences the autonomic sympathetic nervous system (excitation), boosts the parasympathetic nervous system (relaxation), and also has an anti-inflammatory affect," the researchers explained in the press statement.

Human Avian/Bird Flu and Chinese medicine

Human Bird/Avian Flu Treatment Policy (2005 Revision version)

November 23rd, 2005
http://knol.google.com/k/human-avian-bird-...inese-medicine#

Human Avian/Bird Flu and Chinese medicine

Translation and interpretation of section 5.4.1 of < ••••••••(2005••••)> (Ren Qin Liu Gan Zhen Liao Fang An (2005 Ban Xiu Ding Ban); Human Bird/Avian Flu Treatment Policy (2005 Revision version)), issued on November 23rd, 2005, by the Ministry of Health, People's Republic of China.

The policy is the third revision (and the latest up to June 14, 2008) since the first publication in 2004. This new revision was compiled by 25 specialists in the departments of epidemiology, pulmonology, paediatrics, emergency, medical imaging, medical examination, virology, physical examinations & clinical skills.

Below is translation of section 5.4.1 of the policy which details Chinese herbal treatments of Bird Flu in accordance to TCM syndromes. Four syndromes are listed. Modification tips are given for reference. Comments by John Lew explain how the herbs play different cohesive roles in treating different syndromes.

5.4.1 Chinese herbal treatments of Avian/Bird Flu in accordance to TCM syndromes:

5.4.1.1)
Syndrome: External toxins invading Lungs
Symptoms: Fever, aversion to cold, sore throat, headache, muscle and joint pain,

coughing, little phlegm, tongue with white coat, rapid and slippery pulse.
Mechanism: Toxins invading Lungs' protective layer, Lungs losing the ability to maintain upward & downward qi passage.
Therapeutic principles: Clear away heat and toxins, activate the flow of qi, and penetrate external pathogens.

Basic formula (Ingredients) & reference dosage:
No. 1) ••10g (Chai Hu, Chaihu, Bupleurum root, Radix Bupleuri);
No. 2) ••12g (Huang Qin, Huangqin, Scutellaria root, Radix Scutellariae);
No. 3) •••6g (Zhi Ma Huang, Honey-baked Mahuang, Honey-baked ephedra, Herba Ephedrae Praeparata);
No. 4) •••10g (Chao Xing Ren, Fried Xingren, Fried bitter apricot kernel, Semen Armeniacae Amarum);
No. 5) ••10g (Yin Hua, Yinhua, Honeysuckle flower, Flos Lonicerae);
No. 6) ••15g (Lian Qiao, Lianqiao, Forsythia fruit, Fructus Forsythiae);
No. 7) •••15g (Niu Bang Zi, Niubangzi, Arctium fruit, Fructus Arctii);
No. 8) ••10g (Qiang Huo, Qianghuo, Notopterygium root, Rhizoma seu Radix Notopterygii);
No. 9) •••15g (Bai Mao Gen, Baimaogen, Lalang grass rhizome, Rhizoma Imperatae);
No. 10) ••15g (Lu Gen, Lugen, Reed rhizome, Rhizoma Phragmitis);
No. 11) •••6g (Unprepared Gan Cao, Sheng Gancao, Licorice root, Radix Glycyrrhizae)

Modifications: For severe cough, add ••••(Zhi Pi Pa Ye, Honey-prepared Pipaye, Loquat leaf, Folium Eriobotryae Praeparata), •••(Zhe Bei Mu, Zhebeimu, Thunberg Fritillary Bulb, Bulbus Fritillariae Thunbergii). For Nausea and vomiting, add ••(Zhu Ru, Zhuru, Bamboo shavings, Caulis Bambusae in Taeniam), ••(Su Ye, Suye, Perilla leaf, Folium Perillae).

John's comments:
1) This formula combines that of •••(Yin Qiao San, a powder formula for the treatment of superficial syndrome of wind-heat, consists of 10 herbs) and •••••(Ma Xing Gan Shi Tang, a decoction formula for the treatment of cough and dyspnea due to wind-heat, consists of 4 herbs) with modifications. Chai Hu dispels pathogenic heat in the half exterior. Huang Qin clears out stagnated heat in the half interior. The combined use of the two herbs removes pathogenic factors from Shao Yang channels. Ma Huang facilitates the flow of the Lung-qi to relieve asthma, and its pungent flavor is good at dispelling exogenous factors. When used in honey-baked form, the effect in relieving asthma and cough is stronger. Xing Ren, with bitter taste and warm property, helps to move the Lung-qi to the lower part of the body. Yin Hua and Lian Qiao, pungent in flavor and cool in property, are used to relieve the exterior syndrome and clear away pathogenic heat and toxic materials. Niu Bang Zi and Gan Cao are used to relieve sore throat and cough by clearing away toxins and removing phlegm and, furthermore, the pungent and cool property of Niu Bang Zi is good for dispelling exterior heat. Qiang Huo, pungent in flavor and warm property, is used to expel exterior wind, remove

dampness and relieve pain. Bai Mao Gen, being cold and sweet, helps to cleanse heat in the Lungs and Stomach. Lu Gen, sweet in flavor and mild cool in property, is used to remove pathogenic heat and promote the production of body fluid and relieve thirst and restlessness, working in tandem with Bai Mao Gen.

2) The formula seems more inclined in catering for wind-heat syndrome. The use of Ma Huang, Qiang Huo, even though warm and pungent, helps in arresting asthmatic symptoms and removing dampness. Tongue impression for wind-heat is usually thin yellowish fur, in contrary to what's stated above. Anyway, all other factors are to be taken into account.

5.4.1.2)
Syndrome: Toxins invading Lungs and Stomach
Symptoms: Fever, or aversion to cold, headache, muscle and joint pain, nausea, vomiting, diarrhea, lower abdomen pain, tongue with whitish greasy fur coupled with floating and slippery pulse.
Mechanism: Toxins invading Lungs and Stomach, dampness accumulated at Stomach and Intestines, causing disruption of downward movement.
Therapeutic principles: Clear away heat and toxins, remove dampness and regulate Stomach.

Basic formula (Ingredients) & reference dosage:
No. 1) ••20g (Ge Gen, Gegen, Pueraria Root, Radix Puerariae);
No. 2) ••12g (Huang Qin, Huangqin, Scutellaria root, Radix Scutellariae);
No. 3) ••6g (Huang Lian, Huanglian, Coptis Root, Rhizoma Coptidis);
No. 4) •••30g (Yu Xing Cao, Yuxingcao, Houttuynia herb, Herba Houttuyniae Heartleaf);
No. 5) ••10g (Cang Zhu, Cangzhu, Atractylodes, Rhizoma Atractylodis);
No. 6) ••10g (Huo Xiang, Huoxiang, Agastache, Herba Agastachis);
No. 7) •••10g (Jiang Ban Xia, Ginger-prepared Banxia, Ginger-prepared pinellia tuber, Rhizoma Pinelliae Praeparata);
No. 8) ••6g (Hou Pu, Houpu, Macrostem onion, Bulbus Allii Macrostemi);
No. 9) ••15g (Lian Qiao, Lianqiao, Forsythia fruit, Fructus Forsythiae);
No. 10) ••10g (Bai Zhi, Baizhi, Dahurian angelica root, Radix Angelicae Dahuricae);
No. 11) •••15g (Bai Mao Gen, Baimaogen, Lalang grass rhizome, Rhizoma Imperatae)

Modifications: For severe stomachache, add •••(Fried Bai Shao, Chao Baoshao, White peony root, Radix Paeoniae Alba)••••(Honey-baked Gan Cao, Zhi Gancao, Honey-baked licorice root, Radix Glycyrrhizae Praeparata). For severe cough, add •••(Chao Xing Ren, Fried Xingren, Fried bitter apricot kernel, Semen Armeniacae Amarum), •• (Chan Tui, Chantui, Cicada slough, Periostracum Cicadae).

John's comments:
1) This formula combines that of •••••••(Ge Gen Huang Qin Guang Lian Tang, a decoction formula for the syndrome of toxins invading both Lungs and Stomach,

consists of 4 herbs) and •••(Ping Wei San, a powder formula for the treatment of stagnancy of dampness in the Stomach and Spleen, consists of 4 herbs) with modifications. Ge Gen, sweet and pungent in flavor and cool in property, dispels pathogenic factors from the superficial muscles to reduce fever and invigorates Spleen-Yang to stop diarrhea. Huang Lian, bitter in flavor, cold in property, acting on the Heart, Stomach, Liver and Large Intestine channels, purges pathogenic fire in the Heart and Stomach. Huang Qin acts to clear away heat in the Lungs and purge fire in the upper body. Cang Zhu dispels dampness to promote the function of the Spleen. Hou Pu promotes qi circulation and eliminates dampness to relieve distension and fullness in the abdomen. Huo Xiang, with a pungent and aromatic smell, not only dispels wind but also expels the turbid pathogen and regulates the Stomach to arrest vomiting; meanwhile it can send up the lucid qi and send down the turbid, clear away summer-heat and filthy pathogens. Ban Xia dries dampness and regulates Stomach, lowers the adverse flow of qi to arrest vomiting. Bai Zhi expels wind to relieve pain and removes dampness. Yu Xing Cao, pungent in flavor and mild cold in property, clears heat and toxins from the Lungs. It also subdues swelling and promotes pus discharge. Lian Qiao, pungent in flavor and cool in property, is used to relieve the exterior syndrome and clear away pathogenic heat and toxic materials. Bai Mao Gen, being cold and sweet, helps to cleanse heat in the Lungs and Stomach.

2) Comparing to formula 5.4.1.1, this formula of 5.4.1.2 tailors the direction toward getting rid of dampness around the middle part of the body, namely Stomach and Spleen, by regulating qi movement and drying dampness.

5.4.1.3)
Syndrome: External toxins clouding Lungs
Symptoms: High fever, cough with fewer phlegm, chest numbness, asthmatic short breath, or palpitation, restlessness, agitation, even delirium, coma, deep purplish lips, dim-red tongue with greasy gray or yellow fur and sunken fine and rapid pulse.
Mechanism: Severe case of toxins invading and clouding Lungs, causing disruption of upward & downward qi passage, thus the high fever and cough; phlegm accumulation and stagnation of Lungs, thus dim purplish lips and asthmatic short breath.
Therapeutic principles: Clear away heat and purge Lungs, remove toxins and resolve phlegm.

Basic formula (Ingredients) & reference dosage:
No. 1) •••9g (Zhi Ma Huang, Honey-baked Mahuang, Honey-baked ephedra, Herba Ephedrae Praeparata);
No. 2) •••30g••(Xian Xia; Boiled first) (Sheng Shi Gao, Unprepared Shigao, Gypsum, Cypsum Fibrosum);
No. 3) •••10g (Chao Xing Ren, Fried Xingren, Fried bitter apricot kernel, Semen Armeniacae Amarum);
No. 4) ••10g (Huang Qin, Huangqin, Scutellaria root, Radix Scutellariae);
No. 5) ••10g (Zhi Mu, Zhimu, Wind-weed rhizome, Rhizoma Anemarrhenae);

No. 6) •••10g (Zhe Bei Mu, Zhebeimu, Thunberg Fritillary Bulb, Bulbus Fritillariae Thunbergii);
No. 7) •••15g (Ting Li Zi, Tinglizi, Lepidium seed, Semen Lepidii seu Descurainiae);
No. 8) •••15g (Sang Bai Pi, Sangbaipi, White mulberry root-bark, Cortex Mori);
No. 9) •••15g (Pu Gong Ying, Pugongying, Mongolian dandelion herb, Herba Taraxaci);
No. 10) •••10g (Cao He Che, Caoheche, [••, Chong Lou, Chonglou, Chinese paris rhizome, Rhizoma Paridis Chinensis]);
No. 11) ••10g (Chi Shao, Chishao, Red Peony Root, Radix Paeoniae Rubra);
No. 12) ••10g (Dan Pi, Danpi, Mountan Bark, Cortex Moutan Radicis)

Modifications: For high fever, unresponsiveness, or even delirium, add •••••(Angong Niuhuang Wan / AnGong NiuHuang Pill, a OTC pill for treatment of high fever, delirium, coma due to phlegm-heat in the Heart or pathogenic heat in pericardium, consists of roughly 12 herbs (depending on manufacturers)); with a choice of using •••••• (QingKaiLing Injection), ••••••(TanReQing Injection), ••••••(YuXingCao / Houttuynia injection). For deep purplish lips, add ••(Huang Qi, Huangqi, Astragalus root, Radix Astragali seu Hedysari), ••(San Qi, Sanqi, Notoginseng, Radix Notoginseng), •••(Dang Gui Wei, Danggui tail, Chinese angelica root, Radix Angelicae Sinensis). For constipation, add •••(Sheng Dai Huang, Unprepared Daihuang, Rhubarb, Radix et Rhizoma Rhei),••(Mang Xiao, Mangxiao, Mirabilite, Natrii Sulphas).

John's comments:
1) The formula combines that of •••••(Ma Xing Gan Shi Tang, a decoction formula for the treatment of cough and dyspnea due to wind-heat, consists of 4 herbs), •••(Bai Hu Tang, a decoction formula for the treatment of excessive heat syndrome in Yang Ming channels and qi system, consists of 4 herbs) and •••••••(Ting Li Da Zao Xie Fei Tang, a decoction formula for the treatment of phlegm accumulation and retention, consists of 2 herbs) with modifications, mostly addition of herbs. Ma Huang facilitates the flow of the Lung-qi to relieve asthma, and its pungent flavor is good at dispelling exogenous factors. When used in honey-baked form, the effect in relieving asthma and cough is stronger. Shi Gao, pungent and sweet in flavour and extremely cold in nature, acts against excessive heat in Yang Ming channel. Xing Ren, with bitter taste and warm property, helps to move the Lung-qi to the lower part of the body. Huang Qin clears out stagnated heat in the half interior and removes pathogenic factors from Shao Yang channels. Zhi Mu, which is bitter in taste and cold moist in nature, serves to strengthen the action of Shi Gao. Ting Li Zi, pungent and bitter in flavour, very cold in property, removes heat from the Lungs, and relieves asthma. Zhe Bei Mu, bitter in flavor and cold in property, has a strong activity of cleansing heat phlegm away and dissolving accumulation. Pu Gong Ying, bitter in flavor and sweet cold in property, acts on Liver and Stomach channels to clear heat and detoxicate, subdue swelling and dissolve lumps. Chong Lou, bitter in flavor and a little cold in property, acts on Liver to clear heat, detoxicate, subdue swelling, kills pain and relieve convulsion. Dan Pi has the effect of cooling the blood and removing latent heat from the body's Yin system. Chi

Shao removes pathogenic heat from the blood, dissipates blood stasis and relieves pain.

2) The formula is intended to do five therapeutic principles: First, it clears cough and asthmatic cough due to wind-heat. Second, it clears pathogenic heat in the qi system. Third, it has strong emphasis on removing phlegm heat. Fourth, that's to detox and finally fifth, to cool the blood in the Yin system. This syndrome is definitely more serious and a step further toward deterioration in terms of prognosis. From the point of view of conventional medicine, the symptoms can be similar to that of pneumonia.

5.4.1.4)
Syndrome: Internal shut-down; external collapse
Symptoms: High or low fever, cough, asthmatic short breath, cold limbs, cold sweat, dark purplish finger nails and lips, with deep and fine or non-existing pulse.
Mechanism: Further sinking of toxins, collapse of qi, Yin and Yang.
Therapeutic principles: Strengthens the essential qi to rescue from collapse

Basic formula (Ingredients) & reference dosage:
No. 1) •••15g (Sheng Shai Shen, Sun-dried ginseng, Radix Ginseng);
No. 2) ••15g (Mai Dong, Maidong, Ophiopogon root, Radix Opiopogonis);
No. 3) •••10g (Wu Wei Zi, Wuweizi, Schisandra fruit, Fructus Schisandrae);
No. 4) •••10g••(Boiled first) (Pao Fu Zi, Prepared Fu Zi, Prepared lateral root of Aconite, Radix Aconiti Lateralis Praeparata);
No. 5) ••10g (Gan Jiang, Ganjiang, Dried ginger, Rhizoma Zingiberis);
No. 6) •••30g (Shan Yu Rou, Shanyurou, or •••, Shan Zhu Yu, Shanzhuyu, Dogwood fruit, Fructus Corni);
No. 7) •••6g (Honey-baked Gan Cao, Zhi Gancao, Honey-baked licorice root, Radix Glycyrrhizae Praeparata)

Modifications: For severe sweating, add •••(Duan Long Gu, Calcined longgu, Dragon's bone, Os Craconis Fossilia), •••(Duan Mu Li, Calcined muli, Oyster shell, Concha Ostreae). For abundance of phlegm, sputum in throat, greasy coat on tongue, add ••• (Jin Qiao Mai, Jinqiaomai, Wild Buckwheat Rhizome, Rhizoma Fagopyri Cymosi), •••• (Su He Xiang Wan, a OTC pill for treatment of cold syndrome of coma, consists of roughly 15 herbs (depending on manufacturers)), •••(Hou Zao San, a OTC powder for treatment of inner phlegm accumulation, consists of roughly 13 herbs (depending on manufacturers)). For injections the following can be selectively used (based on syndrome differentiation): ••••••(Xingnaojing Injection), •••••(Shengmai Injection), ••••• (Shenmai injection), •••••(Shenfu injection), ••••••(Xuebijing injection) and so on.

John's comments:
1) The formula is a combination of •••(Sheng Mai San, a powder formula for the treatment of impairment of both qi and Yin manifested by short breath, spontaneous perspiration, exhaustion and faint pulse, consists of 3 herbs) and •••(Si Ni Tang, a

decoction formula for the treatment of syndrome of insufficiency of Yang manifested by cold limbs, intolerance to cold, diarrhea, cold-pain of abdomen, mental fatigue and sleepiness, pale complexion and profuse sweat, consists of 3 herbs) with modifications. Sheng Shai Shen (A type of Chinese/Korean ginseng which has been sun-dried) is sweet in flavor and warm in property, acts to replenish qi and promote the production of body fluid, and invigorates primordial qi. Mai Dong, sweet in flavor and cold in property, is used to tonify Yin and promote body fluid production, clear away deficient heat to get rid of restlessness. Wu Wei Zi, sour in flavor and warm in nature, is used for astringing the Lungs to stop sweat. Fu Zi, pungent and hot in the extreme, acts on channels of the Heart, Kidneys and Spleen, helping to warm the Yang and qi and recuperate the depleted Yang to rescue from collapse. Gan Jiang, functions in warming Yang of the middle portion and eliminating interior cold. Therefore it's suitable for vomiting and diarrhea due to cold of the insufficiency type. Shan Zhu Yu, sour in flavor and slightly warm in property, induces astringency to arrest excessive loss of body fluid. Gan Cao, in honey-baked form, strengthens the Spleen and replenishes qi. It is used in assisting Fu Zi to recuperate depleted Yang and promote blood circulation, in assisting Gan Jiang in warming and restoring Yang of the middle portion, in reducing toxin of Fu Zi, in relieving the extremely pungent property of Fu Zi and Gan Jiang so as to make it possible to warm Yang and remove Yin cold without injuring Yin fluid.

2) The formula achieves the result of replenishing qi, warming the Yang energy and astringing Yin. This stage is of the extreme one as the patient has exhausted the body's qi, Yin fluid and Yang energy during the course of battle with the pathogenic factors. The first priority is to quickly replenish qi, recuperate Yang and promote body fluid production. The second direction is to astringe further exhaustion through excessive perspiration.

Postscript:
I have written on the general applications of traditional Chinese medicine in treating Avian/Bird Flu related symptoms. Some advantages of TCM have been outlined. With the ever increasing threat of human-to-human pandemic I see a need in better awareness of using traditional medicine to reach wider scope of people.

One of the advantages of using Chinese herbs is that the patient, having flu-like, or pneumonia-like symptoms, who may or may not be Bird Flu virus related, can immediately take Chinese herbs once his or her syndrome is properly diagnosed with TCM diagnostic method. The diagnostic method doesn't rely on availability of test kits, machines, and can be done in 10 minutes. Of course, a properly trained TCM physician has to do the job in diagnosing. In the case of suspected Bird Flu, medical personnel can be trained to recognize the most prominent features of identifying the commonly manifested different syndromes.

There are purposes for this article:
1) To outline the different syndromes manifested by human beings infected by Bird Flu virus. There are of course some other syndromes which can share certain similarities to that of this policy. There are at least two policies which have been translated into or written in English: (1) The policy issued by 441-443 of issue No. 6, 2005 of ••••• Tian Jin Zhong Yi Yao (Tianjin Chinese Medicine & Medicinals) journal, translated by Bob Flaws and; (2) “The potential Avian Flu epidemic” by Jake Paul Fratkin, April, 2006 . They are very good references; they would have been better if elaborations and explanations were given.
2) To explain and elaborate how different herbs, with different properties, flavours, channel tropism, and effects are applied cohesively into a formula that works hand-in-hand to treat a particular syndrome. There are certainly not many writings focus on how herbs actually work on our human bodies.
3) As mentioned above, to emphasize how Chinese herbs can be applied with or without knowing the existence of H5N1 virus. By proper diagnosis of syndromes based on many symptoms/manifestations, a herbal formula can be custom-tailored for treatment.

Over-The-Counter Prescriptions:
Another section of the article, section 5.4.2, focuses on the application of OTCs (Over-The-Counter) according to various syndromes. There are six categories of the OTCs, in the forms of pills, boluses, oral solutions, powders and injections. The categories are: 1) ••••(Jie Biao Qing Re, Exterior-relieving and heat-clearing, 3 OTCs suggested); 2)•••• (Qing Re Jie Du, Heat-clearing and toxins-clearing, 4 OTCs suggested); 3)••••••(Qing Re Kai Qiao Hua Yu, Heat-clearing, resuscitation and clearing blood stasis, 6 OTCs suggested); 4)••••(Qing Re Qu Shi, Heat-clearing and dampness-removing, 2 OTCs suggested); 5)••••••(Zhi Ke Hua Tan Ping Chuan, Cough-arresting, phlegm-resolving and asthma-relieving, 4 OTCs suggested); 6)••••(Yi Qi Gu Tuo, Qi-supplementing and exhaustion-astringing, 3 OTCs suggested). They can be convenient in prevention as well as treatments at various stages. I do not translate nor elaborate on them because these OTCs are not normally available outside China.

Notes:
1) The modifications to the suggested formulae must be based on differentiation of syndromes, i.e. taking into accounts the properties, flavours and channel tropism of the herbs.
2) Directions: All the ingredients are to be decocted in water for oral dose. Modern form of herbal preparation includes fine powder extracted from individual herbs; without the need for inconvenient decoction.
3) Capitalization of the first letter of internal organs in this writing refers to the channels/ systems/organs; not just the physical organs alone.

View Full Version: TCM take on swine flu - It's pathogenic heat, cold

Title: TCM take on swine flu - It's pathogenic heat, cold
Description: *and damp*

craig-oxley - July 29, 2010 10:53 AM (GMT)

A food for dampness would be Job Tear's Seed known as Semen Cocois or Yi Yi Ren. Take this food with rice like the Chinese peoples do. -Craig

TCM take on swine flu - It's pathogenic heat, cold and damp

http://kaleidoscope.cultural-china.com/en/...oscope5240.html

Swine flu, or more accurately A-H1N1 flu, has alerted people around the world and in China where many people take anti-viral medication to prevent catching flu.

But anti-viral medicine is ineffective since flu strains mutate, and it can also be detrimental to health by building resistance, according to a doctor of traditional Chinese medicine.

TCM practitioners urge people to take the standard precautions - primarily frequent hand washing, airing of rooms. If you feel sick, see a doctor.

TCM regards and treats ailments as energy imbalances. It does not have a "germ theory of disease" but perceives pathogens as environmental factors such as pathogenic heat, cold, wind and damp.

Improving one's healthy energy (qi) and boosting immunity can help defending against the flu, according Dr Wu Yingen, a member of the Shanghai Expert Panel on Preventing and Controlling A-H1N1 flu. He is the chief physician of Longhua Hospital attached to Shanghai University of TCM.

The ordinary flu virus usually attacks the respiratory system or digestive system, but A-H1N1 can attack one or both, says Dr Wu.

Although it is highly contagious - the virus can survive for up to 48 hours on surfaces - it is generally not fatal and is often mild. Patients exhibit some of the usual flu symptoms, including coughing, sore throat, headache, fever, weakness, muscle aches, diarrhea and vomiting.

A few patients develop very high fever (39 degrees Celsius or above), pneumonia, kidney failure or septicemia, which can be fatal.

Dr Wu advises those with symptoms to see a doctor right away, avoid public places, and wear a mask.

"The flu is likely caused by invasion of pathogenic heat, pathogenic cold and pathogenic dampness, according to its different symptoms," says Dr Wu.

Sore throat and fever suggest pathogenic heat, aches and pains suggest pathogenic cold, while diarrhea and stomach ache indicate pathogenic damp, he says.

Dispelling the pathogenic energies while strengthening healthy energy is the strategy agreed upon by the panel to treat A-H1N1, he says.

To treat patients with respiratory symptoms, herbs like jiu ma huang (Chinese ephedra) and chai hu (Chinese thorowax) are recommended. There are also effective Chinese patent drugs including Banlangen chongji (radix isatidis medicinal granules), Shuanghuanglian (oral liquid composed of honeysuckle, baikal skullcap root and forsythia), and Zheng chaihu yin keli (Chinese thorowax granules).

To relieve digestive system symptoms, TCM recommends herbs like ge gen (radix puerariae) and ageratum. People can take patent drugs such as Huoxiang zhengqi zhiji (ageratum oral liquid) and Gegen qinlian (pills composed of radix puerariae, baikal skullcap root, coptis root and liquorice).

For those with high fever, chest congestion, irritability and breathing problems, TCM recommends patent drugs like Qingkailing pills and Angong niuhuang wan, mainly composed of herbs like cow-bezoar, cornu bubali, musk and baikal skullcap root.

These medicines are effective in treating other kinds of flu, according to Dr Wu. They only treat symptoms, however, and do not prevent people from catching flu.

Though A-H1N1 is highly infections, people in China don't need to worry too much at this time, says Dr Wu.

"There are two peaks of annual flu attacks in China, one in January and February while the other in August and September," says Dr Wu. "We are now in a low season and the flu has been controlled well so far."

To prevent A-H1N1 flu, some people turn to medicines like anti-viral oral liquid, even though they are completely healthy. But this is unnecessary and unhelpful because it doesn't work and extensive self-dosing can cause drug-resistance and make future treatment difficult.

TCM drugs like radix isatidis medicinal granules can help relieve symptoms, but don't prevent this new flu or other flus, says Dr Wu.

"You cannot prevent catching flu by taking anti-viral medication as the flu virus mutates so quickly," says Dr Wu. Medication must be specific to the virus.

"Strengthening your healthy energy, in other words, improving your immunity can help fight the invasion of pathogenic energies that cause flu."

The six-herb-prescription used in combating SARS is recommended for high- risk groups, including staff in hospitals, hotels, airports and other congested public places. It is comprised of huang qi (milk veteh), bai shu (atractylodes macrocephaia), fang feng (divaricate saposhnikovia root), guan zhong (rhizome of cyrtomium), honeysuckle and dried orange peel.

The first three herbs can help strengthen healthy and defensive energy, while the other three herbs can help prevent and control a virus. Dried orange peel can also aid the digestive system. Chinese patent drug Yu pinfeng san composed of huang qi, bai shu and fang feng also works.

As for ordinary citizens, having enough sleep, eating a balanced and nutritious diet and taking regular exercise is enough to improve immunity. Frequent hand washing and airing rooms are always important in prevention.

Though vitamins, such as C, can help improve immunity if taken regularly in moderation, taking too much can cause stomach acid and other problems. It's best to get vitamins from food, not nutritional supplements.

View Full Version: Big Natural Chinese Herbs will Overcome Death

Title: Big Natural Chinese Herbs will Overcome Death
Description: *Squad Drugs*

craig-oxley - July 27, 2010 06:04 PM (GMT)

Big Natural Chinese Herbs will Overcome Death Squad Drugs (Opinion)

Sunday, July 25, 2010 by: Christopher Gussa
http://www.naturalnews.com/029273_Chinese_...cine_herbs.html

Although the western pharma/medical system certainly will fight this statement with all their might, Chinese Herbal Medicine and other natural medicine is, by far, the best thing in the world to overcome common health concerns. There is just no other logical conclusion anyone with half a brain could come to, especially when you look at the nightmare of early deaths caused by the alternative. (And yes, pharmaceuticals are the alternative medicine now. It is time we all realize this and address it as such so that natural medicine can truly re-emerge.)

Many people (Author included) do not address this evil death squad as "Big Pharma" anymore for two reasons: Firstly because there is nothing wrong with any form of big business as long as it is not evil (though God knows many of them are). Secondly, why give them an edge as far as showing any respect? They must now realize they can be downsized by the people. "Big" is only relative. The natural medicine suppliers should be known as "Big Natural" with clearly no negative attached to the word "big" because "natural" represents God's creation and if that isn't big what is?

But getting back to the facts: Chinese medicine can address serious disease beautifully including life threatening infections like malaria, pneumonia, diphtheria, septic angina, typhoid fever, lime disease and all the others.
(http://www.naturalnews.com/028216_l...)

However it seems that the "common" health concerns these days (high blood pressure, high cholesterol, arrhythmias etc.) are the biggest target of this extremely evil death

squad known also as the pharmaceutical industry.

Out of the many (approximately 10,000) medicinal plants in the Chinese system only about 100 are classified as "Superior Tonic Herbs".(http://www.naturalnews.com/023021_t...) These are the herbs that can be taken safely by almost anyone without any ailments other than (strangely enough) the one's mentioned in the paragraph above. In other words, the safest of all herbs are used to correct what the death squad uses the most dangerous of all poisons for.

This is absolutely ludicrous when a simple 5:1 whole herb extract known as Dan Shen (Salvia miltiorrhiza) can put an end to most heart disorders that would otherwise be "treated" with any number of death sentence drugs. (http://www.naturalnews.com/025028_D...)

Even longevity itself can be addressed with what many consider the most useful of all tonic herbs known as He Shou Wu. (http://www.naturalnews.com/026786_H...)

Also a combination of heat clearing herbs, listed here (http://www.naturalnews.com/023322_h...), can replace any number of anti viral and antibacterial drugs and do a much faster and better job with absolutely no harmful effects.

Doesn't anyone ever question what (besides the love of money) is behind this evil killing of innocent people in the name of "healthcare"? If the names Rockefeller, Rothschild and organizations such as the New World Order and the Illuminati come to mind you are with out a doubt on the right track. (http://fedupwithbs.com/illuminati.html)

The next few years will be most interesting as all this comes to a head. There is by far too much knowledge of "Big Natural" for the death squad to go on much longer without people getting up in arms. It is long overdue.

Source: Based on the author's own knowledge of Chinese Herbal Medicine and of the pharmaceutical industry.

Title: Iraqi doctors run out of pharmaceuticals, start
Description: *using acupuncture*

craig-oxley - July 27, 2010 06:04 PM (GMT)

Iraqi doctors run out of pharmaceuticals, start using acupuncture

Tuesday, July 27, 2010 by: Ethan A. Huff
http://www.naturalnews.com/029292_acupuncture_Iraq.html

Rattled by years of war and conflict, the capital city of Iraq is seeing a shift in medical protocol, according to a recent study. Because there has been a shortage of certain pharmaceutical drugs in Baghdad throughout the past decade, many doctors there have begun to successfully use acupuncture treatments instead.

The study, published in the British medical journal Acupuncture in Medicine, evaluated 200 different pregnancy cases at the Red Crescent Hospital for Gynecology and Obstetrics in Baghdad between 2004 and 2006 when there was a shortage of oxytocin, a drug used to help women who have just given birth via a c-section. The drug is typically administered to help cause the womb to retract and to help prevent excessive bleeding.

However because of the shortage, doctors began to look for alternative treatments that would help spare the drug. Remarkably, doctors found that acupuncture treatments worked beautifully on patients and greatly reduced, or even eliminated, the need to use oxytocin.

"Oxytocin...proved largely unnecessary in my series (of patients), apparently through the action of acupuncture," explained Lazgeen Zcherky, anesthetist and author of the study, in a report.

The Baghdad study revealed that 45 percent of the women who received acupuncture after their c-sections had no need for any oxytocin. Thirty percent needed some, but did

not need a full dose. None of the women required a full dose.

Acupuncture is a traditional form of Chinese medicine that involves inserting small needles into pressure points on the body in order to reroute body energy. As strange as it sounds, it actually works very well for many people and is now being utilized all over the world.

In the Baghdad study, needles were inserted into women's toes and ankles just after their deliveries, and were stimulated for five to ten minutes. Doctors chose insertion points based on those that related to the womb and giving birth via c-section.

"These acupuncture techniques, born out of necessity, have proved useful in overcoming the deficiency of modern drugs and equipment in a war-torn city," added Zcherky.

The beauty of acupuncture is that is does not carry with it harmful side effects like pharmaceutical drugs do. And whatever provides benefit without causing harm is preferable to conventional treatments that carry with them significant risks.

Title: Thyroid Disease: A Natural Perspective. An
Description: *Interview with Shasta Tayam*

craig-oxley - July 16, 2010 12:36 PM (GMT)

Thyroid Disease: A Natural Perspective

An Interview with Shasta Tayam by Mary Shomon
http://www.longevity-center.com/thyroid_interview.html

Mary Shomon: I'm pleased to be able to highlight you and our work at my Thyroid site for our thyroid patients and practitioners who frequent the site. First, I'd like to start out by just asking a bit about your philosophy on thyroid problems. As a natural healer, why do you think thyroid function becomes imbalanced, and why are we seeing more autoimmune thyroid disease here in the United States?

Shasta Tayam: The thyroid as we know it in western medicine is a master-controlling gland having many different functions on the body. It is a part of the endocrine system, which in both Ayurveda and Traditional Chinese medicine (TCM) is like the chakra system or the root or "essence" qi (Qi pronounced "Chee"). Therefore, if the thyroid is out of balance from a TCM perspective it can effect the different organs in many ways, a few examples are:

Liver: Controls the nervous and gynecological system such as cysts, fibroids, infertility and houses the emotions of frustration anger and depression.

Heart: Too high or too low blood pressure, anxiety, palpitations, insomnia and the emotions of lack of joy and over emotionalism.

Spleen: Houses the emotions of worry and obsession while affecting the strength of the muscles and tissues of the body (fibromyalgia) and helps convert the food into strong blood (anemia/fatigue) as well as transforms "dampness" (fat).

Lung: Houses the emotions of grief and sadness and manifests as asthma, allergies, eczema, earaches and frequent colds and flu's.

Kidney: Houses the emotions of fear and insecurity and is the root of all of the other organs, which includes the functions of what western medicine calls the adrenal gland - sex hormones, female and male reproduction, cortisone, melatonin, DHEA, etc. and if weak then will have the symptoms of low back and joint pain, coldness, severe fatigue (chronic fatigue), decrease immunity and much more.

TCM doesn't have just one cause for the breakdown of the body's functions, but many different factors ranging from lifestyle, nutrition, exercise, emotions, genetics and the environment. As you can see from above symptoms that the lack of thyroid hormone causes pathogenesis in every organ system in the TCM medicine model, and this is why I say it is similar to what TCM calls the "essence".

Essence is what TCM calls pre ancestral qi (what our parents genetically gave us). When we're born we have the opportunity to preserve our essence by eating good "food qi" (healthy, unprocessed, organic, seasonal, body temperature and appropriate for our particular constitution and blood type) and breathe in good "air qi" (proper exercise, unbound breathable clothing, chemical free perfumes and cosmetics, clean air, etc.). Our "essence" mixed with "food qi" and "air qi" combine together to give us our "defensive qi" or immunity. If there is a breakdown in any of these factors either deficient "essence" (genetic problem), poor nutrition and/or inadequate oxygen, then we will see a breakdown in the immune system - autoimmune problems. In this fast paced, very "yang" society you can see where many breakdowns in the above theory happen and can see it is as individual a reason for the autoimmune problem as the person. Why are we seeing more autoimmune thyroid disease here in the United States?

I think that our particular culture - always on the run, eating fast empty calories such as cold raw foods (salads, fruits, yogurts, sugar, etc.) trying to stay skinny to fit into the Hollywood image (starving ourselves) along with nutritionless, pesticide covered foods are causing us as a culture to be malnourished. This combined with the many chemicals (fluoride), pollutants and lack of exercise along with getting overchilled by indoor air-conditioning for long periods of time, not to mention wearing too tight and constricting clothing (bras, pantyhose, etc.) that we have been killing off our vitality for years. Perhaps this American lifestyle, polluted environment and conditioned habits mixed with more genetic hypothyroid parents producing more offspring is all adding up.

What I think is at the root of the problem is the paradigm we live in (all yang) and we as a part of nature are just manifesting the results of this type of lifestyle either created or passed down. If we were to change our whole way of being (more yin - equal rest, play and work, let our bodies be their normal healthy size, eating nutritious food and living closer to nature) maybe we would preserve our essence which would increase our immunity. This is easy to say, but like swimming upstream in a fast current to do. I think

the real cause of this paradigm we live in is a lack of view of what life is for. The American Indians have the medicine wheel paradigm which was said to believe that the ultimate duty of a life was to have a good lifestyle all to support the spirit so it could do the work it was meant to do here on earth. The Chinese and Ayurvedic medicine have a similar philosophy, with health being an important component of the entire philosophy of life, with the ultimate goal to be the cultivation of the spirit - peace.

I think we as a culture have not developed a paradigm such as this, as we are a young country, but it appears to be taking shape more and more as doctors and natural doctors begin to work together and yoga, tai chi, qigong (chi kung) and healthy foods are all being advocated. I think ultimately, because the people want them.

Herbal Alternatives to Thyroid Hormone Replacement, Iodine: Yes or No?

Mary Shomon: Do you feel that there are any natural alternatives to thyroid hormone replacement that would allow patients to either avoid starting prescription thyroid hormone replacement, or gradually reduce their dose over time?

Shasta Tayam: There are no herbs that have thyroid hormone in them. That being said, there are herbal, lifestyle, and dietary choices that can be done to help the whole body, which in turn will help the thyroid. If we take the Chinese theory of: PREANCESTRAL QI (essence/genetics)+ FOOD QI + AIR QI = DEFENSIVE QI (immunity), then what we want to do is foster the best food and oxygen to preserve our essence and maintain our immunity. So, if herbs are just specialized foods, they would fall under that category and be used to help the bodywork optimally.

As we know the thyroid hormones are mostly converted in the liver and the kidneys, so helping these two organs will help the conversion and give the thyroid a brake. Therefore we want the stomach to absorb the food at it's best so that the liver will have less toxins to cleanse and be able to convert the thyroid hormone better. Therefore we would want to eat easily digestible foods and take herbs that will help with digestion including ginger (if the person has mostly cold symptoms) and peppermint (if the person has cold and heat symptoms) and digestive grape bitters (neutral).

Planetary Formulas has products called Digestive Comfort and Digestive Grape bitters that will help. Guggul is known to help the thyroid and if you look at it's properties it is spicy and warm, like ginger, so it again increases the metabolism, while braking down cold clogging fat (cholesterol). Triphala has lots of enzymes, vitamin C and helps digestion and elimination, and since that is a problem with thyroid patients this would be good. Planetary has a product that combines Guggul and triphala, which would be very good for hypothyroid patients. Kelp has iodine in it, which is known to help the thyroid, so eating a little kelp, dulse, or kombu with our meals is a good idea. There are other liver regulating herbs and kidney strengthening herbs (deer antler, rhemania, polygonum, shizandra) that may be able to be used if the digestion is working well.

A big problem with taking tonifying herbs for hypothyroid patient's is that they are hard to digest, so if a person only takes digestive aids this may be as good as it gets and would help the patient more then if they were trying to take some heavy duty tonic's and were not digesting them. Some tonic's that are easier to digest and absorb are the Royal jelly, bee pollen and bee propolis. Since these are warmer energetically, yet a whole food the body can brake them down easier. They are known for increasing metabolism, nutrients and enzymes in the body, all-important for helping the thyroid work better.

For the immune system Reishi or Shiitaki mushroom supreme are good Planetary Formulas.

Planetary Formulas will be coming out with a formula called Thyro-boost that will incorporate all of the above principles, and be o.k. for hot hypothyroidism (acute - inflamed Hashimoto's-autoimmune) and cold type hypothyroidism (no inflammation, all cold symptoms only), as it will focus on digestion, metabolism and elimination in a neutral way, which can then have other formulas added in conjunction as needed.

There are many more herbs, as herbs can be used to treat the symptoms that are present, but I would say the place to start would be 1)cleansing the liver, 2)regulating the digestion and elimination, 3)tonifying the spleen and stomach (digestion) and 4) lastly tonifying the kidney/adrenals. This same principle would be true for acupuncture, exercise, etc. I believe the severity of a thyroid problem depends on the above factors, how strong is their genetic problem? How good or bad is their diet? Do they get enough healthy oxygen? Along with emotions, etc. I have known people who spent their whole life in a devotionally lifestyle, meditating three hours a day, fostering beautiful ashrams and orphanages that still had to be on their thyroid medication. I think it is short sided for complementary practitioners to think that we can fix anything, including the thyroid if we just do all the right things for our health. Some genetic thyroid problems are like type I diabetes, which people are born with and must be treated with insulin for the rest of their lives or they will die.

I know there is a big fear about going on something synthetic or even non-synthetic (Armour) because it replaces our thyroid and may shut our bodies down, and that is contraindicated if the adrenals are too weak (which makes one think that it could weaken our adrenals), but I think the opposite is true. If we do not have proper peristalsis or metabolism then we begin to run off of our adrenals and weaken them even more. If we use just the right amount, while incorporating the natural options we should be able to keep our dosages lower while preserving our adrenals and other healthy functions of the body. If we take too much thyroid, then of course we get burned out, but if we need it, and can't get our thyroids going after trying the natural stuff for 2 to 4 months, then we may need a little of it to help the body actually assimilate the natural products. Finding out what works for you is the key.

Mary Shomon: Some practitioners believe that the current increase in hypothyroidism in North America is stemming from a deficiency of iodine in the diet. Yet at the same time, many patients who decide to try to self-treat thyroid symptoms with iodine, kelp, or other iodine-rich herbal supplements report having a "crash" several days after beginning. Their energy flags, they feel profoundly hypothyroid, and cannot function well. This has happened to me personally several times, taking a variety of products containing iodine, and hundreds of other thyroid patients have written to me with similar reports. Some alternative practitioners believe that lack of iodine is not the cause of autoimmune hypothyroidism, and that iodine aggravates an autoimmune thyroid, which has seemed to be the case for me, and for many patients who have contacted me. Yet, I also know some herbal experts who feel quite strongly that supplemental iodine in some form is essential for thyroid patients. What are you thoughts about this controversial issue?

Shasta Tayam:We do not give out plain iodine to our patients. Chinese medicine really believes that a combinations of herbs working together usually work best, and kelp (which is how they get iodine from herbs) is usually a very low percentage of the formula (5%) as it is very cold energetically and hard to digest and absorb. So it would always be used with some form of warming digestive herb to help it assimilate properly. Perhaps that is why you had a "crash" from it, because you could not digest it. It's not what we put into our bodies; it's what our bodies can do with it.

Alternative Medicine for Graves' Disease

Mary Shomon: Many patients who are in the throes of hyperthyroidism due to Graves' Disease are reluctant to try herbal medicine, because they have such acute symptoms - palpitations, high blood pressure, tremors, etc. Frequently they are being shepherded to quickly have radioactive iodine permanently disable their thyroid. Have you found any herbal remedies for hyperthyroidism that work quickly, or that can be pursued in conjunction with the use of antithyroid drugs or beta blockers that are used to help manage the acute phase?

Shasta Tayam: It depends on what you think quickly is. Generally, the more severe problems like hyperthyroidism and hypothyroidism take a lot of treatments to get under control, and may need both western and eastern/complementary methods to treat and stabilize. The person's should always try to work with their whole environment, lifestyle, foods, medications, herbs, treatments, exercise etc. to get the best results. I have seen a combination of acupuncture (2 to 3x's a week), Chi Kung (exercise), less spicy and greasy foods and some herbal formulas with cooling uncongesting properties help a lot within two months. I have seen the fast pulse rate decrease and the protruding eyes go back in and a lot of the symptoms decrease with this more aggressive approach (3x's a week of acupuncture treatments for 3 months). The herbs used are again specific for the patient's constitution, sometimes strong Chinese herbs such as oyster shell and dragon bone are used, and in acute stages I have seen western herbs such as St.

John's wort and kava kava along with valerian be used. Kava kava is very sedating and works quickly, however it is spicy and hyperthyroid people are too hot so this could create a problem, especially if used long term, so it is very tricky and should be monitored by a health care provider. I think it is safe to say that chamomile and peppermint tea (room temperature) along with Planetary Formulas Easy Sleep, Stress Free and possibly Bupleurum Calmative are good over the counter formulas. As far as taking herbs along with other hyperthyroid drugs, if the herbs are taken two to three hours from the drugs it would decreases the interaction and may help the body rebalance more quickly, but again this would need to be prescribed by a health care provider who was knowledgeable about herb drug interactions.

Soy: Is It Right for Thyroid Patients?

Mary Shomon: One of the big controversies for thyroid patients is the issue of soy isoflavones. Some studies have reported that overconsumption of soy - particularly in the form of isoflavone-packed supplements and protein powders, can inhibit the thyroid peroxidase, the thyroid enzyme that makes the key hormones, T4 and T3, resulting in goiters, hypothyroidism, and autoimmune thyroid problems. A number of patients have reported developing thyroid symptoms after periods of excessive soy consumption. What are you thoughts about this process? For thyroid patients looking for natural ways to lower cholesterol, or prevent menopausal symptoms, are there other alternatives that might be more thyroid-friendly than soy products?

Shasta Tayam: In Chinese medicine soy is considered very cold, so to balance it they always cook it with ginger, green onion and sesame oil to help the digestibility of it. Hypothyroidism is considered an excessive cold imbalance, so eating anything that is cold in nature (soy, ice cream, lots of salads, and even chilled foods) will increase this imbalance and make it even harder for the body to assimilate nutrition from food. So, if we are to eat soy, it should be in moderation, always cooked and have the balancing herbs to help digest it such as ginger, etc.

I had a young male patient who came to my office with severe carpal tunnel syndrome, but upon further inspection, he had all the classic hypothyroid symptoms. After running a thorough blood test his TSH was found to be 40 along with low Total T3. We immediately took him off all the soy protein drinks and put him on a mostly warm cooked diet, got him on the appropriate thyroid medications and he reported significant improvement in most of his symptoms. However, he still felt his stomach was not right, and after a stool test found he had very high candida (which is considered to be dampness in TCM). He is now focusing on treating his candida (with warm cooked foods, and appropriate herbs) to warm and dry the dampness (candida) out of his body. He says the symptoms all started when he began drinking excessive amounts of soy protein drinks and he believes that this may have brought on his hypothyroidism and candida.

Guggul has been found to be very helpful for cholesterol as well as red yeast. I have personally seen red yeast lower triglycerides by 200 points in 6 weeks while lowering the cholesterol about 20 points. I have also seen a triglycerides level of 760 go to 250 and cholesterol go from 270 to 213 in about 9 months with the combination of Chinese herbs, red yeast, vitamins and diet change. Regarding menopause, the herb called vitex or chaste berry is used extensively in Europe for helping the balance between estrogen and progesterone. Lesley Tierra has made a wonderful product called Menochange the has many of the menopause herbs in it which is available through Planetary Formulas. Single herbs that are used are peony, dioscorea, black cohosh, but we find that formulas tend to work better because of the synergistic balancing of the herbs.

Natural Solutions for Fatigue, Weight Gain & Depression

Mary Shomon: The three symptoms that tend to plague most people who are hypothyroid are: (1) fatigue, (2) weight gain/difficulty losing weight, and (3) depression. Can you suggest some natural and herbal ideas that can be of help for thyroid patients who are still suffering these symptoms?

Shasta Tayam:

(1) Fatigue:
A)Qigong - the "simplified Tai Chi" is a system of exercise from Chinese medicine that uses posture (movement), breath(breathing practices) and mind intent (visualization), to balance and strengthen the bodies energies. I have personally had a patient who was so weak from Lupus and thyroid problems that I advised him not to receive acupuncture, as the theory is that it takes some qi (energy) to move qi, so if a person is too weak then the acupuncture needles will have nothing to move and can even make the person weaker. This same concept is true for people wanting to go out and do aerobic exercise to get stronger, but actually end up running off of their adrenal glands and end up weakening their already compromised adrenal system. So I advised this patient to do Qigong only, with whatever limited foods he could eat, but have them room temp to warm and cooked to help assimilation. I advised him to keep well covered from the wind and not to take any herbs at this time as he was too weak and too allergic to everything to add new things at this time. This man was completely disabled, severely fatigued and looked like he was 70 when he was only in his mid 30's. He took my advice and began studying Qigong from my husband Arnold Tayam, Doctor of Medical Qigong (China). He got both forms of Qigong a)the qi emission sessions where the Qigong Therapist emits energy out of his hands into acupuncture points to rebalance the body (two times a week) and B) qigong meditation, movement practices daily (which he did for two hours a day on his own at home or at class). Within a few months this man normalized his free t3, some of the lupus test values normalized and he reported an increased his strength, stamina, flexibility and vitality. Some people who are not this weak do very well with regular acupuncture or moxibustion (herbal heat therapy)

treatments. You have to give it time though. If you really want to undertake fatigue it is good to rule out all western causes ranging from thyroid, to Epstein Barr, candida, adrenal and female hormones, allergies, vitamin and anemia test, etc. then give yourself and a practitioner at least 3 to 9 months to see what can be accomplished together. There is an old Chinese saying that it takes 9 months to create a baby, the first three months you may not even see any changes, but as 6 to 9 months come along it all begins to accumulate in a substantial way. This is the same for all chronic diseases.

B) Bone marrow broth's (see Planet Herbs web site) and Chinese congees (The Way of Chinese Herbs) can be eaten on a regular basis as they are very well cooked and assimilated much more easily in our bodies. A few selected herbs can be cooked into these foods to help bring in the nutrients from herbs in a digestible way like citrus peels, astragalus, codonopsis, ginger, lycii berries and codonopsis.

C) Royal jelly, bee pollen and bee propolis have many healing properties and are especially good for hypothyroid patients with fatigue because again, they are more warm in nature, and are packed with enzymes, B vitamins and minerals which nurture the blood and qi and since they are a whole food, are much more digestible.

D) Deer antler is known to help hypothyroidism and fatigue as it is packed with nutrients that are known to not only strengthen the blood, qi and yin and yang, but also, more importantly, the essence. Planetary has just come out with a deer antler product.

E) The Planetary Formulas Bu Zhong Yi Qi tang, Gui pi tang, Menochange and Women's Treasure are all great all around energy builders, but may need to be taken with digestive herbs such as Digestive Comfort. If digestion is really bad, you can dissolve the tablets in hot water so that they are more like a tea.

F) A good probiotic is always recommended to restore the friendly bacteria in the intestines.

G) Using heat therapy, such as a hot water bottle ten minutes a day over the lower abdomen and upper back can be useful in creating better circulation for the lungs and the intestines, which helps the metabolism over all.

H) Equal rest, play and work.

I) Try the "Eat Right For Your Blood Type" diet theories along with the Chinese theories of food for your constitution.

2) Weight gain/difficulty-losing weight:
A) A great book Herbal Healing Secrets of the Orient, written by my father's student, Darlena L'Orange, talks about eating for your constitutional body type and eating with the seasons. Many of us do not know what our predominate body type according to TCM is and what foods benefit and what foods aggravate our constitution. For example,

a hypothyroid patient has deficient "yang" or heat in their body and if they want to loose weight they must eat more warming foods to counteract the slow, cold metabolism. When we exercise we get hot, sweat and burn calories, if we drink a freezing cold drink on top of that we will squelch all of the heat and metabolism we just increased. Therefore, if we want to loose weight and have deficient heat and internal coldness, we must eat mostly warm cooked, less watery and more hearty foods (like root veggies, whole grains, protein) and decrease or stay away from the frozen fruit smoothies, yogurts, salads, ice teas, etc. Refrigerated foods and drink are a new phenomenon of the 20th century and we really have no idea how shocking this may be repeatedly used on our bodies. Most cultures do not serve iced drinks as we do at every meal, and the Chinese never have chilled foods. It may seem hard at first, but over time your taste buds change and cold food and drink is way too cold. As our bodies get warmer, perhaps with the thyroid naturally regulating or from medication, we may be able to handle the occasional chilled foods without it causing stomach distress and weight gain as readily.

B) Eating right for your blood type has been shown to really help most people loose weight and I think there is something to this. I think perhaps the combination of knowing what your TCM constitution or Ayurvedic constitution mixed with your blood type recommendations is a great idea.

C) In the book Herbal Healing Secrets of the Orient, there is a recipe called Spring Kicharee, which I use for all of my patients who want to loose weight. People should eat it minimum three times a day for 7 to 14 days (14 is best). It is a wonderful tonifying cleanse in that it has cleansing herbs and foods in it, without being low on calories and causing your body to go into starvation. I recommend that my patients eat it with steamed or sauteed veggies (not the nightshade family though,) and if they are more of an B or O blood type, or feel weak, add a little bit of animal protein. I also recommend that they take Planetary Formulas Triphala or Triphala-Garcinia formula with the Bupleurum Liver Cleanse at the same time as this cleanse. It is remarkable how people's cravings change, their excess dampness comes off and their energy increases. The herbs in the recipe - turmeric, cumin and coriander are renown for helping digestion and increasing metabolism, and the beans are a natural diuretic. An master yogi named Baba Hari Das taught the kicharee recipe to my Father, saying that kicharee is a very balanced food and is what the Indian sages live off of, and Darlena took the recipe and added herbs and veggies for each season and body type making up 5 unique recipe's. The wonderful thing about the spring kicharee is that is has blood cleansing and liver cleansing herbs in it which is so important for hypothyroidism as the liver is where most of the thyroid hormones are converted and other important hormones are eliminated. The beans are known to be kidney tonics and this is very helpful for hypothyroid patient's as the kidneys are also considered part of the adrenals so helping the kidney's be stronger helps the conversion of the thyroid hormones as well as the strength of the adrenal hormones. Most of my patient's lose 7 to 10 pounds

in 7 to 10 days while eating plenty of food! I recommend that they get a ketone dipstick from the Drug store to make sure they do not loose too much weight at once, but I have never seen anyone test positive, so I believe that they are not starving, their systems are just rebalancing and the weight is a reflection of this. They can then follow the food suggestions for their blood type ("Eat right for your blood type" book) along with their constitution and the season (as in the book Herbal Healing Secrets of the Orient). Then, after about three to four weeks a person can do the kicharee cleanse again, and perhaps try one of the other recipes if it seems appropriate and loose another 5 to 10 pounds and so forth. I have seen great success with this program and really like it because people are not starving themselves, yet they loose weight and most importantly gain energy! There have only been a few patients who just could not stomach this recipe and others that I also recommended the use of Beano digestive enzymes, but most people come to really like it after about day three or four.

D) Decrease the use of processed, refined foods and drink along with excess dairy and yeasted foods such as pasta's and breads.

E) Regular exercise. Could even be easy exercise like walking, yoga, etc. Minimum 20 minutes 3 times a week.

F) Drink lots of water. Particularly "organic" waters like the brands Trinity, Fiji or Evian as they still have some of the naturally occurring minerals left in them.

3) Depression

A) Exercise. Research shows that just 20 minutes of light aerobic exercise a day can increase your seratonin and decrease depression. Yoga, Tai Chi and Chi Kung are also good forms of less strenuous but strengthening exercises. Some people do better or high impact aerobic exercise where they are also able to let some of their pent up emotions out.

B) St. John's wort and Kava Kava are known to help depression and anxiety. Planetary Formulas has a product called Bupleurum Calmative the is an ancient Chinese formula known to help depression, and mixed with St. John's wort may be a very good combination.

C) Make sure you're having enough good carbohydrates, as these are known to help the serotonin in the brain also (Book: "Potatoes not Prozac"). I've seen people on the high protein diet's eat too little complex carbohydrates and become depressed and get anxiety and insomnia, and with the addition of a little brown rice cream with rice milk (unopposed carbohydrates) calm down, feel happier and go right to bed.

D) Spiritual cultivation. Is your life in line with who you feel you truly are? A counselor may be able to help with this, or meditation, or good friends, etc.

Constipation and Hair Loss Solutions

Mary Shomon: One problem that some thyroid patients have had trouble with is persistent constipation. An ayurvedic herbalist recommended that I try your Triphala product, and frankly, I've been a great fan of this product ever since. Can you tell us a little bit about Triphala, and how it works?

Shasta Tayam: Persistent constipation is a big problem because the body needs to eliminate its waste or it becomes toxic inside the body. You could be eating as pure as possible, but without proper elimination your body becomes a toxic waste dump. This is where increased airborne and food allergies are a common side effect. If our body has healthy bacteria and good elimination then our immunity is better.

a) The main Planetary Formula there is for this is Triphala. It is made of three fruits from India and has a lot of vitamin C as well as digestive enzymes.

B) Getting a Complete Digestive Stool Analysis is a good idea to see how many functions of your intestines are working from your pH to your unfriendly bacteria to candida. You can get these from your health care provider who can order them from Great Smokies Diagnostic Laboratories or Meridian Valley Lab.

c) The kicharee can be used like an "elimination diet" and once completed you can reintroduce different foods back into your diet and see which one's you may be more allergic to.

d) You can do the "Elimination diet", which is hard, but helpful.

e) Eat lots of fiber, including flax seeds and use flaxseed oil. You can put two tablespoons of ground flax seeds on your food every day.

f) Use probiotics and fermented foods such as miso to reestablish friendly bacteria into the gut.

g) Try eating the proper diet for your blood type and TCM (Traditional Chinese Medicine) constitutional type.

h) Be careful eating too much protein as it has little to no fiber (except beans). Some people have very little hydrochloric acid (which can be detected in a Complete Digestive Stool Analysis test) and may need to use a little bit with meals particularly to help digest animal protein. Digestive bitters can help this also.

i) Keep trying different things until you find what helps you.

Mary Shomon: Another frequent complaint of thyroid patients is persistent hair loss that

doesn't slow down despite being on thyroid hormone replacement. In fact, in some cases, it even becomes worse once a patient begins taking Synthroid, or Armour Thyroid. Is there any herbal help for thyroid patients suffering from hair loss?

Shasta Tayam: The hair is governed by the kidney qi in Chinese medicine. That is why you may see an old tai chi master who still has naturally black hair, great flexibility while the his body may be wrinkly. The art of cultivating the kidney qi is of the utmost importance to the Chinese who practice their philosophy. They believe in everything in moderation, not going to big extremes. Even too much excitement, or sex, they feel is unhealthy for the body. That is why you may see millions of them doing tai chi and qigong in the parks in the morning in China. They are rarely seen running or straining themselves in exercise and believe in moderation in their lives. If the blood is weak (lack of nutrients) then the hair will get thin. This can happen by being too stimulated (excess physical activity or yang hormones like testosterone) or not enough stimulus (like not enough nutrients from the food, poor metabolism and absorption, etc.). That is why the hypothyroid patient has a problem with this because first they have bad metabolism and absorption so as many as 40% of them are anemic (weak blood) and they are having to run off of their adrenals to just keep going, which weakens their kidney qi (reserves). I have seen blood building foods and herbs help, while eliminating the false stimulants like coffee, sugar, nicotine that burn up our reserves. Some of the foods that I have seen help are the iron rich foods such as bone marrow broths, liver, green leafy veggies, etc. The herbs that I have seen work are blood tonics such as polygonum, dang qui, lycii, kelp, rhemania, peony, dioscorea (wild yam), royal jelly, bee pollen and bee propolis. If the thyroid hormone is overstimulating the adrenals (even subtly) this may cause more of the hair to fall out. It is better if a person regulates their lifestyle, food, habits, exercise to optimize the absorption and assimilation of the medication so that they will not need as much to survive. Again, it is a balancing act to find the way.

How to Find a Natural Practitioner

Mary Shomon: How would you suggest a thyroid patient go about finding the best natural practitioner or herbalist to aid in thyroid treatment?

Shasta Tayam: I think looking up different practitioners such as the Thyroid Top Doctors is a good place to begin. Then there is Andrew Weil's site, which has numerous health care providers across the country, as well as many acupuncturist's. There is the American Herbalist Guild, which has many respected herbalist's across the country. I think it is important to find out what their experience and philosophies are. It is important that they have a comprehensive system that treats the patient's individual symptoms individually, verses one thing for all. Are they totally western medicine oriented or totally alternative medicine, or can they see the strengths and weaknesses of both? Are they up to date with the latest literature? Do they seem like they truly care, or are they going to think that you're a hypochondriac and neurotic? Do you feel like you are in

partnership with them, or is it all one sided? Hopefully you will be blessed enough to find a team of doctor's that are willing to work together to help you with your health.

Mary Shomon: This has been fascinating, and I would like to thank you for being so generous with your time and helping to address the concerns of thyroid patients. Is there anything else you would like to share with our readers?

Shasta Tayam:Thyroid disease is very disabling for many. If it comes on slowly then you can feel as if your life force is slowly draining out of you and you don't know why. If it comes on quickly, you can feel like you've been hit by a semi truck (Marie Osmond's post partum runaway from the family depression). Thank God people are starting to speak out and books like Living Well with Hypothyroidism are available now, as it seems that mainstream medicine doctors are still stuck on the simplistic TSH with the wrong ranges for the lab test. The above answers are only suggestions, by no means has anyone figured out all the answers for thyroid disease. We are the pioneers, and we have the ability to help shape the way and hopefully ease the suffering for future generations. Thank you Mary for making a place for all of us to contribute our ideas and experiences to further this cause and help us all live well with thyroid disease.

About Shasta Tayam
As a licensed primary health care provider, Shasta Tayam uses Acupuncture, Clinical Herbology, Nutrition and Acupressure for the treatment of a broad range of common ailments. Having grown up surrounded by the healing arts, Shasta had the rare opportunity to study under the tutelage of her father, Dr. Michael Tierra O.M.D. L.Ac. author of many books including the best selling book, The Way of Herbs. With over ten years as a health care provider, Shasta specializes in and teaches on hypothyroidism, women's health care, pain management and whole body and facial rejuvenation. Shasta has lectured and practiced Chinese Medicine at the Center for Integrative Medicine at O'Connor Hospital, as well as taught at the American School of Herbalism. Her unique approach incorporates a total health program aimed at achieving whole life enrichment.

HAIR LOSS REMEDIES FROM TRADITIONAL CHINESE MEDICINAL SYSTEMS

http://www.hairloss-research.org/ChineseMedicinal.html

The Taoist have a long standing tradition of rejuvenation that goes back thousands of years.

What is today considered traditional Chinese medicine, acupuncture, acupressure, herbology, etc. has its roots in an ancient system that is considered now more than ever to have a legitimate scientific base. Since they have meticulously accounted for virtually every ailment known to man since time immemorial, if it is not surprising that they have some things to say about hair loss.

Instead of taking you around the world with elaborate explanations of energy and chi flow, pressure points, and how they relate to different types of hair loss, I'll cut right to the chase and attempt to summarize what may actually prove to be of use for preventing or treating male pattern baldness.

Goto Kola - Recommended for several types of disorders, including male pattern baldness and age related hair loss. Several famous Chinese centenarians, and Taoist "immortals" have sworn by its ability to help them keep not just some, but all their hair well into their 90's and beyond! It is also indicated for memory, anxiety, cognitive enhancement, insomnia, wound healing, edema, circulation, and high blood pressure.

It would be easy to dismiss it as fanciful fiction except for the fact that some studies

have produced some intriguing effects.

In one study Gotu Kola was orally administered to some alopecic rats, and over time was shown to, check this out: thicken epidermis and restore thick hair growth, actually speeding it up beyond its original growth rate. Sounds a lot like Viviscal, with the epidermis thickening mechanism of action. Remember epidermis naturally thins with male pattern balding (in the scalp), and overall with aging. What I don't know is how the dosage given the rats would correlate with human consumption.

In another study including rats, Gotu Kola was shown to significantly speed up wound healing by increasing the rate of collagen synthesis, which implies that it may be capable of offsetting, and possibly healing the inflammation around the hair follicle seen in M.P.B. In yet another intriguing, yet unrelated controlled study, a sample of mildly mentally retarded children significantly improved on most cognitive performance parameters on just one 500 mg., powered whole herb capsule a day. Many feel that Gotu Kola will be next biggest herbal discovery since St. John's Wort, and perhaps rightfully so. Gotu Kola is currently under intensive investigation by several large pharmaceutical companies. Am I endorsing Gotu Kola? Not even close. Will I include it in my treatment protocol? Damn right I will, but only as an adjunctive treatment. It costs next to nothing, and comes in encapsulated and powder forms, the recommended dose is 2, 500mg. capsules a day, AM and PM. Extremely high doses can cause a sedative effect.

Ginseng - What haven't you not already heard about Ginseng? The reason I mention it is that several authoritative texts in both Chinese and Ayurvedic medicine have indicated its usage in the treatment of hais loss, even MPB specifically in some cases. Its mechanism of action varies from mild 5 alpha reductase inhibition to cortisol inhibition, not to mention its function as an adaptogen. I'm not sure how it would directly affect hair growth, but it gets mentioned almost as much as Gotu Kola in the traditional texts for hair loss prevention or treatment. For those so inclined to give it a try I would use only the standardized, encapsulated, Ginseng extract. They were the only ones shown to be of any use in the numerous stress and endurance studies evaluating its effects.

Foti - The famous "shien mien", which has been promoted as a hair growth agent for the last couple of years. No evidence exists yet, but perhaps someday, it will.

Another fact that is consistently emphasized in their traditional medical texts and in ancient Taoist teachings is how sexual activity affects hair growth and loss. They all

state that a healthy head of hair in a man is indicative of a high level of sexual energy, when depleted through "excessive emissions" has a profoundly negative effect on a man's health, leading to premature aging, and amongst other things, hair loss for many. They created specific exercises and techniques designated to allow one to cultivate sexual energy, libido, and ultimately stall the aging process. For more on this fascinating "facet", read "Taoist secrets of Love", by Mantak Chia. Having met him in person, I was astounded by his youthful appearance and totally thick, full, black hair. This guys in his late 50's.

An interesting epidemiological study was done in Japan about 8 years ago. It simply compared the incidence of male pattern baldness in rural Japan and urban Japan.

It was noted that the incidence on MPB in urban Japan was 4 times higher that that of rural Japan. The author, Dr. Inabi, hypothesized that diet played a major role. In urban Japan, the city dweller have essentially gone to a western diet, meaning more meat, dairy products, and fast foods, not to mention the stress. In rural Japan, he studied that they eat a traditional macrobiotic diet consisting mainly of fish, grains and vegetables, high in 3 and 6 fatty acids.

The incidence of MPB amongst the urban Japanese is only slightly less than what it is in the U.S., and among Japanese who have been living in the U.S. for more than one generation, it is identical to other ethnic groups. In Japan, prior to WWII, and its subsequent urbanization, MPB was virtually unknown and extremely rare. This study sheds a drastically different light on how diet and environment can impact genetic triggers and the predispositions.

If nothing else this study strengthens my commitment to lay off the French fries and trans fats, and perhaps eat more whey protein, fish, and flax oil instead of red meat…

craig-oxley - August 4, 2009 05:05 PM (GMT)

I know a herbalist who's had good success with Gotu Kola and Elecampane in a combination formula.

Dr Christopher would recommend the use of Yarrow both internally and also topically as a 8 hour fomentation daily 6 days on and 1 day off. Rosemary could also be used in place of Yarrow but it's not as good.

RobTSeeker1 - June 27, 2010 07:11 PM (GMT)

Craig, what is the dosage of Yarrow to take orally and the amount to put on top of the

head?

What would be the required dosage of Gotu Kola and Elecampane to take?

The Gotu Kola comes in just under 500mg.,and it seems that the suggestion of 2,500mg. is far too much.

What would you recommend?

craig-oxley - June 29, 2010 05:25 PM (GMT)

Yarrow would be 12 grams internally whilst x-amount to strong for topical fomentation. Gotu Kola is for internal work and this is taken at a level of 10 grams for a period of six weeks only before having a one month break or two. Elecampane would be 10 grams internally. Please don't forget the wonderful Nettle leaf both internally and topically along with topical use of Horsetail. Both of these super rich in Silica and more. Internally you'd take 20 grams as an infusion rather than decoction and topically the same or x-amount to strong. The Horsetail we'd use topically at a decent strong grams level. All herbs used in a formula together for topical use should be used as a fomentation for between 30-480 minutes at a time daily. This will really feed the head the food for the hair to decide to grow again. Of course the internal work is very important and we must never forget the Kidneys and Lungs which we're addressing above anyhow especially with the likes of super food, Nettle. To really top this all off utilise black Sesame seed 10-30 grams internally a day roasted. Use a pan with cover and high flame until they start to pop then count down for two minutes before letting cool and eating. These are an amazing food for the Kidneys and really help nourish the Yin of this organ and the Liver. I take twenty grams daily but will be increasing to thirty shortly. My dosages are based on fresh/dried herbs not store bought capsules which may I add are mostly trash these days.

WHAT IS PU-ERH TEA?

Pu-erh tea (also written as Pu'er or Puer) is finally becoming better known in the West.

Originating from the Pu-erh region of China, it comes from old wild tea trees in Yunnan that produce large leaves. Some Pu-erh tea trees still in existence today are said to be ancient – the oldest is over 2000 years old.

Pu-erh tea was discovered by accident when tea that was sold onold trade routes (called the Ancient Tea Horse Roads) aged a lot whilst in transit. The routes were long, often taking many months to negotiate, and lay between Yunnan and the destinations of Tibet, Burma, and Laos. The climates the tea came into contact with en route were very hot and humid and as the tea was only carried it baskets it was found to absorb the moisture from the air, which had a huge effect on the taste and character. The traders soon realised however that the tea actually tasted better when it was aged for such a long time and so

Pu-ehr as we know it was born.

It's a full tea thanks to the long periods of fermentation. In fact, the longer the better: its

value is directly related to the length of fermentation. Some Pu-erh tea has been fermented for hundreds of years! One pound of genuine and hard to find aged Pu-her, for example, can cost anything up to $25,000. This makes Pu-erh tea much like wine in that it is often referred to and classified by year and region it was produced in.

There are two kind of Pu-erh tea: cooked and raw.

Raw Pu-erh is made from leaves that are picked gentle to avoid any bruising and therefore unwanted oxidation. The leaves are then usually, though not always, left to wilt and start drying out in the sun, before being fried in a large wok to kill the enzymes and stop any further oxidation. It's then compressed into bricks or cakes and left to age.

Cooked, or ripened, Pu-erh tea seeks to imitate the flavour and colour of aged, raw Pu-erh for those who cannot wait 20 years for it! It's produced through a process that uses controlled conditions to manipulate the tea and create almost a false aging. A technique called wet piling, which is a little like composting, sees the tea leaves stacked in damp piles and then occasionally mixed and turned. This ensures the tea ferments evenly. The whole process can take up to one year.

Pu-erh is known as a medicinal tea. According to the Chinese system of medicine, Pu-erh teas are seen as being hot, which makes them good at warming the body and reducing any excessive coldness. They're also very good at aiding digestion and alleviating period pains.

BENEFITS OF PU-ERH TEA

In China, where it is often referred to as a "wonder tonic", Pu-erh tea widely known for its health giving properties which have been well documented in various historical texts throughout Chinese history. Pu-erh is traditionally made from old, wild tea trees which, according to the Chinese system of medicine, have strong Qi (energy, or "life force"). Which may go towards explaining why the Chinese believe that Pu-erh boasts greater benefits than any other tea.

In recent years, this wonderful, unique tea has crept into our consciousness in the West thanks mainly to the significant way it can aid in weight loss. It's even said to be used by various celebrities to help keep them looking trim on the red carpet (unfortunately it can't do anything to stop them wearing such daft shoes).

The Chinese often drink Pu-erh tea alongside their meals, which are often very oily and high in fat. It's very good at breaking down fats, aiding in digestion and speeding metabolism. Its soothing properties help clean the intestines and stomach, and it's even known to counteract the effects of alcohol consumption and help you sober up. Which clearly makes Pu-erh ideal after an evening in the pub with a stop-off for Chinese take-

away on the way home.

Pu-erh tea has remarkable blood cleansing and cholesterol lowering properties and, like green tea, it can help prevent heart disease and cancer due largely to its antioxidant content.

Other Pu-erh tea benefits include:

-Reducing high blood pressure
-Anti-aging effects
-Improving eyesight
-Reducing inflammation
-Improving circulation
-Helping you walk through walls.

HOW TO MAKE PU-ERH TEA

First make sure that all your tea utensils are clean. Any old residue can taint the flavour.

Using a knife, cut off some Pu'ehr off from the tea brick.

Place 3-4 grams per serving of Pu'ehr to your pot.

Add boiling water. This is one of only two types of tea where you can, and should, use fully boiling water. The best type of water to use is bottled, or filtered water from of chlorine and other chemicals.

Drain the water immediately to wash the leaves.

Refill with boiling water and steep for 2-3 minutes.

Stir and then pour into cups.

Tea can be brewed2-4 times - each time steeping it for 60 seconds longer than the last infusion.

craig-oxley - June 8, 2010 04:03 PM (GMT)

TCM Take on Fat: Vent Your Spleen

http://www.china.org.cn/english/health/220996.htm

If you want to fight fat the TCM way, you should eat foods to promote a healthy spleen — like Chinese pearl barley, known as Job's tears — and drink lots of Pu'er tea. Both are also diuretics.

A sun top, miniskirt and high-heel sandals - that's the outfit that catches men's attention and other girls' envy on the streets in summer. In order to show off their figures in skimpy clothes, girls started their weight-loss battles months ago, but it's never too late to lose weight.

Drinking slimming tea (a laxative), staying on a diet, and going to the gym frequently are widely used weight-loss methods. But eating certain foods or being pierced by fine silver needles may also help you to get rid of excessive weight.

Most people believe that obesity results from eating too much, which is certainly true in most cases. But it fails to explain why some people gain weight even though they eat little and drink lots of water while others keep slim though they eat a big dinner every day.

"It is not simply the case that the more you eat, the more weight you gain," says Dr Zhang Zhongyi, deputy director of the Acupuncture Department of Yueyang Western and Traditional Chinese Medicine Hospital. "Whether your stomach and spleen work well plays a much more important role."

According to traditional Chinese medicine (TCM), the spleen, together with the stomach, digest and absorb nutrients (the spleen function in TCM differs from that in Western medicine). TCM holds that the spleen is responsible for sending the nutrients from the stomach to all the organs, and also for expelling excessive body fluid. If the spleen doesn't function well, excessive body fluid will collect and turn into fat.

Fat not only collects on muscles, destroying a nice figure, but also on organs and in the blood, which can cause health problems.

Fatty liver is common among fat people and can lead to cirrhosis if patients fail to correct their diet. Links are also found between obesity and the "three highs" (hypertension, high blood cholesterol and high blood sugar), which may contribute to cerebral vascular disease.

"The function of the organs, including the spleen, declines with aging. That's why most middle-aged and old people find themselves gaining weight easily," says Dr Zhang. "As for young people, unhealthy eating habits may cause malfunction of the stomach and spleen and leads to fat collection."

Not eating regular meals, but having continuous between-meal nibbles, according to Dr Zhang, is a bad diet habit that causes a weight problem among many young ladies. Besides, sitting all day long and not getting regular physical exercise can also lead to

body fluid accumulation, which is typical among office ladies.

Dr Zhang suggests taking a five- to 10-minute break every hour, relaxing, doing some exercises and eating foods that are good for the spleen and are diuretics as well, such as Pu'er tea.

If these methods can't help you reach your ideal figure, you may try acupuncture therapy. It will help improve the function of stomach and spleen, and reduce the appetite by piercing fine needles into certain acupoints.

"Acupuncture works well in reducing excessive weight, yet doesn't seem so effective when girls of normal weight insist on losing more," says Dr Zhang, "especially when some girls only want their legs slimmer."

Dr Zhang says that generally the normal weight for a man is his height minus 100, while that for a woman is her height minus 105. People weighing five kilograms more or less are all within the normal range.

The ingredients listed in the recipes below are available at major supermarkets, such as Carrefour, City Market, Hualian Supermarket and Lianhua.

One of the dishes should be eaten once a day.

craig-oxley - June 8, 2010 04:04 PM (GMT)

Pu-erh Tea is a Chinese Cholesterol Remedy and Overall Health Tonic

Saturday, August 01, 2009 by: Zephyr Faegen
http://www.naturalnews.com/026747_Pu-erh_blood_health.html

For over 2000 years, a special tea that originates from the Yunnan Province of China has been coveted for its preventative and curative properties. This tea is known as Pu-erh or Yunnan Tuocha. The tea`s cultivation can be traced as far back as the Han Dynasty (202 BCE-220 CE) and was made from the leaves of da ye or broad leaf tea. The leaves of this variety of old wild tea tree when picked, are taken and put through a process of delicate maturation that ends in the creation of what is called maocha.

This maocha, meaning "rough tea", is then taken and put through one of two processes. Either it is immediately pressed into tea cakes where it is then classified as "raw/green pu-erh" or it is put through an artificial aging process for 30 to 40 days where daily the leaves are turned, splashed with water, covered with cloth, and then left to ferment. After this fermenting stage, the tea is then dried and pressed into tea cakes and classified as "cooked/black pu-erh". Traditionally, the tea was always pressed raw and

then vaulted for up to 100 years to gain this fermented status, but this modern process of fermentation was developed by the Kunming Tea Factory in 1975 for economic reasons.

Pu-erh Tea has been used in traditional Chinese medicine for generations to inhibit "internal dampness" (a term used in Chinese medicine to describe a build up of internal energy due to the spleen`s inability to transform energy that it receives from the stomach) and to invigorate the activity of the spleen and stomach. Other traditional uses include the removal of toxins from the body, curing dysentery, weight loss, improving eyesight, promoting blood circulation and reviving those who have over indulged in alcohol.

More recently, researchers have taken interest in Pu-erh tea for its ability to reduce cholesterol, lower blood pressure, protect connective tissue, and its ability to attack free radicals within the body. In multiple studies done in several countries, pu-erh tea has shown significant success in reducing blood cholesterol. One study done at the Wun-Shan Branch Tea Research and Extension Station in Taipei, Taiwan compared the effects of green, black, oolong, and cooked/black pu-erh teas on cholesterol in rats. The study showed the rats fed the cooked pu-erh tea leaves had an increase of HDL-C (good cholesterol) and a decrease in LDL-C (bad cholesterol) where the rats given the other teas had varying decreases in both types. This means that with pu-erh tea you get the best of both worlds, an increase in the cholesterol that you do want and a decrease of the cholesterol that you don`t.

At China`s Kunming Medical College, another study that consisted of 86 patients with unusually high levels of blood cholesterol examined the differences in the treatment of patients with Pu-erh tea verses conventional cholesterol medication. 55 of the patients were given a regimented dose of pu-erh tea three times a day; the other 31 were given a cholesterol lowering drug called PCIB in doses of 1/2 a gram 3 times a day. At the end of a two month period, the patients drinking the Pu-erh tea showed a 64.29% reduction in blood cholesterol levels in comparison to 66.67% for the group taking PCIB. Cholesterol is not the only benefit that pu-erh tea has to offer though. In 2006, a study found that it has anti-aging and anti-cancerous properties by attacking free radicals within the body as well as actively protecting human fibroblast cells (connective tissue) from damage and deterioration

Pu-erh Tea is truly a wonder tonic but one must be careful when shopping for this sought-after tea. There are many knock-offs and fake pu-erh teas out there, and the older the tea, the more expensive it is. Sometimes tea cakes can sell for thousands of dollars. Another concern is for the quality of the tea leaf itself. Many of the cheaper teas can contain fluorine which, when ingested over a period of time, can lead to fluorosis or fluoride poisoning. When you are looking for a good pu-erh tea make sure that you are dealing with a reputable tea house or seller, make sure that the tea is from the Yunnan province of China, and make sure that the packaging states that the Tea was cultivated

from wild da ye or broad leaf tea trees. This may be a difficult task because most pu-erh teas today are cultivated from multiple trees and from different areas. In the end it`s really the fermentation process that gives pu-erh its distinctive taste and curative properties but if you`re a tea purist, good luck hunting down a true aged Pu-erh tea; it`s difficult and you might just pay an arm and a leg.

Today we are constantly battling the toxicity of our everyday environment and our potentially toxin laden food. Drinking pu-erh tea is a great way to eliminate free radicals within the body, lower your cholesterol and blood pressure, fight cancer, and possibly look a little younger one cup at a time. If you are interested in more information on Pu-erh, please look through the links below.

craig-oxley - June 8, 2010 04:08 PM (GMT)

J Agric Food Chem. 2005 Jan 26;53(2):480-9.
Comparative studies on the hypolipidemic and growth suppressive effects of oolong, black, pu-erh, and green tea leaves in rats.

Kuo KL, Weng MS, Chiang CT, Tsai YJ, Lin-Shiau SY, Lin JK.

Wun-Shan Branch, Tea Research and Extension Station, Taipei, Taiwan.
Abstract

The four major commercial teas, oolong, black, pu-erh, and green teas, have been manufactured in southeast Asia. In this study, we evaluated the growth suppressive and hypolipidemic effect of these four different tea leaves by oral feeding to male Sprague-Dawley rats for 30 weeks. The results showed that the suppression of body weights of tea leaves-fed groups were in the order: oolong tea > pu-erh tea > black tea > green tea. Pu-erh tea and oolong tea could lower the levels of triglyceride more significantly than that of green tea and black tea, but pu-erh tea and green tea were more efficient than oolong tea and black tea in lowering the level of total cholesterol. In lipoprotein, 4% pu-erh tea could increase the level of HDL-C and decrease the level of LDL-C, but other teas simply decrease the levels of both. The activity of antioxidant enzyme SOD is increased in all tea-fed groups as compared to the basal diet-fed group. Finally, relative weight ratios of liver to epididylmal adipose tissue were lower in feeding oolong tea and pu-erh tea groups. On the basis of these findings, it seemed that the fully fermented pu-erh and black tea leaves and partially fermented oolong tea leaves were more effective on their growth suppressive and hypolipidemic effects as compared to the nonfermented green tea leaves.

J Agric Food Chem. 2006 Oct 18;54(21):8058-64.
Free radical scavenging effect of Pu-erh tea extracts and their protective effect on oxidative damage in human fibroblast cells.

Jie G, Lin Z, Zhang L, Lv H, He P, Zhao B.

Zhejiang University Tea Research Institute, 268 Kaixuan Road, Hangzhou 310029, People's Republic of China.
Abstract

In the present study, we successively extracted the Pu-erh tea with acetone, water, chloroform, ethyl acetate, and n-butanol, and the extracts were then isolated by column chromatography. Our study demonstrates that the Pu-erh tea ethyl acetate extract, n-butanol extract, and their fractions had superoxide anion and hydroxyl radical scavenging activity: fractions 2 and 8 from the ethyl acetate extract and fractions 2, 4, and 5 from the n-butanol extract showed protective effects against hydrogen peroxide-induced damage in human fibroblast HPF-1 cells and increased the cells' viability under normal cell culture conditions. In addition, it is found that these fractions, except fraction 5 from the n-butanol extract, decreased the accumulation of intracellular reactive oxygen species in hydrogen peroxide-induced HPF-1 cells. Interestingly, the antioxidant effect of fraction 8 from the ethyl acetate extract on the above four systems was much stronger than that of the typical green tea catechin (-)-epigallocatechin-3-gallate, but there were almost no monomeric polyphenols, theaflavins, and gallic acid in fraction 8.

PMID: 17032009 [PubMed - indexed for MEDLINE]

Slimming teas

http://www.ivillage.co.uk/dietandfitness/w...14749-2,00.html

Can you really drink yourself thin with slimming teas? Our intrepid reporter Andrea Wren investigates

Victoria Beckham, Jerry Hall and Joss Stone are among the many celebrities who are said to be staying slim through drinking Pu'er Tea, an ancient Chinese brew which is thought to raise the body's metabolism so that it burns more calories with minimal exercise. Call it a hunch, but my guess is that Victoria Beckham is not pigging out at the chippy the rest of the time!

With its celeb status, it is the Chinese Pu'er (or Pu'erh) tea that has received the most attention when it comes to weight loss. Others include green tea, 'hoodia' and various tea blends, such as 'Figuro' by Birt&Tang, which combines Pu'er with other Chinese herbs such as Cassia tora, Water Lily leaf, cinnamon and cloves (herbs which have apparently been used in China for centuries to warm the stomach, stimulate digestion, and eliminate retained fluids and stagnant chi energy).

Another slimming tea on the market, which is based on the principles of Ayurveda, is 'Women's Fitness Tea' by Yogi Teas. This has been formulated with ingredients including rosemary, nettle, rooibos and green mate, the South American plant and natural energiser that, it is claimed, promotes a healthy metabolism.

And there is even a slimming aid coffee, CoffeeSLENDER, made from raw, unroasted (or green) coffee beans, and which has some backing in research. Norwegian scientist Dr Erling Thom participated in a study involving CoffeeSLENDER, which was published in 2007 in The Journal of International Medical Research.

Dr Thom concluded that: 'Green coffee bean extract supplemented coffee has a significant effect on the absorption and utilisation of glucose from the diet. This effect, when CoffeeSLENDER is used for a reasonable period, has shown to aid a significant reduction in body weight and body fat.'

But can you really drink your way thin through a cuppa? Natalie Willis, 31, a customer designer from Bristol, has been drinking Dragonfly Organic Pu'er tea for six months and swears by it.

'I wasn't expecting any miracles from a simple tea, but I noticed the effects within a month after drinking it ceremoniously three-times-a-day with just a normal, balanced diet and the odd naughty treat,' she explains

'I lost 10lbs in a month and went from a size 16 to a 14. Five months down the line, I'm very content with my curvy size 12 frame, and although I know that my new healthy living lifestyle has contributed to my weight loss greatly, I have no doubt that Pu'er has been instrumental in my successful long-standing fight against the flab.'

Still, Natalie's experience wasn't part of a clinical trial. I've been drinking a variety of these so-called slimming teas and coffees several times a day for a fortnight, and other than enjoy their lovely flavours, I have not dropped a dress size (or even an ounce).

Commenting on the teas alone, celebrity nutritionist Jeanette Jackson (www.jeannettejackson.com) thinks we shouldn't rely on these drinks as 'miracle' weight-loss methods, although she stresses that they are certainly beneficial to health.

'I would never suggest the tea is used as a slimming aid. They purport to aid weight loss, which has never been scientifically proven.

'The weight loss aspect probably comes from the fact that milk and sugar are not added to the drink and also, when people buy these teas, they may be at a stage where they are making other changes to diet as well, so weight loss is a consequence of a change of routine.

'However, many of these teas can offer tremendous health benefits and have been known to reduce cholesterol and aid digestion. They also contain high amounts of antioxidants and so are healthy from that perspective. The teas can, and do, offer health benefits and so could be included in a daily diet, but to lose weight and keep it off, you need a healthy diet.'

And, of course, you need a healthy relationship with food, which drinking a tea can never teach you. Surinder Phull, head nutritionist at Eat Well adds: 'Effective weight loss is a complex issue which involves dealing with both physical and emotional factors.

'In certain cases, a particular food may be useful as part of a whole weight management programme, but the magic bullet for weight loss simply does not exist in the form of any food, drink or quick-fix diet.'

Weight loss for many people is hard work, she says, which involves tackling individual issues that may be preventing someone from losing weight and looking at the reasons why someone may be over-eating.

'Although a particular food may help boost the metabolism of certain individuals, it certainly will not work alone,' she concludes.

View Full Version: Shaolin Medicine for Arthritis and inflammation

Title: Shaolin Medicine for Arthritis and inflammation

craig-oxley - May 31, 2010 06:18 PM (GMT)

http://www.fbshealth.com/shaolin_arthritis_herbs.php

This article lists the medicinal herbs contained in one Traditional Chinese Medicine, which was used by the Shaolin Temple herbalists to treat Temple monks who had arthritis, and describes their possible function in light of current scientific research.

This arthritis medicine was developed through careful observation and experimentation over the course of many generations. This was possible due to the long history and relative stability of this institution, which is devoted to study, mental and physical discipline and training, spiritualism and holistic healing.

While reading this article, please keep in mind that many of the papers cited were published very recently: often within the past 5 years. Yet, the Shaolin have been using these medicines for centuries.

Shaolin medicine, as with all Traditional Chinese Medicine, is holistic, as the various herbs are intended to work together. Some create the primary healing effects, some increase the action of the primary herbs, and some decrease adverse reactions from the primary and secondary herbs. A good analogy would be in Western herbal medicine, senna is often combined with another herb to calm the stomach such as anise or peppermint.

For example, note that many of herbs reduce inflammation. But they all do it in different ways, by affecting different biological pathways. Now, we know that anytime you inhibit a particular point on a pathway (i.e., the activity of one enzyme), this can potentially cause unintended side effects (crosstalk.) That's because pathways interact with each other in very complex ways that we do not totally understand. And the more you inhibit the pathway at some point, the greater the potential for an adverse drug reaction.

Consider this: say we'd like to reduce lung cancer deaths. There are many single things

we could try: we could raise taxes on cigarettes, restrict where you could smoke, invest more money in cancer research, encourage the use of smoking substitutes. Every single action will eventually have a effect on lung cancer rates, and each action also has its own costs and unintended side-effects.

You push too hard in any one area, and the unintended pain increases. Make the tax high enough, for example, and you put a lot of shops out of business, but people still smoke anyway because they smuggle them in from someplace else: and maybe organized crime increases, too.

But, that's also how modern medicine fights disease. Take Tysabri (natalizumab), for example: it fights auto-immune diseases such as multiple sclerosis by inhibiting NF-KappaB throughout your whole body, including the brain. It does such a good job, in fact, that it greatly increases the risk of multifocal leukoencephalopathy [29] (which is a serious brain infection.) Not surprisingly, if you fire all the policemen, the criminals will run wild.

So, what does the government do about lung cancer?

All of the above, and more. They hit the problem from as many different angles as possible, to maximize the intended effect and minimize the harm in any single area.

Now, look at how Chinese Medicine treats disease: the Shaolin's medicine reduces inflammation in multiple ways, but not so strongly in any one way. It hits NF-KappaB, COX-2, Nitric Oxide, TNF-alpha, etc. And it inhibits their pathways in different ways. This is actually very clever, because by attacking the problem from so many different angles at once, they synergistically act to reduce inflammation very effectively, but they hopefully avoid causing any other problems at the same time.

Western medicines don't work that way: they cannot work that way, by design! Its much easier to research and test a new drug with a single, well defined effect on the body, which means that it hits exactly one target, and it hits it hard.

Is Chinese Medicine's approach the best one? You can make up your own mind about that. But, in my personal opinion, this approach needs to be better researched and understood. It may well be a safe, and more effective way to treat disease.

Review of the herbs used in Shaolin Herbal Arthritis and Pain traditional medicine

Radix Aconiti (Aconite Root) - Also known as Fu Zi , monkshood and wolfsbane
Radix Aconiti Kusnezoffii (Wild Aconite Root) - also known as Cao Wu Tou

Aconite root contains three closely allied alkaloids: Aconitine, Picraconitine (benzoylaconine), and Aconine. When applied to the skin, Aconitine is an effective and long lasting analgesic [1] (pain killer) and is often used in both the West and China to

treat neuralgia and rheumatism.

For the moment, I am grouping the Aconiti and Aconiti Kusnezoffii together, as they appear to have similar effect although the wild Aconite is said to be stronger.

Note: Aconite needs to be properly prepared by experienced herbalists (such as the Shaolin): the processing, several hours steaming or boiling is known as "PaoZhi".

Radix Angelica Sinensis (Female Ginseng) - Also known as Dong Quai

Appears to function as a muscle relaxant, reduce pain and dilate blood vessels (hence locally increase blood flow.) Furthermore, research suggests that it may reduce inflammation [2] and [3], promote wound healing, collagen growth and bone regeneration [4], and promote regeneration of blood vessels [5].

Radix Angelica Dahurica - Also known as Jiang Huo

Appears to act as a vasodilator [6] (hence locally increase blood flow.) Furthermore, it contains coumarins, which seem to act as neuroprotective agents [7]: in particular, furanocoumarins [8], which may have some protective effect against Alzheimer's disease.

Schizonepeta tenuifolia - Also known as Japanese Catnip or Jing Jie

Appears be anti-inflammatory by modulating the immune response and locally inhibiting COX-2 [9], [10] and [11]. It is also used in Chinese Medicine against cold and influenza.

Saposhnikovia Divaricata (Turcz.) Schischk - Also known as fang feng

Appears be anti-inflammatory by modulating the immune response [12] (NF-kappaB, which is implicated in auto-immune diseases such as rheumatoid arthritis [2]) and inhibiting nitric oxide synthase [13]. It is also an analgesic [14] (pain killer.)

Rhizoma Sparganii - Also known as Burreed Tuber or San Leng

Used in Chinese Medicine to reduce blood stasis (improve circulation.) Did not find any published English research--yet.

Curcumae Rhizoma - Also known as turmeric root or Yu Jin

Well known anti-inflammatory inhibits NF-KappaB and COX-2. Has a protective effect on cartilage [15] and [16] and is thought to be useful against osteoarthritis [17] and rheumatoid arthritis [18] (clinical studies still on-going.) Too many research papers found to cite here.

Myrrh - Also known as Commiphora myrrha and Mo Yao

A gift from the 3 wise men to the baby Jesus. Used since ancient times in the West and the East. Analgesic, anti-inflammatory, promotes healing [19].

Frankincense - Also as known Indian Frankincense, Ru Xiang and Boswellia Serrata

Another gift from the Magi: great minds think alike! Potent anti-inflammatory [20] and protects collagen (joint cartilage) [21] and was found to be useful against osteoarthritis in a clinical trial [22].

Clove - Also known as Ding Xiang and Eugenia caryophyllata

Analgesic [23] (pain killer.)

Cinnamon - Also known as Gui Pi and Cinnamomum cassia

Anti-inflammatory (inhibits NF-kB [24] and [25]), creates a pleasant warming sensation. Traditionally used as to relieve arthritic and rheumatic pains in the West and Asia.

Ginger - Also known as Jiang and ginger zingiber officinale

Anti-inflammatory [26] (inhibits COX-2 pathway by blocking NF-kB [27]), creates a pleasant warming sensation, stimulates blood circulation.

Borneol - Also known as Bin Pian

Said to relieve pain and reduce swelling. No English research found-yet.

Peppermint - Also known Bo He and Mentha piperita

Topical analgesic [28], creates cooling pleasant sensation.

Carthamus Tinctorius - Also known Safflower and Hong Hua

Purpose Unknown.

Camphor - Also known Zhang Nao

Well known topical analgesic.

Methylsalicylate - Also known oil of wintergreen or Shui Yang Suan Jia Zhi

Well known rubefacient used in deep heating rubs: produces a warming effect and increases blood circulation.

Research papers:

1. Anesthesiology. 2007 July; 107(1): 82–90., Bulleyaconitine A isolated from Aconitum plant displays long-acting local anesthetic properties in vitro and in vivo, Chi-Fei Wang, MD, Peter Gerner, MD, Sho-Ya Wang, PhD, and Ging Kuo Wang, PhD

2. Arthritis Res. 2001;3(4):200-6. Epub 2001 Mar 26. NF-kappa B in rheumatoid arthritis: a pivotal regulator of inflammation, hyperplasia, and tissue destruction. Makarov SS.

The transcription factor NF-kappa B has been well recognized as a pivotal regulator of inflammation in rheumatoid arthritis (RA), but recent developments revealed a broad involvement of NF-kappa B in other aspects of RA pathology, including development of T helper 1 responses, activation, abnormal apoptosis and proliferation of RA fibroblast-like synovial cells, and differentiation and activation of bone resorbing activity of osteoclasts. In agreement with this, studies in animal models of RA have demonstrated the high therapeutic efficacy of specific inhibitors of NF-kappa B pathway, indicating the feasibility of anti-NF-kappa B therapy for human disease.

(note: TNF-a and TGF-b1 are proinflammatory cytokines. See [2])

4. Phytother Res. 2008 Jul;22(7):923-8. Effect of SBD.4A--a defined multicomponent preparation of Angelica sinensis--in periodontal regeneration models. Zhao H, Alexeev A, Sharma V, Guzman LD, Bojanowski K.

Here, for the first time, the bone-regenerative capabilities of a non-proteinaceous biological--SBD.4A--a novel, stable multicomponent growth factor isolated from a medicinal plant Angelica sinensis are reported. SBD.4A was tested in osteoblast proliferation and differentiation systems, as well as in a fibroblast-secreted hyaluronic acid assay. Furthermore, SBD.4A was formulated in a slow release matrix and tested in the rat calvarial defect model. Apart from the previously reported strong stimulation of angiogenesis, fibroblast growth and collagen synthesis--the activities needed for periodontal regeneration--SBD.4A enhanced the deposition of hyaluronic acid and proliferation of osteoblasts in vitro, as well as bone regeneration in the rat calvarial defect model. Together, these results indicate the beneficial effect of SBD.4 on periodontal ligament and bone regeneration making the case for further development of this botanical growth factor.

5. J Cell Biochem. 2008 Jan 1;103(1):195-211. The angiogenic effects of Angelica sinensis extract on HUVEC in vitro and zebrafish in vivo. Lam HW, Lin HC, Lao SC, Gao JL, Hong SJ, Leong CW, Yue PY, Kwan YW, Leung AY, Wang YT, Lee SM.

Angiogenesis plays an important role in a wide range of physiological processes such as wound healing and fetal development. Many diseases are associated with imbalances in regulation of angiogenesis, in which it is either excessive or there is insufficient blood vessel formation. Angelica sinensis (AS), commonly used in the prescriptions of Chinese medicine, is a potential candidate for curing such diseases. However, biological effects of AS on angiogenesis and underlying mechanisms are yet to be fully elucidated. This investigation describes the angiogenic effects of AS extract on human endothelial cells (HUVEC) in vitro and zebrafish in vivo. The extract was demonstrated, by XTT assay and microscopic cell counting, to stimulate the proliferation of HUVEC; in addition, flow cytometry analysis indicated that the extract increased the percentage of HUVEC in the S phase. The wound healing migration assay illustrated that a dramatic increase in migration could be measured in AS extract-treated HUVEC. Meanwhile, the number of invaded cells and the mean tube length were significantly increased in AS extract treatment groups. The extract was also demonstrated to promote changes in subintestinal vessels (SIVs) in zebrafish, one feature of angiogenesis. In addition, AS extract was found by real-time PCR to enhance vascular endothelial growth factor (VEGF) mRNA expression. In a bead-based immunoassay, higher levels of p38 and JNK 1/2 expression were also observed in effusions compared with control cells. All results suggest that Angelica sinensis extract can promote angiogenesis, and that the angiogenic effects involve p38 and JNK 1/2 phosphorylation.

6. Chin J Integr Med. 2009 Dec;15(6):442-7. Epub 2010 Jan 18. Imperatorin is responsible for the vasodilatation activity of Angelica Dahurica var. Formosana regulated by nitric oxide in an endothelium-dependent manner. Nie H, Meng LZ, Zhou JY, Fan XF, Luo- Y, Zhang GW.

OBJECTIVE: To demonstrate the vasodilatation activity of the coumarin-containing Angelica dahurica var. formosana and to further analyze active components in the herb extracts.
CONCLUSIONS: The principal effective component of Angelica dahurica var. Formosana was found to be imperatorin. Imperatorin-induced vasodilatation is at least partially regulated by nitric oxide, and has no correlation to beta-receptor.

7. Mini Rev Med Chem. 2009 Oct;9(11):1262-71. Natural coumarins as a novel class of neuroprotective agents. Epifano F, Curini M, Menghini L, Genovese S.

Neurodegenerative disorders are a heterogeneous group of diseases and are among the most invaliding syndromes for humans. The aim of this manuscript is to review what has been reported so far in the literature about coumarins as a novel class of pharmacologically active compounds in chemoprevention and/or therapy of these diseases.

9. Am J Chin Med. 2008;36(6):1145-58. Anti-inflammatory activity of Schizonepeta tenuifolia through the inhibition of MAPK phosphorylation in mouse peritoneal macrophages. Kim SJ, Kim JS, Choi IY, Kim DH, Kim MC, An HJ, Na HJ, Kim NH,

Moon PD, Myung NY, Lee JY, Jeong HJ, Um JY, Shin TY, Kim HM, Hong SH.

Schizonepeta tenuifolia (ST) is a well-known herb to treat the cold and its associated headache. However, the anti-inflammatory mechanism of ST in mouse peritoneal macrophages is not clear. In this study, we demonstrated that ST inhibited lipopolysaccaride (LPS)-induced tumor necrosis factor (TNF)-alpha and interleukin (IL)-6 production. The maximal inhibition rate of TNF-alpha and IL-6 production by ST (2 mg/ml) was 48.01 +/- 2.8% and 56.45 +/- 2.8%, respectively. During the inflammatory process, cyclooxygenase (COX)-2 and inducible nitric oxide synthase (iNOS) were increased in mouse peritoneal macrophages. However, treated with ST decreased the protein level of COX-2 and iNOS, as well as the production of PGE(2) and NO in LPS-stimulated mouse peritoneal macrophages. In addition, ST inhibited the phosphorylation of MAPK. Taken together, the results of this study suggest an important molecular mechanism by which ST reduces inflammation, which may explain its beneficial effect in the regulation of inflammatory reactions.

10. Immunopharmacol Immunotoxicol. 1999 Nov;21(4):705-15. Effect of Schizonepeta tenuifolia extract on mast cell-mediated immediate-type hypersensitivity in rats. Shin TY, Jeong HJ, Jun SM, Chae HJ, Kim HR, Baek SH, Kim HM.

We investigated the effect of an aqueous extract of Schizonepeta tenuifolia (STAE) on mast cell-mediated immediate-type hypersensitivity. STAE inhibited systemic allergic reaction induced by compound 48/80 in rats dose-dependently. STAE also inhibited plasma histamine levels induced by compound 48/80. STAE inhibited local allergic reaction activated by anti-dinitrophenyl (DNP) IgE. In addition, STAE does-dependently inhibited histamine release from rat peritoneal mast cells (RPMC) activated by compound 48/80 or anti-DNP IgE. However, STAE had a significant enhancing effect on anti-DNP IgE-induced tumor necrosis factor-alpha (TNF-alpha) production from RPMC. These results indicate that STAE inhibits immediate-type hypersensitivity and suggest that STAE can selectively activate the TNF-alpha production from RPMC.

11. Zhongguo Zhong Yao Za Zhi. 2007 Sep;32(17):1777-9. [Effects of volatie oil of Schizonepeta tenuifolia Briq herb and Saposhnikovia divaricata Schischke root on proinflammatory cytokine expression and regulation] [Article in Chinese] Ge WH, Guo JY, Shen YJ, Chen ML, Shi SL, Han YH, Lin J.

12. Zhongguo Zhong Yao Za Zhi. 2007 Sep;32(17):1777-9. [Effects of volatie oil of Schizonepeta tenuifolia Briq herb and Saposhnikovia divaricata Schischke root on proinflammatory cytokine expression and regulation] [Article in Chinese] Ge WH, Guo JY, Shen YJ, Chen ML, Shi SL, Han YH, Lin J.

OBJECTIVE: To study the effects of volatie oil of Schizonepeta tenuifolia Briq herb and Saposhnikovia divaricata Schischke root (OSS) on proinflammatory cytokine expression and regulation in rats.
METHOD: OA and LPS were injected intravenously to rats to develop acute lung injury (ALI). The rats were treated with OSS (45.19 microL kg(-1)). The pathological sections of lung tissue were prepared and observed in acute lung injury rats. The expression of nuclear factor-kappa B p65 (NF-kappaB p65), intercellar adhesion molecule CD54, and NF-kappaB p65 mRNA were determined in lung cells. RESULT: volatie oil of Schizonepeta tenuifolia Briq herb and Saposhnikovia divaricata Schischke root significantly inhibited the expression of CD54, the activation of NF-kappaB p65, and the transcription of NF-kappaB p65 mRNA.
CONCLUSION: OSS can reduce the expression of CD54 and NF-kappaB p65 protein synthesis, which may be its anti-inflammatory molecular mechanisms.

13. Cancer Lett. 1999 Oct 18;145(1-2):151-7. Inducible nitric oxide synthase inhibitor of the Chinese herb I. Saposhnikovia divaricata (Turcz.) Schischk. Wang CC, Chen LG, Yang LL.

L-Arginine derived nitric oxide (NO) and its derivatives, such as nitrogen dioxide and peroxynitrite, play a role in inflammation and also possibly in the multistage process of carcinogenesis. Four furanocoumarins and eight chromones isolated from the dried root of Saposhnikovia divaricata (Fang Feng in Chinese) and evaluated for their effects on the synthesis of NO induced by lipopolysaccharide (LPS) in macrophage cell line RAW 264.7. The inhibition of nitrite production, as an index for NO released from the macrophage cells, was quantitatively analyzed by Griess reaction. The results showed that imperatorin and deltoin are potential NO production inhibitor, and their IC50 values for inhibition of nitrite production were 17.3 and 11.6 microg/ml, respectively. Western-blot analysis demonstrated that iNOS enzyme activity was not inhibited by treatment with imperatorin or deltoin, but revealed that both compounds inhibited the expression of the iNOS protein.

14. Chem Pharm Bull (Tokyo). 2001 Feb;49(2):154-60. Analgesic components of saposhnikovia root (Saposhnikovia divaricata). Okuyama E, Hasegawa T, Matsushita T, Fujimoto H, Ishibashi M, Yamazaki M.

By activity-oriented separation using the writhing method in mice, the analgesic components of Saposhnikovia root (Saposhnikovia divaricata Schischkin; Umbelliferae) were identified to be chromones, coumarins, polyacetylenes and 1-acylglycerols. Two new components, divaricatol and (3'S)-hydroxydeltoin, were also isolated. The most potent analgesia was observed in chromones such as divaricatol, ledebouriellol and hamaudol, which inhibited writhing inhibition at an oral dose of 1 mg/kg in mice. Acylglycerols also showed inhibition significantly at a dose of 5 mg/kg. In some pharmacological tests using sec-O-glucosylhamaudol, the compound showed analgesia by the tail pressure and the Randall & Selitto methods, and its writhing inhibition was not reversed by naloxone.

19. Holist Nurs Pract. 2007 Nov-Dec;21(6):308-23. Myrrh: medical marvel or myth of the Magi?

Since antiquity, the genus Commiphora is composed of more than 200 species, and has been exploited as a natural drug to treat pain, skin infections, inflammatory conditions, diarrhea, and periodontal diseases. In more recent history, products derived from Commiphora myrrha and various other species of Commiphora are becoming recognized to possess significant antiseptic, anesthetic, and antitumor properties. Traditional practice and evidence-based research have supported that these properties are directly attributable to terpenoids (especially furanosesquiterpenes), the active compounds present in myrrh essential oil. More recently, current studies have focused on applying clinical trial methodologies to validate its use as an antineoplastic, an antiparasitic agent, and as an adjunct in healing wounds.

20. Transplant Proc. 2001 Feb-Mar;33(1-2):539-41. Boswellic acid, a potent antiinflammatory drug, inhibits rejection to the same extent as high dose steroids. Dahmen U, Gu YL, Dirsch O, Fan LM, Li J, Shen K, Broelsch CE.

21. Phytother Res. 2009 Nov 26. [Epub ahead of print] Boswellia frereana (frankincense) suppresses cytokine-induced matrix metalloproteinase expression and production of pro-inflammatory molecules in articular cartilage. Blain EJ, Ali AY, Duance VC.

We have demonstrated that B. frereana prevents collagen degradation, and inhibits the production of pro-inflammatory mediators and MMPs. Due to its efficacy we propose that B. frereana should be examined further as a potential therapeutic agent for treating inflammatory symptoms

22. Arthritis Res Ther. 2008;10(4):R85. Epub 2008 Jul 30. A double blind, randomized, placebo controlled study of the efficacy and safety of 5-Loxin for treatment of osteoarthritis of the knee. Sengupta K, Alluri KV, Satish AR, Mishra S, Golakoti T, Sarma KV, Dey D, Raychaudhuri SP.

INTRODUCTION: 5-Loxin is a novel Boswellia serrata extract enriched with 30% 3-O-acetyl-11-keto-beta-boswellic acid (AKBA), which exhibits potential anti-inflammatory properties by inhibiting the 5-lipoxygenase enzyme. A 90-day, double-blind, randomized, placebo-controlled study was conducted to evaluate the efficacy and safety of 5-Loxin in the treatment of osteoarthritis (OA) of the knee.
CONCLUSION: 5-Loxin reduces pain and improves physical functioning significantly in OA patients; and it is safe for human consumption. 5-Loxin may exert its beneficial effects by controlling inflammatory responses through reducing proinflammatory modulators, and it may improve joint health by reducing the enzymatic degradation of cartilage in OA patients.

23. Neurosci Lett. 2010 Feb 9. [Epub ahead of print] Eugenol modifies the excitability of rat sciatic nerve and superior cervical ganglion neurons. Moreira-Lobo DC, Linhares-Siqueira ED, Cruz GM, Cruz JS, Carvalho-de-Souza JL, Lahlou S, Coelho-de-Souza AN, Barbosa R, Magalhães PJ, Leal-Cardoso JH.

Eugenol is a phenylpropene obtained from the essential oils of plants such as clove and basil which has ample use in dentistry. Eugenol possesses analgesic effects that may be related to the inhibition of voltage-dependent Na(+) channels and/or to the activation of TRPV1 receptors or both.

28. Clin J Pain. 2002 May-Jun;18(3):200-2. A novel treatment of postherpetic neuralgia using peppermint oil. Davies SJ, Harding LM, Baranowski AP.

BACKGROUND: Postherpetic neuralgia remains a difficult problem to treat. A number of therapies have been shown to be effective, but some patients have intractable pain. PATIENT: The case of a 76-year-old woman whose pain had been resistant to standard therapies is described. The pattern of quantitative sensory testing results for this patient led the authors to believe that she had an "irritable nociceptor" type of pathophysiology.
INTERVENTION: The patient was instructed to apply neat peppermint oil (containing 10% menthol) to her skin, resulting in an almost immediate improvement in her pain. This pain relief persisted for 4-6 hours after application of the oil.
RESULTS: The patient was successfully treated with topical peppermint oil. During 2 months of follow-up she has had only a minor side effect, with continuing analgesia. The authors believe this is the first evidence of peppermint oil (or menthol) having a strong analgesic effect on neuropathic pain. The possible mechanisms of action of peppermint oil are discussed.

29. Neurologist. 2006 Nov;12(6):293-8. Review of progressive multifocal leukoencephalopathy and natalizumab. Aksamit AJ.

BACKGROUND: Progressive multifocal leukoencephalopathy (PML), a destructive demyelinating infection which lytically infects oligodendrocytes, has occurred in patients treated with natalizumab. Magnetic resonance imaging (MRI) scan imaging of the brain gives clues to diagnosis but is nonspecific in distinguishing multiple sclerosis from PML. Spinal fluid detection of JC virus is specific but incompletely sensitive. Associated immunosuppression is typically of the cell-mediated type but can be poorly defined on clinical grounds.
REVIEW SUMMARY: It is apparent that natalizumab is a predisposing factor for developing PML from the 3 cases of natalizumab-treated patients. There is no reliable presymptomatic way to detect PML or JC virus infection of the brain by virologic or imaging surveillance techniques. One patient with multiple sclerosis and natalizumab treatment has survived, indicating that withdrawal of antibody, possibly in combination with antiviral therapy, may permit survival. However, immune reconstitution disease is a risk after immune restoration and withdrawal of natalizumab. PML deficits would be expected to be permanent. The estimate of incidence of PML in natalizumab-treated patients is 1 per 1000. The duration of natalizumab treatment may be an independent risk factor for development of PML.
CONCLUSION: PML, a usually fatal neurologic infection, should be considered as a risk factor when using natalizumab. The treatment of multiple sclerosis patients with natalizumab is a matter of informed risk, individualized for each multiple sclerosis patient.

Shaolin Pain and Arthritis Patch

user posted image

XIANG YAO FENGSHI ZHI TONG GAO

Suggested Use: Shaolin monks use this warming medicated herbal paste to help the soothe joint and muscle pain and inflammation, especially associated with arthritis.

Directions: Remove backing and apply the patch to the skin directly above the affected area. Trim excess hair if necessary to improve adhesion. Patch may be left in place for up to 24hrs as needed. Remove if irritation develops and before washing.

Ingredients: Frankincense, Myrrh, Clove, Cinnamon, Carthamus Tinctorius, Radix Aconiti, Radix Aconiti Kusnezoffii, Schizonepeta Tenuifolia Briq., Saposh-nikovia Divaricata (Turcz.) Schischk, Ginger, Lonicera Japonica, Angelica Dahurica, Rhizoma Sparganii, Curcumae Rhizoma, Borneol, Angelica Sinensis, Peppermint, Camphor, Diphenhydramine, Methylsalicylate.

Size: 8cm x 13cm (3.2 x 5.2 inches)

Note: The statements on this page have not been evaluated by the FDA. This product is not intended to diagnose, treat, cure or prevent any disease.

Title: TEAS FOR GENERAL HEALTH

craig-oxley - May 31, 2010 06:16 PM (GMT)

GENERAL HEALTH

http://www.green-tea-benefit.com/tea_remedy.html

1. Cleansing and Detoxifying

[Detoxifying Green Tea] Add one Hedyotis Instant Detoxifying Teabag into a cup of hot Green tea or Jasmine tea.

[Chrysanthemum Green Tea] Add one Chrysanthemum Instant Granule Teabag into a cup of hot Green tea or Jasmine tea.

2. Longevity

[Goji Green Tea] Use half spoon of Goji Berry (Chinese Wolfberry) and Longjing Fresh Green Tea, rinse once with boiling water (See How to Make the Best Tea), add boiling water to brew, drink tea then take Goji Berry and tea leave.

3. Fatigue

[American Ginseng Black Tea] Add one American Ginseng Root Teabag into a cup of hot Black Tea or Pu'er Tea.

[Wild Ginseng Black Tea] Add one Wild American Ginseng Instant Granule Teabag into a cup of hot Black Tea or Pu'er Tea.

4. Cleansing Digestive System

[Chrysanthemum Pu'er Tea] Put 1/2 spoon of Hangzhou White Chrysanthemum Flower and 2 spoon of Loose Pu'er Tea into an Empty Paper Filter-Bags, rinse once with boiling water (See How to Make the Best Tea), add boiling water to brew tea.

COLD and FLU

1. "Wind-Heat" (feel hot, having fever, thick and yellow mucous)

[Chrysanthemum Green Tea] Add one Chrysanthemum Instant Granule Teabag into a cup of hot Green tea or Jasmine tea.

[Detoxifying Green Tea] Add one Isatis Instant Granule Teabag into a cup of hot Green tea or Jasmine tea.

2. "Wind-Cold" (feel chill, having not or low fever, not or white mucous)

[Ginger Tea] Add a cup of hot Black Tea or Pu'er Tea into one Ginger Instant Granule Teabag .

[Ginger Milk Tea] Add a cup of hot Black Tea or Pu'er Tea into one Ginger Instant Granule Teabag and 1/4 cup of milk (or 1/8 cup of Half-and Half).

3. "Stomach Cold" (nausea, vomiting, light diarrhea)

[Ginger Tea] Add one Ginger Instant Granule Teabag into a cup of hot Pu'er Tea.

DIGESTION

1. Nausea

[Ginger Tea] Add one Ginger Instant Granule Teabag into a cup of hot Pu'er Tea.

2. Constipation

[Tai Refreshing Herbal Tea] Add the teabag content of Tai Refreshing Tea into a Empty Paper Filter-Bag, then add boiling water again and aging to make tea until no taste.

[Honey Green Tea] Add honey into a cup of Green tea or Jasmine tea.

3. Hemorrhoid, Prolapse of Anus

[American Ginseng Green Tea] Add one American Ginseng Root Teabag into a cup of hot Green tea or Pu'er Tea.

[Wild Ginseng Green Tea] Add one Wild American Ginseng Instant Granule Teabag into a cup of hot Green tea or Pu'er Tea.

4. Oral Ulcer

[American Ginseng Green Tea Add one American Ginseng Root Teabag into a cup of

hot Green tea or Jasmine tea.

[Wild Ginseng Green Tea] Add one Wild American Ginseng Instant Granule Teabag into a cup of hot Green tea or Jasmine tea.

[Isatis Green Tea] Add one Isatis Instant Granule Teabag into a cup of Green tea or Jasmine tea.

BACK or MUSCLE PAIN

[Korean Ginseng Black Tea] Add one Korean Ginseng Granule Teabag into a cup of Black Tea or Pu'er Tea.

[Eucommia Black Tea] Add one Duzhong (Tuchung) Granule Teabag into a cup of Black Tea or Pu'er Tea.

EYE TIREDNESS

[Chrysanthemum Green Tea] Add one Chrysanthemum Instant Granule Teabag into a cup of Green tea or Jasmine tea.

[White Chrysanthemum Pu'er Tea] Combine half tablespoon of dry Chinese White Chrysanthemum Flower with Pu'er Tea to make tea.

View Full Version: Chinese Medicine Treatment for Excessive Sweating

Title: Chinese Medicine Treatment for Excessive Sweating
Description: *in the Groin*

craig-oxley - May 22, 2010 04:15 PM (GMT)

Chinese Medicine Treatment for Excessive Sweating in the Groin

http://www.shen-nong.com/eng/exam/internal...ve_groin.html#3

[dohtml] Sweating in the groin and buttocks are very common since the skin is folded and always covered by clothing. For some people, they tend to sweat heavily in this area causing intense discomfort and embarrassment. It can further lead to odor, rashes, itching and peeling of the skin, due to imbalances in skin flora in the moist and warm groin, genitals or anal areas.
In traditional Chinese medicine (TCM) understanding, an itchy and wet anus indicates damp-heat irritation that originates from the large intestine. The problem can occur in anal eczema or piles and is usually aggravated by emotional distress or overeating hot and spicy food. On the other hand, excessive sweating of the groin area indicates either a kidney or liver disharmony as the kidney dominates the reproductive organs, and the liver meridian circulates around the external genitals. This problem is a common ailment in men but is often neglected by them. People go for consultations for this problem only when they also suffer from localized eczema, vaginal discharge, impotence, emission or fertility problems. Below are the typical disharmonies of excessive sweating in the groin area.
<table width="360" border="0" align="center" cellpadding="3" cellspacing="0">
<tr>

<td class="etext" align="center"><img src="http://www.shen-nong.com/eng/images/exam/internal_tcm/groin_meridians.jpg" alt="In TCM, excessive groin sweating is associated with kidney and liver deficiency."></td>
</tr>
<tr>
<td class="description"> In TCM, excessive groin sweating is associated with kidney and liver deficiency. </td>
</tr>
</table>

Herbal prescriptions for excessive groin sweating
Damp-heat in the liver meridian
Excessive sweating in the groin with an unpleasant smell is often accompanied by other symptoms including distention in lower chest, a bitter taste in the mouth, blood-shot eyes, scanty yellowish urine, a feeling of incomplete emptying after bowel movements, impotence in men, and vaginal itchiness and discharges in women. The tongue is covered by yellow greasy fur and the pulse is taut and rapid. The remedy should clear heat, induce urination, soothe the liver and nourish the blood.
Sample prescription: Gentian Liver-Purging Decoction plus ledebouriella root and jehol ligustium rhizome
Kidney yang deficiency
Excessive cold sweating in the groin can be accompanied by other symptoms that include sensitivity to low temperatures, limb coldness, lumbar soreness, fatigue, night urination, low libido, impotence, emission and infertility problems. The tongue looks pale and glossy with teeth marks on the margin, and the pulse is slow and deep. The remedies should warm the kidney, enrich yang and replenish qi.
Sample prescription: Kidney Qi Bolus plus angelica root and schisandra

Acupuncture and moxibustion for excessive groin sweating
Acupuncture is a therapy that is used to activate qi flow in the meridians. Acupuncture in conjunction with moxibustion can regulate kidney and liver functioning so as to help arrest excessive sweating in the groin area.
Point selection for invigorating the kidney: qi hai (Cv 6), guan yuan (Cv 4), zhong ji (Cv 3), ming men (Gv 4) and shen shu (Bl 23). Moxa heating is suggested on guan yuan (Cv 4), ming men (Gv 4) and shen shu (Bl 23).
Point selection for invigorating the kidney and liver: gan shu (Bl 18), pi shu (Bl 20), wei shu (Bl 21), qi hai (Cv 6), guan yuan (Cv 4), zhong ji (Cv 3), san yin jiao (Sp 6), fu liu (Ki 7) and ran gu (Ki 2). Moxa heating is suggested on qi hai (Cv 6).
External herbal remedies for excessive groin sweating
In case of excessive groin sweating, herbal decoctions combined with external remedies can quickly relieve sweating; however, there are exceptions that need longer term treatment. TCM herbal remedies work on the body surface directly to help reduce sweating, ease skin irritations and act as disinfectants.
1. Washing prescriptions for the groin and buttocks regions

<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Gallnet of Chinese sumac (30g), processed alum (20g), garden burnet root (30g) and common cnidium fruit (30g). Used for cold, sweaty groins. </td>
</tr>
<tr valign="top">

<tr valign="top">
<td><img src="http://www.shen-nong.com/eng/images/exam/internal_tcm/groin_prescription.jpg" width="7" height="7" vspace="5"></td>
<td>Wormwood herb (30g), dandelion (30g), belvedere fruit (30g), Tokyo violet herb (15g) and borneol crystal (5g, put in the prepared solution directly). Used for sweaty, itchy and smelly groins. </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Common cnidium fruit (30g), gallnet of Chinese sumac (10g), processed alum (10g) and realgar (3g). Used for sweaty and itchy groins as well as for vaginal itchiness. </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Common cnidium fruit (15g), pricklyash peel (15g), processed alum (15g), sessile stemona root (15g) and sopora root (15g). Used for sweaty and itchy groins with a fungal infection in the external genitals.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>European verbena (15g), cowherb seed (15g), sopora root (15g), dictamnus root bark (15g), amur corktree bark (15g), red peony root (15g) and borneol crystal (5g, put in the prepared solution directly). Used for sweaty groins with eczema in the region.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Sopora root (50g), figwort root (30g), alum (10g), sodium sulfate (10g), pricklyash peel (15g) and Chinese rhubarb (15g). Used for sweaty and itchy groins with a fungal infection on the upper thighs. </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Pricklyash peel (6g), chrysanthemum (6g), mulberry leaf (12g), sopora root (30g),

artemisia leaf (30g), common cnidium fruit (30g), honeysuckle flower (30g), dandelion (18g) and baical skullcap root (15g). Used for anal itchiness.</td>
</tr>
</table>

When preparing the decoctions, first soak the herbs for 20 minutes and then boil for 30 minutes. Keep the water temperature at around 45•, soak for at least 20 minutes before evenly rubbing the groin and buttock areas. After soaking, rinse with clean water and wipe properly.
2. Powder prescriptions for a sweaty groin

These powders are used to reduce sweat in the groin only; they are not suitable if there are odors or skin rashes in the area.

<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Equal amount of fossil bone (calcined), oyster shell (calcined) and soapstone. </td>

<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Equal amount of smithsonite (calcined) and gallnet of Chinese sumac. </td>
</tr>
</table>

Pound the ingredients until they are reduced to a fine powder and put aside. Clean and dry the groin, dust with powder and rub in. Do this 2-3 times a day.
Lifestyle advice for excessive sweating in the groin area
<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Wear light loose clothing.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Don't use perfume or cologne to mask the odor, as this will not only intensify the smell in the groin area, but may also lead to an allergic reaction.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>

<td>Losing weight can lessen sweat production</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Drink water to keep the body well hydrated, so that the body temperature remains stable.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Greasy, fried and processed foods should be eaten sparingly; avoid smoking and alcohol.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Those who have cool sweat, limb coldness and sexual problems are likely to have a kidney deficiency. Beneficial foods for these individuals include pond loach, sparrow or sparrow egg, mutton, animal kidney or bone marrow, chives, shrimp, walnut, sea cucumber, oyster, Chinese wolfberry, mulberry, cherry, sesame, soybean and nuts.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>As damp-heat irritation is blamed for sweaty and smelly groins, individuals with this problem are recommended to eat more fresh vegetables and melons to help eliminate the pathogens. Other useful foods are wax gourd, tomato, cucumber, coix seed, mung beans, lotus root, lotus seed, and bean sprouts.</td>

Title: Chinese Medicine Treatment for Sweaty Palms & Feet

craig-oxley - May 22, 2010 04:09 PM (GMT)

Chinese Medicine Treatment for Sweaty Palms and Feet

http://www.shen-nong.com/eng/exam/internal...ty_palms.html#4

[dohtml] The palms of the hands and the soles of the feet have more sweat glands than any other part of the body. Excessive hand sweating is the most common sweating problem; sweaty hands usually come along with sweaty feet. In severe cases, this can greatly affect one's social life, work performance and even health.
When sweaty hands and feet become a severe problem, they are called palmar hyperhidrosis and pedal hyperhidrosis respectively. They tend to run in families, and usually begin in early childhood and worsen in the teenage years and early adulthood. The sweaty hands and feet are likely to develop cracking and scaling of the skin, blisters, frostbite, warts and fungal infections.
Treatment options of sweaty hands and feet vary according to the intensity and how well the person responds to treatment. There are over-the-counter products or prescription antiperspirants for light to moderate cases. Apply the powder, lotion or cream on the palms or soles, cover with a plastic wrap overnight, and then wash off in the morning. Iontophoresis which uses a mild electrical current to temporarily turn off the sweat gland is also suitable for sweaty hands and feet. Botox injections, although quite painful, are helpful to those who with severe sweating. When all these methods fail, surgery is the last resort. Quiet often, a single method that works for a person may not work for another, so it is better to use a combination of methods.
In addition, stress, emotional stimuli, anxiety and certain foods play key roles in the development of the problem. People should find ways to minimize these things through relaxation techniques, changing diets and exercise.

</tr>
</table>
According to traditional Chinese medicine (TCM), the spleen system controls the muscles and the limbs; the four extremities must be nourished by the nutrient essence transformed and transported by the spleen. When the spleen and stomach fail in its transportation and transformation functions, it will lead to abnormal distribution of the body fluids and excessive sweat will arise from the hands and feet. Furthermore, due to the pathways provided by the meridian system, certain pathogens can be transmitted to the hands and feet affecting the local sweating process, for example:
<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Excessive heat in the stomach and intestines not only leads to constipation, but also sweaty hands and feet.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Damp-heat in the spleen and stomach lead to wet hands and feet, and the sweat is like to be sticky in nature.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Yin deficiency creates virtual fire that leads to warm sweaty palms and soles. </td>
</tr>
<tr valign="top">

<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Coldness in the spleen and stomach leads to cold sweaty palms and soles. </td>
</tr>
</table>

TCM remedies for sweaty hands or feet are based on particular disharmony patterns that mean besides the intensity of sweaty hands and feet, physicians also notice the subtle symptoms that go with them. In TCM herbal prescriptions, specific herbs like sour jujube seed, shriveled wheat, ephedra root, oyster shell and fossil bone are used to arrest excessive sweating. Typical disharmony patterns that result in sweaty hands and feet are listed below.
Herbal prescriptions for sweaty hands and feet
Damp-heat in the spleen and stomach
People with sweaty hands and feet may also have symptoms such as gastric bloating, poor appetite, fatigue, feverish sensation, scanty urine, a feeling of incomplete emptying after bowel movements, a tongue that is covered by yellow greasy fur, and a soft, floating pulse. The remedy should clear heat, dry the organs and regulate the middle burner.
Sample prescription: Three Kernels Decoction plus white peony root.
Yin deficiency in the heart and kidney
Sweaty hands and feet may be accompanied by other symptoms such as mouth dryness, warm palms and soles, low appetite, sleeping difficulties, constipation, red tongue, and a thready, rapid pulse. The remedy should nourish yin and clear heat.
Sample prescription: Six-ingredient Pill with Rehmannia plus dwarf lily-turf tuber and schisandra.
Coldness in the spleen and stomach
Sweaty hands and feet may be accompanied by other symptoms that include limb

coldness, pale complexion, no appetite, fatigue, loose bowels, urinary difficulty, pale tongue and a weak pulse. The remedy should warm and invigorate the middle burner.
Sample prescription: Regulate the Middle Pill plus smoked plum.
Insufficiency of heart yang
Sweating in the hands is more apparent than in the feet, and the situation is always aggravated by nervous states; sufferers also have sleeping difficulty at night. Physicians treat this by harmonizing heart yang.
Sample prescription: Cinnamon Twig Decoction plus fossil bone, oyster shell, tortoise shell, sour jujube seed and shriveled wheat.
Acupuncture therapies for sweaty hands and feet
The hands and feet are either the end point or the starting point for each of the twelve regular meridians, and many of their important acupoints are located in the four extremities. Appropriate point selection and stimulation can help regulate the sweating process in the regions. Acupuncture therapies for sweaty hands and feet aimed to:
<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Resume the normal functions of the spleen and stomach;</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Unblock the localized meridians include the heart, pericardium and kidney meridians.</td>
</tr>
</table>

Suggested acu-points for sweaty hands and feet caused by spleen and stomach dysfunctions: pi shu (Bl 20), wei shu (Bl 21), zhong wan (Cv 12), zhang men (Lr 13), qu chi (Li 11), zu san li (St 36), san yin jiao (Sp 6) and yin xi (Ht 6). Each time stimulate three to four points bilaterally, for 20 minutes and twice weekly.

Suggested acu-points for sweaty hands and feet caused by heart and kidney dysfunctions: fu liu (Ki 7), yin xi (Ht 6), he gu (Li 4), tai xi (Ki 3) and nei guan (Pc 6). Each time, stimulate on both sides for 20 minutes and twice weekly.
Acupressure to ease sweaty hands and feet
Acupressure is a good way to calm down and relax, so that the sweating is unlikely to be further aggravated by a nervous condition. TCM regards nervous conditions or stress as a manifestation of unease spirit in the heart, soothing certain acupoints on heart or pericardium meridian helps to relaxation. Acupressure techniques are suitable for this propose; choose either way when you begin to sweat.
<table border="0" align="center" cellpadding="3" cellspacing="0">
<tr>
<td class="etext" align="center"><img src="http://www.shen-nong.com/eng/images/exam/internal_tcm/sweaty_hand_acupressure.jpg" alt="Acupressure points for sweaty hands."></td>
</tr>
<tr>
<td class="description"> Acupressure points for sweaty hands. </td>
</tr>
</table>

Method 1: Use the thumb to rub the front side of wrist, knead forcefully on nei guan (Pc 6) and shen men (Ht 7), 2 minutes on each point.

Method 2: Use the thumb to rub the palm, knead forcefully on lao gong (Pc 8) and shao fu (Ht 8), one minutes on each point.

The points belong to the pericardium and heart meridians, which are indicated for calming the spirit in the heart. When the sweating is accompanied with warm palms and soles, sleeping difficulties and irritability, lao gong (Pc 8), shao fu (Ht 8) and yong quan (Ki 1, located in the center of soles) should be pressed, do this every night before going to bed.
External herbal remedies to arrest excessive sweating in the hands and feet
External herbal remedies can directly work on the hands and feet and lessen the activity of the sweat glands. These remedies are necessary for complications like odor, scaling, blisters and fungal infections. In addition, applying them frequently at home as a part of beauty treatment for the hands and feet can make you look good and feel great.

<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Astragalus root (30g), kudzu root (30g), schizonepeta herb (10g) and ledebouriella root (10), this is particularly good for preventing excessive sweating in the hands.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Alum (30g), melanterite (30g), oriental arborvitae leafy-twig (60g) and cutch black catechu (30g). This is suitable for sweaty hands and feet that have blisters.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Alum (15g), kudzu root (20g) and astragalus root (30g). This is suitable for sweaty hands and feet that tend to be triggered by a nervous condition.
<table border="0" align="center" cellpadding="3" cellspacing="0">
<tr>
<td class="etext" align="center"><img src="http://www.shen-nong.com/eng/images/exam/internal_tcm/sweat_prescription.jpg" alt="Alum (15g), kudzu root (20g) and astragalus root (30g)."></td>
</tr>
<tr>
<td class="description"> 18. Alum (15g), kudzu root (20g) and astragalus root (30g). </td>
</tr>
</table> </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Tea leaf (25g) and salt (25g) are suitable for sweaty feet.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Alum (30g), sopora root (15g), clove (10g), kudzu root (15g), purslane herb (15g) and red halloysite (30g), this are suitable for sweaty and smelly feet.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Siberian cocklibur fruit (60g), sopora root (30g), common cnidium fruit (30g), amur corktree bark (30g), alum (30g), and bee wax (15g), this can arrest sweating, inhibit microorganisms growth and stop itchiness.</td>
</tr>

<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Belvedere fruit (20g), Siberian cocklibur fruit (60g), sopora root (30g), dictamnus root bark (20g) and amur corktree bark (30g), this helps remove dead skin, inhibit the growth of microorganisms, and stop itchiness. </td>
</tr>
</table>
The above prescriptions can be prepared as a washing solution or regular scrub. For washing and soaking, keep the water temperature between 50 -60•, soak for at least 20 minutes while rubbing evenly to remove dead cells from the skin. After bathing, rinse with clean water, wipe the hands and feet properly, and put on lotions for protection or anti-fungus drugs if necessary.
Tips to reduce foot odor
People with smelly feet should pay attention to hygiene in the area, as the unpleasant odor is mostly duo to bacteria breaking down dead skin cells on sweaty feet. The following suggestions are helpful:
<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>When you take a bath, remember to scrub and clean the feet rather than just splash water on them. Dry the feet thoroughly afterward especially between the toes. </td>

View Full Version: Chinese Medicine Treatment of Excessive Underarm

Title: Chinese Medicine Treatment of Excessive Underarm
Description: *Sweating and Odor*

craig-oxley - May 22, 2010 04:06 PM (GMT)

Chinese Medicine Treatment of Excessive Underarm Sweating and Odor

http://www.shen-nong.com/eng/exam/internal...underarm.html#2

[dohtml] Medically, excessive underarm sweating (axillary hyperhidrosis) involves constant heavy sweating in the armpits without any apparent cause. The exact cause of excessive underarm sweating is not known, and specialists believe it may due to increased sensitivity of the sweat glands to neural stimulation. This is a hereditary condition. Other reasons for this condition include specific foods, anxiety, stress, and emotional stimuli. Excessive sweating may appear in the armpits alone or be accompanied by sweaty palms, soles, face and scalp. This kind of sweating often leads to an uncomfortable feeling as well as bad odor and stained clothes.
Treatment options for excessive underarm sweating include antiperspirants, Botox, oral medication and surgery. Since there are different grades of severity, and different people will react differently to the same method, it is better to consult a prefessional to help find the best method that works for you. Nevertheless, one should always start with conservative measures in controlling extreme sweating.
Antiperspirants are considered the first line of treatment for excessive underarm sweating. It is more appropriate to select a product containing 10-25% aluminium based compounds, and try perfume-free ones to reduce the chance of skin irritation. Everyday, apply to dry armpits at bedtime and wash off after 6-8 hours, when the sweating becomes controlled, then apply it one or two times weekly to maintain the control.
The armpits are the most common place to develop body odor, others are the groin, nipples and the navel. Sweat is in fact odorless; it is the bacteria that normally live on the skin that break it down and release chemicals that cause sweat to give off an unpleasant smell. The armpits provide a warm and moist environment for

bacteria to thrive, and the sweat glands in this region produce extra proteins and oily substances to feed them. People with excessive sweating in the armpits also tend to have excessive ear wax.
<table border="0" align="center" cellpadding="3" cellspacing="0">
<tr>
<td class="etext" align="center"><img src="http://www.shen-nong.com/eng/images/exam/internal_tcm/chest_meridians.jpg" alt="Meridians run in the underarms and lower chest."></td>
</tr>
<tr>
<td class="description"> Meridians run in the underarms and lower chest. </td>
</tr>
</table>

Herbal prescriptions for excessive underarm sweating
In traditional Chinese medicine (TCM), excessive underarm sweating is a sign of heat accumulation and is related to the liver and heart meridians. The heat may be a product of poor diet, overwork, lack of sleep, or organ weakness. When the accumulated heat affects the liver or heart meridians, it can be transmitted to the armpit regions, which then sweat profusely. TCM treatment principle for the problem is to clear heat from the appropriate meridian and organ, and to resume the internal harmony. Typical disharmony patterns for excessive underarm sweating are below.
Liver deficiency and heat accumulation
 Excessive underarm sweating which is worse at night; other associated symptoms include insomnia, dream-disturbed sleep, dizziness, general weakness, paleness, hot flashes, mouth dryness, red tongue and a thready, rapid pulse. The remedy should nourish yin, soothe the liver and clear heat.
Sample prescription: Linking Decoction plus anemarrhena rhizome, amur

corktree bark, oyster shell (calcined) and ephedra root.
Heat accumulated in heart meridian
Heavy underarm sweating, other associated signs include irritability, thirst, burning urination, and red tongue which may have sores. The remedy should eliminate the heat through urination.
Sample prescription: Guide Out the Red Powder
When an emotional stimulus triggers sweating, a heart deficiency should be considered, ginseng, dwarf lily-turf tuber and schisandra can be used to nourish the heart and arrest sweating.
Herbal prescriptions for sweaty and smelly underarms
In TCM understanding, body odor has a constitutional character which is hereditary. However, for those who become really smelly, their bodies are usually in disharmony making the body surface susceptible to damp-heat pathogens. Furthermore, the liver and gallbladder meridians, which start at the toes and run bilaterally upward to the head, promote the distribution of damp-heat pathogens and cause some regions of the body to have a stronger odor than others. Techniques for TCM physicians to treat body odor include harmonizing the internal body, controlling the sweating process, clearing the skin and using aromatic herbs to mask the odor. Two commonly seen disharmony patterns are:
Damp-heat irritation
Smelly sweat with or without a yellowish color is often accompanied by irritability, a feeling of incomplete emptying after bowel movements, itchiness, thirst, a red tongue covered by yellow fur, and a floating or rolling pulse. The remedy should clear heat, dry the body, nourish blood and unblock the meridian.
Sample prescription: Wormwood Decoction plus astragalus root, white peony root, cassia twig and vinegar.

Yin Deficiency leading to internal heat
Excessive sweating, smelly armpits, irritability, warm palms and soles, mouth dryness, insomnia, constipation, a red tongue, and a thready, rapid pulse. The remedy should nourish yin, clear heat and arrest sweating.
Sample prescription: Rehmannia Root & Dwarf Lily-turf Tuber Drink
External Remedies to help arrest underarm sweating and eliminate body odor
Besides oral treatments for sweating and its accompanying odor, TCM physicians will also use external remedies such as powders and dressings. The aim of these remedies is to keep the armpits clean and dry, and to inhibit the spread of bacteria.
1. Prescriptions for Washing
<table border="0" cellspacing="0" cellpadding="3" class="etext">
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Schizonepeta herb (30g), agastache (30g), clove (15g), golden thread rhizome (15g), processed alum (20g) and wormwood herb (30g). </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Chinese nardostachyos root (10g), Dahurian angelica root (12g) and fortune eupatorium herb (6g).</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Acorus (15g), clove (6g) and processed alum (10g). </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Kudzu root or purslane herb (200g) and processed alum (25g). </td>
</tr>
</table>

When preparing the decoctions, soak the herbs for 20 minutes first and then boil for 30 minutes. Use the solution for washing the armpits, genitals, nipples and navel or for rubbing the body. After washing, rinse with clean water and wipe properly, and dust with absorbent powder if necessary.
Regular exfoliation helps get rid of the sebum and dead skin remnants in the armpits, as these harbor bacteria. You can use a piece of ginger to scrub the area or you can make a regular skin scrub with the above washing prescriptions.

2. Prescriptions for absorbent

Oyster shell (60g, calcined), fossil bone (60g, calcined) and processed alum (120g).
Oyster shell (20g, calcined), ephedra root (20g), fossil bone (15g, calcined) and red halloysite (15g).
Ledebouriella root (30g), Dahurian Angelica root (30g), Chinese wildginger (15g) and Sichuan lovage (15g) and processed alum (30g).

<table border="0" align="center" cellpadding="3" cellspacing="0">
<tr>
<td class="etext" align="center"><img src="http://www.shen-nong.com/eng/images/exam/internal_tcm/armpit_odor_prescription.jpg" alt="Ledebouriella root, Dahurian Angelica root, Chinese wildginger and Sichuan lovage and alum. "></td>
</tr>
<tr>
<td class="etext"> Ledebouriella root, Dahurian Angelica root,
 Chinese wildginger and Sichuan lovage and alum. </td>
</tr>
</table>

Processed lead (30g), borneol crystal (6g), alum (30g) and gallnet of Chinese sumac (20g).

Pound the ingredients until they are reduced to a fine powder and put aside. Shave the armpit hair to prepare for applying the powder. Clean and dry the armpits, dust on the powder and rub in. Do this 2-3 times a day.
It should be noted that some external remedies especially folk remedies, may contain a high amount of irritating ingredients. They may cause undesirable reactions, so be cautious and seek professional advice before using them.
Dietary advice for sweaty and smelly underarms
Certain foods contain chemicals that can stimulate sweating and make the sweat smelly, such as curry, garlic, onion and other strong spices. Generally, pungent, spicy and fried foods should be taken in moderation, and salty and preserved seafood should also be avoided. Foods like bitter melon, pear, wax gourd, mung bean, bean crud, rice bean, coix seed, eels, lotus leaf, water chestnut, olive and radish are beneficial, as they promote the elimination of accumulated pathogens through urination. Below are simple recipes that help control sweating and unpleasant odor.
<table border="0" cellspacing="0" cellpadding="3" class="etext">

<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Prepare olives (500g) and fresh radish (500g), boil with 1500ml of water for 30 minutes; serve as a tea and drink regularly. </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Prepare wax gourd (500g, chopped and don't peel), coix seed (500g), boil with 2000ml of water for one hour; add salt to taste and serve as soup.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Prepare wax gourd (750g, chopped and don't peel), a piece of fresh lotus leaf, boil with 2500ml of water for one hour; serve as tea and drink regularly. </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Prepare water chestnut (10-15 pieces), rice bean (60g) and wax gourd (500g, peeled and chopped), boil with 2500ml of water for one hour; add salt to taste and serve as a soup.</td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Prepare chrysanthemum (10g), mulberry leaf (10g) and liquorice root (3g), boil with 750ml of water for 20 minutes; serve as a tea. </td>
</tr>
<tr valign="top">
<td><img src="../images/principles/dot.gif" width="7" height="7" vspace="5"></td>
<td>Prepare fresh corn silk (50g) and Asian pond loach (250g, also called mudfish). Clean the loach and remove the organs. Add vegetable oil in a pot and heat, insert the loach and fry slightly; pour in 1500ml water, put in the corn silk, add ginger, green onion and pepper to taste; bring to the boil and allow the ingredients to remain at a brisk simmer until the soup turns silky white. Eat the loach meat and drink the soup.</td>
</tr>
</table>
Suddenly sweating much more than usual or a change in body odor could be a sign of an underlying health problem such as diabetes or kidney failure. It may be a good idea to pay a visit to your health practitioner for a medical checkup. </td>
</tr>[/dohtml]

View Full Version: Chinese External Herbal Remedies for Insomnia

Title: Chinese External Herbal Remedies for Insomnia

craig-oxley - May 22, 2010 04:03 PM (GMT)

Chinese External Herbal Remedies for Insomnia

http://www.shen-nong.com/eng/lifestyles/tc...remedies.html#3

[dohtml] In traditional Chinese medicine (TCM) theory, our body consists of a giant web called the meridian system that distributes the fundamental substances over the body. Along the channels, acupoints are the sites where the qi of the organs and meridians infuse onto the body surface, and simulating these points help regulate the corresponding organs or meridians and promote the recovery of internal disharmonies.

To treat insomnia, regardless of cause, the basic principle is to resume harmony between the body and mind, so that a natural rhythm of sleep and waking can return. An external herbal remedy is an effective and easy way to relax and induce sleep. The selected herbs are made into a paste, powder, solution, medicinal wine or essential oil. The active components of the preparations are absorbed through the skin or acupoints and transmitted by the meridian system to finally work on the target organs.
Herbal pillows and sachets to promote sleep
Appropriate bedding promotes a restful night and ensures that the body maintains a healthy vitality. Herbal stuffing used to make pillows and sachets are natural sedatives, as the selected herbs are mostly aromatic and are able to remove blockages, calming and relieving the stress in the body.

Prescription (1):

Chrysanthemum (100g), magnetite (100g), albizia flower (100g), tuber fleeceflower stem (100g), common rush (30g), clove (30g), acorus (60g), polygala root (60g), Indian bread with pine (60g), sandal wood (10g) and borneol (10g). <a href="javascript: MM_openBrWindow('../lifestyles/popup_insomnia_prescription_1. html','glossary','scrollbars=yes,width=640,height=600')" class="link">See the graphic</ a> When seriously disturbed by dreams, add fossil bone (100g) and oyster shell (60g). Grind the ingredients properly.

Prescription (2):
Bamboo shavings, chrysanthemum, mulberry leaf, peppermint, oriental arborvitae leafy-twig, Dahurian angelica root, Sichuan lovage, schizonepeta herb, peony root bark and magnetite. Mix equal amounts of each ingredient and crush them slightly. See the graphic

Prescription (3):
Peppermint, chrysanthemum, lophatherum herb, sweet wormwood herb, fortune eupatorium herb and tuber fleeceflower stem, 30g of each; fossil bone, oyster shell, and ochre minerals, 30g for each; Sichuan lovage, Dahurian angelica root, Chinese nardostachyos root, vitex fruit, costustoot, silkworm dung, tangerine peel and atractylodes rhizome, 10g each; Manchurian wildginger, acorus, Chinese honeylocust abnormal fruit and borneol, 5g each. Mix and grind properly. See the graphic

Mix all the ingredients together, place in a cloth bag and sew up the end, tuck inside a pillow or cushion to give off a gentle fragrance during the day or while sleeping. These mixtures need renewing after several months. The room temperature should be around 25-30°C.

Age, body type, specific health problem, and even season of the year should be considered when selecting herbs.
<table width="500" border="0" cellpadding="6" cellspacing="2" class="etext">

TOP

Topical herbal dressings to promote sleep
The prescribed herbs are ground or extracted, made into a paste and applied to areas like the navel, soles or palms to induce sleep. By stimulating the specific acupoints of the various regions, a medicinal effect infiltrates the skin and reaches the meridians, activating qi movement and promoting internal balance.

<table border="0" align="center" cellpadding="3" cellspacing="0">

</tr>
</table>

Dressing for the palms:
Prescription: fossil bone (20g), amber (5g), pearl (4.5g), golden thread rhizome (5g) and pinellia tuber (10g). Grind into a fine powder and put aside. Every night before going to bed, take 3-4g of the powder and mix with an oral solution called Fresh Bamboo Juice (xian zhu li ye) or just tap water, paste on the centre of both palms, cover with swabs and fixed in place. Afterward, press with fingers on the area for 30 minutes each, keeping the dressing overnight. Apply for 20 days as one course. In the centre of the palm, an acupoint called lao gong (Pc 8) belongs to the pericardium meridian, it works with the ingredients to calm the spirit and promote sleep.

Dressing for the umbilicus:
Prescription (1): Red sage root (20g), sulfur (20g), polygala root (20g) and acorus (20g). See the graphic

Prescription (2): Acorus (10g), turmeric (10g), immature bitter orange (10g), Chinese eaglewood (10g), sour jujube seed (10g) and amber (10g). See the graphic

Prescription (3): Medicinal evodia fruits (100g). See the graphic

Grind the above ingredients into a fine powder and put aside. Every night before going to bed, take 5g of the powder and mix with a small amount of rice wine into paste form, fill in the navel (or umbilicus) and then cover by gauze or tape. The umbilicus is known as shen que (Cv 8), which is an important acupoint along the conception vessel, works with the ingredients to calm the spirit and induce sleep.

Dressing for the soles:
Prescription (1): Arisaema with bile (10g), Sichuan lovage (30g), golden thread rhizome (20g). See the graphic

Prescription (2): Golden thread rhizome (30g) and Cassia bark (30g). See the graphic

Grind the ingredients into a powder and put aside. Every night before going to bed,

mix 5g of the powder with honey, paste it on the soles of the feet, and then cover by gauze or tape. There is an acupoint named yong quan (Ki 1) in the centre of the soles, which is an important point along the kidney meridian. It works with the ingredients to promote communication between heart and kidney, and calms the mind.

Wet dressing on the forehead:
Prescription (1): Magnetite (20g), Indian bread with pine (15g), schisandra (10g) and prickly acanthopanax root (20g). See the graphic Boil the magnetite with 1500 ml of water for 30 minutes, then add in other ingredients, boil for 30 minutes and filter out the solution.
Prescription (2): Pinellia tuber (12g), poria (9g), tangerine peel (9g), arisaema with bile (9g), acorus (9g), polygala root (9g), lophatherum herb (9g), immature bitter orange (6g), liquorice root (6g, processed with honey). See the graphic Boil the ingredients with 1000ml of water for 30 minutes and filter out the solution.

Every night when in bed, soak the gauze in the warm solution and use it to cover on the forehead and eyes. This method stimulates and harmonizes the meridians and soothes the mind.

TOP

Herbal foot baths to promote sleep
The feet are the end of three yang meridians (stomach, gall bladder, bladder), and the start of three yin meridians (spleen, liver, kidney). There are more than sixty acupoints located on each foot, and appropriate stimulation on them can activate the flows in the meridians, and enhance body functioning. In modern understanding, soaking the feet dilates the local blood vessels, induces blood flow downward, which relieves the congested state of the brain and relaxes the mind to prepare for sleep. Foot-soaking remedies are not only for relieving foot strain, but is also a simple and effective way to promote health.

</table>

For individuals who prefer a whole body treatment, they can also enjoy herbal baths, <u>saunas or steam methods</u>. The heat of the water helps release the properties of the herbs, and also opens the skin pores, which facilitate the herbs being absorbed through the skin and so into the bloodstream, benefiting both the mind and body.

Enjoying natural springs to promote health

http://www.shen-nong.com/eng/treatment/naturalsprings.html

Natural spring water can be of various temperatures, pressure and mineral content, depending upon the nature of the geology through which it passes. We drink cold spring water and bathe in hot springs.

When bathing in hot springs, the heat and pressure effects promote blood circulation, arrest swelling and pain. In addition, the mineral content of the water can exert particular health benefits. Hot springs are often classified by ions such as HCO3-, SO42-, Cl-, Na+, Ca2+, Mg2+; gases such as carbon dioxide, hydrogen sulphide, radon and certain tract elements such as Ferrum, Bromine and Iodine.

Types of hot springs

[dohtml]<table cellspacing="0" cellpadding="3" border="1" class="etext">
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Pure springs </td>
<td width="583" valign="top" bgcolor="FCC66"> Water temperature is above 25•; the content of carbon dioxide ions and solid compounds are below 1g/L. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Carbonic springs </td>
<td width="583" valign="top" bgcolor="FCC66"> The water contains over 1g/L carbon dioxide ions, and the solid compounds are less than 1g/L. The spring water is clear and sweet, and is suitable for drinking. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Alkaline springs </td>

<td width="583" valign="top" bgcolor="FCC66"> The water contains over 1g/L of sodium carbonate, and thus also called soda springs. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Salty springs </td>
<td width="583" valign="top" bgcolor="FCC66"> The water contains more than 1g/L of sodium chloride; people will feel warmer after bathing. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Sulfate springs </td>
<td width="583" valign="top" bgcolor="FCC66"> Also called gypsum springs, in which the water contains over 1g/L of sulfate; it has a bitter taste. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Ferric springs </td>
<td width="583" valign="top" bgcolor="FCC66"> The water contains a high amount of ferric carbonate, which usually oxidized and red in color. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Alum springs </td>
<td width="583" valign="top" bgcolor="FCC66"> The water contains a high amount of aluminum sulphide. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Sulfur springs </td>
<td width="583" valign="top" bgcolor="FCC66"> The water contains a high amount of hydrogen sulphide. It should be only used for bathing, which is particularly good for exfoliation and disinfection. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Acid springs </td>
<td width="583" valign="top" bgcolor="FCC66"> The water contains a high amount of mineral acids; this water cannot be drunk.. </td>
</tr>
<tr>
<td width="139" valign="top" bgcolor="F8E7C2"> Radiate energy springs </td>
<td width="583" valign="top" bgcolor="FCC66"> The hot water contains certain amount of radium or radon. </td>
</tr>
</table>
<p class="etext"> It is said that hydrogen sulphide promotes functioning of the body; sodium carbonate is beneficial for digestive disorders; chloride ions stimulate blood production and the development of ovarian cysts; calcium and potassium ions enhance

cardiovascular functions, and also regulate neural endocrine activates; magnesium ions helps to calm down the neural system; sodium ions are important for muscular contraction.

 The usual ways of taking hot spring therapies are immersion, cyclic jets and underwater exercise.

<table cellspacing="0" cellpadding="3" border="0" class="etext">
<tr>
<td width="83" valign="top"> Partial immersion </td>
<td width="639" valign="top"> This is taken by sitting in a bathtub filled with water at the navel level and the upper part of body is covered properly.
<table width="100%" border="0" cellspacing="5" cellpadding="0">
<tr>
<td width="10" align="left" valign="top" class="style24"><img src="../images/principles/dot.gif" width="7" height="7" hspace="0" vspace="5"></td>
<td valign="top" class="etext style24">Refreshment: sit in the tub while rubbing the body surface briskly and splashing water over the back region for 3 to 5 minutes. This is suitable for healthy individuals who suffer from depression or nervous debility. Start from 38 - 39•, gradually raise the water temperature each time.</td>
</tr>
<tr>
<td width="10" align="left" valign="top" class="style24"><img src="../images/principles/dot.gif" width="7" height="7" hspace="0" vspace="5"></td>
<td valign="top" class="etext style24">General enhancement: sit in the tub, while, rubbing the body surface softly and splashing water over the back region for 3 to 5 minutes. This is suitable for individuals who are weakened or in early recovery period after a long-term illness. Keep the water temperature about 35 - 36• each time.</td>
</tr>
<tr>
<td width="10" align="left" valign="top" class="style24"><img src="../images/principles/dot.gif" width="7" height="7" hspace="0" vspace="5"></td>
<td valign="top" class="etext style24">Cooling down: sit still in the tub quietly for about 10 to 15 minutes. Start from 38 - 39• and lower the temperature by 2 - 3• each time until the maximum tolerance. This is helpful for individuals who have overly active functional activates.</td>
</tr>
</table></td>
</tr>
<tr>
<td width="83" valign="top"> Full immersion </td>

<td width="639" valign="top"> This is taken by immersing the whole body in a bathtub with water filled to the nipple level.
<table width="100%" border="0" cellspacing="5" cellpadding="0">
<tr>
<td width="10" align="left" valign="top" class="style24"><img src="../images/principles/dot.gif" width="7" height="7" hspace="0" vspace="5"></td>
<td valign="top" class="etext style24">Cool water: the temperature should between 33 - 36• and you should soak for 8-10 minutes. This can relieve heat and enhance body functions, and is usually used for rehabilitation. </td>
</tr>
<tr>
<td width="10" align="left" valign="top" class="style24"><img src="../images/principles/dot.gif" width="7" height="7" hspace="0" vspace="5"></td>
<td valign="top" class="etext style24">Tepid water: the temperature should be about 37 - 38• and you should soak for 15-30 minutes. This can promote calmness and help induce sleep as well as relieving blood vessel contraction; this is particularly good for the management of joints or cardiovascular problems. </td>
</tr>
<tr>
<td width="10" align="left" valign="top" class="style24"><img src="../images/principles/dot.gif" width="7" height="7" hspace="0" vspace="5"></td>
<td valign="top" class="etext style24">Hot water: the temperature should lie between 39 - 42• and you soaking should be for 5-30 minutes. This helps relaxation and promotes metabolism, which is beneficial for skin and joint problems. It overloads the heart and therefore this is not recommended for the aged and those with cardiovascular problems. </td>
</tr>
</table></td>
</tr>
</table>
 Bathing by cyclic jets are good for lumbar problems; during which the entire body or particular regions are splashed with a jet for 3 to 5 minutes. The water temperature lies between 38 -42•, and with a pressure of 1-3 Pa. Underwater exercise is usually performed during rehabilitation of injuries. Qi-gong, acupuncture, massage and wax treatment may be employed along with hot spring baths.

 Precautions for hot spring baths
 Generally, hot spring bathing should not be taken too frequently, for too long or at too high a temperature. Individuals with health problems should consult a professional before taking a hot spring bath, as it may acerbate their condition. For example sulfur springs are good for skin problems, however, it may also induce

insomnia in neurasthenic individuals. </p>

 The usual temperature for spring bathing lies between 38 - 42•, however, some special springs such as carbonic springs, alkaline springs or sulphide springs, the temperature should be 37 - 38• or below, this can prevent vaporization of the gases that would mean loss of some of the therapeutic effects.
 Usually soak for around 15-20 minutes, but the time is mostly subject to the individual's comfort level. If the pulse is over 120 beats per minute or if you feel tired, bathing should stop immediately. Hot spring baths can be taken once daily for 2 to 3 times and then rest for one day break. Alternatively, take 20 to 30 times as one cycle, and rest for 7 to 10 days, then start another cycle.
 The first time that one has a hot spring bath some adverse reactions may be experienced. These include general symptoms like fatigue, insomnia, palpitation, dizziness, nausea, epilepsy, skin rashes or respiratory problems. There may also be pain or swelling in various body parts. If one or more of these symptoms are experienced, bathing should be stopped immediately.

Title: Herbal Foot Baths to Promote Health

craig-oxley - May 22, 2010 03:58 PM (GMT)

Herbal Foot Baths to Promote Health

http://www.shen-nong.com/eng/treatment/footbaths.html

In herbal foot bathing, the feet are immersed in a tub filled with a special herbal solution. Ancient physicians believed that: "the three yin meridians (Liver, Spleen and Kidney) start from the toes, and exterior coldness tends to invade from the soles; washing the feet before sleep helps to warm the yin meridians and expel the coldness." Based on long term experience, they commented that:

> Washing feet in spring promotes the yang qi to flow upward, and thus consolidates the internal organs in their proper positions;
>
> Washing feet in summer helps to eliminate dampness (relieves tiredness and promotes the appetite);
>
> Washing feet in autumn nourishes the lungs and promotes its functioning (less chance of respiratory problems developing);
>
> Washing feet in winter can warm up the dan-tian (enhance resistance against cold weather).

In addition to immersing the feet in a hot solution, massage is applied on the toes and soles to enhance the stimulation. Generally, the Liver Meridian and Spleen Meridian run through the big toe; the Stomach Meridian runs through the second toe; the Gall Bladder Meridian runs through the fourth toe; the Bladder Meridian runs through the small toe and the Kidney Meridian runs through the center of the sole. For example, massaging the big toes can invigorate the digestive functions; the fourth toes can relieve constipation and rib sides discomfort; the small toe is helpful to prevent bedwetting in children and uterine problems in women, while the center of the sole is beneficial for kidney problems.

Herbal foot bathing is widely used as a supplementary healing therapy for conditions like skin diseases, joint pain, hypertension, insomnia or diarrhea in children. Each time prepare a herbal decoction in an amount sufficient to cover ankles; keep the water temperature between 50 -60•, and soak for at least 15 minutes; do this one to three times daily. After bathing, wipe the feet properly, keep warm and avoid wind; raise the feet and rest for 15 to 30 minutes.

Below are sample prescriptions:

[dohtml] 1. Hypertension
<table cellspacing="0" cellpadding="3" border="1" class="etext">
<tr>
<td width="103" valign="top" bgcolor="F8E7C2"> Ingredients </td>
<td width="619" valign="top" bgcolor="FCC66"> Gambir vine stem (20g crushed) and borneol (5g), stuff up with a gauze bag. </td>
</tr>
<tr>
<td width="103" valign="top" bgcolor="F8E7C2"> Methods </td>
<td width="619" valign="top" bgcolor="FCC66"> Steep the bag into the bathtub and

soak for 30 to 45 minutes each time. The same bag can be used twice daily, after waking up or before sleep. Ten days is one course. </td>
</tr>
</table>

<table cellspacing="0" cellpadding="3" border="1" class="etext">
<tr>
<td width="103" valign="top" bgcolor="F8E7C2"> Ingredients </td>
<td width="619" valign="top" bgcolor="FCC66"> Selfheal fruit spike (30g), gambir vine stem (20g), mulberry leaf (15g) and chrysanthemum (20g); prepared as decoction. See picture</td>
</tr>
<tr>
<td width="103" valign="top" bgcolor="F8E7C2"> Methods </td>
<td width="619" valign="top" bgcolor="FCC66"> Each time soak for 10 to 15 minutes, 1 to 2 times daily. </td>
</tr>
</table>

 2. Insomnia
<table cellspacing="0" cellpadding="3" border="1" class="etext">
<tr>
<td width="103" valign="top" bgcolor="F8E7C2"> Ingredients </td>
<td width="619" valign="top" bgcolor="FCC66"> Magnetite (30g), baical skullcap root, chrysanthemum and fleece flower stem (15g of each); prepare as a decoction. See picture</td>
</tr>
<tr>
<td width="103" valign="top" bgcolor="F8E7C2"> Methods </td>
<td width="619" valign="top" bgcolor="FCC66"> Soak before sleep. </td>
</tr>
</table>

 3. Emission or premature ejaculation
<table cellspacing="0" cellpadding="3" border="1" class="etext">
<tr>
<td width="103" valign="top" bgcolor="F8E7C2"> Ingredients </td>
<td width="619" valign="top" bgcolor="FCC66"> Agrimony grass (30g), baical skullcap root and peony root bark (9g of each); prepare as a decoction. </td>

View Full Version: Shire hits a 'high' on hyperactivity drug hopes

Title: Shire hits a 'high' on hyperactivity drug hopes

TheUnhivedMind - July 15, 2011 03:01 AM (GMT)

Shire hits a 'high' on hyperactivity drug hopes

Although the market slouched back into the doldrums amid jitters over America's credit rating, investors rushed into Shire, sending the pharmaceutical company to an all-time high.

By Rachel Cooper, City Reporter
6:52PM BST 14 Jul 2011
http://www.telegraph.co.uk/finance/markets...drug-hopes.html

Scribblers at Goldman Sachs reiterated their "conviction buy" rating and £23.00 price target on the blue-chip drug maker, which develops treatments for rare diseases and conditions such as attention deficit hyperactivity disorder (ADHD).

Shire's ADHD drugs include Intuniv and Vyvanse, with the latter seeing a 26pc increase in revenue last year to $634m (£393m). The company is also looking to expand the application of Vyvanse to other conditions, such as binge eating and schizophrenia.

Goldman was particularly upbeat about the hyperactivity opportunity, highlighting data showing the American market grew 10pc in June. "ADHD drugs are around 35pc of Shire's total revenue base, and a key element of our thesis on Shire is our above-consensus view on its ADHD franchise," said the broker.

Analysts described Shire as "one of the best positioned European pharmaceutical companies", saying their revenue estimates were 4pc to 8pc ahead of company-compiled consensus, while their earnings-per-share estimates are 6pc to 7pc ahead.

Analysts at Jefferies were encouraged by recent ADHD prescription trends, too. As a result of that and other factors, such as Shire's recent acquisition of US business

Advanced BioHealing, they raised their price target to £20.00 from £18.00, but kept their “hold” rating.

Shire ticked up 27p to a high of £20.73, but the benchmark index as a whole veered into the red as dealers got a chance to react to Moody’s warning that America could lose its triple-A rating.

That further flustered investors who were already fretting about debt troubles in Europe, sending the FTSE 100 down 59.48 points to 5,846.95. The FTSE 250 lost 76.63 points to 11,766.56.

Financial stocks remained largely under pressure, with Barclays shedding 2.15 to 225.85p and Royal Bank of Scotland easing 0.09 to 35.43p

But Lloyds Banking Group galloped ahead thanks to Goldman Sachs. The broker lifted its rating on the Black Horse to “buy” in light of weakness in the share price. Analysts suggested that the recent underperformance “appears to have been related to rising market concerns over sovereign debt burdens, particularly in Greece and Italy”. But the broker added that the bank’s exposure to indebted European countries is limited outside of Ireland. Goldman’s optimism helped Lloyds leap 1.43 to 45.82p.

The lender was joined by precious metal miners as the price of gold and silver continued to forge ahead. Randgold Resources put on 25p to £54.65 while Fresnillo advanced 75p to £15.95 as it posted record second-quarter silver and gold production.

Also motoring ahead was Rolls-Royce as both JPMorgan Cazenove and Bank of America-Merrill Lynch published upbeat notes on the engine manufacturer. As part of a review of the aerospace and defence sector, JPMorgan lifted its rating on Rolls to “overweight” and increased its price target to 751.83p from 655.81p.

Merill added Rolls to its “Europe 1” list and increased its earnings-per-share forecast for this year by 2pc. That helped Rolls put on 8 to 659p.

Meanwhile, Collins Stewart was focusing on mid-cap defence stocks. Analysts cautioned that the good times were over as the industry faces a “'perfect storm’ of geopolitical and fiscal pressures”.

They added that with the final withdrawal of US forces from Iraq and the start of troop withdrawals from Afghanistan, US defence spending is poised to contract.

But, despite this “pessimistic backdrop”, Collins Stewart thought niche areas, such as cyber warfare, could see increased levels of spending. It kept its “buy” rating on defence technology company Cobham, even though it eased 2.7 to 210.7p. Chemring kept its “buy” rating, too, as analysts thought fears over its dependence on continuing operations in Afghanistan were overdone. Even so, the maker of military equipment

inched down 9½ to 586½p.

Back on the top tier, oil stocks were under pressure with Tullow Oil and Cairn Energy retreating 34p to £12.69 and 13.8 to 387.3p respectively. But Petrofac suffered the sharpest fall, sliding 57p to £14.45, as Barclays Capital cut its rating on the oil services business to “underweight”. In a review of the sector, analysts argued that with continuing political uncertainties in Petrofac’s heartland, they believed share price performance might lag that of the rest of the sector.

A downgrade also weighed on Man Group as HSBC cut the hedge fund manager to “underweight”, sending it down 5.2 to 240.6p. Joining Man was InterContinental Hotels, which retreated 41p to £12.41 as US rival, Marriott, issued a tepid forecast for the year.

Retailers stayed under pressure as well, with Marks & Spencer slipping a further 8.8 to 355p after its trading update on Wednesday and Next shed 32p to £23.77. However, Associated British Foods, which owns Primark and Silver Spoon, rose 24p to £10.81 after saying it was on track to meet its full-year earnings targets.

On the second tier, Premier Foods soared 3.56 to 21.66p after the maker of Mr Kipling cakes and Hovis bread appointed Michael Clarke, head of Kraft Europe, as its new chief executive.

A board shake-up had the opposite effect on Mitchells & Butlers, though. As the pub group, which owns All Bar One, announced that its chairman was stepping down, it fell 10.6 to 295p.

Suffering the sharpest fall, however, was Thomas Cook. Since the tour operator posted a profit warning on Tuesday, its shares have fallen almost 42pc as analysts cut forecasts and price targets. Earlier this week, Morgan Stanley cut its target price to 100p from 200p and Panmure Gordon said its 2011 earnings-per-share forecast had fallen 23pc to 17.2p. Thomas Cook tumbled 13.15 to 71.3p on Thursday while its peer TUI Travel shed 9½ to 192½p.

Elsewhere, Entertainment One, the film and television distributor behind the Twilight films, perked up 15 to 192p. Giving the shares a lift was the inking of a deal with LoveFilm that will give subscribers exclusive online access to Entertainment One’s titles.

Drug selectively dampens bad memories
By Emily Chung, CBC News Posted: May 26, 2011 4:18 PM ET Last Updated: May 26, 2011 8:25 PM ET Read 38 comments38

Post-traumatic stress disorder is most often associated with military service. Mark Dye/ Reuters

A drug that seems to dampen bad memories, while leaving other memories intact, may one day be used to treat post-traumatic stress disorder.

Previously, scientists knew that a stress hormone called cortisol affects people's ability to form new memories and decrease negative emotions that might have been associated with them. But they thought once memories had solidified, they could no longer be affected by cortisol.

A new study led by researchers at the Centre for Studies on Human Stress, affiliated with the University of Montreal, shows that in fact, metyrapone, a drug that temporarily alters cortisol levels can be used to dampen an old, negative memory for days and possibly the long term.

"It gives us a second chance, basically, to act on the memory," said Marie-France Marin, lead author of the study published in the Journal of Clinical Endocrinology and Metabolism.

What is PTSD?
Post-traumatic stress disorder is the constellation of symptoms such as depression,

flashbacks and nightmares that can be brought on by any type of trauma.

It's most often associated with military service, among soldiers who return from battle only to suffer the after-effects of what was once called "shell shock."

Psychotherapy may be an effective treatment. Drugs such as antidepressants, antipsychotics, anticonvulsants and beta blockers may also help with some of the symptoms.

That makes it potentially very useful, because most memories that cause problems are older rather than newly formed.

"Soldiers, for example, or rape victims, are not going to go to the emergency room within an hour, obviously," Marin said Thursday.

She added that many people who experience traumatic events don't necessarily go on to develop post-traumatic stress disorder, and the fact that the drug works long after the memory was formed means it can be selectively given to people who have suffered long-term effects from a traumatic experience.

The study involved 33 men who were asked to watch a story in the form of slides with audio narration. The story starts off as an emotionally neutral tale of a little girl who visits her grandparents and builds a birdhouse. The middle three slides show an accident where the girl's hand gets mutilated and bloodied with a saw. The final four slides are also neutral, as the girl gets medical care and is expected to be fine.

The drug 'gives us a second chance, basically, to act on the memory,' said Marie-France Marin, the PhD student who led the study. University of MontrealThree days later, the volunteers were given a placebo or one or two doses of a drug called metyrapone, which dramatically decreases levels of cortisol, which is normally present at a certain level in the blood.

They were then asked to recall the story.

Those who received two doses of metyrapone had significantly more trouble remembering the negative parts of the story compared to the rest of the story. That effect was not seen among those who had taken the single dose or the placebo.

What is cortisol?
Cortisol is a hormone produced by the adrenal gland in the kidneys. It is always present at low levels in the body, but more is produced when the body is under stress. Cortisol affects many systems in the body, including metabolism and the immune system.

What is metyrapone?
Metyrapone is a drug that lowers levels of cortisol to far beneath normal levels — low

levels that cannot be achieved without drugs, researcher Marie-France Marin says. It was originally used to treat an uncommon disorder called Cushing's disease, in which people secrete too much cortisol. However, other treatments for Cushing's have been developed, and metyrapone is no longer on the market. The drug does have some side-effects, such as dizziness. However, Marin believes that since it only needs to be taken once to affect memories, the side-effects are minimal compared to the potential benefit.

Four days later, when their cortisol levels were back to normal, the participants came back into the lab and were asked to recall the story again.

Those who had taken two doses of metyrapone still had trouble remembering the negative parts of the story.

That result surprised the researchers.

It seems to show that contrary to what scientists previously believed, "at the time of retrieving the memory, you open an opportunity for the memory to be changed," Marin said. "And by lowering the cortisol levels, you change it in a lasting manner."

Marin said the researchers believe the double dose had an effect where the single one didn't because the two doses were separated by three hours, lowering cortisol levels for a longer time.

Potential use during psychotherapy
She foresees that the drug may one day be given to people with serious cases of post-traumatic stress disorder during psychotherapy, when they are asked to describe their traumatic experiences.

However, before that happens, the researchers must do more work to figure out whether the technique will work on memories that are years old instead of days old, and just how long-lasting the effects are.

"A lot of studies are needed to get to the perfect treatment, obviously," she said.

She also emphasized that the drug should only be used in cases of people with very serious cases of PTSD.

"It's really, really to help people who could not recover, who could not live a normal life, basically," she said.

"You can't start giving this to everyone who has a bad day…. Memories are important. They define who you are."

View Full Version: Merck Profit Beats Analysts' Estimates on Diabetes

Title: Merck Profit Beats Analysts' Estimates on Diabetes
Description: *Drugs, Cost Reductions*

TheUnhivedMind - May 1, 2011 05:22 PM (GMT)

Merck Profit Beats Analysts' Estimates on Diabetes Drugs, Cost Reductions

By Robert Langreth and Tom Randall - Apr 29, 2011
http://www.bloomberg.com/news/2011-04-29/m...reductions.html

Merck & Co., the second-largest U.S. drugmaker, reported first-quarter profit that topped analysts' estimates, boosted by cost reductions and higher sales of its Januvia diabetes pill.

Earnings excluding a $500 million charge to settle an arbitration dispute with Johnson & Johnson (JNJ) and other one-time items were 92 cents a share, beating the 84-cent average estimate of 15 analysts surveyed by Bloomberg. Net income more than tripled to $1.04 billion, or 34 cents a share, the Whitehouse Station, New Jersey-based company said. Sales rose 1.4 percent, led by rising demand for Januvia and the HIV medicine Isentress.

Merck is eliminating jobs, buying back shares and investing in new research as the company loses patent exclusivity in the next five years to products responsible for half of the company's revenue. The drugmaker settled its dispute with New Brunswick, New Jersey-based J&J in April over the arthritis drug Remicade, ending a conflict that weighed on Merck shares.

"Merck certainly showed they have the numbers under control and things are going well," said David Maris, an analyst with CLSA in New York, in a telephone interview. "Their core growth products are doing very well, including Januvia."
Forecast

Merck raised the lower end of its 2011 profit forecast to $3.66 a share, excluding certain

items. The company on April 15 had affirmed the previous range of $3.64 to $3.76 following the Remicade resolution.

Merck rose 18 cents to $35.95 at 4 p.m. in New York Stock Exchange composite trading. The shares increased 2 percent in the past 12 months.

This is the first quarter of earnings under Kenneth Frazier, who took over as chief executive officer on Jan. 1. Since then, Merck has reported pipeline setbacks including a halted trial of the company's experimental blood thinner, vorapaxar, which resulted in a $1.7 billion writedown in February. Last month, the company walked away from a second blood thinner, betrixaban, and had a trial of its vaccine to prevent staph infections suspended pending a review.

Still, Frazier in February said he's committed to spending as much as $8.5 billion in research and development, a sum that would rank Merck alongside bigger rivals New York-based Pfizer Inc. (PFE) and Roche Holding AG in Basel, Switzerland. That target was lowered today to as much as $8.4 billion.
Hepatitis Drug

Merck is awaiting U.S. approval for its experimental hepatitis C drug boceprevir. This week, a Food and Drug Administration advisory panel recommended that the agency approve the product. The drug is expected to bring in about $600 million a year by 2015, the average estimate of six analysts surveyed by Bloomberg. The company is also conducting tests in 30,000 patients for its cholesterol drug anacetrapib.

Merck lost exclusive rights last year to blood-pressure drugs Cozaar and Hyzaar. In 2012, the company will face generic competition on its asthma treatment, Singulair, the company's top drug with $4.99 billion in sales last year. Merck eliminated about 11,500 jobs last year in a plan to reduce its workforce by 17 percent by 2012. The workforce was reduced in the first quarter to 93,000 from 94,000 at the end of 2010.

Sales of Cozaar and Hyzaar declined 46 percent to $426 million, from $782 million in the first quarter of last year. That compares with $364 million, the average estimate of three analysts surveyed by Bloomberg.
Januvia, Janumet

Sales of Januvia and Janumet increased 47 percent to $1.04 billion. Januvia stimulates the pancreas to produce more insulin and signals the liver to make less blood sugar. The medicine doesn't have side effects linked to other types of diabetes medicines, studies suggest.

Revenue from the HIV treatment Isentress increased 26 percent to $292 million. Isentress is the first in a new class of AIDS medicines that attack HIV by blocking an enzyme used to hijack healthy immune cells.

Remicade sales rose 12 percent to $753 million. Under the agreement with J&J, Merck will keep exclusive marketing rights in 70 percent of the areas where it sells the drug and increase J&J's share of the profit from those sales to 50 percent.

"Investors have clarity around this messy situation and can now focus and invest in Merck for the late-stage pipeline," said Marc Goodman, an analyst at UBS AG in an April 15 note.

View Full Version: Faith investors turn on pharmaceuticals companies

Title: Faith investors turn on pharmaceuticals companies

TheUnhivedMind - April 23, 2011 11:54 PM (GMT)

Faith investors turn on pharmaceuticals companies

American pharmaceutical giants are facing calls from faith investors to curb "exorbitant" drug price rises in the latest move by religious groups to urge corporate change.

By Rachel Cooper 8:15PM BST 23 Apr 2011
http://www.telegraph.co.uk/finance/newsbys...-companies.html

Pfizer, Johnson & Johnson (J&J), Bristol Myers-Squibb (BMS) and Abbott Laboratories are among those being pressed to impose "price restraint" on branded drugs, such as ensuring increases do not exceed annual inflation.

Members of the Interfaith Center on Corporate Responsibility, including Catholic hospitals and orders of nuns, have filed shareholder resolutions on ballots for the drug makers' annual meetings, which fall this week and next.

Their proposals cite research by Medco, which found that in 2010 "inflation in branded drugs accelerated to an all-time high of 9.2pc", while generic drug prices increased by just 0.3pc. Shareholders said they were not satisfied drug makers had made "a clear case offering fiscal and moral justification for such exorbitant price increases".

Faith investors also argue that by charging high prices, the pharmaceutical companies are restricting their business. Edward Gerardo, director of community commitment and social investments at Catholic hospital chain Bon Secours Health System, said: "They're really focusing on a smaller population of people who are well insured, who can afford more expensive medication, but they're also focusing on becoming a smaller company.

"Elevating the prices is a short-term response to trying to satisfy shareholders, but not

over the long term."

The drug firms are asking shareholders to vote against the resolutions. In its proxy statement, BMS said flexibility on pricing was necessary to enable it to "invest aggressively" in research.

Pfizer said: "It is essential that innovators are able to price drugs based on the value they bring to patients." And a spokesman for Abbott said the company takes a "responsible" approach to pricing.

Drug makers also highlighted assistance programmes to help improve access to medicines and J&J said in its proxy that it strives to keep average price increases across its health-care products within the consumer price index.

Pressure on drug makers is the latest example of religious investors taking a stand against perceived corporate shortcomings or excesses.

Four leading orders of Catholic nuns are urging Goldman Sachs to review its executive remuneration, unhappy about the $70m (£42m) the Wall Street bank is paying five of its leading directors – clearly not believing Lloyd Blankfein, one of the five, who said in 2009 he was simply doing "God's work".

One of the Sisters of St Francis, in Pennsylvania, went so far as to say the order's founding saint would be "spinning in his grave" if he knew of the largesse at Goldman, which is facing considerable "noise" around its annual meeting in two weeks' time.

The Goldman movement follows a campaign against Morgan Stanley and Deutsche Bank, sued by Irish nuns in 2010 for allegedly failing to redeem their investment.

The banks and big pharma are not alone. BP has faced criticism of high executive payouts and of its safety record from Christian groups holding more than £200m of its shares. The action at BP's annual meeting in London 10 days ago heralded a fresh approach, as groups from both sides of the Atlantic – US-based Christian Brothers Investment Services and Britain's Church Investors Group (CIG) – co-ordinated votes on resolutions including BP's remuneration report.

Although CIG adopted a British stance of pressure through engagement, rather than the American route of filing a resolution, they kept open the possibility of tabling one next year if the oil giant does not make changes.

"It wasn't the right time to bring it, we needed to give the company a chance to put things in place," said Bill Seddon, vice-chairman of CIG, which represents almost 40 church investors with £12bn of assets between them.

But he added: "We will want to see some action and, in the autumn, we will look at what

has actually happened, what's the evidence that BP has acted to make sure this sort of thing doesn't happen again, like the Gulf [of Mexico] disaster."

Mr Seddon pointed out there is now greater collaboration between different faith groups: "The difference is it's not just individual churches doing it now, it's much more collective, which is all to the good because it makes the voice louder."

Activism has also been rekindled by the the Stewardship Code. Born out of the banking crisis, it encourages better scrutiny of companies by those who own them.

"Good stewardship is a biblical phrase and has a biblical history," said Helen Wildsmith, head of ethical and responsible investment at the CCLA, which manages more than £4bn of funds for 15,000 Church of England parishes, cathedrals and schools, as well as 30,000 charities. "It's really ignited interest in the churches about being good stewards of their assets so the code has been part of this resurgence."

But faith investors' attempts to effect change through engagement draws criticism from observers who would like to see a tougher stance.

Lee Coates, of specialist financial advisers Ethical Investors, said: "What I'd like to see is better involvement and engagement with cut-offs, active positive engagement that requires companies to do something. That doesn't mean be slightly nicer.

"If you look through a lot of the resolutions, they're calling on companies to be better, to understand more, to incorporate more; there are very few resolutions which say 'you shouldn't do that'."

But Mr Seddon, who is also chief executive of the Central Finance Board of the Methodist Church, highlighted the importance of dialogue. "Avoidance is a pretty negative kind of approach to take; you don't have any influence if you are not involved. The ideal is to be working with companies to encourage them to change their practices."

That was echoed by Julie Tanner, assistant director at Christian Brothers, who said: "It's not just engagement for engagement's sake. There has to be improvement made."

"[Faith investors] are perceived to be preaching to companies on human rights or environmental stewardship, but in so many cases we're going in with real financial issues and risk arguments.

"We're going in as the moral or ethical voice, but also the financial voice."

View Full Version: Eli Lilly Profit Drops 15% on Costs From Diabetes

Title: Eli Lilly Profit Drops 15% on Costs From Diabetes
Description: *Accord with Boehringer*

TheUnhivedMind - April 18, 2011 05:41 PM (GMT)

Eli Lilly Profit Drops 15% on Costs From Diabetes Accord With Boehringer

By Catherine Larkin - Apr 18, 2011
http://www.bloomberg.com/news/2011-04-18/l...boehringer.html

Eli Lilly & Co., whose top-selling antipsychotic drug Zyprexa faces generic competition in October, said first-quarter profit fell 15 percent on costs from a diabetes agreement with Boehringer Ingelheim GmbH.

Net income decreased to $1.06 billion, or 95 cents a share, from $1.25 billion, or $1.13, a year earlier, the Indianapolis- based drugmaker said today in a statement. Earnings excluding one-time items were $1.24 a share, beating the $1.17 average estimate of 16 analysts surveyed by Bloomberg. The company reiterated its forecast for full-year adjusted earnings.

Lilly has exceeded analysts' estimates in 21 of the past 25 quarters, according to data compiled by Bloomberg. Investors are more focused on whether Chief Executive Officer John Lechleiter's strategy of spurning large-scale acquisitions in favor of smaller deals and partnerships will pay off, said Les Funtleyder, a health fund manager at Miller Tabak & Co.

"They've done a pretty good job of beating expectations," Funtleyder said in a telephone interview from New York. "We are heading toward the Zyprexa expiration. At some point, we need a little bit more clarity about how they're going to grapple with that."

Lilly fell 54 cents, or 1.5 percent, to $35.47 at 10:24 a.m. on the New York Stock Exchange. Before today, the shares had fallen 1.5 percent in the past 12 months.

Revenue Increases

Revenue in the quarter rose 6.4 percent to $5.84 billion, $160 million ahead of analysts' estimates on higher demand overseas. The antidepressant Cymbalta increased 13 percent to $908.8 million, including a 43 percent gain outside the U.S. after it was introduced in Japan and other markets, Lilly said. Zyprexa sales rose 5.5 percent to $1.28 billion. Alimta, a lung cancer treatment, gained 10 percent to $579.9 million.

The drugmaker needs new products to replace top-selling Zyprexa. Lilly is also developing medicines for cancer, arthritis and Alzheimer's disease, all of which "have a fair amount of risk associated with them" in terms of the likelihood of commercial success, said Tony Butler, an analyst at Barclays Capital in New York, in a telephone interview last week.

Lilly agreed to pay $388 million in the quarter to closely held Boehringer, of Ingelheim, Germany, to help develop two of the company's diabetes drugs. The agreement also includes two insulin products developed by Lilly, which may receive $650 million in payments if the medicines are successful in testing.

The quarter also included $76.3 million in cost tied to previously announced job cuts. While Lilly reaffirmed its Jan. 27 forecast of full-year earnings excluding one-time items of $4.15 to $4.30 a share, the company said net income in 2011 will be 6 cents less per share than previously forecast because of the severance costs.

TheUnhivedMind - April 18, 2011 05:43 PM (GMT)

Don't worry they'll just get the AMA to lower the level needed to get you hooked on Insulin poisons in the future and force you into their diabetes trap of hell. This is the inquisition folks. This Eli Lilly was purposely turning many elderly into diabetics and getting away with it under the cover of the age of these elderly making it seem the norm.

Title: Drugmakers Poised to Report Biggest Profit Drop
Description: *Since 2006 on Patent Loss*

TheUnhivedMind - April 15, 2011 06:32 PM (GMT)

Drugmakers Poised to Report Biggest Profit Drop Since 2006 on Patent Loss

By Tom Randall - Apr 15, 2011
http://www.bloomberg.com/news/2011-04-15/d...atent-loss.html

Pfizer Inc. (PFE) and rival U.S. drugmakers are poised to report the industry's biggest drop in quarterly profit in more than four years as the companies cope with record patent losses in 2011.

Earnings at the 11 drugmakers listed in the Standard & Poor's 500 Index probably fell 1.4 percent in the first quarter, even as overall profit for companies in the index may have gained 12 percent to a record, according to analyst estimates compiled by Bloomberg. Pharmaceutical profits last fell in 2009's first quarter, and the current drop is the biggest since a 3.5 percent slip in the final quarter of 2006.

Pfizer, Merck & Co. and Bristol Myers Squibb Co. are eliminating jobs, cutting costs and shedding business units to prepare for patent expirations. In 2011, drugmakers face generic rivals to products with $34 billion in yearly sales, a figure 34 percent higher than last year. Sales at risk from patent losses will swell to $147 billion by 2015, Bloomberg data shows.

"A brand can lose 40 percent of sales and 50 percent of volume globally in the first two years after generic entry," said Chris Bowe, a New York-based analyst for Informa Plc, a London industry research firm, "It's now not uncommon to see a brand lose 50 percent of U.S. sales in two quarters."

Four U.S. drugmakers report earnings next week. Eli Lilly & Co., based in Indianapolis, will report on April 18, followed by New Brunswick, New Jersey-based Johnson &

Johnson and New York- based Forest Laboratories Inc. on April 19 and Abbott Laboratories, of Abbott Park, Illinois, on April 20. The average quarterly earnings growth for drugmakers was 10 percent since the first quarter of 2007.
Divestitures Considered

Drug profits last quarter were also hampered by the U.S. health-care overhaul, which mandates product discounts for older Americans, as well as price cuts from European drugmakers.

To make up for lost sales, Chief Executive Ian Read at New York-based Pfizer said last quarter he was reviewing possible divestiture of each company division -- baby formula, animal health, consumer and established products -- to concentrate on drug development. On April 4, Pfizer agreed to sell Capsugel, its smallest unit, which manufactures pill casings, to KKR & Co. for $2.38 billion.

“Everybody knows it’s coming, everyone’s placed their bets,” said Les Funtleyder, a New York-based fund manager at Miller Tabak & Co. “What pharma investors are interested in is pipelines and corporate transactions -- either acquisitions or divestitures. That’s going to dominate the discussions.”

Analysts and investors will press Read on conference calls about his plans and ask other CEOs whether Pfizer’s break-up strategy will be repeated at their companies, said Barbara Ryan, an analyst at Deutsche Bank AG.
‘Cool Kid’

GlaxoSmithKline Plc (GSK), based in London, yesterday said it will divest its over-the-counter brands. Sanofi-Aventis SA of Paris is seeking a buyer for its U.S. dermatology business, people familiar with the matter on April 13.

Pfizer “is like the cool kid in school now, and everyone will be focused on asking that question: Are you going to split up” your non-pharma business, Ryan said in a telephone interview. “Companies are going to take different paths.”

Nine of the world’s 15 best-selling medicines will lose patent protection during the next five years. Chief among these products is Pfizer’s Lipitor cholesterol pill, the world’s best selling drug with $10.7 billion in 2010 sales. Lipitor lost market exclusivity in Spain and Canada last year and will have generic U.S. competition in November.
Pfizer Profit Slips

Pfizer reports earnings on May 3. The world’s biggest drugmaker may post a drop in profit excluding one-time items to 58 cents a share from 60 cents a year earlier, according to the average of 17 analysts surveyed by Bloomberg. Joan Campion, a spokeswoman, declined to comment on Read’s plans for splitting off units.

Merck, based in Whitehouse Station, New Jersey, lost patent exclusivity last year to its

Cozaar and Hyzaar blood pressure medicines, resulting in a 57 percent drop in the drugs' sales in the fourth quarter. Next year Merck loses its Singulair asthma treatment, with $5 billion in yearly sales.

Merck reports April 29. Its profit excluding certain items probably gained to 84 cents a share from 83 cents, according to 15 analysts surveyed by Bloomberg.

Most U.S. revenue growth in the pharmaceutical industry will come from price increases after some drug costs were raised more than 10 percent, Bernstein's Anderson wrote in an April 12 note. Pricing outside the U.S. probably declined after cost reductions were implemented last year in at least 10 European countries, he said.
Bristol-Myers Pipeline

Bristol-Myers is expected to report earnings declined to 52 cents a share from 56 cents a share excluding one-time items, according to 15 analysts surveyed by Bloomberg. The company faces generic competition next year to its Plavix blood thinner, which generates about a third of the company's revenue.

To prepare for the loss, the New York-based company sold its wound care and medical imaging businesses in 2008 to raise almost $5 billion. The company also split off its Mead Johnson nutritionals business to focus on adding drugs to its pipeline. Bristol-Myers won U.S. approval in March for Yervoy, the first treatment proven to extend lives of patients with advanced melanoma, and is expecting U.S. approval decisions on four new drugs by the end of 2012, Jennifer Mauer, a spokeswoman, said in a telephone interview.

Eli Lilly & Co. (LLY), based in Indianapolis, faces the biggest loss of branded drugs as a percentage of sales, with 78 percent of revenue facing generic competition by 2016, according to a Bloomberg analysis. Its top seller, the antipsychotic medicine Zyprexa, loses exclusivity this year. Profit for the quarter likely declined to $1.17 a share, from $1.18 a share a year earlier, according to analyst estimates.
Roche Results

Roche Holding AG, the world's biggest maker of cancer drugs, yesterday said first-quarter sales declined 9 percent as the Swiss franc strengthened and revenue from the Avastin tumor medicine fell. The Basel, Switzerland-based company also said it expects the U.S. health-care overhaul will have stripped about 1 billion francs ($1.12 billion) from sales by the end of this year, following a 532 million-franc impact in 2010.

The law's impact "should level out in the second half of the year," CEO Severin Schwan said on a conference call. The changes are expected to shave "just over" 2 percentage points from revenue in 2011, he said.

Description: *Novartis*

TheUnhivedMind - April 12, 2011 03:08 AM (GMT)

GW signs Sativex cannabis-based drug deal with Novartis

GW Pharmaceuticals has signed up Swiss drug group Novartis to sell its cannabis-based multiple sclerosis drug, in a significant breakthrough for the British company that sent its shares up more than 12pc.

By Graham Ruddick 9:24PM BST 11 Apr 2011
http://www.telegraph.co.uk/finance/newsbys...h-Novartis.html

Under the deal, Novartis will pay an initial $5m (£3m) to sell Sativex in Australia, New Zealand, Asia, the Middle East and Africa. GW is also potentially in line for $28.75m of milestone payments as well as royalties on sales.

Sativex treats muscle spasms in MS patients and GW is also trialing its use for cancer sufferers. The drug was launched in Britain last year, with the cannabis used in the drug grown at secret locations in the English countryside.

Agreeing a deal with Novartis allows GW to take the drug into emerging markets. Analysts said GW "could not have asked for a better partner in these regions" than the Swiss major.

Justin Gover, GW's managing director, said: "We are delighted to have entered into this agreement with Novartis. As one of the world's leading pharmaceutical companies with a strategic focus in both MS and oncology, Novartis represents an excellent commercial partner for Sativex in these important and growing international markets."

GW has already struck similar licensing agreements to sell Sativex in other parts of the world, including Otsuka Pharmaceutical in the US, and Bayer in the UK.

GW shares rose by 11.95 to 107.45p on Monday.

Shawn Manning, analyst at Singer Capital Markets, said: "Successful commercialisation of Sativex is a key driver for GW Pharma, given our view that this is the key factor that will drive the potential for sustainable profitability going forwards."

View Full Version: Glaxo offers NHS rebate if latest cancer drug fail

Title: Glaxo offers NHS rebate if latest cancer drug fail
Description: *to outperform Pfizer rival*

TheUnhivedMind - December 26, 2010 04:22 PM (GMT)

Glaxo offers NHS rebate if latest cancer drug fails to outperform Pfizer rival

GlaxoSmithKline has agreed a new deal with the National Health Service that will see the pharmaceuticals giant hand back money to the Government should one of its drugs fail to outperform a rival medicine.

By Jonathan Sibun 6:30AM GMT 26 Dec 2010
http://www.telegraph.co.uk/finance/newsbys...izer-rival.html

The unusual deal, believed to be the first of its kind, comes as the Government is heightening efforts to cut down on waste in the health service as it looks to reduce public spending.

The Government last week outlined plans for a radical shake-up of its drugs policy and the introduction of a "value-based" pricing model from the end of 2013. The model would allow companies to agree an initial "contingent" price for a medicine that could then be revised in the light of clinical evidence as to the drug's effectiveness.

GSK has agreed to hand the NHS a partial rebate if Votrient, its new kidney cancer drug, fails in clinical trials to match up to Sutent, a rival medicine produced by Pfizer.

On Friday, the National Institute for Health and Clinical Excellence (Nice), the cost-effectiveness watchdog, recommended Votrient's use but only with the proviso of the special pricing scheme.

Sutent is cheaper than Votrient and GSK has also agreed to reduce its cost by 12.5pc to bring it into line with the rival treatment.

The potential for a rebate is a further part of the complex pricing deal.

"If we fail to confirm that they are comparable in efficacy – which we do not expect – then we provide a rebate back to the NHS as a result," Simon Jose, head of GSK in the UK, told Reuters.

"We are moving in the direction where price is driven by value and value is driven by evidence, and therefore we can start to construct different sorts of arrangements where we can balance this off," he added.

The results of the clinical head-to-head trial will not be known until mid-2012. The size of the potential rebate has not been disclosed, although the GSK drug costs around £14,000 to supply to a patient annually.

Mr Jose said the difficulty of fully valuing cancer medicines meant it was likely that such pricing models would increasingly be used in negotiations between the Government and industry.

Global sales of Votrient are expected to hit $314m (£203m) in 2014, according to consensus estimates from Thomson Reuters.

Nice expects to issue its final guidance on Votrient in February next year.

View Full Version: Novartis Plans to Cut 1,400 Drug Sales Jobs in U.S

Title: Novartis Plans to Cut 1,400 Drug Sales Jobs in U.S
Description: *Cost Is $85 Million*

TheUnhivedMind - December 1, 2010 04:31 AM (GMT)

Novartis Plans to Cut 1,400 Drug Sales Jobs in U.S.; Cost Is $85 Million

By Phil Serafino - Nov 30, 2010
http://www.bloomberg.com/news/2010-11-30/n...85-million.html

Novartis AG plans to cut 1,400 sales jobs in the U.S. as the drugmaker prepares for patent expirations and product introductions.

The reductions will result in a one-time cost of about $85 million, the Basel, Switzerland-based company said in a statement today. The cuts don't affect the sales forces for cancer treatments or the Sandoz generic-drug unit, said Anna Frable, a company spokeswoman.

Novartis Chief Executive Officer Joseph Jimenez told investors this month that the company would review sales and manufacturing to cut costs. Crosstown rival Roche Holding AG said this month it would eliminate 4,800 jobs to offset pressures on drug prices and setbacks in drug development.

"The future growth potential for our organization remains strong," said Andy Wyss, president of Novartis Pharmaceuticals Corp., the parent's U.S. unit, in the statement. The reductions "will enable us to focus our resources on key launch products and capture opportunities in both primary care and specialty medicines."

The drugs sold by the East Hanover, New Jersey-based unit are changing as patents expire and new products come to market, according to the statement. The company's best-selling drug, Diovan for hypertension, starts to lose U.S. patent protection in 2012. In September, U.S. regulators approved Gilenya, a multiple sclerosis pill that the company says may bring in billions of dollars annually.

Novartis fell 80 centimes, or 1.5 percent, to 53.25 Swiss francs at the 5:30 p.m. close of trading in Zurich, giving the company a market value of 140.5 billion francs ($140.7 billion). The stock has declined 2.4 percent this year, including reinvested dividends, compared with a 6.3 percent return for the Bloomberg Europe Pharmaceutical Index.

Jimenez, presenting the company's strategy to analysts and investors on Nov. 17 in London, said cost savings will be invested in drug development and faster-growing emerging markets such as China, Russia, Brazil and India.

The company employed about 99,800 people at the end of last year.

Novartis is testing 142 drugs in human trials, and plans to have submitted eight experimental drugs for regulatory approval by the end of this year, the company said on Nov. 17.

View Full Version: £600m cancer drug fund announced

Title: £600m cancer drug fund announced
Description: *[ALL TO WASTE ON TOXIC POISONS]*

TheUnhivedMind - October 27, 2010 01:48 AM (GMT)

£600m cancer drug fund announced

The new fund kicks off in April 2011

27 October 2010 Last updated at 00:35
http://www.bbc.co.uk/news/health-11630699

Patients in England will benefit from a £600m fund to improve access to cancer drugs over the next three years, the government has confirmed.

The move is to address the UK's poor record of cancer treatment provision compared with the rest of Europe.

Health Secretary Andrew Lansley said cancer patients were already getting extra treatments thanks to an interim fund of £50m which began in October.

From next April, the first of three annual £200m sums will be available.

Mr Lansley said this would enable NHS doctors to buy drugs for their patients that can extend life or improve its quality.

"This £200m a year funding over three years for cancer drugs is a crucial step forward in addressing the disparity in patients' access to cancer drugs in England compared to other countries.

"My aim is to truly empower patients."
Greater availability

A recent analysis ranked the UK 12th out of 14 developed countries - which included

much of Western Europe, North America, Australia and New Zealand - on access to cancer drugs that have come onto the market within the past five years.

Experts said part of the reason was because some of the newer cancer drugs had not been approved by England's drugs regulatory body, the National Institute for Health and Clinical Excellence (NICE).

The extra money should make it easier for doctors to prescribe treatments even if they have not yet been approved by NICE.

Mr Lansley said NICE would continue to appraise most significant new drugs, and would have "an important part to play" in longer-term plans to introduce "value-based pricing" for new medicines.

Hilary Tovey, of Cancer Research UK, said: "This cancer drugs fund could make a real difference for some cancer patients, allowing them to get the treatments they need.

"It's crucial that cancer patients have easy access to the best drugs and that the way this happens is transparent and easy for doctors and patients to understand.

"How this fund operates will be crucial to its success. All patients - wherever they live - must be able to access this fund in a clear and consistent way.

"Its use will need to be carefully monitored, so we can be sure it's being used in the way that benefits patients most."

Description: *Favourite Face*

craig-oxley - October 23, 2010 01:10 AM (GMT)

Sellouts: How CNN's Sanjay Gupta Became Big Pharma's Favorite Face

Published on 10-20-2010 Email To Friend Print Version
http://www.bnet.com/blog/drug-business/how...orite-face/6126

On Propublica's list of 17,000 doctors who take money from Big Pharma, one of the standout names is "Sanjay Gupta," who took $155,943 from Eli Lilly, (LLY) GlaxoSmithKline (GSK) and AstraZeneca (AZN). No, it's not that Sanjay Gupta, the CNN medical correspondent who was once floated as a candidate for surgeon general. Rather, it's a psychiatrist with the same name who practices in upstate New York.

But the fact that psychiatry's Gupta practices with a financial conflict of interest when he prescribes those companies' drugs underlines just how many doctors take money from the companies whose products they're supposed to be assessing objectively. As it turns out, CNN's Gupta, like his New York namesake, also has a tangled relationship with the pharmaceutical business.

For years Gupta and his CNN colleage Robin Meade have hosted a fluffy health information show on AccentHealth, a network of closed circuit TVs in doctor and hospital waiting rooms nationwide, sponsored by drug companies. Gupta has been an AccentHealth host since 2003. AccentHealth says its clients are "primarily pharmaceutical and consumer packaged goods companies."

AccentHealth does not currently disclose on its web site which companies pay for Gupta's programming. However, in previous press releases it has said that its clients include "Aventis, Pfizer, Procter & Gamble, Merck, and Warner Lambert," and "Bristol-Myers Squibb, Glaxo Smith Kline, … Pharmacia,Ortho-McNeil Pharmaceutical (a unit of Johnson & Johnson, and), General Mills."

It's easily one of the strangest and longest running drug sponsorship relationships in the news business. Some believe it's a conflict of interest. When Merck launched Gardasil, the HPV vaccine for girls, Counterpunch writerPam Martens thought Gupta's CNN coverage of the controversy was too soft:

… should Dr. Sanjay Gupta have revealed to his CNN viewers during his extolling of the virtues of Gardasil that its manufacturer, Merck, was a financial sponsor of this integrated marketing scheme he co-hosts at AccentHealth?

CNN defends the relationship by arguing that Gupta's show is produced independently from the sponsorship:

A CNN spokesperson e-mailed us this morning to emphasize that AccentHealth is responsible only for distribution and sales of the program, while CNN maintains full editorial control of its content.

It sounds like AccentHealth operates along the same lines as CNN itself — they're simply broadcasting information, and sponsors can choose to be next to that. But it's more the case that AccentHealth only exists because drug companies pay for its existence and Gupta's presence.

That makes it the equivalent of advertorial, or a special section for advertisers. In the print world, such sections are clearly labelled so readers know that they're not reading "news." The sample programming on AccentHealth's site doesn't make that disclosure. Perhaps it should: AccentHealth's programming carries the CNN logo on the screen, which might make some patients believe Gupta is telling them the news when, clearly, he isn't.

Pfizer buys King Pharmaceuticals for $3.6bn

Pfizer is the world's largest pharmaceutical company by revenue

12 October 2010 Last updated at 21:23
http://www.bbc.co.uk/news/business-11522704

Drugmaker Pfizer has agreed to buy smaller rival King Pharmaceuticals for $3.6bn (£2.3bn) in cash.

Pfizer is paying $14.25 per share for King, a premium of 40% to King's closing share price on Monday.

King has struggled in recent years as patents on several of its key drugs have expired or been thrown out.

Pfizer said the deal would add about two cents a share to its profit in 2011 and 2012, and three to four cents per share in each of the next three years.

The boards of both companies approved the deal.

King's shares ended Tuesday trading up $3.99 or 39% to $14.14. Pfizer advanced 0.5%.

China Demand to Help Increase Global Drug Sales to $880 Billion, IMS Says

By Ellen Gibson - Oct 7, 2010 12:21 AM GMT+0100
http://www.bloomberg.com/news/2010-10-06/c...n-ims-says.html

Global pharmaceutical sales may rise 5 percent to 7 percent next year to $880 billion, on soaring demand in developing nations led by China as it becomes the world's third largest drug market, according to IMS Health Inc.

The 2011 projection compares with this year's 4 percent to 5 percent growth in drug sales to $840 billion, the Norwalk, Connecticut-based research company said in a report released today. Emerging markets including China and India are expected to expand by as much as 17 percent to $180 billion while growth in the U.S. market slows.

The world's largest market, the U.S., is growing at a historically low rate of 3 percent to 4 percent as patents expire on top-selling medicines and cheaper generic versions become available to consumers, said Murray Aitken, senior vice president of IMS, in a telephone interview yesterday. Drugs with sales of more than $30 billion are expected to lose patent protection next year, according to IMS.

"While the overall market will appear to rebound somewhat in 2011, the underlying constraints to growth in developed markets are stronger than ever," Aitken said. "Almost half of the global growth next year will come from China and the other emerging markets."

The five biggest European markets -- Germany, France, Italy, Spain and the U.K. -- will grow 1 percent to 3 percent as governments cut drug prices as part of efforts to restore fiscal balance, according to the IMS report. In the U.S., health plans will require pre-

authorization for certain medications along with other measures intended to address rising health-care expenditures.

Generic Competition

Generic copies will hit the market next year for Pfizer Inc.'s cholesterol pill Lipitor, the world's top-selling drug with sales of $11.4 billion in 2009. Generic versions of the No. 2 seller, Bristol-Myers Squibb Co.'s blood thinner Plavix, will become available in the U.S. in 2012. Together with Eli Lilly & Co.'s antipsychotic Zyprexa and Johnson & Johnson's antibiotic Levaquin -- also expected to lose market exclusivity -- the drugs account for 93 million prescriptions a year, IMS said.

Developing countries are expected to pick up the slack for those lost revenue. IMS said it expects drug spending in China to increase at least 25 percent next year as the middle class expands and the government invests in health care. Japan is the second-biggest pharmaceutical market after the U.S.

Another bright spot for the industry is the anticipated introduction of several new treatments for diseases including melanoma, hepatitis C and multiple sclerosis, the report said. IMS expects five products each potentially worth at least $1 billion in annual sales to be approved and launched by the end of next year.

These medicines could include AstraZeneca Plc's heart drug Brilinta, Bristol-Myers' apixaban for blood clots, Sanofi- Aventis SA's iniparib for breast cancer, the hepatitis C treatment telaprevir from Vertex Pharmaceuticals Inc. and Bristol-Myers' ipilimumab for melanoma, Aitken said.

Shrinking U.S. Biotechnology Sector Lost 25% of Companies in Past 3 Years

By Rob Waters - Oct 5, 2010 11:22 PM GMT+0100
http://www.bloomberg.com/news/2010-10-05/s...st-3-years.html

One hundred publicly traded biotechnology companies in the U.S. have been acquired or ceased operations since the end of 2007, a 25 percent drop in the number of active companies, a report said.

Companies have struggled to raise funds from public offerings and acquisitions haven't filled the void, said John Craighead, managing director for investor relations and business development of the Biotechnology Industry Organization, a Washington-based trade group. While acquisitions of biotech companies grew to 55 in 2008 from 40 in 2007, the number fell to 38 last year and to 21 so far this year, Craighead said.

The estimated 294 public companies that remain in the biotechnology industry are in a better cash position than they were at the end of 2008, when 45 percent of companies had less than a year's worth of funds available. Today, only 25 percent of companies have such limited resources, according to data released today by BIO.

"The biotech industry is significantly smaller than it was three years ago," Craighead said during a presentation at the group's annual investor meeting in San Francisco.

Since August 2009, 13 biotechnology companies have gone public and the share prices of 12 of the companies fell by an average of 20 percent once they began trading, Craighead said. The offerings were priced 30 percent below the company's initial goals, he said.

Among surviving publicly traded companies with at least one year of cash, 40 percent have cut staff, 11 percent have issued debt and 7 percent have sold assets, Craighead said.

Merck shares hit after drug denied approval

The EMA's decision is a blow to Merck

24 September 2010 Last updated at 16:59
http://www.bbc.co.uk/news/business-11403379

Shares in German drugs and chemicals group Merck have fallen after European regulators refused approval for a new multiple sclerosis (MS) treatment.

Merck shares fell 10% on Friday after the European Medicines Agency (EMA) said the benefits of Merck's cladribine drug did not outweigh the risks.

On Wednesday, rival drugmaker Novartis won backing in US for its own MS pill.

Merck said it was considering its next step, and did not rule out an appeal against the EMA's decision.

The company expects a decision from the US Food and Drug Administration over a marketing approval for cladribine later this year.

But the EMA's decision is seen as a blow to Merck in the race for a slice of the huge US market for MS treatment.

Malaria-Medicine Exports Will Boost Ipca Labs' Sales This Year, Jain Says

By Adi Narayan - Sep 20, 2010 4:37 AM GMT+0100
http://www.bloomberg.com/news/2010-09-20/m...-jain-says.html

Ipca Laboratories Ltd., India's biggest supplier of anti-malaria drugs, forecast a 25 percent jump in sales of the treatments this year because of increased demand from overseas buyers, including aid agencies.

Revenue from malaria medicines will reach 3.3 billion rupees ($72 million) in the 12 months ending March 31, from 2.6 billion rupees a year earlier, said joint managing director A.K. Jain in a telephone interview. Ipca sold a record volume of the chloroquine malaria treatment last month, spurred by outbreaks in several states including Orissa and Andhra Pradesh, Jain said.

Ipca, India's best-performing health-care stock in the past year, is ramping up production of medications to fight the mosquito-borne disease. Malaria killed almost 1 million people worldwide in 2008, according to the World Health Organization. Mumbai-based Ipca will generate as much as 1 billion rupees from the export of a generic version of Novartis AG's Coartem, which combines the medicines artemether and lumefantrine, Jain said.

"Global aid agencies are putting more money into malaria because mortality can be reduced drastically" with proper treatment, Jain said Sept. 17. "We have not allowed any kind of shortage to take place."

Ipca rose 0.5 percent to 295 rupees as of 9:03 a.m. on the Bombay Stock Exchange, valuing the company at about 37 billion rupees. The stock has doubled on India's 17-

member BSE Healthcare Index in the past 12 months, beating the benchmark's 45 percent gain.

Ipca revenue totaled 15.6 billion rupees in the year ended March. Sales have risen an average of 18 percent the past five years, according to data compiled by Bloomberg.

Boston Scientific to Buy Asthmatx for $193.5 Million Gaining Asthma Device

By Ellen Gibson - Sep 20, 2010 2:57 PM GMT+0100
http://www.bloomberg.com/news/2010-09-20/b...hma-device.html

Boston Scientific Corp. will buy Asthmatx Inc., a closely held company with an asthma treatment device, for an initial payment of $193.5 million.

Asthmatx may receive added payments of as much as $250 million for reaching revenue targets, the companies said in a statement. Boston Scientific will pay cash for the first installment and expects the transaction to reduce earnings by 2 cents a share in 2011 and 2012.

Asthmatx, based in Sunnyvale, California, markets the Alair Bronchial Thermoplasty System, the first non-drug therapy for severe asthma approved by U.S. regulators, according to the statement. The catheter-based system heats tissue of the airway wall to prevent it from constricting. Uncontrolled asthma results in about 2 million emergency room visits and 4,000 deaths per year, the companies said.

“With clinical trial data and FDA approval in hand” for the Asthmatx product, the deal is “very positive news” for Boston Scientific, Rick Wise, an analyst at Leerink Swann & Co. in New York, said in a note to clients today. “We expect there will be other deals of this type in coming months.”

Boston Scientific, of Natick, Massachusetts, rose 1 cent to $5.43 at 9:55 a.m. today in composite trading on the New York Stock Exchange.

Inflamed Airways

Asthma occurs when narrow or inflamed airways cause wheezing, coughing, chest tightness and shortness of breath. No cure exists, although the disease often can be managed with inhaled steroids, such as Symbicort, sold by London-based AstraZeneca Plc. The rate of asthma in the U.S. more than doubled to 7.1 percent of the population in 2004 from 3.1 percent in 1980, according to the U.S. Centers for Disease Control and Prevention, an Atlanta-based agency.

“The acquisition of Asthmatx represents an important step in the execution of our strategy to realign Boston Scientific’s portfolio,” President and Chief Executive Officer Ray Elliott said in a statement. “Given the large underserved patient population and this innovative technology, we expect this transaction to provide meaningful revenue growth.”

Edwards Lifesciences Corp. may double annual revenue and become a buyout target with U.S. approval of a $30,000 cardiac valve that can be implanted without open heart surgery.

First, the device, called Sapien, must pass two tests.

Edwards, the world's biggest heart valve maker, will report data next week that will show whether the device helps frail, elderly people live longer, with fewer hospitalizations, compared with standard therapy. Results from the same study, to be released next year, will demonstrate if it works as well as older treatments in healthier patients.

The device maker's stock surged 73 percent to $58 in the past year, as investors anticipate positive trial outcomes. If Sapien doesn't show a survival benefit, one of the study's two main goals, the stock can tumble to $39, said Suraj Kalia, of Rodman & Renshaw in New York, who recommends selling shares.

"People are banking on a slam-dunk trial," Kalia said in a telephone interview. "If they don't show a mortality improvement, then it is going to be trouble for these guys."

Edwards, based in Irvine, California, fell $2.50, or 4.3 percent, to $55.81 at 4:01 p.m. in New York Stock Exchange composite trading, for the biggest decline in three months.

The valve, made partly from cow tissue, is inserted in the groin or chest, then threaded using a thin wire through an artery into the heart. It's designed to help patients who may be too frail to undergo surgery in which doctors cut open the chest, spread the ribs and temporarily stop the heart. It may also give a less invasive option with speedier recovery times to healthier patients.

2012 Approval

Sapien, cleared for sale in Europe in 2007, may win U.S. approval as early as 2012, Edwards has said. Once approved, the device may help Edwards more than double its revenue in five years to $2.8 billion, from $1.3 billion last year, analysts surveyed by Bloomberg estimated.

Approval may also spur bigger device makers to view the company as a buyout candidate, said Spencer Nam, managing director at Madison Williams & Co. in Boston.

"We believe Edwards could be an ideal candidate for a buyout once Sapien receives FDA approval," perhaps attracting an offer of $8 billion to $10 billion, Nam wrote in an Aug. 18 note to clients. Possible acquirers could include New Brunswick, New Jersey-based Johnson & Johnson, the world's largest maker of health-care products, or Fairfield, Connecticut-based General Electric Co., the world's biggest provider of medical imaging equipment.

Jeffrey Leebaw, a spokesman for J&J, Arvind Gopalratnam, with GE, and Edwards spokeswoman Sarah Huoh declined to comment.

Sept. 23 Results

Edwards will report results Sept. 23 from one group of 350 patients in the trial, called Partner, at the Transcatheter Cardiovascular Therapeutics meeting in Washington, D.C. These patients had an average age of 80 and were in poor health, making them ineligible for open heart surgery.

Next year, Edwards is set to release findings from a second group of 690 patients at the American College of Cardiology meeting in New Orleans, said Michael Weinstein, an analyst with JPMorgan in New York, in a Sept. 16 e-mail. This group included healthier patients who would be candidates for surgery.

Edwards originally designed the Partner trial to test whether the Sapien valve helped patients live longer than treatment with blood-pressure pills and an older surgery that snakes a tiny balloon through vessels to expand them and improve circulation.

Trial Changes Goals

In 2008, Edwards expanded the number of patients in the study to 1,040 from 600. Last

year, the company added a second endpoint, or main goal, to the trial to measure how well Sapien prevented deaths, hospitalizations and repeat surgeries.

“Edwards became less confident in the original mortality endpoint as the trial progressed,” said Duane Nash, an analyst with Wedbush Securities in San Francisco, in a Sept. 9 report. He recommends selling shares and projects the stock can crash to $30 on bad trial results. “Reducing death carries far more gravitas with physicians and payers alike than simply postponing the next hospitalization.”

U.S. regulators agreed to change the trial design because both living longer and preventing hospital stays are critical for patients, Edwards’ Huoh said in an e-mailed statement.

The Partner trial results will likely show the valve kept 70 percent to 75 percent of patients alive after a year, Wells Fargo Securities analyst Larry Biegelsen said in a Sept. 8 note to investors. He expects about 50 percent to 60 percent of those who didn’t get the valve to survive that long.

Recommendations

Biegelsen is one of 24 analysts of 27 surveyed by Bloomberg who recommend owning Edwards shares. Nash and Kalia are among the three who say the stock should be sold.

“If this data is as good as people expect or slightly better, you will see continued acceleration in Edwards’ market share and earnings and revenue growth,” said Jon Fisher, a fund manager in the Minneapolis office of Fifth Third Asset Management, which manages $17.8 billion, including Edwards shares.

If the data is not as good as expected, shares could tumble 10 percent, Fisher said.

A European study reported in May found that the Edwards valve kept 81 percent of patients alive after a year when the device was inserted through the femoral artery in the groin. A Canadian study in 2009 found that 64 percent of patients were alive two years after implantation of the valve.

200,000 People

About 200,000 people in the U.S. need a new heart valve each year, though nearly half of them do not receive one, often because they are too sick or old, Edwards said.

Aortic stenosis, a narrowing of the aortic valve most commonly diagnosed in patients between 70 and 90 years old, is a life-threatening condition if left untreated. A study published in 2006 found that one in three patients with the illness died within a year if they didn’t have traditional valve-replacement surgery.

"It's clear that aortic stenosis is a lethal condition," Chet Rihal, a cardiologist at the Mayo Clinic in Rochester, Minnesota and a Partner trial investigator, said in an interview. "For many older, sicker patients, surgery is too risky. We've been searching for years for better treatments for those patients."

Arena Shares Post Record Drop After U.S. Panel Rejects Anti-Obesity Drug

By Shannon Pettypiece - Sep 17, 2010
http://www.bloomberg.com/news/2010-09-17/a...esity-drug.html

Arena Pharmaceuticals Inc. had a record decline in Nasdaq trading after failing to win a U.S. advisory committee's backing to sell an anti-obesity drug, its most advanced treatment in development.

The San Diego-based company tumbled $1.75, or 47 percent, to $1.99 at 4 p.m. New York time in Nasdaq Stock Market composite trading, the biggest drop since the company sold shares to the public in July 2000 for $18 each. Arena's stock- market value fell to $222.6 million, according to Bloomberg data.

Arena has fallen 70 percent since Sept. 14, when Food and Drug Administration staff issued a report saying the drug, lorcaserin, may cause cancer and works only by a "slim margin." A panel of FDA advisers said yesterday that the treatment doesn't work well enough to justify risks when used long-term in overweight or obese people. While the FDA usually follows panel recommendations, it isn't required to do so.

"The selected population studied demonstrated modest efficacy with this medication, and in my opinion the potential risks of the medication outweigh the potential benefits," Heidi Connolly, a professor of medicine at the Mayo Clinic in Rochester, Minnesota, and a panel member, said yesterday.

No New Approvals

The FDA hasn't approved a prescription drug for long-term weight loss since Swiss

drugmaker Roche Holding AG's Xenical in 1999. Xenical has been linked to liver damage, and Abbott Park, Illinois-based Abbott Laboratories' 13-year-old Meridia was tied to heart attacks, strokes and deaths in an FDA staff review on Sept. 13. Earlier this week, the FDA advisory panel voted 8-8 on whether to recommend keeping Meridia on the market. In July, Vivus Inc. of Mountain View, California, failed to win an advisory panel's backing for its diet pill Qnexa.

Lorcaserin, which has the proposed brand name Lorqess, is similar to fenfluramine, a component in the diet pill fen-phen, which was withdrawn from the U.S. market in 1997 because of links to heart-valve damage.

Peak global sales of lorcaserin may be $800 million in 2015 if the drug is approved, Jon Lecroy, an analyst at Hapoalim Securities in New York, said Sept. 14 in a telephone interview. Eisai Co. of Tokyo bought rights to sell the drug on July 1 and plans to give about a third of the revenue to Arena.

Arena's View

The companies believe the drug's benefits outweigh its risks, said Jack Lief, Arena's president and chief executive officer.

"Arena will work closely with the FDA as the agency completes its review of the lorcaserin new-drug application," Lief said in an e-mail yesterday after the vote.

Eisai Co. of Tokyo fell 20 yen, or less than a percent, to 3,035 yen at the close of Tokyo trading. Orexigen Therapeutics Inc., which is developing a rival weight-loss pill, fell 72 cents, or 11 percent, to $6.05 in New York. An FDA panel will review San Diego-based Orexigen's obesity treatment Dec. 7.

Two-thirds of American adults are overweight, raising their risk of diabetes, heart disease, high blood pressure and cancer, according to the 2008 National Health and Nutrition Examination Survey. More than a third of American adults are obese, measured as a ratio between height and weight.

Lorcaserin binds to a receptor in the brain that controls appetite while avoiding a separate target thought to have contributed to irregular functioning of heart valves in about 30 percent of people who took Wyeth's fen-phen.

Sales of prescription weight-loss drugs dropped 11 percent last year to $153.7 million, according to IMS Health Inc., a research company in Norwalk, Connecticut. Of the almost 7.5 million prescriptions dispensed, four of every five were for generic phentermine, a fen-phen component still sold as a short- term appetite suppressant.

The FDA is scheduled to decide on lorcaserin by Oct. 22, Vivus's Qnexa by Oct. 28, and Orexigen's Contrave by Jan. 31.

Title: PAST UHM SCROLLTEXTS

craig-oxley - November 14, 2009 03:12 PM (GMT)

10 AUG 2009 - MILITARY URBAN CIVIL UNREST TRAINING OCCURING FOR OCTOBER 2009 ORDERS!! EXPECT THE MJTF FOREIGN 'FINCEN [UN]' TROOPS ON YOUR STREET SHORTLY AS THE ECONOMY COLLAPSES VEILED EITHER BY A NUKE OR FALSE PANDEMIC. STOCK UP AND GET OUT OF CURRENCY AND INTO PRECIOUS METALS NOW...

10 SEP 2009 - WELLS FARGO IN SERIOUS DIRE TROUBLE WHILST CHINA IS ABOUT TO DEFAULT ON IT'S COMMODITY DERIVATIVES. EXPECT THE BEGINNING OF THE FULL COLLAPSE OF THE WORLD ECONOMY SHORTLY AND MOST DEFINATELY BY JUNE 2010.....

25 SEP 2009 - MEDIA RAMPING UP ATTACK ON IRAN WITH SANCTIONS YESTERDAY AND URANIUM ENRICHMENT TODAY. THIS WILL INCREASE DRAMATICALLY SINCE IRAN SWITCHED TO *EUROS* FROM THE USELESS U.S DOLLAR. I SAID THIS WOULD HAPPEN BELOW REMEMBER....

22 SEP 2009 - 7/7 DE JA VU AGAIN AS NETANYAHU IS TOLD TO STAY IN THE WALDORF ASTORIA HOTEL DUE TO TERRORISM THREATS. I WONDER WHERE THE XE CREW ARE RIGHT NOW. THEN ALL WILL BE BLAMED ON MUSLIMS TO GET THE EXTRA BANG IN AFGHANISTAN GOING AND READY FOR THE ATTACK ON IRAN FOR CONVERTING TO EUROS ON SEPT 12 2009....

20 SEP 2009 - IRAN HAS REPLACED THE U.S DOLLAR WITH THE EURO. EXPECT A WAR VERY SHORTLY, JUST AS THEY'VE HINTED AT RECENTLY AGAIN....

07 OCT 2009 - 'U.K FACED BANK RUNS AS RBS & HBOS NEARLY COLLAPSED' MORE PROVE THIS SITE IS A TRUTHSAYER SITE FOR REAL NEWS AND INFORMATION. PLEASE CHECK OUT THE FINANCIAL DOOM THREADS FOR MORE ON THIS STORY!...

26 OCT 2009 - CAPMARK FINANCIAL FILES FOR BANKRUPTY. THIS IS A MASSIVE REAL ESTATE LENDER. RECOVERY?!?! WE'RE ENTERING AN OVERT DEPRESSION!!!...

25 OCT 2009 - MASSIVE 'DISASTER RECOVERY EXERCISE' WITH THE BANKING ACROSS THE WORLD HAPPENING RIGHT NOW. WILL WE SEE A BANK HOLIDAY ANNOUCED BY OCT 30 2009? ALL TIMED WITH THE GET OUT CLAUSE OF SWINE FLU AS THE COVER FRONT FOR PLANNED/STAGED ECONOMIC COLLAPSE?...

30 OCT 2009 - I WARNED YOU THAT EASTERN EUROPE, SOUTH AMERICA, AFRICA AND PARTS OF ASIA WERE TO BE BIOATTACKED HARD FOR DEPOPULATION. I DID THIS PRIOR AND AT THE START OF THE SWINE FLU ISSUE. NOW NOTICE WHAT MAY BE HAPPENING DOWN IN THE UKRAINE [EASTERN EUROPE]. THIS IS N.W.O (TEMPORAL POWER) BIO WARFARE AGAINST THE PEOPLES. THE ECONOMIC SYSTEM IS COLLAPSING THEY NEED THE FRONT COVER FOR YOU TO BLAME RATHER THAN THEM, SWINE FLU IS THAT COVER!!...

1-11-2009 - CIT GROUP GOES BANKRUPT. THIS IS THE BIGGEST BANKRUPTCY THIS YEAR. PREPARE FOR DEPRESSION!!!...

1-11-2009 - CHINA MAY NOW HAVE UP TO A 20 SECOND LEAD TIME ON ALL CURRENCY, COMMODITY AND SECURITY TRANSACTIONS WORLDWIDE THANKS TO THE SHITS AT THE U.S COMMERCE DEPT! ALL SO THEY CAN CONTINUE THIS U.S LED FINANCIAL FARSE!!!!...

1-11-2009 - PEOPLES OF TERNOPIL/UKRAINE BUYING GARLIC, ONION & VODKA BY THE MASS. NATURES MOST POWERFUL MEDICINAL FOODS AS I'VE HIGHLIGHTED TO YOU ALL FOR SO LONG. STOCK UP ON THIS ASAP AND KEEP FRESH COMING IN READY. GARLIC WILL SAVE YOUR LIFE. IN FULL PANDEMIC SITUATIONS UP TO 14 CLOVES A DAY WILL SAVE YOU. TAKE NOW AT LEAST 1-2 IDEALLY 3-5 DAILY AS A PREVENTATIVE!...

craig-oxley - November 19, 2009 02:39 PM (GMT)

14-11-2009 - U.K BANK ATMs DOWN AS BOTH HALIFAX AND ROYAL BANK OF SCOTLAND FOLLOW THE RECENT NAT WEST EPISODE WHICH OCCURED ONLY DAYS PRIOR TO A 'DISASTER RECOVERY EXERCISE' INVOLVING WORLDWIDE BANKING HOUSES. KEEP OUT OF BANKS AND STICK WITH METALS AND LITTLE CA$H

13-11-2009 - CHINA INVOLVED WITH WORLD COURT (11-11-09) TO SEIZE U.S ASSETS, BOTH LAND AND SEA!!!...

19-11-2009 - AGENT SZYMANSKI SHOWING HIS TRUE COLORS SUPPRESSING TRUTH FROM ERIC PHELPS AND REAL HISTORICAL MEANINGS. THIS SITE WILL NOT HOLD ANY INFORMATION FROM THIS "ADDICT" JESUITICAL MIND SLAVE

21-11-2009 - CHINA BEING ALLOWED TO BUY INTO U.S BANKS!! ALL AS THE CHINESE LIEN ENTERED THE WORLD COURT NOV 11 2009. RED CHINESE SOON PART OF NEW HIGHSPEED RAIL NETWORK ON U.S MAINLAND. NOTICE OBAMA AND HILLARY IN THE ASIA REGION AFTER THIS TIME.

21-11-2009 - CLUB DE MADRID WILL BE MAD AS HATERS AS FORCES OF GOOD HAVE RELEASED HIGHLY DAMAGING DOCUMENTS SHOWING THE FRAUD OF CLIMATE CHANGE JUST PRIOR TO THE WORLD GOVERNMENT CREATING COPENHAGEN TREATY. THE CLUB OF ROME WILL NOT BRING ABOUT ITS WORLD GOVERNMENT THROUGH PHONY TRASH FROM IRON MOUNTAIN REPORT.

26-11-2009 - HIGHLY IMPORTANT ECONOMIC INFORMATION FROM BOB CHAPMAN ON FULL COLLAPSE OF FINANCIAL SYSTEM IN 2010 NOW ONLINE IN A VIDEO. PLEASE VIEW ASAP AND PREPARE!

26-11-2009 - LONDON STOCK EXCHANGE HALTED FOR 3.5 HOURS WHILST WORLD SEES DUBAI DEFAULT ON PAYMENTS WHILST ON THE BRINK OF BANKRUPTCY!! THE ARAB WORLD IS TO BE BANKRUPTED

28-11-2009 - ROYAL BANK OF SCOTLAND IN DIRE TROUBLE AND NOW ALSO TIED INTO DUBAI. I SUGGEST YOU CHANGE BANKS FROM RBS ASAP. STUDY THE DIRENESS OF RBS EVEN PRIOR TO DUBAI!

06 DEC 2009 - I WARNED YOU ON NOV 28TH THAT GREECE WAS ULTRA CLOSE TO DEFAULTING. NOW ITS BEING CONFIRMED THAT GREECE IS INFACT BANKRUPT!

10 DEC 2009 - THE RUSSIAN FEDERAL SECURITY SERVICE IS BEHIND THE CLIMATEGATE HACKING...

craig-oxley - January 2, 2010 03:00 PM (GMT)

24 DEC 2009...START TO WITHDRAW YOUR FUNDS FROM THE NATIONAL IRISH BANK BEFORE THEY DO AWAY WITH PAPER TRA$H FOR WORSE ELECTRONIC TRA$H (FULLY TRACEABLE). ITS WE WHO HAVE THE POWER, NOT THESE MALTESE CONTROLLING KNIGHTS..

24 DEC 2009...AIFUL DEFAULTS ON ITS DEBTS AS THE JAPANESE CONSUMER FINANCE COMPANY TELLS CONSUMERS GET READY FOR BIG LIMITING ON BORROWING NEXT YEAR!! DOES THIS TIE IN WITH THE 1-1-10 INFO FROM CHAPMAN?

13 JAN 2010 - THE U.S TREASURY MAY HAVE BEEN FORECLOSED UPON DURING MONDAY THE 11TH OF JAN 2010. BE AWARE JUST IN CASE THIS IS TRUE. IT WILL HAVE TO COME OUT SHORTLY IF SO

15 JAN 2010 - MAINSTREAM MEDIA ADMITS $1 TRILLION NEEDS TO BE REMOVED FROM ECONOMY. THIS SITE WARNED ABOUT THIS ALL THE WAY BACK IN NOVEMBER 2009 BUT RATHER THE FACT ITS REALLY $1.5 TRILLION. THIS ALL HAS TO HAPPEN BY JUNE 2010...

16 JAN 2010 - ATTEMPTED PC ATTACK FROM VIRGINIA STEMMING FROM HOSTINGS FOR THE C.I.A, HOMELAND SECURITY AND DEPARTMENT OF DEFENSE, OCCURED TONIGHT AGAINST ME. MORE INFO SHORTLY..

22 JAN 2010 - AS THE COVERT BATTLE TAKES PLACE BEHIND THE BANKRUPT U.S TREASURY, THE U.K GETS SLAMMED WITH SEVERE TERROR THREAT WARNINGS.

25 JAN 2010...Wheres Waldo? Or should we say, Sabbatean Frankist, Heinz Alfred Kissinger that Knight of Malta loyal Hofjuden of the Pope? Do we have a 187 to be dressed soon as due to a health related problem? Has he been Horizontalised?

4 FEB 2010 .. HAVE BOTH KNIGHT OF MALTA TONY BLAIR AND HOFJUDEN BEN BERNANKE BEEN ARRESTED YESTERDAY??

4 FEB 2010 .. STOCK MARKETS KANED AS DOW LOSES 268 POINTS WHILST FTSE LOSES 113 POINTS.

5 FEB 2010 .. NIKKEI DOWN -299.28 (-2.89%) ALREADY AT 01:21GMT. SPAIN'S IBEX 35 FUTURES DOWN 6% COULD END UP HALTING TRADING LATER TODAY.

8 FEB 2010 .. SANTANDER ATMs AND ONLINE BANKING STOPPED IN THE U.K FOR SIX HOURS FROM 11AM TODAY (11=SATURN'S JUDGEMENT) THIS BEING A SIGN OF MAN MADE TRICKERY GOING ON AS USUAL ALSO PUT THE 6 IN FRONT OF 11 AND YOU GET 9/11. DON'T TRUST ANYTHING SPAINISH WITH FINANCE RIGHT NOW. WILL LEGATUS PULL THE PLUG SOON?

11 FEB 2010 .. NO SIGN OF BERNANKE YET? NOTICE HOW THEY PUT HIS TEXT UP ON THE WEBSITE AND CANCEL HIS TESTIMONY ON WEDNESDAY IN THE FLESH. THE C.I.A HAD BETTER GET HIM ON TV FAST TO PUT PEOPLE OFF THE

SCENT LIKE SIS DID WITH BLAIR ON SMOM FOX.. </STRONG></MARQUEE></FONT></DIV>

11 FEB 2010 .. BRITISH SIS QUICKLY GET SMOM TONY BLAIR IN FRONT OF THE SMOM FOX NEWS CAMERAS. THIS IS CLASSIC COUNTER INTELLIGENCE HAPPENING ONLY ONE DAY AFTER MY VIDEO ON HIS ARREST GOES GLOBAL ON YOUTUBE. NOTE HE'S STILL IN THE UNITED STATES (HOUSE ARREST???)

12 FEB 2010 .. ECONOMY MAY TAKE A BIG HIT ON MONDAY 15 FEB BASED ON THE OUTCOME OF SOME $4 TRILLION IN TAXES

craig-oxley - February 17, 2010 07:03 PM (GMT)

12 FEB 2010 .. KING JUAN CARLOS WILL NOW BE IN THE U.S ON THE 17TH FEB. ALL AS NETANYAHU IS ABOUT TO VISIT MOSCOW. JUAN CARLOS NOT LONG COMING FROM THE LEBANON ROMAN POWER OF THE MIDDLE EAST. SOMETHING IS COMING FOLKS! WILL IT BE A COVER FOR THE ECONOMIC PROBLEMS STARTING FEB 15 2010 BEHIND THE SCENES IF NOT OVERTLY TO THE SHEOPLE??

14 FEB 2010 .. I TOLD YOU ABOUT POSSIBLE TROUBLE WITH THE ECONOMY ON THE 15TH FEB 2010. NOW ACCORDING TO SOME, PAUL VOLCKER TOLD OBAMA ON FRIDAY 12TH THAT U.S BANKS HAD AT MOST 72 HOURS LEFT BEFORE COLLAPSE AGAIN! APPARENTLY MASS QUANTATIVE EASING HAS TAKEN PLACE TO STALL THIS?!?!?!....

14 FEB 2010 .. YOUTUBE SUPPRESS MY WORLD WAR III VIDEO BY BLOCKING IT FROM TEUTONIC GERMANY!!. THIS IS CLASSIC SUPPRESSION OF TRUTH FROM THE GLOBE. YOUTUBE CAN'T HANDLE THE HEAT OF CRAIG OXLEY'S REAL TRUTH BY DAVID 'SIS' ICKE IS ACCEPTED OF COURSE ALONG WITH HIS SIGMA AND FANG HAND SIGNALS. F* DACHAU...**

15 FEB 2010 .. JORDAN MAXWELL THE WANNABE KNIGHTS TEMPLAR GETS BUSTED APART FOR THE FRAUD HE IS. WATCH AS HE APPLIES THE MASONIC HANDSHAKE TO POPISH SITCHIN. I WARNED YOU ABOUT MICHAEL 'DRAGON'S CLAW' TSARION AND JORDAN MAXWELL, SHILLY SHAM ARTISTS.

18 FEB 2010 ... THE FALKLANDS ALTERNATIVE BY THE ASSASSINATED JOE VIALLS SEEMS TO BE CONTINUOUSLY PROVING CORRECT. A MUST READ, NOW ADED ONLINE HERE!!

19 FEB 2010 ... KNIGHT OF MALTA, GEORGE 'CROOK' SOROS DOUBLES HIS GOLD HOLDINGS WHILST TELLING THE SERFS TO FEAR A BUBBLE. THE DOUBLING OCCURED SINCE 3RD QUARTER 2009. HE KNOWS WHATS

COMING!!!

20 FEB 2010 ... WARNING GET OUT OF CITIGROUP ASAP REMOVE ALL YOUR WEALTH AS THEIR ABOUT TO BE ABLE TO STOP WITHDRAWALS. TIMEFRAME GIVEN APRIL 1 2010. THE MONTH I EXPECTED TROUBLE AROUND DUE TO THE $1.5 TRILLION NEEDING TO BE REMOVED BY JUNE. TAKE HEED OF THE WARNING IN CASE AND STAY OUT OF ALL OTHER BANKS AND CROOKS..

22 FEB 2010 ... FOLKS THE MALTESE U.S INTELLIGENCE HAS TRIED TO GAIN ACCESS AGAIN TO MY P.C THIS OCCURED BETWEEN 02:01GMT AND 02:05GMT ON 22 FEB 2010 WITH 48 ATTACKS BY ONCE AGAIN - CARPATHIA HOSTING INC - HAVE THEY TAKEN OFFENCE AT MY FALKLANDS VIDEO? OR IS IT MY WARNING TO FLEE BANKS AND CITIGROUP ESPECIALLY?..

25 FEB 2010 ... BEN BERNANKE FINALLY SHOWS HIS FACE TODAY AFTER HIS SUPPOSED ARREST ON THE 3RD OF FEBRUARY! SMOM TONY BLAIR HAS BEEN VISIBLE FROM AROUND THE 20TH FEBRUARY ONWARDS!!

25 FEB 2010 ... WHILST THE KNIGHTS OF MALTA U.S INTELLIGENCE MONITOR ME FROM CARPATHIA HOSTINGS IN VIRGINIA, WE NOW HAVE THE VATICAN MONITORING SPIRITUALLY SMART. SEEMS WE'RE UPSETTING THE APPLE CART!!!

25 FEB 2010 ... BEN BERNANKE FINALLY SHOWS HIS FACE TODAY AFTER HIS SUPPOSED ARREST ON THE 3RD OF FEBRUARY! SMOM TONY BLAIR HAS BEEN VISIBLE FROM AROUND THE 20TH FEBRUARY ONWARDS!!..

craig-oxley - March 4, 2010 01:58 PM (GMT)

27 FEB 2010 ... HAS CHILE BEEN HIT BY IONOSPHERIC USAF WEAPONRY (HAARPIQUAKE) IN ORDER TO SCARE ARGENTINA INTO SUBMISSION OVER THE MASSIVE OIL RESERVES 10X THE SIZE OF SAUDI ARABIA AS EXPOSED BY THE FALKLANDS ALTERNATIVE? HAS A NUCLEAR DEVICE BEEN PLANTED IN THE PACIFIC TO CREATE A TSUNAMI AS WAS THE CASE IN 2004 IN THE INDIAN OCEAN EVENT??? DOES THE ARCANA ARCANORUM RITE OF ATLANTIS WISH TO PLACE ITS ROMAN POPISH TROOPS OF THE CATHOLIC CONTROLLED UNITED STATES OF ROMELAND NEXT TO ARGENTINA AS AN INVASION BASE AS IS HAITI WITH VENEZUELA???

01 MAR 2010 ... ACHTUNG! ERNST ZUNDEL IS NOW FREE FROM JAIL! WHAT WONDERFUL NEWS FOR THIS MENTALLY TORTURED TRUTHSAYER JAILED FOR SPEAKING TRUTHS. THE UHM WELCOMES THIS GOOD NEWS!!..

13 MAR 2010 .. SMOM HENRY KISSINGER IS SUPPOSEDLY IN A KOREAN

HOSPITAL COMPLAINING OF STOMACH PAINS. HE'S BEEN MISSING SINCE DECEMBER 2009! DON'T FALL FOR THE FIRST MEDIA PIECE STRAIGHT AWAY. THIS MAY JUST BE THE COVER STORY IF HE'S BEEN KILLED!!

14 MAR 2010 .. GOLD IS BEING CONSIDERED AS BACKING TO THE NEW EUROPEAN MONETARY FUND. GET INTO GOLD QUICK WHILST YOU HAVE THE CHANCE!!!..

14 MAR 2010 .. U.S SOCIAL SECURITY EXISTING ON I.O.U'S! GET PREPARED SOON FOR ZERO BENEFITS AND THUS ZERO FOOD THEN THE RIOTS WILL COMMENCE USHERING IN THE MARTIAL LAW POLICE STATE AND GUN CONFISCATION!!..

15 MAR 2010 .. BOTH FITCH INC AND MOODY'S INVESTORS SERVICE WARN THAT THE UNITED KINGDOM CORPORATION (U.K) IS SUBSTANTIALLY CLOSE TO LOSING ITS AAA CREDIT RATING. THIS RATING IS CURRENTLY AN ILLUSION TO HIDE HOW DIRE THE U.K REALLY IS AND HAS BEEN FOR QUITE SOME TIME!!!..

18 MAR 2010 .. U.K NOW HAS DEPRESSION LEVELS OF 25% UNEMPLOYMENT AND RISING. THE UNITED KINGDOM CORPORATION IS BANKRUPT, ITS CURRENCY IS GOING DOWN WHILST ITS EMPLOYEES BECOME JOBLESS...

18 MAR 2010 .. LATVIAN GOVERNMENT COLLAPSES DUE TO GLOBAL DEPRESSION. WILL THE U.K SOON BE ANOTHER? POUND DEVALUATIONS, HUNG PARLIAMENTS AND COMMON PURPOSE CAUSED CHAOS???...

19 MAR 2010 .. THE U.S NOW HAS 22% UNEMPLOYMENT AND RISING!...

20 MAR 2010 .. WHATS SPECIAL ABOUT APRIL 1ST? BANK WITHDRAWAL RESTRICTIONS, SPIKE ON PETROL PRICES AND WAR*WART PRICE WAR? ONLY TWO MONTHS BEFORE DEADLINE TO REMOVE $1.5 TRILLION FROM THE SYSTEM OR ELSE COMPLETE ECONOMIC COLLAPSE! APRIL 1ST IS SACRED TO THOSE WHO WORSHIP LUCIFER/VENUS AND COMES IN THE 13TH WEEK OF THE YEAR...

20 MAR 2010 .. KING JUAN CARLOS POCKETS $20 MILLION PER BARREL OF AFGHANISTAN HEROIN WHILST THE SHEOPLE BELIEVE HIS 'LONG WAR' IS JUST ABOUT $82 A BARREL OIL. NO WONDER THE BOURBON CREST STINKS OF POPPY...

craig-oxley - March 24, 2010 03:16 PM (GMT)

21 MAR 2010 .. KING JUAN CARLOS PREPARES THE TURKISH AND U.S SPLIT IN ORDER TO BRING TURKEY ON THE SIDE OF IRAN FOR HIS COMING SEPULCHRE WW3 EVENT FOR THE COMING ROMAN WORLD GOVERNMENT ...

21 MAR 2010 .. HAS ICELAND BEEN ATTACKED BY AN EISCANO DIRECTED FROM EISCAT EXOSTIC WEAPONRY AT RAMFJORDMOEN? ICELAND WILL PAY FOR ITS INSUBORDINATION TO THE ROMAN EMPIRE!! ...

22 MAR 2010 .. VIRGINIA INTELLIGENCE ATTEMPT TO HACK MY I.P ONCE AGAIN FIVE TIMES FROM THE EARLY HOURS OF TODAY. WHATS UPSETTING THESE CRIMINALS? IS I GETTING TO CLOSE TO THE TRUTH. IS THEIR BOSS, KING CARLOS ANGRY? ALL CONFIRMATION OF TRUTH IF YOU ASK ME ...

24 MAR 2010 .. FOR THE FIRST TIME THE NATIONAL INDICATOR SET FOR THE EURO EXCHANGE RATE FALLS BELOW FIVE!!...

25 MAR 2010 .. PAPAL NOBILITY ORSINI BLOOD (LEE ROSENBERG) HEADS THE HOFJUDEN AIPAC ORGANISATION DOMINATED BY ROME!! ...

25 MAR 2010 .. POPISH, HUGO 'CIA' CHAVEZ EXTENDS THE PAGAN 'CATHOLIC/ BABYLONIAN' FESTIVAL OF ISHTAR BY THREE MASONIC DAYS (ISIS, HORUS, SET). IS THIS REALLY DUE TO DROUGHT OR HAS VENEZUELA STARTED TO CAVE IN A FINANCIAL COLLAPSE?? ONLY IN JANUARY THE CURRENCY WAS DEVALUED BY A WHOOPING 50%. DO THE MATH! WHATS INTERESTING IS ONCE AGAIN WE SEE THE DATE OF APRIL 1ST TIED TO LUCIFER, THE PLANET VENUS!...

26 MAR 2010 .. HAS NORTH KOREA OR A U.S NAVY FALSE FLAG SUNK A SOUTH KOREAN NAVY SHIP? IS THIS THE TRIGGER FOR WAR WITH NORTH KOREA TO ALLOW FOR CONSCRIPTION AND DRAFT FOR EXTRA BODIES TO BE REALLY SENT TO PETER KOLVENBACH S.J AND KING JUAN CARLOS'S MIDDLE EAST? YOU CAN BET IF SO THAT PETER HANS KOLVENBACH AND ADOLFO NICOLAS WILL HAVE WORKED THEIR 'ERA OF THE TWO GENERALS' MAJICK! ...

29 MAR 2010 .. POSSIBLE ATTEMPTED ASSASSINATION OF PERCI BLOODED, BARBARA 'BOOKKEEPER' BUSH OF THE DEUTSCHE VERTIDIGUNG DIENST. DOES THIS REMIND YOU OF THAT OTHER CATHOLIC SOAKED, D.V.D AGENT, HEINZ KISSINGER?? WHAT ABOUT D.V.D CLINTON??

13 APR 2010 .. LOS ANGELES WILL BE OUT OF FUNDS BY THE 5TH OF MAY (55) 2010. ALL DURING THE TIME THAT ISIS ENTERS THE CONSTELLATION OF CAPRICORN THE ABODE OF SATURN (SATAN). MORE CREDIT DOWNGRADES TO COME!

15 APR 2010 .. EISCAT EXOTIC WEAPONRY ATTACK AND AFTER EFFECTS ON ICELAND CONTINUES AS MAJOR SUSPENSION OF EUROPEAN & BRITISH FLIGHTS OCCURS DUE TO MAJOR ASH CONCERNS FROM ATTACK ON THE EYJAFJALLAJOKULL VOLCANO!! ARE THE KNIGHTS OF MALTA GEARING UP SOON TO ANNOUNCE THE ICE-AGE FINALLY AND HAVE SOMETHING ON THE GROUND WHICH THEY'VE CREATED TO BLAME FOR IT??

16 APR 2010 .. GLOBAL STOCK MARKETS PLUMMET AS GOLDMAN SACHS GETS CHARGED WITH FRAUD BY THE S.E.C!!

16 APR 2010 .. EVERYONE MUST MAKE THEMSELVES AWARE OF -REISHI MUSHROOM- AND NOTE THAT DAME OF MALTA, ELIZABETH II TAKES THIS HERB REGULARLY!! STUDY MY THREAD ON THIS IN THE CHINESE MEDICINE AREA!!

17 APR 2010 .. U.K FOOD SUPPLY TO BE SEVERELY DISRUPTED NEXT WEEK AS ALL FRESH FOOD IS DRAMATICALLY LOWERED IN THE SUPERMARKETS DUE TO THE MAN-MADE ORIGIN ICELANDIC ERUPTION VIA EXOTIC WEAPONRY BASED TROMSO, NORWAY AT THE RAMFJORDMOEN FACILITY KNOWN AS EISCAT!!

craig-oxley - April 28, 2010 03:54 PM (GMT)

17 APR 2010 .. U.K FOOD SUPPLY TO BE SEVERELY DISRUPTED NEXT WEEK AS ALL FRESH FOOD IS DRAMATICALLY LOWERED IN THE SUPERMARKETS DUE TO THE MAN-MADE ORIGIN ICELANDIC ERUPTION VIA EXOTIC WEAPONRY BASED TROMSO, NORWAY AT THE RAMFJORDMOEN FACILITY KNOWN AS EISCAT!!

19 APR 2010 .. IS THE 'BRILLIANT ARDENT 2010' EXERCISE BY N.A.T.O THE CAUSE OF THE CLOSURE OF THE NATIONS AIRSPACES? I'M SURE JAMES G. STAVRIDIS KNOWNS THE ANSWER!..

21 APR 2010 .. U.S COINAGE TO BE STOPPED BY THE U.S TREASURY IN SEPTEMBER 2010 WHICH SHOULD TIME NICELY WITH THE COLLAPSE OF THE BANKRUPT FDIC. ALL 2-3 MONTHS PRIOR TO DEVALUATIONS IN DECEMBER AND POSSIBLY A NEW CURRENCY ISSUED..

28 APR 2010 .. ROMAN CATHOLIC JOE BIDEN (TEMPORAL COADJUTOR) WILL MEET WITH THE KING OF THE WORLD, JUAN 'FARNESE' CARLOS AT THE BEGINNING OF MAY DURING THE 18TH (666-BEAST-BONDAGE) WEEK OF 2010...

28 APR 2010 .. THE EURO FALLS SHARPLY AS SPAIN'S CREDIT RATING IS DROPPED TO AA- WHICH SHOULD IN FACT BE BANKRUPT BY NOW! STOCK MARKETS TAKING A HIT QUITE QUICKLY....

craig-oxley - May 12, 2010 04:17 PM (GMT)

2 MAY 2010 .. OBAMA HAS ANOTHER ASSASSINATION ON HIS BLOODY HANDS AS HE HAS JOHN HEMENWAY JR. KILLED AS REVENGE FOR HEMENWAY SR'S EXPOSURE ATTEMPTS ABOUT BARRY DAVIS SOETORO'S BIRTH ORIGIN!

4 MAY 2010 .. STOCK MARKETS BATTERED WORLDWIDE WITH 2+% DROPS AS EUROPE STARTS TO COLLAPSE AS THE WORLD ECONOMY NOW STARTS TO ENTER FULL COLLAPSE WHICH WILL CONCLUDE DECEMBER 2010!!

5 MAY 2010 .. FULL ECONOMIC COLLAPSE IS JUST STARTING WITH GREECE COLLAPSING AND RIOTS ACROSS THE WHOLE COUNTRY. BE PREPARED FOR THIS TO BE YOU SOON!! YOU WERE WARNED!! I TOLD YOU ALL THE PROBLEMS WOULD START BETWEEN APRIL AND JUNE DUE TO THAT $1.5 TRILLION NEEDING TO BE MOVED OUT THE SYSTEM. GET READY FOR PUNISHMENT WITH FULL COLLAPSE BY DECEMBER 2010... DO YOUR PREPARATIONS IMMEDIATELY!!

6 MAY 2010 .. DOW JONES SHOCKS THE WORLD AS IT FREE FALLS A 1000 POINTS IN EARLY TRADING. TRADERS HIGHLY PANICKED AT THE SIGHT ON THE MARKET FLOORS. PROPAGANDA LIES CLAIMING IT WAS A STOCK ENTERED ERROR HAVE BEEN PUT OUT TO FOOL YOU THAT EVERYTHING IS NORMAL AND A NEAR STOCK MARKET CLOSURE WASN'T TIED TO GREECE AND WHAT I'VE BEEN WARNING ABOUT FOR MONTHS FOR THIS TIME OF APRIL-JUNE 2010. CIRCUIT BREAKERs WILL HAVE BEEN ENGAGED DURING FREE FALL..

6 MAY 2010 .. JESUIT E.U IS NOW ABOUT TO SUPPRESS THE CREDIT RATING AGENCIES IN ORDER TO MAKE SURE YOU DON'T FIND OUT YOUR BANKRUPT BEFORE -THEY WISH- YOU TO KNOW. THE SAME IS HAPPENING IN THE U.S. THE ECONOMY IS COLLAPSING FASTER THAN THE TWIN TOWERS ON 9/11 AND THOSE WERE FAST!! PREPARE NOW PLEASE!!

6 MAY 2010 .. 60,000 SMALL BUSINESSES IN GREECE TO SOON BE DESTROYED FROM THE COLLAPSED ECONOMY. WORLDWIDE STOCK MARKETS BATTERED ONCE AGAIN. ARE YOU SEEING YOUR COMING FUTURE? PREPARE NOW PLEASE!!

07 MAY 2010 .. NIKKEI FREE FALLS -420 POINTS IN MINUTES OF OPENING. WESTERN MARKETS WILL SUFFER HARD LATER TODAY! JAPAN IS ABOUT TO

MAKE AN EMERGENCY TWO TRILLION YEN CASH INJECTION..

7 MAY 2010 .. 11 BANKS IN THE E.U TO HAVE ACCESS TO 600 BILLION EURO BORROWING FACILITY FROM THE EUROPEAN CENTRAL BANK. THEIR EXPECTING SERIOUS TROUBLE PEOPLES! PLEASE PREPARE!!..

7 MAY 2010 .. BRITISH GILTS TRADING TO OPEN 7 HOURS EARLIER THAN USUAL AT 01:00HRS ONLY MINUTES TO GO. WE'RE TOLD ITS DUE TO POSSIBILITY OF HUNG PARLIAMENT BUT WE ALL KNOW BETTER DON'T WE?..

10 MAY 2010 .. LUCIFERIAN KING JUAN 'FARNESE' CARLOS GETS A WARNING FROM GOD TO TURN TO CHRIST AS HE HAS A SCARE WITH A RIGHT LUNG TUMOUR. MAYBE ITS CARLOS'S BROTHER GETTING HIS OWN BACK FOR JUAN KILLING HIM. MAYBE ITS ALL THE DEAD IRAQIS GETTING THEIR OWN BACK ON THE KING OF THE MIDDLE EAST CARLOS AND HIS UNION OF THE MED..

12 MAY 2010 .. GOLD HITS NEW HIGHS NOW CLOCKING IN AT $1243 WHILST SILVER HEADS IN AT A RESPECTABLE $19.64. GET IN WHILE YOU CAN!! THE ECONOMIC COLLAPSE OF 2008 IS ABOUT TO BE SHOWN TO THE PEOPLE TO ITS FULL EXTENT AS ALL GUISES ARE STOPPED FINALLY....

12 MAY 2010 .. NICK CLEGG CONTINUES TO SPEAK OF A 'COMMON PURPOSE' THROUGHOUT HIS SPEECH AT THE JOINT PRESS CONFERENCE WITH 'BLUEBLOOD' CAMERON. BOTH PUTTING UP A SHOW COVERING UP THE ILLUSION OF CHOICE AS THE FALSE QUEEN SELECTS THE GOVERNMENT ALONG WITH HER MASTERS THE JESUITS...

14 MAY 2010 .. WORLD STOCK MARKETS BATTERED AS SOME CLOSE OVER 6.6% DOWN SUCH AS THE IBEX35. DOW JONES TUMBLING!!. FOLKS THE TIME IS NEAR. YOU NEED PHYSICAL GOLD AND SILVER ASSETS!! PREPARE QUICKLY FOOD, HERBS, WATER, GOLD/SILVER AND ESSENTIALS ....

14 MAY 2010 .. GOLD SHORTAGES IN MUNICH AND ACROSS GERMANY AS CUES FOR GOLD GO AROUND THE BLOCK. MORE GOLD ATM MACHINES POPPING UP AROUND THE WORLD. GOLD NOW HITS $1229 A TROY OZ, THE NEXT LEVEL WILL BE $1350-1425 SHORTLY!!...

17 MAY 2010 .. ALL EYES ON THE DOW JONES AROUND 19:30 GMT FOR POSSIBLE LARGE DROPS AND INCREASE IN GOLD PRICES. LETS SEE IF ANYTHING HAPPENS!!.

19 MAY 2010 .. STOCK MARKETS BATTERED 3% AS GERMANY BANS SOME SHORT SELLING. YOU CAN BET THE ZAHRINGEN FAMILY HAVE THEIR TEUTONIC WEALTH HOARDED

craig-oxley - May 21, 2010 12:29 PM (GMT)

20 MAY 2010 .. WORLD STOCK MARKETS DOWN AGAIN ON AVERAGE 2.5%. AS OF 19:20 GMT THE DOW IS HIT WITH A -250 POINTS (2.4%)

21 MAY 2010 .. ANDREW ROBERTS OF THE ROYAL BANK OF SCOTLAND TELLS THE WORLD WHAT THE CONCLUSION IS OF THE CURRENT FINANCIAL CRISIS! IN HIS OWN WORDS "GREAT DEPRESSION II." ALL AS HIS BANK IS IN DIRE TROUBLE AT THIS CURRENT MOMENT AS IS BANK OF JAPAN, THE D.V.D DEUTSCHE BANK AND CITIBANK. YOU HAVE BEEN WARNED!! WE NOW ENTER 'OVERT' DEPRESSION TIMES WHICH WILL NO LONGER BE ABLE TO BE COVERED UP!! PREPARE NOW!!.

21 MAY 2010 .. THE START OF ALL OUT OVERT ECONOMIC COLLAPSE CONTINUES AS STOCK MARKETS ARE BATTERED YET AGAIN. MARKETS DROP AN AVERAGE 2% SO FAR TODAY (13:35 GMT).

25 MAY 2010 .. NORTH KOREA & THE EUROZONE BRING DOWN WORLDWIDE STOCK MARKETS!! AS OF 11:00 GMT EURO & ASIAN MARKETS ARE DOWN AROUND 3%. ONCE AGAIN THE KNIGHTS OF MALTA UTILISE THEIR NORTH KOREA TO MANIPULATE THE ASIAN MARKETS. DON'T WORRY THOUGH AS THEY'LL HAVE KIM JONG II START UP THE FED'S 'ILLEGAL' PRINTING PRESS TO FLOOD THE WORLD WITH MORE WORTHLESS DEBT CURRENCY. IT MAY JUST BE CORRECT THAT THE BUSH'S HAD KIM JONG II ATTACK DEEPWATER IN ORDER FOR EXCUSES AGAINST NORTH KOREA AND OF COURSE TOWARDS THE UNITED NATIONS AGENDA 21 MOVEMENT OF U.S CITIZENS INLAND TO THE MEGA CITIES

25 MAY 2010 .. V.P. JOE BIDEN ATTACKED BY BRITISH INTELLIGENCE ONLY DAYS AFTER HIS SON, BEAU IS HOSPITALISED BY A SO-CALLED STROKE

4 JUN 2010 .. DOW JONES FALLS 3.1% WITH A MINUS OF 323PTS WHILST THE NASDAQ FALLS 3.6% WITH A MINUS OF 83PTS...

4 JUN 2010 .. EURO GETS BATTERED AS IT DROPS BELOW $1.20 FIRST TIME SINCE 2006 WHILST WORLDWIDE STOCK MARKETS TAKE A BEATING. ALL AS HUNGARY IS ADMITTING ITS IN DIRE TROUBLE!!

05 JUN 2010 .. BILDERBERG, ANTONY HAYWOOD THE CEO OF BRITISH PETROLEUM CASHES IN A THIRD OF HIS B.P SHARES BACK IN MARCH ONLY 4 WEEKS PRIOR TO THE STAGED EVENT OF DEEPWATER HORIZON. OTHER LARGE SELL OFFS OCCURED BY WACHOVIA AND THE CASANOVA/HAPSBURG CONTROLLED UNION BANK OF SWITZERLAND PRIOR TO THE EVENT

06 JUN 2010 .. THE CLIVEDEN SET BANKSTERS AT J.P MORGAN INCREASE THEIR EXPOSURE TO *GOLD*. NOTICE HOW THE GLOBAL CENTRAL BANKS GOLD HOLDINGS ARE BEING INCREASED. IRAN MOVING FROM EURO TO GOLD!! GET OUT OF WORTHLESS FIAT TRA$H AS QUICK AS YOU CAN AND BEFORE DECEMBER 2010

07 MAY 2010 .. TODAY COULD SEE SOME SERIOUS FINANCIAL DESTRUCTION OF THE WORLD'S STOCK MARKETS. ASIA TAKES 4% DIVES WHILST EUROPE IS IN THE RED WAITING FOR THE DOW JONES. WILL THE PRESIDENT'S WORKING GROUP [PPT] GET UP TO THEIR FRAUDULENT TRICKS OR WILL THE CIRCUIT BREAKERS CLOSE SESSION? REMEMBER THE DOW LOST 3% ON VENUS DAY (FRIDAY)

07 JUN 2010 .. GOLD JUMPS A WHOOPING $28 AN OUNCE FROM 13:02 ONWARDS. AN OUNCE NOW COSTS $1238 WHILE SILVER COMES IN AT $18 AN OUNCE

craig-oxley - June 13, 2010 06:29 PM (GMT)

08 JUN 2010 .. THE CRUSADING KNIGHTS MAKE A PATHETIC ATTEMPT TO TIE OSAMA BIN LADEN WITH IRAN IN ORDER TO START THE OVERT MILITARY WAR WITH IRAN AS DESIRED BY THE PAPAL NOBILITY & THEIR JESUITS BEHIND THE BILDERBERG GROUP FRONT! ALL AS A FRONT TO COVER UP THE ECONOMIC COLLAPSE DUE TO HIT IN DECEMBER 2010. THE FINAL WORLD WAR (3) MUST BE STARTED AS HIGHLIGHTED BY ALBERT PIKE IN MORALS AND DOGMA. 1957 HAS MOVED TO THE 21ST CENTURY IF YOU UNDERSTAND WHAT I'M SAYING. HAS THE WORLD BECOME SO BRAINWASHED THEY CANNOT SEE THROUGH THIS CLAPTRAP? I GUESS LOOKING AT THE STATE OF HOLLYWOOD THESE DAYS, THE ANSWER IS -YES-!!

10 JUNE 2010 .. THE F.D.A BULLY BOYS FOR THE SEPULCHRE CONTROLLED POISONERS HAVE EXTENDED THEIR ATTACKS ON OZONE GENERATORS. WHY? PROFITS & POPULATION CONTROL AS THEY FEAR THEIR NEXT TRUE PANDEMIC WON'T HAVE THE KILL RATE THEY DESIRE. OZONE MACHINES WORK AND DESTROY THEIR BIOLOGICAL ATTACKS WHILST DRAMATICALLY CUTTING DOWN ILLNESS TIMES AND NEED FOR DEPENDENCE ON POISON WESTERN DOCTORS AND DANGEROUS POISONOUS DRUGS. THEY ESPECIALLY DETEST POLYATOMIC APHERESIS OZONE THERAPY!!. REMEMBER THE F.D.A WAS CREATED BY KNIGHT OF MALTA CRUSADER, TEDDY ROOSEVELT! THEY ATTACK WHAT WORKS AND WHATS A THREAT TO THEIR DEVILISH AGENDA ENSLAVING HUMANITY AND FILLING THE MORGUES.

PLEASE STUDY THE BOOK BY ED MCCABE CALLED 'FLOOD YOUR BODY WITH OXYGEN' ASAP

11 JUN 2010 .. KNIGHT OF MALTA, FINANCIAL PIRATE, HOFJUDEN, CFR & CONVICTED CRIMINAL, GEORGE SOROS ONCE AGAIN SUBLIMINALLY TELLS YOU THAT THE ECONOMY HAS COLLAPSED AND IN TRUTH WE'RE IN A DEPRESSION. YOU WILL ALL FIND THIS OUT FROM SEPTEMBER 2010-DECEMBER 2010 ONWARDS IF YOU HAVEN'T FIGURED IT OUT ALREADY. THE PATHETIC COVER-UPS WILL BE NO MORE SHORTLY. THIS IS THE SAME SOROS CRUSADING KNIGHT WHO SCARED THE PEOPLES OFF GOLD WHILST HE HOARDED EVEN MORE THAN EVER!!...

15 JUN 2010 .. I HAVE GOOD REASON TO BELIEVE NOW THAT THE ECONOMIC COLLAPSE WILL OCCUR FROM AUGUST 2011 ONWARDS. I CERTAINLY BELIEVE BY THIS TIME THE HOUSING MARKET WILL BE DESTROYED!! I HAVE MY REASONS FOR WHY I'M STATING THIS. I BELIEVE THE DEVALUATIONS OF CURRENCY WILL OCCUR END OF JULY 2011 OR BEGINNING AUGUST 2011

15 JUN 2010 .. POSSIBLE INTELLIGENCE OPERATION AS THE CENTRAL BANK OF IRAQ GETS ATTACKED. THIS IS USED AS A LAUNDERING SITE BY THE KNIGHT OF MALTA, GEORGE H.W BUSH (SCHERF) AND COMPANY. REMEMBER HOW MUCH OF THE KATRINA DONATIONS WERE STOLEN AND PLACED IN THIS BANK. THE NEW FAVOURITE AS THIS ONE GETS DUMPED IS THE CENTRAL BANK OF HAITI..

18 JUN 2010 .. WATCH ME STRIKE THE JESUIT ORDER'S JUGULAR VEIN WITH MY STRONG NEW VIDEO HIGHLIGHTING THEIR DEVILISH BEHAVIOUR. THEIR NOTHING BUT RARARA!!.

24 JUN 2010 .. I BUST OPEN MASON, JORDAN MAXWELL (RUSSELL PINE) AND HIS MASONIC SIGNALING IN RECENT INTERVIEWS. THIS PERSON IS HIGHLY OCCULT AND AN OPPOSAME. REMEMBER BACK TO HIS MASONIC GRIP WITH SITCHIN TOO?...

29 JUN 2010 ..SUPPRESSION OF REAL GROSS DOMESTIC PRODUCT FIGURES GETTING TO THE POPULACE AS THE O.N.S DELAYS PUBLICATION OF FIGURES UNTIL THEY CAN BE MANIPULATED TO SUIT!...

29 JUN 2010 .. EUROPEAN STOCK MARKETS TAKING A BATTERING TODAY AS WE SEE LOWS OF 2.5%. LETS SEE HOW THE U.S MARKETS DO LATER. GOLD MANIPULATION CONTINUES AS PRECIOUS METALS ARE SUPPRESSED YET AGAIN!...

29 JUN 2010 .. TREASONOUS FALSE QUEEN, ELIZABETH 'GUELPH' II (DAME OF

MALTA) ENTERS INTO HER URANIUM DEATH PRODUCING CANADIAN PLANTATION. HOW WONDERFUL THAT ISIS PISSED UPON HER AND VIRUS PHILIP AS THEY WERE DROWN BY THE SATELLITE ORB IN BIG DOWN POURS OF RAIN RARARA. SEEMS PHILIP HAS GOT AWAY FROM SUCKING ON MICHAEL HOLMAN SJ'S PHALLUS ALL DAY LONG FOR A FEW DAYS...

30 JUN 2010 .. GOLD HATER, THE DEVIOUS, NOURIEL ROUBINI IS BEING INVESTIGATED FOR CONNECTIONS TO RUSSIAN SPY RING. NEVER TRUST THIS MOST CROOKED CHARACTER...

craig-oxley - July 24, 2010 03:32 PM (GMT)

16 JULY 2010 .. STOCK MARKETS TAKING A BATTERING AS THE DOW JONES HOVERS AS OF 15:45GMT JUST OVER 10,000 POINTS...

18 JULY 2010 .. NOTICE HOW THE FALSE QUEEN ENTERS HER EMPIRE STATE JUL 6 & THEN WITHIN TEN HERMETIC DAYS BULLSHIT & PROPAGANDA SUPPOSEDLY CAP THE OIL RISER. REMEMBER THERE IS NO DIFFERENCE IN THE GULF THERES STILL 120,000 BARRELS A DAY LEAKING INTO THE REGION. EXPECT BLACKOUTS SHORTLY IN THE REGION ALONG WITH POSSIBLE 75 PLUS MILE INLAND CATASTROPHIC EVENTS. PREPARE TO WITNESS U.N AGENDA 21 IN ACTION SOON....

02 AUG 2010 .. MY NEWLY RELEASED VIDEO IS NOW AVAILABLE ON THE AFRICA CONNECTION AND THE ASSASSINATION OF CHRISTOPHER STORY...

30 JUL 2010 .. CHRIS STORY HAS BEEN *ASSASSINATED* ON JULY 14 2010 BY ELEMENTS OF BRITISH MILITARY INTELLIGENCE SIX. EVERYONE MUST ARCHIVE HIS WORKS IMMEDIATELY TO PRESERVE HIS INFORMATION LIKE WE DID WITH JOE VIALLS. THIS IS A VERY SAD TIME INDEED!...

24 JUL 2010 .. RUSSIA & CHINA USE THEIR PROXY NORTH KOREA IN RETALIATION OVER KOSOVO ALONG WITH DALIAN, CHINA AND THREATENINGS OF U.S ECONOMIC COLLAPSE IN AS LITTLE AS 21 DAYS OR LESS IF THINGS CONTINUE...

06 AUG 2010 .. THE U.S SOCIAL SECURITY -OFFICIALLY- GOES INTO THE RED FOR THE FIRST TIME IN ITS HISTORY!! THEY FORGET TO TELL YOU HOW THEY'VE BEEN STEALING FROM IT FOR SO LONG TO CARRY ON THEIR ILLUSIONAL SYSTEM....

06 AUG 2010 .. GOLD IS BEING SUPPRESSED AS LEVELS STAY STAGNANT EVEN AS STOCK MARKETS FALL ON U.S JOBS OUTLOOK. THE SEPULCHRE FEAR GOLD IN YOUR HANDS!...

09 AUG 2010 .. AUGUST SURPRISE! U.S TREASURY MAY SHORTLY HAVE INJECTION OF MULTIPLE TRILLIONS OF DOLLARS AS WE POSSIBLY THOUGHT MAY HAPPEN AFTER THE ASSASSINATION OF CHRIS STORY! THIS WOULD OF COURSE COVER THE $56 TRILLION LIEN OVERHANGING OVER THE U.S BY BOTH CHINA AND U.K. .....

09 AUG 2010 .. GUESS WHO'S GOING TO SEE THE PETER HANS KOLVENBACH SJ CLAN IN LEBANON? WHY ITS IRANIAN MASONIC PRESIDENT, AHMADINEJAD. ALL IN PREPARATION FOR THE STAGED ATTACK AND FUSE FOR WORLD WAR III TO BRING ABOUT THE GREAT WORK AND THE LUCIFERIAN DOCTRINE.....

11 AUG 2010 .. STOCK MARKETS TAKE A BATTERING AS SELENE BEGINS TO COME TOGETHER WITH HER DAUGHTER APHRODITE ALONG WITH ARES AND KRONOS IN THE FOUR WAY CONJUCTION COMING UP SOON. LOOK UP TO THE HEAVENS!!.....

22 AUG 2010 - BRITISH INTELLIGENCE'S HORSEFERRY ROAD, LONDON CLOSED OFF DUE TO FIRE IN GOVERNMENTAL BUILDING. MEDIA DECIDES TO QUICKLY IGNORE THIS INCIDENT AFTER A SMALL INITIAL REPORT FROM SKY NEWS. THIS WAS ALSO THE LOCATION OF THE LATE, CHRISTOPHER STORY.

24 AUG 2010 .. GLOBAL STOCK MARKETS HAMMERED AS DOW LOSES 133 POINTS AND GETS CLOSER TO BELOW 10,000 POINTS. GET READY FOR SOME ACTION TO START. YOU MUST NOW BE PREPARED MENTALLY FOR WHAT IS TO TAKE PLACE VERY SHORTLY, 2008 WAS A MERE BLIP TO WHAT YOU'LL EXPERIENCE SOON. IF YOU'RE NOT PREPARED THEN YOU'VE HAD IT.

craig-oxley - September 2, 2010 06:15 PM (GMT)

25 AUG 2010 .. DOW JONES ENDS UP BELOW 10,000 POINTS. YOU CAN NOW START TO GET USED TO EVENTUALLY NEVER SEEING 10,000 FIGURES AGAIN. THE END IS ABOUT TO COME, 50-75% DEVALUATIONS COMING WITHIN MONTHS. YOU MUST GET PREPARED NOW! STUDY KATRINA, RUSSIAN POWER CUTS AND WHAT HAPPENS TO POWER, FOOD AND CLEAN WATER ETC, YOU'LL NEED IT! THIS TIME WONT BE LIKE 2008. THAT WAS A WALK IN THE PARK COMPARED TO LIFE COMING SOON. THE N.W.O WILL PUNISH US ALL MORE FOR DEFEATING THEIR SWINE FLU AND OTHER HOAXES RECENTLY. THIS ONE WILL NOT FAIL!.....

26 AUG 2010 .. MID AND UP SCALE RESTAURANTS IN PART OF NEW YORK NO LONGER ACCEPTING CREDIT CARD TRANSACTIONS.....

27 AUG 2010 .. ALERT!! INTEL TRADING HALTED AS INTEL STOCKS DECLINE RAPIDLY IN MINUTES SETTING OFF THE CIRCUIT BREAKERS (SCAM GAME).....

02 SEP 2010 .. KNIGHT OF MALTA, TONY BLAIR FEARS THE FALSE ROYAL FAMILY AND JUST WOULD NOT TAKE HIS KIDS OF SATAN TO BALMORAL.....

08 SEP 2010 .. MASSIVE EARTHQUAKE DRILLS IN BRITAIN CALLED EXERCISE *ORION* TAKING PLACE IN PREPARATION FOR A COMING SATELLITE WEAPONS BASED ATTACK WITH TESLA TECHNOLOGY SHORTLY AS A PRETEXT FOR MARTIAL LAW? COVER UP ECONOMIC COLLAPSE PERHAPS, LIKE A DIVERSION? THE BUSH DYNASTY (BARBARA BUSH AKA AGENT BOOKKEEPER) CONTROLS MUCH OF THE TESLA TECHNOLOGY AND LOOK AT THEIR CONTROL OVER THE CIA (DVD)!!.....

16 SEP 2010 .. DID THE CIA/DVD ATTEMPT TO EXPLODE THE FAULT LINES IN THE ENGLISH CHANNEL TO CREATE A MASSIVE U.K. EARTHQUAKE ON SEPTEMBER 11 2010?

22 SEPT 2010 .. U.S EMBASSY IN GREECE HAVE BEEN WARNED ABOUT POSSIBLE REVOLUTION AS PEOPLE WANT AN OVERTHROW OF THE GOVERNMENT OVER ECONOMY!!..

22 SEPT 2010 .. SILVER BULLION SMASHES THE $21oz MARK AS GOLD ALSO INCREASES TOO. START STOCKING ON YOUR BULLION WHILST YOU HAVE A CHANCE..

23 SEPT 2010 .. B.P TERMINATE OIL CLEAN UP OPERATIONS!!..

29 SEPT 2010 .. BULLION SALES HAVE BEEN *SUSPENDED* AT RAND REFINARY LTD(SOUTH AFRICA), THE AUSTRIAN MINT(AUSTRIA) & ARGOR-HERAEUS(SWISS) AS GOLD GOES IN EXCESS OF $1300OZ AND SILVER GOES ON FIRE AT NEARLY $22OZ. YOU MUST GET IN QUICK BEFORE YOU LOSE ANY OPPORTUNITY AGAIN. THERES ABSOLUTELY NO OTHER SAVE HAVEN OUT THERE, WHAT YOU GOT TO LOSE?

06 OCT 2010 .. SILVER HITS $23.12 A TROY OUNCE AS GOLD HITS $1346.24!!

TheUnhivedMind - October 31, 2010 04:27 AM (GMT)

18 OCT 2010 .. TODAY WE SEE SPANISH CAR SALES HAVE PLUMMETED NEAR 38% IN OCTOBER AND HEADING TO -40%.• THE SPANISH ECONOMY IS IN TERRIBLE TROUBLE ESPECIALLY SANTANDER WHICH IS CONTROLLED BY THE ROMAN EMPIRE VIA ITS BRITISH FRONT KNOWN AS 'THE INTER-ALPHA

GROUP OF BANKS'. MORE REASON FOR THE CLUB OF ISLES TO NUKE SPAIN IN THE FUTURE...

18 OCT 2010 .. QE2, QUANTITATIVE EASING. IS AN OCCULT SIGN BEING GIVEN? REMIND YOU OF QUEEN ELIZABETH II? STUDY THE CLUB OF ISLES AND YOU MAY FIND IT SO.. IS SHE ABOUT TO PASS AWAY SOON HANDING OVER TO PRINCE WILLIAM? BUT THE CORONATION STONE IS BACK UP IN SCOTLAND AND THE MONARCHY IS NO MORE IN THE E.U? ALL PREPARATION FOR 2012 PERHAPS?..

22 OCT 2010 .. FITCH ANNOUNCES IT MAY BE DOWNGRADING BANK OF AMERICA AND CITIGROUP. ALL ON THE DAY OF LUCIFER READY FOR THE WEEKEND FOR THINGS TO COOL DOWN AND MARKETS TO BE UNAFFECTED, ALL EYES ON THE STOCKS ON MONDAY. IS THIS WHY PWG RAN THE DOW UP TO 11,000 IN PREPARATION FOR 1-2000 DROP THIS WEEK COMING?..

31 OCT 2010 .. HAPPY REFORMATION DAY AS THIS REVOLT STARTED ON THE 31ST OF OCTOBER 1517 IN SAXONY THANKS TO MARTIN LUTHER

1ST NOV 2010 .. FRENCH CALLING FOR EUROPE WIDE BANK RUN ON DEC 7 2010. EVERYONE SHOULD SUPPORT THIS AND DESTROY THE BANKSTERS. THIS IS LAWFUL REBELLION AGAINST FASCIST TYRANNY.....

3RD NOV 2010 .. THE LONDON STOCK EXCHANGE HAS A TWO HOUR HALTED TRADING SESSION YESTERDAY BE ON YOUR GUARD!.....

4TH NOV 2010 .. HAS BOEING FINALLY ATTACKED THE SUPER A380 JUMBO JET AS I'VE WARNED ABOUT FOR YEARS WOULD HAPPEN?? A380 ENGINE DESTROYED OVER INDONESIA. DO I SMELL DISC? MAYBE THE NEXT ATTACK BY FRANCE WILL ANNILATE WASHINGTON D.C. SEEING AS THE U.S DON'T HEED EVEN NUCLEAR P700 GRANIT WARNINGS OF THE PAST. IS THIS WHY OBAMA IS GETTING OUT OF D.C?.....

16 NOV 2010 .. DIVERSION TAKING PLACE AS THE U.K. NEWS MEDIA BOMBARDS THE SCREENS ABOUT THE ROYAL WEDDING TO BE. ALL AS THE FTSE LOSES NEARLY 2.4%. WORLD MARKETS HIT TODAY!!.

17 NOV 2010 .. VIKTOR BOUT HAS BEEN QUICKLY KIDNAPPED BY THE U.S. FROM THAILAND UNDER RUSSIA'S NOSE. BOUT WILL SOON BE KILLED BY HILLARY 'QUEEN MELUSINA' CLINTON WHEN SHE SO DESIRES. THIS TIES IN WITH THE RUSSIAN P700 GRANIT MISSILE IN THE PENTAGON ON 9/11 AND ISSUES IN IRAQ WITH THE AMERICAN-TURKISH COUNCIL ATTEMPT TO SET UP IRAQ WITH WMD'S..

TheUnhivedMind - December 8, 2010 03:44 AM (GMT)

03 DEC 2010 .. GOLD BREAKS $1406 AN OZ AS SILVER GOES OVER $29. CRASH J.P MORGAN, BUY SILVER (PHYSICAL).....

01 DEC 2010 .. PILOT OF PLANE THAT CRASHED NIGEL FARAGE INTO THE GROUND IS CHARGED WITH THREATENING TO KILL HIM!!.

29 NOV 2010 .. STOCK MARKETS BATTERED AS ECONOMIC DEPRESSION FESTERS INTO MORE PUSS UNTIL IT BURSTS REAL SOON. YOU NEED PHYSICAL PRECIOUS METAL. CRASH J.P MORGAN, BUY SILVER!.

26 NOV 2010 .. NEW YORK STATE PREPARING FOR SEA LEVEL RISES BUT DON'T INFORM YOU HOW TERRIBLY HIGH THESE WILL BE. CHECK OUT THE JOHN MOORE INFORMATION AND MY ADDITIONAL NEW YORK STATE INFORMATION JUST ADDED WITHIN THE THREAD IN THE EARTH CHANGES FORUM NOW!!.

08 DEC 2010 .. RUSSIAN FIGHTERS FLYBY U.S. KOREAN DRILLS.....

08 DEC 2010 .. MAJOR DISASTER COMING TO MARYLAND? ECONOMIC PROBLEMS NEEDING HUGE STATE LAYOFFS ALL AS MARYLAND WILL END UP COMPLETELY COVERED IN OCEAN SOON. CHECK OUT THE JOHN MOORE THREAD OF MINE.....

08 DEC 2010 .. CRASH J.P MORGAN BUY SILVER. FOR EVERY $1 RISE IN SILVER, J.P MORGAN HAS $3.3 BILLION ON THEIR BALANCE SHEETS PUTTING THEM IN DEEP SHIT! EVERYONE BUY SILVER. NOTICE TODAY THEY'VE HIT THE SILVER BY A COUPLE OF DOLLARS THAT 6.6 OFF THE BALANCE SHEET.....

19 DEC 2010....THIS WEEK COMING BUT 53 YEARS AGO WAS THE PLANNED START OF A NUCLEAR WORLD WAR III!! KEEP YOUR EYES ON THE KOREAN PENINSULA JUST IN CASE. ALSO NOTE THE BIGGEST EVENTS LIKE MARTIAL LAW ROUNDUPS WILL OCCUR AT HOLIDAY SEASONS ESPECIALLY CHRISTMAS

20 DEC 2010....THE ORIGINAL WW3 PLANS WERE FOR CHRISTMAS WEEK 1953. THE KOREAN WAR ENDED IN JULY 1953. NOW 57 (DEATH) YEARS LATER WE END UP WITH A POSSIBLE WW3 SCENARIO IN THIS CHRISTMAS WEEK WITH THE KOREAN PENINSULA. COINCIDENCE?...

20 DEC 2010....LIVE SOUTH KOREAN DRILLS STARTED AT 05:05GMT ACCORDING TO REUTERS. KEEP YOUR EYES OPEN, WILL THIS BE THE 1953

THAT WASN'T?...

31 DEC 2010....GOLDMAN SACHS ARE NOW BETTING WHICH U.S. STATES WILL GO BANKRUPT. ARE YOU READY FOR IT TO HAPPEN? ITS THEIR DESIRE TO DESTROY THE CURRENT CORPORATE MODEL AND REPLACE IT WITH A NEW CORPORATION SUBORDINATE NOT TO THE FED, BUT A WORLD CENTRAL 'WAR' BANK SUBORDINATE AGAIN TO THE UNIVERSAL POSTAL UNION IN BERNE, SWITZERLAND WHICH IS CONTROLLED BY THE PAPAL CRUSADING ORDERS OF OLD...

31 DEC 2010....IRAN MAY SOON BE BLAMED FOR THE 9/11 PENTAGON STRIKE WITH THE RUSSIAN P700 GRANIT CRUISE MISSILE WHILST THE PAPIST CRUSADERS USE THEIR U.S MEDIA TO CLAIM RUSSIAN VIKTOR BOUT SUPPLIED IRAN THE MISSILE VIA UKRAINE. THIS WILL SHIELD VLADIMIR PUTIN, JACQUE CHIRAC, GERHARD SCHRODER, GEORGE H.W BUSH ALONG WITH HEINZ KISSINGER FROM THE EVENT BOUGHT TO YOU BY THE DEUTSCHE VERTEIDIGUNGS DIENST

06 JAN 2011 .. POSSIBLE PANDEMIC LEVEL 6 COMING AGAIN AS THE ECONOMY GOES INTO A SINK HOLE AND FLU SYMPTOM CASES RISE WORLDWIDE ESPECIALLY IN THE U.K CORP. REMEMBER UNDER A LEVEL 6 PANDEMIC YOU CAN FORCE MAJEURE YOUR WAY OUT OF CONTRACTS IF NEEDED! I BELIEVE THIS MAY HAVE BEEN THE SCAM LAST TIME. INTERESTING HOW THE U.K. IS IN A WORSE ECONOMIC SITUATION THAN ALL OTHER EURO NATIONS BUT ITS BEEN HIDDEN FROM THE PEOPLE. REMEMBER ALSO IF YOU WANT TO COVER UP ECONOMIC COLLAPSE YOU CAN USE THE PANDEMIC THREAT AIDING MARTIAL LAW AND THE BIO-METRIC ID CHIPPING FOR THE NEXT FINANCIAL SYSTEM CONTROLLED BY THE U.P.U

TheUnhivedMind - January 25, 2011 11:45 PM (GMT)

12 JAN 2011 .. U.S. WEATHER WARFARE ON AUSTRALIA IN ORDER TO STARVE CHINA OF COAL ENERGY WHILST BRING THEM BEGGING FOR THIS OFF THE U.

S. ALONG WITH FOOD SUPPLIES. ALL IN ORDER FOR CONTROL AND TO AID THE BANKRUPT U.S. ECONOMY. WATCH THE PRICE GO SKY HIGH!!!...

19 JAN 2011 .. U.S./CHINA CONFERENCE FARCE AS SLAVE MASTER HU DODGES QUESTIONING ON NATION'S LACK OF FREEDOM/RIGHTS. GIANT FARCE OF LONG TRANSLATIONS WAY AFTER A.P QUESTIONING. AFTER ALL THAT NONSENSE THE WHOLE QUESTION WAS IGNORED WHILST A CHINESE REPORTER QUESTIONED AND FINALLY ALL YOU HEARD WAS HU IN CHINESE. A CON TO MAKE YOU THINK TRANSLATIONS HAD BROKE DOWN. MEDIA THEN ENDS FULL COVERAGE PROMPTLY WORLDWIDE (NSA)....

23 JAN 2011 .. SERCO IS ABOUT TO TAKE OVER THE UNITED STATES AS IT HAS DONE HERE IN THE U.K. IT'S NOW AFTER TAKING OVER S.R.A INTERNATIONAL IN THE U.S.....

28 JAN 2011 - EGYPTIAN INTERNET AND CELL PHONE SMS TAKEN DOWN AS UNDERCOVER POLICE POUR PETROL IN THE STREETS AND OVER CARS READY TO OF COURSE BLAME THE REVOLTING POPULACE. ONE MAN SHOT DOWN DEAD BY AUTHORITIES LEADS TO THE COMMUNICATION BLACKOUT

06 FEB 2010 .. ROGER HAYES OF THE BRITISH CONSTITUTIONAL GROUP FINALLY GETS A JUDGE TO ACCEPT THAT HE'S A HUMAN BEING AND NOT A CORPORATION IN THE COMMERCIAL WORLD WHICH BY THE WAY IS CONTROLLED BY THE PAPIST ORDERS VIA THEIR UNIVERSAL POSTAL UNION IN SWITZERLAND. THIS IS A BIG EVENT FOR LAWFUL REBELLION.

21 FEB 2011 .. SUEZ CANAL SUPPOSED HIT BY 5.9 EARTHQUAKE FOR 27 MINS. WAS THIS AN ISRAELI 150 KILOTON NUCLEAR DETONATION SOMEWHERE UNDERGROUND OR WAS IT A SCALAR ATTACK?

17 FEB 2011 .. THE FARNESE CONTINUUM, KING JUAN CARLOS WILL BE IN RUSSIA ONLY ONE WEEK AFTER THE POPE'S MEETING WITH SHIMON PERES TODAY THE 17TH FEB. I EXPECT DIRE TROUBLE FOR MIDDLE EAST AND IRAN IN PARTICULAR. PETER HANS KOLVENBACH SJ AND CARLOS ARE THE MASTERS OF THE MIDDLE EAST!

16 FEB 2011 .. SHIMON PERES TO MEET THE POPE IN RUSSIA FEBRUARY 17 2011. SHIMON PERES HAS RECEIVED HIS ORDERS FROM KING JUAN CARLOS OF SPAIN ON THE 14TH OF FEB 2011. SOMETHING BIG IS COMING IN THE MIDDLE EAST, BIGGER THAN THE REVOLUTION OF EGYPT!!!!!

22 FEB 2011 .. MOSLEMS TO BE BLAMED FOR ECONOMIC COLLAPSE AND FOOD CRISIS'S IN ORDER TO TURN WESTERNERS AGAINST THE MOSLEM WORLD FOR HURTING THEIR LIFESTYLES. ALL WHILST THEY FORGET THE

BANKSTERS STARTED THIS IN THIS OPEN.

28 FEB 2011 .. DID THE DEUTSCHE VERTEIDIGUNGS DIENST PAY OFF MUBARAK TO THE SUM OF $65 BILLION VIA DEUTSCHE BANK CREATING A GERMANIC DERIVATIVE PANIC?.

11 MAR 2011 .. NOTICE THERES BEEN A *COBRA* MEETING IN THE U.K. TODAY! IS THIS ABOUT THE NUCLEAR REACTOR IN THE JAPAN EQ ZONE? OR IS IT THE MIDDLE EAST? MAY IT ALL BE SHOW TRYING TO TAKE ATTENTION OFF A COLLAPSE OF THE ECONOMY? REMEMBER FORCE MAJEURE CAN NULLIFY FINANCIAL CONTRACTS!!.

15 MAR 2011 .. NIKKEI 225 CRASHES - DOWN 12.24% (1177PTS) AT 04:46 GMT....

02 MAY 2011 .. FAKE U.S KILLING OF OSAMA BIN LADEN WHICH WAS REALLY BY MI6 10 YEARS AGO. MAKE SURE YOU READ MY THOUGHTS ON THE AGENDA COMING UP QUICKLY!

21 MAY 2011 .. WORLD WAR III IS JUST A STONE THROW AWAY AS CHINA GIVES THE U.S. AN ULTIMATUM ON PAKISTAN (STUDY JULY 1914 AND AUGUST 1939

30 MAY 2011 .. NEW YORK TIMES STARTS SOFT CONDITIONING THE WORLD FOR THE COMING MASSIVE PRODUCTION OF OIL FROM THE UNION OF NORTH AMERICA. CHECK OUT MY LINDSAY WILLIAMS THREAD IN THE VIDEO AREA NOW!

TheUnhivedMind - April 21, 2011 03:56 AM (GMT)

11 APR 2011 .. JAPANESE NUCLEAR DISASTER RAISED TO LEVEL 7 MATCHING CHERNOBYL (IN TRUTH THIS ECLIPSES CHERNOBYL) MAKE SURE YOU FOLLOW MY MUNG BEAN ANTI-CANCER PROTOCOL....

11 APR 2011 .. JAPAN NOW CALLING FOR EVACUATIONS OF MORE AREAS DUE TO RADIATION. IN TRUTH 1/3 OF JAPAN IS UNINHABITABLE BUT THEY'RE HIDING THIS FACT!.

TheUnhivedMind - May 2, 2011 05:10 AM (GMT)

23 APR 2011 .. JAPAN NOW CALLING FOR WORLDWIDE CENSORSHIP OF TRUTHFUL INFORMATION ON FUKUSHIMA RADIATION. WANTING ALL TRUTHFUL INFORMATION TO BE SEEN AS 'ILLEGAL' AND WANTING ALL SITES TO REMOVE OFFENDING TRUTHFUL MATERIAL. DON'T BELIEVE THE

GOVERNMENTS THIS IS A VERY DANGEROUS EVENT DO NOT REMOVE YOUR INFORMATIONS...

25 APR 2011 .. HIGHLY LIKELY JAPANESE GOVERNMENT ARE NOW GOING TO GO TO THE CROWN CONTROLLED, OSAKA AS TOKYO IS DESTROYED BY RADIATION FOR THOUSANDS OF YEARS. ALL EYES ON SOPHIA UNIVERSITY AND WHERE ITS GOING, WILL IT GO WITH THE GOVERNMENT IT CONTROLS OR TO KYOTO WITH THE EMPEROR IT CONTROLS WHO'S FLED TOKYO? THE GREATEST 'BIG EVENT' IN MILLENNIUMS AROUND 2050 I BELIEVE IS KEY TO ALL THIS.....

25 APR 2011 .. SILVER BULLION SHOOTS UP TO $47.79 (£28.98) PER OZ WILL WE SEE $50 AT ANY MOMENT? GOLD JUST DOESN'T COME CLOSE TO SILVER RIGHT NOW. I TOLD YOU A LONG TIME TO GET INTO SILVER DIDN'T I? PREPARE FOR OVERT DEPRESSION WHILST YOU CAN YOU MAY HAVE DAYS, WEEKS OR AS LONG AS TILL ENKUTATASH 2012 DON'T REGRET IT WHEN G4S OR SERCO HAS YOUR FEET IN CHAINS IN SUBORDINATION FOR SOUP LINES AND RATIONS OF GM POISONS FROM KNIGHT OF MALTA, JOHN QUEENY AND HIS MONSANTO.....

28 APR 2011 .. THE OBAMA CAMP QUICKLY THROW A FRAUDULENT BIRTH CERTIFICATE OUT IN FEAR OF ARREST AT ANY MINUTE BY FLAG OFFICERS WISHING TO REMOVE THIS USURPER. JOHN MCCAIN IS THE TRUE U.S PRESIDENT OR EVEN HILLARY CLINTON BUT NOT OBAMA ITS TIME FOR HIS REMOVAL AND HE'S PANICKING THE MORE PEOPLE DON'T BELIEVE IN HIM THE LESS HIS USEFULNESS TO THE KNIGHTS OF MALTA THUS HE'LL BE FORCED OUT BY SETUP OR DEATH.....

TheUnhivedMind - May 22, 2011 02:01 AM (GMT)

13 MAY 2011 .. ALL EYES ON U.S. NUCLEAR POWER PLANTS WATERFORD, RIVER BEND IN LOUISIANA ALONG WITH GRAND GULF NUCLEAR STATION IN MISSISSIPPI IN CASE OF ATTACK BY THE WORSHIPFUL COMPANY OF FUELLERS TYING INTO EVACUATIONS LINKED TO THE U.S. NAVY MAPS HIGHLIGHTED BY JOHN MOORE FOR AROUND 2050.....

13 MAY 2011 .. OSAMA BIN LADEN WAS BURIED IN CHINA IN 2001. HIS BODY IS NOT AT SEA WHICH IS JUST A 'MAN IN THE MIDDLE PSY-OP' TO INCITE MOSLEM HATRED OF THE WEST READY FOR THE BLOODY HOLY WAR THE VATICAN AND KING JUAN CARLOS OF SPAIN CRAVE FOR IN ORDER TO REVIVE THEIR BABYLON. .....

TheUnhivedMind - June 29, 2011 10:41 PM (GMT)

09 JUNE 2011 - FRENCH BANKING SYSTEM PREPARING FOR EURO DEFAULTS BY HALFING ALLOWED CASH FROM ATM MACHINES. MORE WILL FOLLOW SO BE PREPARED REMOVE YOUR CASH NOW AND BANK RUN THE VERMIN.....

11 JUNE 2011 - U.S. IS NOW ABOUT TO GO TO WAR WITH SYRIA AT ANY MINUTE SO BE PREPARED AS WE ENTER WW3! NICE KNOWING YOU ALL! REMEMBER OBAMA'S BULLSHIT TO GET IN OFFICE TO THE SHEEPLE? ONE DAY THEY'LL WAKE UP WHEN ITS TOO LATE!

16 JUNE 2011 .. FORT CALHOUN NUCLEAR PLANT IN NEBRASKA ATTACKED AND RELEASING RADIOACTIVE MATERIAL CAUSING THE FAA TO CREATE A NO-FLY ZONE. WELCOME TO THE NEXT DEPOPULATION EVENT AND ATTACK ON NUCLEAR ENERGY BY THE WORSHIPFUL COMPANY OF FUELLERS AIDING DEPOPULATION AGAIN.

TheUnhivedMind - July 13, 2011 08:58 PM (GMT)

29 JUNE 2011 .. POSSIBLE ATTACK ON JAPAN AT ANYTIME AS U.S. MEDIA RAMPS UP TALK OF RADIATION PROBLEMS ON FUKUSHIMA RIGHT AT THE SAME TIME AS ANOTHER FINANCIAL ATTACK ON TOYOTA TAKES PLACE AS JAPAN WISHES TO DO AWAY WITH THE OIL AND NUCLEAR ENERGY AND SCREW THE WORSHIPFUL COMPANY OF FUELLERS AND THEIR CROWN MALTESE MASTERS.....

30 JUNE 2011 .. FEARS THAT THE FAST BREEDING PLUTONIUM MONJU NUCLEAR REACTOR MAY BE NEXT WHICH WILL TAKE OUT THE EMPEROR AT KYOTO ALONG WITH 1.5 MLN POPULACE AND FALL OUT 13 MLN AT TOKYO.....

30 JUNE 2011 .. A 5.4 EQ HITS CENTRAL JAPAN NEAR TOKYO, THIS SEEMS LIKE A CLEAR WARNING AS EXPECTED AND JUST AS I WARNED YOU TO WATCH FOR ONLY HOURS AGO. WILL JAPAN HEED THE WARNING? THE FUELLERS WILL PUNISH THEM IF NOT 'THE MATCH IS ALMOST *HOT*'

Title: Unhived Mind ATTACKED by SMU Dept of Physics

craig-oxley - September 13, 2008 05:38 PM (GMT)

I noticed whilst having a look on a search engine that my site had been attacked by **SMU Department of Physics** based at this website. If you click this link you will find my site listed above virusmyth within the *badscience area. Basically its all about my exposing hiv as the fraud it is and of course exposing the REAL information on AIDS and its causes.

Now what gets interesting is that under good science they promote the Quackwatch website. Now things get really funny though because Quackwatch is working for the David Rockefella Cartel regardless what they may claim.

So my friends make your own mind up whos telling you the truth and who has most to gain by lieing to you. Is it me with no financial ties to anyone whatsoever, or a University with ties to the establishment and its chronies which ultimately serve Rome? Enough said. I highly suggest you read the next bit which may help you make your decision even easier

****

Delicensed Stephen Barrett, Quackwatch.com Founder, Loses in Court-Again

By Steven C. Eisen, DC, Foundation for Health Choice

October 20, 2005

The Bolen Report

http://www.bolenreport.net/feature_article.htm

Original Title
My View of the Bigger Picture
The Significance of Dr. Tedd Koren's Courtroom Defeat of Quackbuster Steven Barrett

On October 13, 2005, notorious self-proclaimed consumer medical advocate, Stephen Barrett's defamation lawsuit against Dr. Tedd Koren was thrown out of court after a grueling three and a half day trial. To the unknowing observer, this may seem insignificant, but in no uncertain terms, it was a big victory for the battle of freedom and rights of all individuals to select the health care of their choice.

The American Medical Association has a long standing history of trying to monopolize health care in the United States by eliminating competition. In Wilk v. AMA a Federal court ruled that the AMA and other individuals and organizations had conspired to contain and eliminate the practice of chiropractic. The court found that the AMA and it's officials instituted a boycott of chiropractors and made it unethical for a medical doctor to associate with chiropractors.

This boycott disallowing a medical doctor to associate with a chiropractor was only one part of a seeming comprehensive multi-phase strategy to eliminate chiropractic. The AMA also, and sometimes subtly, made attempts to undermine chiropractic educational institutions, conceal evidence of the usefulness of chiropractic care, undercut insurance programs for patients of chiropractors, subvert government inquiries into the efficacy of chiropractic, engage in a massive disinformation campaign to discredit and destabilize the chiropractic profession, and engage in numerous other activities to maintain a monopoly over health care in this country.

It has been reported that the AMA's Committee on Quackery was the group purportedly assigned with the task of eliminating chiropractic.

A sub-group of the Committee on Quackery called the Coordinating Conference on Health Information (CCHI) was also set up to perform covert activities and operated in total secrecy. According to Joseph Lisa in his book, "The Assault on Medical Freedom," in 1974, the CCHI and its activities were turned over to regional councils against health fraud. According to Lisa, Stephen Barrett, MD, a psychiatrist in Allentown Pennsylvania was the leader of one of the affiliate groups called the Lehigh Valley Council Against Health Fraud. Notice the intentional transition from the word quackery to describe non-conventional health care, to the words health fraud. In 1977, the Allentown group merged with the California Committee Against Health Fraud to form the National Council Against Health Fraud (NCAHF) which is still in existence today and is still an advocate against chiropractic.

Stephen Barrett is now delicensed (he voluntarily gave up his Pennsylvania medical license, the last of four medical licenses he once held, in the early 1990's) and the Vice President of the NCAHF. He also operates at least 20 websites affiliated with his main site, Quackwatch.com. The website and its affiliate web sites are seemingly designed to spread deceitful, untruthful and malicious propaganda about chiropractic and other non-conventional health practices; similar to the way the CCHI did under the auspices of the AMA. NCAHF is also involved in similar activities. In addition, Barrett and his groups also frequently consult for major media magazines, television, radio, governmental agencies such as the FBI, FTC and FDA and even the AMA.

One of Barrett's anti health-choice activities is to frequently file libel lawsuits against non-conventional health care practitioners, manufacturers and publishers. He testified in court to filing lawsuits against at least forty individuals.

One of these lawsuits was filed against well known chiropractor, Dr. Tedd Koren and his publishing company, Koren Publications in 2003. Perhaps it is no coincidence that Barrett admits that he is a consultant to the FTC who unsuccessfully tried to destroy Koren's publishing business in the 1990's using tactics intimately familiar to the CCHI and NCAHF. The FTC investigation was withdrawn after a full briefing of the facts to FTC officials by Dr. Koren's attorneys.

Realizing that the defamation lawsuit was just another of Barrett's continued, conspiratorial tactics to destroy chiropractic, Dr. Koren decided that this time things would be different. In order to officially link Barrett to the original conspiracy revealed in Wilk v. AMA, he and Foundation for Health Choice cofounder and attorney Jim Turner, would have to get Barrett to court instead of settling like so many of his predecessors did. Jim Turner joined forces with health freedom trial attorney Carlos F. Negrete of San Juan Capistrano, California and attorney Christopher Reid of Allentown, Pennsylvania who all decided to take this precedent setting case to trial. This way, they could challenge Barrett and put his activities to the test before a jury of his own peers in his home town. The Barrett v. Koren trial took place between October 10th and October 13th 2005, and the case was thrown out by the judge before it went to the jury because Barrett had not provided sufficient evidence to prove his case. Barrett did, however, provide plenty of sufficient evidence to show that he was linked to the continued conspiracy against chiropractic.

The Foundation for Health Choice now has a comprehensive multi-phase strategy to continue to investigate and uncover activities and organizations created to undermine chiropractic educational institutions, conceal evidence of the usefulness of chiropractic care, undercut insurance programs for patients of chiropractors, subvert government inquiries into the efficacy of chiropractic, engage in a massive disinformation campaign to discredit and destabilize the chiropractic profession, and engage in numerous other activities to maintain a monopoly over health care in this country.

With your help we can stop the activity of these divisive and propagandist organizations once and for all. We ask that you consider supporting this effort to protect your freedom of health choice. Fifty dollars a month, from 1500 individuals, will fund the strategy to end the anti-chiropractic campaign of Barrett and his cronies. You can find out more at http://www.foundationforhealthchoice.com

View Full Version: UHM MAY GO QUIET FOR A WHILE

Title: UHM MAY GO QUIET FOR A WHILE

TheUnhivedMind - July 20, 2011 10:09 PM (GMT)

Folks I'm currently broke and I cannot get assistance off the Pope vermin in Rome aka UCC 33. My vessel person is sinking quick in the Sea of Souls. I will soon have no electricity to do my work or gas for that matter. Any ideas to keep me afloat? Isn't it interesting how genuine truth sayers are poor whilst the deceivers are rich? I guess thats the long battle we've always had on this Earth from day one when fighting for freedom and truth. All my time is spent giving people information which all comes out my own pocket whether its a new computer or the electricity, broadband to run it all and keep it all going. If someone wants to send me a solar panel for 1 days coverage every three days of charging :) but then I'd need a low fifty watt laptop :) not a desktop running four hundred or more watts of energy and a monitor to boot, only Cathode ray-tube of course. I only use CRT not this new flat screen S-Quad vermin mind bending technology palmed off as better than CRT when in fact its nothing but backward.

So anyhow if all goes quiet you know why and at a stretch I could do very little work from another location but I'd be seriously wounded information wise as I cannot spend all day long as I do now and certainly won't have the processing power for YouTube video makings etc. So maybe my time is up who knows but when myself and Eric disappear as you're seeing more from his side then whats left? The Jews baitors or the other favourite the Illuminati or Brotherhood of Darkness, in other words the Gerbil on the Wheel. All whilst your Internet Protocol addresses are all monitored as you go looking for information from all these individual sites. For me I do not care who tracks me, I've had vermin from Carpathia Hostings Inc monitoring and messing with me in the past as you know. So when the camps are opened up guess who'll be in them at some point? All those mouthing off on the internet and those who's data has been collected from the famous pied piper websites everyone knows and who've mostly turned to Jew-baiting sites of late, how interesting is that fact?

So welcome to the Pope's Temporal Power I hope freedom will win but regardless of our Magna Carta of 1215 and the English Bill of Rights of 1689

our sovereign nation of England has been sunk and usurped by a filthy corporation called the U.K. corporation. So now we have the filthy Ian Duncan Smith Nazi vermin who incidentally is a Roman Catholic if you're interested. What filth we have running the U.K. Corporation falsely claiming power of me and my sovereign land of England. But Ian thy will not defeat me or lower my spirit as you nearly have in the past. For I am free in mind and that can NEVER be taken away from me. So Ian kiss my backside you filth and enjoy having your strings pulled by the Howard and Astor filth with that puppet Dame of Malta, Elizabeth Mary II the usurper of the throne of England. The same whore who altered the treason laws with Knight of Malta, Tony Blair so they both could not be executed for their TREASON to England.

Wicked vile creatures of the night and the Crown which brown noses to the Grandmaster Festing who's nothing but a puppet overweight fool walked over by the wicked Ratzinger and Nicolas SJ. So if you have any ideas folks on keeping me going on line then let me know whether its a piddly 50 cents contribution donation via Paypal if thats even allowed and worth it on Paypal with its wicked charges and rules I don't know probably Bitcoin is better but I have no experience of either really. I used Paypal a couple of times in the past but that was it nothing hardcore like some trading all day long on the N.S.A platform. I noticed Max Keiser doing a show yesterday on Bitcoin and its comparisons in a way with Gold on independence etc seems good but never give up physical bullion for anything else on Earth in any form claiming to be money, the only money is bullion or anything backed by food basically. We all need to eat thats for sure but of course the vermin GEF are trying to hinder this too. Welcome to NWO what I and others tried to warn you all about, now its here and all because we didn't know about it, believe it or do anything about it. We deserve to lose everything to this filth they've won your backside and you did nothing, no fight nothing.

No doubt my enemies will be jumping with joy at the news of my slow demise but rest assured vermin although if I fade you're disinformation will take over but it doesn't remove the fact that you're filthy vermin. I've proved myself over time with my dedication and truths which were not following everyone else's but real undiverted truths cutting closer to the real apple cart. Feel proud of yourself as you jump with joy, clap and cheer amongst one another because at some point your master will be done with your uses right now and then you'll be put onto the flames like a useless piece of rubbish. I for one can rest assured I never fell for the Beast and I tried to do the right thing, can you? Oh you don't care but you will at some judgment time in your life or in the passing. Enjoy what your sow vermin.

TheUnhivedMind - July 20, 2011 11:31 PM (GMT)

Do you know only within an hour or so of a message going out to multiples of contacts I have had an offer of $20 off someone who is very kind but I couldn't accept such an amount off one man which seems so unfair. I'd rather multiples of 50 cents were handed by good people who then didn't see any hardship from it as 50c is less than a newspaper so nothing to much to lose. Thats a fairer way for people to help me out each week or something. It was good to get such an offer as at least you realize that some people appreciate the work of myself and Eric. May I remind you that Eric is suffering financially and has been for a while but I can only speak of my situation as this is what I know of directly and personally of course. Right then its now time for some herbal medicine and homemade natural biscuits then some internet action and a lift of spirits before a nice cup of Rosehip tea :) the Beast will not defeat this Oliver Cromwell.

Yes. Never forget the power we have with prayer.

I pray in the name of our LORD Yeshua (Jesus Christ) that our Father in heaven would find a way for this site and information to continue on and that our people would wake up to this wicked power structure and with the help of our God put an end to it for good.

This site has done an incredible job in freeing me from mental slavery and I commend you for it.

God bless and continue the fight for truth and may all the knowledge that yet remains

hidden from us be uncovered.

For there is nothing covered, that shall not be revealed; neither hid, that shall not be known. (Luke 12:2)

Alexandra - July 21, 2011 01:03 AM (GMT)

This may sound a bit naive, Craig, but is PayPal even an option at this point?

How would I go about making any donations, anyway?

And in the meantime, what can we do?

TheUnhivedMind - July 21, 2011 01:16 AM (GMT)

I don't know if small transfers are able to be done on Paypal without incurring costs making it worthwhile or not, I have no idea I need to find that out. I don't know if anyone else on my site has used PayPal for small donations to anyone or for anything? This is where I think Bitcoin is of more value plus its away from the vermin supposedly. We must remember that Bitcoin whilst independent at the moment at least, it is still serving a purpose of the elite from one angle. Thats the destruction of cash which aids The Worshipful Company of International Bankers in heading towards unlimited ratios on reserves as they desire. Remembering at some points in the U.S. we've become aware of as much as 1:70 which is far worse than even the standard 1:18 which originally was always 1:9.

Alexandra - July 21, 2011 01:31 AM (GMT)

I've used PayPal before, for eBay transactions, though it's been years. It simply transfers money from one account to another. You can transfer money from your account (checking, savings, or even credit card) to your PayPal account, and transfer from PayPal to another person's account. As far as I know it didn't cost anything.

Wolveshater - July 21, 2011 01:39 AM (GMT)

Their damned economics have about done for me as well. Its creeping in on us like a sneaking slithering snake, about to squeeze us into silence. I've not worked in 36 months, slowly being drained of fiat resources. The Dead Men Walking are in charge for the moment, but we know they fail, total and complete failure, its in the last book of the Bible, they're toast.

TheUnhivedMind - July 21, 2011 02:04 AM (GMT)

But you live self sufficient right and using your military skills or? What you could do with is some good solar panels and car batteries and low wattage LED lighting and laptop computing as such but of course that costs currency so its go without and just eat your live kills I guess. All of us truth seekers will be down and outs when the new economic system comes in tied to the likes of say the Fourier chip or something even newer than that. We'll be termed savages and live together on a speck of land naturally with books and knowledge whilst the civilized drones have zero knowledge and are doped up on SSRI's all day whilst having rampant sex via social media watched by the National Security Agency. Oh forgive me its happening today only difference is we're mixed for now.

snooze - July 21, 2011 03:24 AM (GMT)

I can tell you my SONY CRT blows the crap out of most HDTV and LCD. LCD only benefit is they use less power I think. How are you runing 400watts???

Insurgent - July 21, 2011 03:50 AM (GMT)

Craig maybe you should indeed set up Paypal via a ChipIn widget

PayPal will charge you only and not a person sending money.

In US they charge 2.9%, that is for inside country transactions. So for over the border transactions they would charge percentage plus couple of cents per transactions. Just check on their website.

Here are some examples of mine, as I had sold some things on ebay:

Received: $25.05 fee $1.03
$5.50 fee $0.46
$17.77 fee $0.82

and so on.....

I see many people use ChipIn on their websites, and it seems that people do donate something.

Give it a try, you have nothing to lose.

Wolveshater - July 21, 2011 03:53 AM (GMT)

True, I'll be fine right up to round up time. Every day goes by the more I realize how we don't need their bullshit system. They can kill my body, they'll never have my mind. I do hope to hang about long enough to see them stomped once and for all, nasty buggers anyhow. I expect to keep power until they just take it way due to the coming currency failure here. Right now the gardens are exploding with greens, but when winter returns if the grocery goes out we're down to dried greens, meats, beans, rice, garlic and onions, { tomato's are booming here, I'll likely turn into one shortly } for the cold months. I have the power thingy all worked out, at least until they start stealing everyone's independent natural power sources, solar or hydro.

TheUnhivedMind - July 21, 2011 04:03 AM (GMT)

> I can tell you my SONY CRT blows the crap out of most HDTV and LCD. LCD only benefit is they use less power I think. How are you runing 400watts???

Yes the Sony will be a Trinitron system I believe and they're the best tube units around and have been for such a long time. I did find that the Mitsubishi diamondtrons were better and it must have been the diamond pixels over the square but both are amazing and remember Mitsubishi just took the Trinitron when its patents or whatever were up. People are seriously brainwashed today and just listen to mind bending hype without really checking out the two together with common sense. My mother's neighbour bought a flat screen Hitachi TV brand new the other week. I had to lie to her and make out it was nice when I really thought the picture was totally dire. Backwards trash if you ask me but then again I'm intelligence and not blind in the land of the one eyed Beast. Well my PC has a max wattage of 400 watts as its a desktop remember and also has more than usual amount of fans inside. Then my monitor is a nice Samsung CRT for now and I have a Compaq spare thats for sure. I'm not sure the wattage on the monitor as I cannot be bothered to do the calculation into watts right now. I wouldn't trust using a flat screen monitor for graphics work.

mvltiversal - July 21, 2011 06:06 PM (GMT)

May YHWH our LORD help us all. I'm too without income for now and getting low on resources...

Bitcoin is a good and secure way to collect donations, you install the program (Bitcoin main webpage, Bitcoin Central) and it creates a wallet for you, it works on windows, linux and mac. People can change money into bitcoins (BTC's) and send BTC's to other users.

When you got a good amount of BTC's you can change them into money again, or even into gold or silver coins or trade with them "market style."

There is also the option to "mine" the coins, it's a kind of mining the BTC's with a special program called "miner", which uses the GPU power of ATI graphic cards to calculate hashes and find blocks that reward you with BTC's, as I understand it.

There are webs forums that can explain it better if you are interested like "Bitcoin mining", but mining bitcoins increases power consumption (Bitcoin miner information).

Paypal is a shithole, they blocked me many times in the past for using proxies to keep anonimity and they charged me every time they blocked my transactions. I got rid of paypal forever.

I hope this info helps.

Blessings!

Ken Ardel - July 21, 2011 11:26 PM (GMT)

So sorry to hear about the financial woes Craig, times are getting tough for most of us, they planned it that way. It would be a great loss not to have the UHM.
Since you are very knowledgeable about herbs Craig .. selling online from bulk could provide you with an income to pay for the power utilities.
Just a thought to get you back on track.

Keith - July 23, 2011 03:28 AM (GMT)

I've wanted to send Craig money for years now so this wouldn't happen in the future. Wanted many times. Never ever had it to give. Like Craig says, truthers are kept poor. It's awfully sad and life draining but we must must keep on trying. I imagine there's definitely some truthers out there with some "inherited money" . At least I hope so. Greed is rampant

Storied US military hospital to close its doors

US Army medical staff and patients sit in the

Tim Sloan
Wednesday, July 20, 2011
http://www.activistpost.com/2011/07/storie...l-to-close.html

WASHINGTON (AFP) - The storied Walter Reed Army hospital, where generations of American soldiers came to heal their wounds, will shut down in September, the Pentagon said Tuesday.

"Walter Reed is closing its doors on the 15th of September permanently after 102 years of service to the nation. For many of the staff members, it's like losing your favorite uncle," said Colonel Norvell Coots, calling the facility a national "icon."

The closure is part of a reorganization of the country's military medical services in the US capital approved in 2005, two years before a scandal that damaged the reputation of the famed hospital.

In February 2007, the Washington Post revealed that wounded soldiers, including amputees, treated at Walter Reed suffered from bureaucratic neglect and often wretched conditions.

The revelations led to the sacking of the head of the hospital and the then army secretary, Francis Harvey.

The closure of Walter Reed is "the largest medical restructuring ever undertaken in the military health system," Vice Admiral John Mateczun, commander of medical services

in the Washington region, told reporters.

Patients and staff members will move to a naval hospital in Bethesda, Maryland, just outside Washington, and to another military center at Fort Belvoir in Virginia.

The Bethesda facility, which will be named the Walter Reed National Military Medical Center, will have 345 beds, as well as space for 50 patients in intensive care units and 20 operating rooms. The Fort Belvoir site will host 120 beds, 10 beds for ICU patients and 10 operating rooms.

"There will be the same capacity that we have" now, Mateczun said.

During the summer months when fighting peaks in Afghanistan, about 20 wounded soldiers from Iraq and Afghanistan are evacuated to Walter Reed every week, he said.

Nearly 45,000 soldiers have been wounded in the wars in Iraq and Afghanistan, according to Pentagon.

Walter Reed hospital includes several VIP suites reserved for the president, cabinet officials or top military officers.

In 1956, president Dwight D. Eisenhower underwent surgery at Walter Reed for a problem with his small intestine and convalesced there for about three weeks.

View Full Version: Largest uranium reserves found in India

Title: Largest uranium reserves found in India

TheUnhivedMind - July 21, 2011 03:47 AM (GMT)

Largest uranium reserves found in India

India claims to have discovered the world's largest uranium reserves in the southern state of Andhra Pradesh.

By Rahul Bedi in New Delhi
3:11PM BST 19 Jul 2011
http://www.telegraph.co.uk/news/worldnews/...d-in-India.html

Srikumar Banerjee, head of the Atomic Energy Commission, said a four-year long survey had indicated that the Tumalapalli mine near the state capital Hyderabad, which is scheduled to begin operating by late 2011, could provide up to 150,000 tons of uranium.

"It's confirmed that the mine has 49,000 tons and there are indications that the total quantity could be three times that amount" Mr Banerjee said on a visit to a nuclear plant in the western state of Rajasthan on Monday.

If that is the case, it will become the largest uranium mine in the world, he added.

But Department of Atomic Energy officials warned that the mineral, which is refined into nuclear fuel to produce energy and power, is not "high but low-grade uranium".

India has eagerly been seeking new uranium supplies worldwide to fuel its atomic plants for desperately-needed power to sustain high economic growth.

Over the past three years it has concluded supply deals with France, Kazakhstan and Russia after securing a special exemption in 2008 from the 46-member Nuclear Suppliers Group that governs global nuclear trade to conduct civil nuclear commerce.

The special waiver permits India to procure atomic reactors and fuel from overseas in return for international inspections of 14 of its 22 atomic reactors without signing the Nuclear Non-Proliferation Treaty, the NPT.

The remaining eight military reactors and associated facilities would not be subject to International Atomic Energy Agency examination.

India's rapidly growing economy, which is heavily dependent on coal, remains desperately short of power, getting less than three per cent of its energy from nuclear plants.

It hopes to substantially increase this output to around 30 per cent by 2050 by erecting 30 atomic reactors and the domestic uranium find would not only boost its plans but also help reduce costs.

World's biggest McDonald's for London 2012

Miranda Bryant
20 Jul 2011
http://www.thisislondon.co.uk/standard-oly...-london-2012.do

McDonald's will open its biggest ever restaurant in Stratford for London 2012.

The burger giant, an Olympic sponsor since 1976, today revealed that it plans to open a "supersize" two-storey branch near the Olympic stadium.

The 3,000 sq•m Central Restaurant will be one of four around the site, one of which will be in the athletes' village.

The world's biggest McDonald's expects to serve 50,000 Big Macs and 180,000 portions of fries over the 29 days of the Olympic and Paralympic Games, and 470 staff will make 30,000 milkshakes.

Fast food has been blamed for some health problems but despite the efforts of Government ministers to reduce booming obesity levels, the company's profits in the UK leapt 38 per cent last year to nearly £160•million.

TheUnhivedMind - July 21, 2011 12:46 AM (GMT)

Shuttle Atlantis heads home for farewell

By Jonathan Amos
20 July 2011 Last updated at 19:53
http://www.bbc.co.uk/news/science-environment-14220423

Space shuttle Atlantis is ready to make one last descent to Earth.

The orbiter and its crew of four are scheduled to hit the runway at the Kennedy Space Center in Florida just before sunrise on Thursday.

At "wheel-stop", the ship will complete its 13-day mission to the space station; but more significantly, it will close the book on Nasa's 30-year shuttle programme.

Atlantis, like Discovery and Endeavour before it, is being retired.

The US space agency is turning to the private sector for future astronaut transport services, hoping that a number of commercial ventures will emerge in the coming years to ferry crews to and from the low-Earth orbit.

Atlantis has two opportunities to land on Thursday, with the first timed at 0556 EDT (0956 GMT; 1056 BST). Weather forecasters expect conditions to be near perfect for the attempt.

Officials have resisted calls to target the second opportunity at 0733 and the better light it would afford shuttle fans to see the ship sweep in over Florida's Space Coast.

"We want to stick with what we do normally with our processes and procedures," said LeRoy Cain, the chair of the space shuttle's mission management team.

"Whether it's 40 minutes before sunrise or an hour after, it will be a good landing at

Kennedy Space Center. We're going to stick with our plan."

Atlantis undocked from the International Space Station (ISS) on Tuesday. It had delivered some four tonnes of supplies to the platform, including a huge load of food.

Its landing is sure to be wound up with plenty of emotion - not least because it will trigger a big lay-off of contractor staff that have supported shuttle operations. More than 3,000 will be let go within days of touch-down.

The programme itself does not officially end for a month, but even then it is likely to take a couple of years to close all activities, such as the archiving of decades of shuttle engineering data.

For Atlantis, its retirement will be spent as a static display at the Kennedy visitors complex.

Assuming the ship takes the first landing opportunity on Thursday, its career statistics will read 33 flights, 307 days in space, logging 4,848 orbits, for a total distance travelled of 202,673,974km (125,935,769 miles).

Mind the gap

The end of the shuttle programme will leave a gap in America's astronaut-launch capability that is unlikely to be filled for at least three or four years.

In the short-term, the US will use Russian Soyuz rockets and capsules to fly its astronauts to the ISS.

A number of US national commercial carriers are then expected to enter service around the middle of the decade.

Nasa will buy seats in these astronaut "taxis". The vehicles are expected to be much simpler - and a lot cheaper - to operate than the shuttle.

"We're not asking industry to do anything cutting-edge here; what we're asking US industry to do is replicate the capabilities that were developed in the 1960s to do the relatively simple task of carrying a few people to orbit," said Dr John Logsdon, professor emeritus of the Space Policy Institute at The George Washington University. "That doesn't require new, or emerging or breakthrough technologies," he told BBC News.

This more commercial approach to low-Earth orbit activities is intended to free up resources for Nasa to build a new capsule and rocket that can take humans beyond the space station to destinations such as the Moon, asteroids and Mars.

The conical ship, known as Orion, has already been defined and is in an advanced

stage of development. The rocket, on the other hand, is still an unknown quantity.

US Congress has told the agency what its minimum capabilities should be. However, Nasa is currently struggling to put those specifications into a concept it says can be built to the timeline and budget specified by the politicians. It promises to detail the rocket's baseline design before the summer is out.

View Full Version: Boeing sees orders fall sharply

Title: Boeing sees orders fall sharply
Description: *[WATCH OUT AIRBUS FOR BOMBS!]*

craig-oxley - June 5, 2009 11:57 PM (GMT)

Folks I've been highlighting and carrying on the knowledge of assassinated Joe Vialls in this area. As we saw Airbus take control of the aerospace game we saw the great Concorde destroyed which wooed customers from Boeing. We saw attacks on the airports involved with the A380. Lets see if this Air France attack gets the media attacking Airbus in the States. You'll know exactly what the game is then. I believe that airliner bought down was it over Queens, NY was a boeing attack back in November 2001 if I remember correctly. -Craig

Boeing sees orders fall sharply

Boeing lost out to rival Airbus in global plane deliveries in 2008

Friday, 5 June 2009 12:57 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/business/8085238.stm

Aircraft giant Boeing has said orders in May were down by more than 70% from a year earlier after airlines cancelled or delayed plans for new planes.

The company said it had received just 20 orders during the month compared with 67 last May. Deliveries, however, were up very slightly on last year.

But orders could be boosted if Boeing secures a deal with United Airlines, which is looking to overhaul its fleet.

United Airlines is also seeking bids from Boeing's rival Airbus.

United Airlines has been in discussions with both Airbus and Boeing but has, so far, held off on ordering new planes, "until we can generate a return on our investment," said chief executive Glenn Tilton.

And despite the gloom surrounding the airline industry, he may now be ready to take the plunge.

"The analysis we have conducted for more than a year suggests that time might be now," he added.

'Crucial year'

EADS, which owns Airbus, said on Friday that it expected to deliver the same number of planes this year as it did last.

However, it said predicting deliveries for next year would be more difficult.

Next year will be "a crucial year for the crisis. I hope this crisis is not too deep, but we are prepared to face all scenarios," explained Louis Gallois, EADS' chief executive.

Boeing's profits in the first three months of 2009 were down 50% from the same period a year earlier to $610m (£379m).

The Chicago-based firm was forced to make production cuts after airlines reined back on plane purchases.

Earlier this year, Boeing said it would cut 6% of its workforce or 10,000 jobs.

craig-oxley - June 13, 2009 12:44 AM (GMT)

Whenever Boeing gets in trouble or Airbus are ahead you'll always see something negative about Airbus in the media and many a time set-up infact. Boeing is tied to Defense Industrial Security Command and FBI Division #5 in Denver, Colorado. -Craig

Boeing cuts global plane outlook

Boeing has seen demand from airlines fall sharply.

Friday, 12 June 2009 13:02 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/business/8097177.stm

US aerospace giant Boeing has slashed its long-term view of the plane industry ahead of the Paris air show.

Boeing forecast the number of new planes ordered over the next two decades would be 29,000, instead of the 29,400 it had projected a year earlier.

The overall value of new orders is expected to remain the same at 3.2 trillion dollars, reflecting a rise in the average cost per aircraft.

Aircraft makers traditionally unveil new orders at the biennial show.

Different focus

The airline industry has been hit by recessionary pressures, which have led to falling passenger numbers and cargo traffic, coupled with unpredictable fuel prices.

Last week, Boeing said orders in May fell 70% from the same period a year earlier.

The aircraft maker received orders for just 20 planes, compared with 67 planes last May, as airlines cancelled or postponed orders.

"Any time you go into a downturn it's about getting the backlog in place, rather than acquiring new orders," said Randy Tinseth, vice president for marketing at Boeing.

Crude oil has risen to $71 a barrel on the New York Mercantile Exchange back up from its low point just above $30 last December.

Boeing’s Delayed 787 Is Capable of Flying Today, Carson Says

By Susanna Ray and Rishaad Salamat
http://www.bloomberg.com/apps/news?pid=206...id=ajeRR6kkfQKc

June 16 (Bloomberg) -- Boeing Co. said its delayed 787 Dreamliner would probably be capable of flying right now after sailing through some of the last remaining ground tests.

“I personally believe the airplane could fly today,” Scott Carson, head of Boeing’s commercial-airplanes unit, said in a Bloomberg Television interview at the Paris Air Show. The plane cleared so-called intermediate gauntlet testing that simulates flight conditions and multiple systems failures “in a much better condition than we’d anticipated,” he said.

Chicago-based Boeing didn’t want to rush the testing process just for the show and the plan remains for the Dreamliner to fly in the next two weeks, Carson said today. Testing aside, the executive said the company remains “very disappointed in the progress we’ve made.”

The Dreamliner is running about two years late following development and production glitches. After the maiden flight the plane still faces an ambitious certification process in order to meet a target of service entry some time in the first quarter.

The U.S. company is working with its suppliers on the Dreamliner to help them through the recession, and problems have been resolved “for the most part,” Carson said.

“Cash is tight for everybody,” he said in the interview. “We’re staying very closely engaged with them, working through the bottlenecks. We all want to get this airplane delivered.”

While the slump has forced both Boeing and European rival Airbus SAS to scale back manufacturing as demand from airlines crumbles, Carson said there are no plans to cut production of the single-aisle 737, the world’s best-selling aircraft.

There may even be an “upside opportunity” to increase output if the economy picks up, he said.

Boeing Deepens Reliance on 777 to Beat Airbus on Jets, Tankers

By Laurence Frost and Susanna Ray
http://www.bloomberg.com/apps/news?pid=206...id=aRvgeMZC21ro

June 16 (Bloomberg) -- Boeing Co. surprised the crowd at the Paris Air Show with the new plane it says can outdo the next Airbus SAS jet and win back a $35 billion military tanker deal: the 14-year-old 777.

The Chicago-based manufacturer, battling to overcome setbacks to its 787 Dreamliner, said it may build a new wing for the 777, improving fuel efficiency and allowing the plane to compete better with the A350 that Airbus will deliver in 2013. Boeing also will offer a 777 tanker design to the Pentagon in an effort to beat Airbus parent European Aeronautic, Defence & Space Co. for an aerial-refueling contract.

“When your new flagship is delayed two years, you have to rely on your current bread-and-butter programs for profits and headlines,” said Richard Aboulafia, a vice president of Teal Group, a Fairfax, Virginia-based consultant.

Boeing’s announcements were a highlight at the industry’s largest aerospace gathering, where both of the world’s biggest commercial planemakers say they are concentrating on keeping customers committed to previous orders. At past shows, Boeing and Toulouse, France-based Airbus won tens of billions of dollars in plane orders.

The U.S. manufacturer was unable to finish its 787 Dreamliner to wow the crowds in Paris, and must compete with the larger A350 that will be available to airlines not long after the Dreamliner is flying. At the same time, Boeing is trying to win back a U.S. tanker order initially lost to a Northrop Grumman Corp. design that uses Airbus aircraft.

Size Gap

The 787’s engines limit the aircraft to 290 seats, while the A350 will have 350. That’s where the 777 may be called upon

again. With a redesigned wing, the aircraft could fill the spot left between the 787 and the Airbus offering with improved fuel efficiency on a 370-seat model.

The Airbus A350 is a driving force.

“As that airplane has been maturing and as it continues to mature, it will create some market expectations,” Scott Carson, Boeing commercial planes chief, said at the Paris show.

The company also may develop a 310-seat version of the Dreamliner, Carson said. That 787-10 model and a re-winged 777 would offer more alternatives to airlines than A350 variations from Airbus, he added.

“I’m not surprised he’s talking about that,” Airbus Chief Operating Officer John Leahy said in a Bloomberg Television interview. “He’s going to lose the market if he doesn’t do something.”

U.S. Military Tanker

Boeing also said it will pitch a refueling tanker based on the 777 to the U.S. Air Force, after a smaller design based on its 767 lost out to the modified Airbus A330 offered by Northrop Grumman. The bidding was reopened after Boeing appealed to the U.S. Government Accountability Office, and the Pentagon is due to announce a winner by March 31.

“The 777 solves the technology and additional cargo capability questions, but it increases cost and it might be too much plane for the requirement,” Aboulafia said.

Randy Belote, a Northrop spokesman, said he couldn’t comment on “what Boeing may or may not offer.” The Los Angeles- based company’s KC-45 “is ready now” and has the right combination of fuel capacity, range and cost, he added.

Boeing’s plan to offer a revamped 777 to fill a void in its commercial airliner stable may not be the most profitable approach, analysts say.

Aluminum Fuselage

Doug Runte, a New York-based analyst with Piper Jaffray & Co., said that developing a new aircraft may make more sense. While less expensive than an all-new airplane, the cost of a new wing may still be “too high versus incremental performance gains,” he said.

“The problem with re-winging the 777 is that you still have an aluminum fuselage,” said Nick Cunningham, an analyst at Evolution Securities in London. “Upgrading existing airframes doesn’t really work -- particularly when you’ve just had a technology change such as a shift to composites.”

Even so, the 777 may be a good base to build upon.

The airliner, Boeing’s newest widebody aircraft, set a record for the longest commercial jetliner flight in 2005 when it flew from Hong Kong to London. It’s also one of Boeing’s most profitable planes.

The 777 program was initiated in October 1990 following an order from UAL Corp.’s United Airlines, with the aircraft entering service with the U.S. carrier in June 1995. While the plane is Boeing’s newest widebody model, the most recent passenger variant, the 200LR -- the world’s longest-range commercial aircraft -- was delivered almost 3 1/2 years ago.

China Southern

A new freighter version was introduced this year, but at least two planes ordered by China Southern Airlines Co. were placed in storage in April as global trade slumped. Boeing said April 9 it would slash 777 production to five planes a month from seven starting in June next year.

As of June 9, 784 of the planes had been delivered, with 323 still on order, representing a backlog of more than five years at the new build rate. The 777 has an average list price of $246 million before discounting.

“A new wing could possibly extend performance by offering enhanced aerodynamic efficiency, weight savings and perhaps greater fuel savings,” said John Dern, a Boeing spokesman.

Hans Weber, president of San Diego consulting firm Tecop International Inc., said a new wing would also hold more fuel.

Boeing said at the Paris show, which began yesterday and runs through June 21, that it's making other advances in its commercial jet program.

Two Weeks

A prototype of the Dreamliner will fly for the first time within two weeks, the manufacturer pledged yesterday. Boeing also announced that the second of six 787s in the flight-test program was readied for fuel testing.

About 600 engineers and 400 mechanics will work with test pilots around the clock to test the 787, the world's first commercial airliner with a composite plastic fuselage and wings. Boeing has 865 orders for the plane, compared to 463 for the Airbus A350.

Boeing's potential solutions for filling the gap between the planes' abilities, including the 777 alteration, come after the Dreamliner delays allowed Airbus to narrow the time between a flying 787 and a flying A350, feeding Aboulafia's skepticism.

"There have been serious delays in introducing and funding new products and technologies across the board at Boeing."

Boeing's Absent 787 Leaves Airspace in Paris Lineup (Update1)

By Susanna Ray
http://www.bloomberg.com/apps/news?pid=206...id=ayC0EIF_gqCw

June 15 (Bloomberg) -- The most talked-about plane at the Paris Air Show will be the one that missed the flight.

Boeing Co.'s 787 Dreamliner would be delivered "bang on schedule" in 2008, commercial-planes chief Scott Carson said in June 2007 at the industry's last Paris gathering. Instead, a date hasn't even been set for its maiden flight after production and development delays put the model back two years.

Investor confidence in Boeing, whose stock has lost half its value since the first delay in October 2007, won't be restored until the 787 takes to the skies, said Bill Alderman of Alderman & Co. Capital, a broker specializing in aerospace. That should be in the next two weeks, Carson said in Paris today, without being specific. Even then the plane has hurdles to clear, according to Craig Fraser, a Fitch Ratings analyst in New York.

"The first flight is an important event, but there are still a few years of potential risk with this program," Fraser said "Flight testing may uncover some other issues that could set back the program, and production ramp-up is always a risk."

Four delays to the 787 have also ceded ground to Airbus SAS, Chicago-based Boeing's only bigger rival. Committed to building the larger A380, the European company initially stalled in its response to the Dreamliner, Boeing's fastest-selling model with 865 orders. Airbus has since begun to close the gap, racking up 483 orders for the competing A350, which will now enter service three years behind the Dreamliner.

Paris Showmanship

The two companies are showing off their wares at the Paris show, a proving ground for planemakers, defense companies and engine manufacturers. The event, which began today and runs until June 21, will have more than 2,000 exhibitors for the first time, though there will be fewer new aircraft, according to the French trade group organizing the show.

The 787 has lost 58 orders so far this year as airlines cut capacity and trim spending to stem losses in a global recession.

While the Dreamliner will “fly when it’s ready,” Boeing is “absolutely committed” to getting it off the ground within the next two weeks, Carson said in a briefing with journalists today. The executive said that while it would have been “great” to have flown the aircraft in time for the Paris show, the company chose not to be driven by any particular event.

Boeing plans to complete the certification process by the beginning of next year. Japan’s All Nippon Airways Co. says it has been told it will get the first 787 in February.

“There’s a confidence factor that’s important,” Alderman said. “The first flight matters in terms of market perception regarding Boeing having its house in order.”

Lighter Parts

The 250-seat Dreamliner is the first airliner to have a fuselage and wings built of composite plastic, making it lighter than traditional aluminum planes, and will use the most extensive electrical system yet to help save on fuel.

Boeing still has to check everything from lights and bathroom plumbing to landing gear and performance of the new materials during lightning strikes. About 600 engineers and 400 mechanics plan to work with test pilots around the clock in the company’s most ambitious testing program yet.

“We’ve made great progress in the last few weeks,” Randy Tinseth, Boeing’s commercial marketing chief, said in an interview last week in London.

Advances in computer simulation will help shorten the process, Boeing says, especially since the manufacturer and its suppliers have had extra time to run the systems during the delays. A test program normally takes about two months longer than Boeing has scheduled for the 787.

Supplier Concern

Boeing aims to build 10 Dreamliners a month by mid-2012 and created a NASA-like mission-control center about six months ago to make sure its suppliers are up to the job.

The manufacturing process counts on vendors from Italy to Japan to gather parts and construct large sections of the aircraft, which Boeing machinists will assemble in just three days. Scott Fancher, the 787 general manager, said last month the company has made tooling improvements to clear up “bottlenecks” in South Carolina where Global Aeronautica LLC, a joint venture with a unit of Italy’s Finmeccanica SpA, is working on a “difficult body join.”

The Production Integration Center overlooks the 787 assembly line at the company’s widebody plant in Everett, Washington -- the world’s biggest building by volume. The center monitors everything that could have an impact on production, from earthquakes and hurricanes to riots and even swine flu. Video cameras at remote plants should speed problem resolution.

Engineers have completed so-called intermediate gauntlet testing of the 787, which simulates conditions ranging from long-duration flights to multiple systems failures. Trials remaining before the first takeoff include a high-speed taxi test where the wheels may briefly lift off the runway.

‘Still Excited’

“The good news is that it seems to be coming together at this point,” said Wolfgang Demisch, a partner at Demisch Associates, a financial consultant that focuses on aerospace and technology companies. “The teething troubles have been just brutal, but they don’t seem to have done mortal damage to the project and the customers are still excited about it.”

The delays may even be a boon to some airlines as the industry seeks to rein in capacity. Research and development costs still are adding up for Boeing, along with penalty payments for not handing over the plane when promised.

“If you start to deliver the airplane during a slow period it takes longer to get to the point where your production breaks even,” Demisch said. “The interest costs and launch costs continue to accumulate and your financial hole gets deeper.”

Weight Concern

Boeing has said the first 787s will be overweight, undermining one of the model’s biggest selling points. Shanghai

Airlines Co. said in March it might cancel its orders because of quality problems.

Ultimately, though, the operational savings that the composite-based construction will deliver should make it a success, said Alderman.

“They won’t get it right the first time,” he said. “But it’ll be right enough to be safe, profitable and over time, one of Boeing’s best products ever built.”

Airbus seals raft of new orders

Airbus is busy developing the new A350 XWB

Tuesday, 16 June 2009 16:33 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/business/8103545.stm

Aircraft maker Airbus has received a number of new orders worth billions of dollars from a number of global airlines at the Paris Air Show.

The biggest deal, for 10 A350 jets with a list price of $2.4bn (£1.2bn), is with Air Asia. Vietnam Airlines and Cebu Pacific also ordered new planes.

On Monday, Airbus announced a deal with Qatar Airways for 24 A320 jets.

The orders mean Europe-based Airbus is now well ahead of US rival Boeing in the race to sign deals at the air show.

Speaking about the Air Asia order, Airbus boss Tom Enders said: "Today's order is certainly proof that there are some rays of sunshine in the market, especially in the low-cost sector."

On target

Vietnam Airlines has ordered 16 A321 medium-haul planes worth $1.4bn at list price, and pledged to order two further long-haul A350s.

Philippines-based Cebu Pacific has ordered five A320 planes.

Buoyed by the latest orders, Airbus sales chief John Leahy said the company was sticking with its target of 300 aircraft orders this year.

"Of course, the figure could be less, but I'm keeping this target," he said.

Meanwhile, United Arab Emirates airline Etihad Airways has announced an engine and maintenance deal with US conglomerate GE worth more than $5bn.

Finally, reports suggest that Spanish airline Air Nostrum has ordered 10 regional turboprop planes from aircraft maker ATR.

Lockheed’s F-35 ‘Program Killer’ May Double Sales (Update1)

By Edmond Lococo and Gopal Ratnam
http://www.bloomberg.com/apps/news?pid=206...id=aLSngSRfWm7o

June 17 (Bloomberg) -- Lockheed Martin Corp., the world’s largest defense company, may double sales of its new F-35

fighter jet in a surge of contracts that could **squeeze competitors including Boeing Co. and Saab AB out of the market.**

The U.S. and eight partner nations already plan to buy more than 3,000 of the warplanes, and with potential exports to countries including Israel, South Korea, Japan, Singapore, Finland and Spain the total could “easily” reach 6,000, Brigadier General David Heinz, the top Pentagon official for the F-35, said today.

Boeing and Saab may come to view the Lockheed model as a “program killer,” said Douglas Royce, a market analyst at Forecast International in Newtown, Connecticut. The F-35 will control half the $17 billion warplane market by 2015, aviation consultants Teal Group estimate, bringing a level of dominance unmatched even by the company’s F-16 and threatening to eliminate other primary manufacturers from the industry.

“There may be fewer primes,” Dan Crowley, Lockheed’s F-35 program manager, said in an interview in Paris yesterday. “Just as we’ve seen fewer shipyards and fewer satellite facilities in the U.S. over time, that is a trend you cannot hold back.”

U.S. Defense Secretary Robert Gates’ pledge in April to speed domestic F-35 purchases will give confidence to foreign buyers, both among the eight current partners and beyond. Israel and Singapore, which had F-35 security cooperation pacts yet weren’t full partners in the program, have begun talks with the U.S. government that could lead them to join, Crowley said. Government talks have also begun on possible F-35 sales with Finland, Spain, South Korea and Japan, he said.

One Survivor

“It’s entirely possible that by 2020 there will be only one surviving western fighter plane,” Richard Aboulafia, an analyst with Fairfax, Virginia-based Teal. “The F-35 is designed to do what the F-16 almost did: drive competing manufacturers out of the market.”

Lockheed has held 31 percent of the global fighter jet market over two decades with the F-16 Fighting Falcon, exceeding Boeing’s 24 percent share, according to Teal. The Bethesda, Maryland-based company shipped more than 4,400 F-16s over 35 years, including 2,200 to international customers.

Lockheed aims to emulate that success with the F-35, which is also known as the Lightning II or Joint Strike Fighter, Chief Executive Officer Robert Stevens said in a June 2 interview.

“The F-16 is now in the inventory of 25 air forces,” Stevens, 57, said in Washington. “I wouldn’t be surprised to see that happen to the Joint Strike Fighter, even though we are only talking about eight partner countries today. We think it will expand over time.” The original international partners developing the jet are Australia, Turkey, the U.K., Italy, the Netherlands, Canada, Denmark and Norway.

‘Bright Future’

Boeing, based in Chicago, and Sweden’s Saab aren’t ready to concede the market. Boeing sees “a very bright future” for its F/A-18 Super Hornet, Tom Bell, the vice president for military aircraft business development, said in an interview. The company “can very easily see ourselves making Super Hornets for at least a decade or more,” he said.

Boeing is promoting the F/A-18 and an updated version of its F-15 called Silent Eagle to international customers in Paris, Bell said.

Saab’s Gripen would be an “ideal plane” to compete for orders with F-35, yet lacks a home market large enough to give it economies of scale because Sweden’s Air Force is only about 100 jets, Teal’s Aboulafia said.

Price, Performance

“From a price-performance perspective I think the Gripen can compete with the JSF,” Linkoping-based Saab’s CEO, Aake Svensson, said in an interview yesterday. “We can compete very tough from a price and cost perspective and then performance- wise also.”

Still, Norway dealt Saab a blow in November with a contract for 48 F-35s in a contest analysts predicted the Gripen would win. The Netherlands selected the U.S. plane as the best candidate to replace 85 older aircraft a month later, and Denmark may also opt for Lockheed later this year.

The U.S. and the eight partner nations plan to buy 3,173 F- 35s. A full-scale model is on display this week at the Paris Air Show, where Heinz and Tom Burbage, executive vice president for F-35 integration, gave a program update today.

“The partnership is strong, the program is stable and the value proposition on which this program was founded remains intact,” said Heinz, the U.S. military’s F-35 program executive officer. He declined to disclose the price of the first test aircraft sold to foreign customers, two to the U.K. and one to the Netherlands.

Biggest Program

At an estimated cost of about $298.9 billion for research, development and the purchase of more than 2,400 aircraft for the U.S., the plane is the Pentagon’s largest weapons program. The F-35, with common parts for Air Force, Navy and Marine Corps missions ranging from air combat and tactical bombing to close air support, is designed to replace legacy aircraft including the F-16 and A-10.

The F-35 comes in three variants including a conventional version, a short takeoff/vertical landing jet that can hover in place, and a plane optimized for landing on aircraft carriers.

Lockheed’s principal subcontractors on the F-35 are Los Angeles-based Northrop Grumman Corp. and London-based BAE Systems Plc. Two separate, interchangeable F-35 engines are under development: the F135 by United Technologies Corp.’s Pratt & Whitney unit, and the F136 by a team of General Electric Co. and Rolls-Royce Group Plc.

Raptor

The F-35 is one of two “5th Generation Fighters” designed by Lockheed, along with the F-22 Raptor, that incorporate stealth technology with the latest avionics and improved combat performance over older jets. Because the more advanced F-22, which is also capable of high-altitude supercruise flight, is banned by U.S. law from export, only the F-35 is available for sale to allies.

Competition in the fighter jet industry will be preserved at the level of suppliers, Crowley said. Rival warplanes already produced will also stay in service, providing their makers with maintenance work for decades, even if new jets aren’t ordered.

The biggest threat to the F-35’s global dominance is development risk, said Eric Hugel, a New York-based analyst with Stephens Inc. Lockheed must keep the jet on schedule and costs under control.

“A lot depends on what price-point Lockheed can hit,” Hugel said. “If you sign up for the F-35, you have to wait and see what you are actually going to get. The F/A-18 is flying today. It’s a lower risk solution, so there are positives and negatives either way.”

Price Equation

Lockheed in February estimated that the F-35’s average flyaway cost, excluding research and development, would be “upper-$40 million” for the conventional version when measured in 2002 dollars and “mid-$60 million” for the short takeoff and carrier versions.

The flyaway cost for the F-35 model mustn’t rise above $70 million or competition such as the Super Hornet “starts to look pretty good,” Aboulafia said. The base cost for the F/A-18 is about $53.8 million, according to Boeing.

Boeing plans to exploit its cost advantage to expand sales beyond the nine nations already flying legacy Hornet jets, Bell said. Another six countries “are seriously considering” Super Hornets, he said, without identifying them.

“We have never seen more robust demand for information about the F-15 Silent Eagle and the F/A-18 Super Hornet,” Bell said. “International customers are very interested in the cost and capability mix that those two products could offer them as they think about how to recapitalize their tactical aircraft inventory in these difficult economic times.”

Stock Performance

Lockheed shares rose 24 cents to $82.05 at 4:15 p.m. on the New York Stock Exchange and have fallen 19 percent in a year. Boeing declined 28 cents to $48.55 and has dropped 35 percent in 12 months.

Production volume will give Lockheed an advantage from economies of scale, Forecast International's Royce said.

"The F-35 is the only fighter looking to be in production for thousands of aircraft over the next 20-30 years," Royce said. "Other fighters have much more narrow prospects. These other manufacturers know they are fighting up hill."

China Eastern makes Airbus order

China Eastern is one of China's top three carriers

Thursday, 18 June 2009 15:17 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/business/8106384.stm

State-controlled China Eastern Airlines has ordered 20 Airbus A320 aircraft despite having announced drastic cost-cutting plans earlier in the year.

The new aircraft ordered have a list price of $1.45bn (£884m) and are to be delivered between 2011 and 2013.

Earlier this year the airline postponed or cancelled half of the 29 plane deliveries it had expected in 2009.

Its shares have been suspended since 8 June as it finalises a tie-up with its local rival Shanghai Airlines.

The merger is supposed to reduce their reliance on state aid.

China Eastern chairman Liu Shaoyong has said that details of the merger plan will be released in the next few weeks.

'Steady growth'

China Eastern has received 8bn yuan ($1.2bn; £714m) in government bail-outs in the current downturn.

But the airline said it had ordered that aeroplanes on the assumption that it would "have steady and organic growth over the next few years... when the economy recovers".

There were suggestions at the Paris Air Show that the planes were an allocation from a previous order by the Chinese government procurement agency CASGC and not a new order.

Nonetheless, Airbus has secured a number of deals at the show, with Hungary's budget carrier Wizz Air signing a memorandum of understanding on Thursday for 50 A320 aeroplanes with a list price of $3.8bn.

Air Asia has ordered 10 A350 jets, Qatar Airways has signed up for 24 A320s and there have also been orders from Vietnam Airlines and Cebu Pacific.

Branson Orders Airbus Planes, Dismisses Aid for British Airways

By Steve Rothwell and Mark Barton
http://www.bloomberg.com/apps/news?pid=206...id=acKoEu.4d_0U

June 22 (Bloomberg) -- Richard Branson, the billionaire owner of Virgin Atlantic Airways Ltd., said he's ordering 10 Airbus SAS A330 aircraft and urged the U.K. government not to bail out British Airways Plc as air traffic declines.

Virgin, the biggest rival to British Airways on long-haul routes from the U.K., has agreed to buy six A330-300 aircraft and lease four others for use on routes to the U.S. and Caribbean.

Branson has no plans to bid for British Airways because it has too many liabilities and no paper value, he said in a Bloomberg Television interview today at London Heathrow airport.

“If they do go bust the government should let them go bust,” he said. “Just because they were once the flag carrier doesn’t mean the government should come in and bail them out.”

British Airways fell as much as 8.5 percent in London trading, the biggest drop in a month. Chief Executive Officer Willie Walsh is cutting jobs and curbing pay after the airline reported a 375 million-pound ($617 million) loss for the 12 months ended March 31, its first full-year deficit since 2002.

“Willie Walsh is saying they are in a fight for survival and asking his staff to work for a month without pay,” Branson said. “These are obviously fairly desperate measures.” Asked if BA would survive the slump, he said: “I really don’t know.”

British Airways said it has no intention of seeking aid from the U.K. government.

Opposed to Aid

“There are no talks with the government and there will be no talks,” the carrier said in an e-mailed statement. “We have opposed state aid and our position has not changed.”

British Airways fell as much as 11.6 pence to 124.8 pence, the biggest slide since May 22, and was trading at 127.6 pence as of 12:54 p.m. in London. The stock is has declined 29 percent this year, reducing the company’s market value to 1.47 billion pounds. Virgin Atlantic is closely held.

Howard Wheeldon, a senior strategist at BGC Partners LP in London, said Branson’s remarks were “aimed at creating unnecessary fear amongst BA investors, staff and customer base” and that Virgin itself faces similar problems.

Remarks from Walsh regarding the likely duration of the global slump in air traffic and the possibility of business travel never returning to earlier levels risk damaging British Airways, Branson said in the interview.

‘Early Grave’

“I think Willie Walsh is talking his airline into an early grave,” he said. “It’s up to Virgin Atlantic and other carriers to go out there, to keep improving, buying young planes and competing to get passengers. We have to offer them good value for money.”

Douglas McNeill, an analyst at Astaire Securities in London, said British Airways is likely to survive the recession.

“Business travel will come back and British Airways will cope courtesy of the cash reserves it has built up when times were good,” said McNeill, who recommends buying the stock.

The airline, Europe’s third-biggest, said separately today that’s it will go ahead with a business-class only service from London City airport to New York beginning Sept. 29. Airbus A318s fitted with 32 flat-bed seats will operate on the route.

“In the harshest trading environment airlines have experienced, we believe it is more important than ever to embrace the future and innovate,” Walsh said in a statement. Passengers will be able to check in up to 15 minutes before departure and the service will offer the in-flight Web access.

Walsh said the worst of the recession is yet to come for the airline industry, the Financial Times reported June 18, citing a speech in Paris. British Airways is assuming that the slump may last two years and Walsh warned that demand for business travel might never fully recover, the newspaper said.

Heathrow Slots

Virgin Atlantic, based in Crawley, south of London, would take up available operating slots at Heathrow airport should British Airways collapse and would establish a short-haul airline to fill the gap, said Branson, who spoke prior to a flight to the U.S. to mark the carrier’s 25th anniversary.

Virgin will buy six A330 planes direct from Toulouse, France-based Airbus and then sell them to Amsterdam-based AerCap Holdings NV before leasing them back, the Dutch company said in a statement. The others four planes will be

leased direct from AerCap, the lessor said.

Boeing Says Airbus A350 Aid Against WTO Rules

June 15, 2009
http://news.airwise.com/story/view/1245101286.html

Boeing said it was disappointed with a move by European rival Airbus to obtain state financing for its new A350 XWB aircraft and called it illegal under World Trade Organisation (WTO) rules.

"We are disappointed by reports that the Airbus member states intend to provide - and Airbus to accept - billions of dollars of launch aid for the A350," Boeing said in a statement on Monday.

"Such financing would violate the member states' international obligations to abide by the rules of the WTO. It is long overdue for Airbus to fund its airplane development on commercial terms including using its own resources, which it has indicated are ample."

Ministers of three European nations home to Airbus' jet production earlier said at the Paris Air Show that they expected to make a decision on financing for the project by the end of June.

Qantas cancels Dreamliner order

The Dreamliner is made from plastic composites rather than aluminium

Friday, 26 June 2009 08:15 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/business/8120276.stm

Australian airline Qantas has cancelled an order for 15 of Boeing's Dreamliner 787 aircraft.

The cancellation came after Boeing this week delayed the launch of the Dreamliner for the fifth time.

Qantas said it revoked its $3bn (£1.8bn) order because of the worsening economic environment, not the delays.

Qantas made the order in December 2005. The "operating environment for the world's airlines has clearly changed dramatically since then," Qantas said.

The long-range, medium-sized Dreamliner is already more than two years behind schedule.

The airline's maiden flight had been due to take place on 30 June, but Boeing said it had now been delayed because of a need to reinforce a side section of the plane.

Boeing has received more than 800 orders for the Dreamliner, the planemaker's fastest selling model.

The Dreamliner is Boeing's first completely new aircraft since 1995.

Child survives Yemeni plane crash

Yemeni authorities said the plane conformed to international standards

Tuesday, 30 June 2009 14:24 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/world/africa/8126576.stm

A five-year-old child has been found alive, hours after a Yemeni airliner crashed in the Indian Ocean with more than 150 people on board.

Some bodies have also been recovered from the wreckage of the plane.

The Yemenia **Airbus 310** flight IY626 was flying from the Yemeni capital Sanaa, but many passengers on the plane began their journey in France.

The EU voiced concern about Yemenia's safety and proposed a world blacklist of those carriers deemed unsafe.

The EU already has its own list, and its transport commissioner, Antonio Tajani, said such a list would be a "safety guarantee for all".

Another EU official told Reuters news agency there were concerns about the airline's "incomplete reporting procedure and incomplete follow-up" following 2007 tests on the aircraft that crashed, but that its record was improving.

RECENT AIR CRASHES
1 June: An Air France Airbus plane travelling from Rio de Janeiro to Paris disappears in the Atlantic with 228 people on board
20 May: An Indonesian army C-130 Hercules transport plane crashes into a village on eastern Java, killing at least 97 people
12 February: A plane crashes into a house in Buffalo, New York, killing all 49 people on board and one person on the ground

Yemeni Transport Minister Khaled Ibrahim al-Wazeer told Reuters that the plane had undergone a thorough inspection and conformed to international standards.

Reports say the plane was due in the Comoros capital Moroni at about 0230 (2230GMT on Monday). Most of the passengers had travelled to Sanaa from **Paris or Marseille** on a different aircraft.

The flight on to Moroni, on the island of Njazidja (Grande Comore), was also thought to have made a stop in Djibouti.

There were more than 150 people on board, including three babies and 11 crew.

An airport source told AFP news agency that **66 of the passengers were French**, although many are thought to have dual French-Comoran citizenship.

Anxious relatives of passengers wait at Paris airport

This is the second air tragedy this month involving large numbers of French citizens.

On 1 June an Air France Airbus 330 travelling from Rio de Janeiro to Paris plunged into the Atlantic, killing all 228 people on board.

Relatives' anger

Gen Bruno de Bourdoncle de Saint-Salvy, French naval commander in the Indian Ocean, said the plane had come down about 15km (eight nautical miles) north of the Comoran coast.

A search is under way, with the French military assisting with the operation.

As well as the rescued child, five bodies and some wreckage of the plane have been recovered.

"The weather conditions were rough; strong wind and high seas," Yemenia official Mohammad al-Sumairi told Reuters news agency.

The three Comoros islands are about 300km (190 miles) northwest of Madagascar in the Mozambique channel.

A resident living near the airport told the BBC that about 100 people were trying to get into the building to find out more information, but without much success.

Radio stations in Moroni have stopped playing music and are broadcasting passages from the Koran as a mark of respect for those killed, a local reporter, Abubacar Omar, told the BBC.

The government had appealed for people to stay calm, he said, and key politicians were returning to the Comoros to take charge of the recovery and rescue operation.

"Everybody here is talking about only one thing - the crash," another local journalist, Abdul Rahman Bar Amir, said.

"There are groups of people huddled everywhere, talking. Nobody seems to know what is going on. All we can do is wait for information.

"Nobody is eating, nobody is drinking. All we are doing is waiting."

In France, relatives also gathered at **Paris' Roissy Charles de Gaulle airport and at Marseille Marignane airport** to wait for news.

Some expressed anger at the state of the airline's planes.

"They put us aboard wrecks, they put us aboard coffins. That's where they put us. It's slaughter. It's slaughter," one relative in Paris told French TV.

The airline Yemenia is 51% owned by the Yemeni government and 49% by the Saudi government.

In 1996, a hijacked Ethiopian airliner came down in the same area - most of the 175 passengers and crew were killed.

craig-oxley - June 30, 2009 03:38 PM (GMT)

First of all folks it is not proven we are in Global Warming, we are actually in GLOBAL COOLING! This article even mentions for godsake the Solar Minimum which means COOLING whilst the article then promotes bullshit that we're warming. Also why would a geo-magnetic storm take down two Airbus planes and not a Boeing? Why both French planes? Who hates Airbus? Who's planes aren't selling and who's are? Who is based in Toulouse, France? Theres your answer. Now remember that Sorcha Faal has been claimed to be part of FBI Division #5. Now who's behind FBI Division #5? Why its Boeing of course with NASA. All tied into the Defense Industrial Security Command. The same Denver crew who bought the Concordski from Russia to try to make sure they also took out Jacque Chirac when they bought down Concorde, two agendas in one. Why attack Concorde? Due to it being the greatest European passenger plane in the World. The same plane used to woo customs away from dull Boeing and onto innovative Airbus. Expect more attacks on Airbus. Expect a big attack on the A380 at some point soon. Do NOT fly on an A380 until they bring down the first one, they won't bother with a second for a while. Now articles like this are tiny conditioners for chemtrails believe it or not. They'll soon use the excuse that chemtrails have to stay to stop geo-magnetic storms taking planes etc out. We do note how many planes do fly under the chemtrail level sometimes and rerouted often to do so. -Craig

style='mso-bidi-font-weight:normal'> Orders
Flight Changes After “Magnetic Storm” Downs 2
Airliners, Leaves Nearly 400 Dead<o:p></o:p>

By: <span style='font-size:14.0pt;
color:windowtext'>Sorcha Faal, and as reported to her Western Subscribers<i

style='mso-bidi-font-style:normal'>
(Traducción al Español <span
class=SpellE>abajo)<o:p></o:p>

Reports circulating in the Kremlin today are saying that Russian Air Force
Commanders have issued warnings to all of their aircraft to exercise “<i
style='mso-bidi-font-style:normal'>extreme caution” during flights “<i
style='mso-bidi-font-style:normal'>in and around” an area defined as Latitude
17 North [North Atlantic Ocean] Latitude 3 South [South Atlantic Ocean] to
Latitude 8 North [Indian Ocean] Latitude 19 South [Indian Ocean] between the
Longitudes of 46 West, 33 West, 46 East and 33 East, and which covers the
greater part of the African
Tectonic Plate.

The reason for this unprecedented warning, these reports state, are the
rapid formations of “geomagnetic storms”
emanating from the boundaries of the African Tectonic Plate that due to their
intensity have caused the loss of two major passenger aircraft during the past month
leaving nearly 300 men, women and children dead.

The first aircraft to be downed by this phenomenon was <a
href="http://en.wikipedia.org/wiki/Air_France_Flight_447">Air France passenger flight
447, and which these reports say that upon encountering one of these
geomagnetic storms, on June 1^{st,} near the western boundary of the
African Tectonic Plate close to Brazil’s <a
href="http://stable.toolserver.org/geohack/geohack.php?pagename=Fernando_de_Noronha&
params=3_51_13.71_S_32_25_25.63_W_">Fernando
de Noronha Islands, was “completely annihilated”
causing the deaths of 216 passengers and 12 crew members as their plane plunged
in pieces into the Atlantic Ocean.

The second aircraft to be downed occurred on the eastern boundary of the
African Tectonic Plate today when another of these geomagnetic storms slammed
from the sky a Yemeni Airways flight to the <a
href="http://stable.toolserver.org/geohack/geohack.php?pagename=Comoros&params=11_41_S_43_16_E_type:
country(2,235)">Island
Nation of Comoros in the Indian Ocean of which of the 153 passengers and
crew aboard, only 1 “<a
href="http://www.cnn.com/2009/WORLD/meast/06/30/yemen.plane.crash/index.html">miracle
child” has been rescued, so far.

To the catastrophic events occurring
within the African Tectonic Plate it has been known for over a year with the
reporting of a “new ocean” forming in
<st1:place w:st="on"><st1:country-region w:st="on">Ethiopia</st1:country-region></st1:place>,
and as we can read as reported by Nature News Service:<o:p></o:p>

<a
href="http://news.softpedia.com/news/New-Ocean-Forming-In-Ethiopia-94628.shtml">“Although
the birth of an ocean is an extremely rare phenomenon on the largest of
historical scales, the geophysics is currently experiencing such an event. Even
more dazzling, this occurs in one of the Earth's most inhospitable and arid
regions, the Afar Depression in Ethiopia.<o:p></o:p>

<span
style='mso-bidi-font-size:14.0pt'><a
href="http://news.softpedia.com/news/New-Ocean-Forming-In-Ethiopia-94628.shtml">The
African continent is literally unstitching itself apart just like the sleeve of
an old shirt, along the area known as the East African Rift, which traverses it

beginning with the southern end of the Red Sea, going through Eritrea, Ethiopia, Kenya, Tanzania and Mozambique. The molten lava beneath the Earth's surface makes it thin by constantly pushing against it, and eventually breaks it and tears it apart.”<o:p></o:p>

Though Western scientist assert that the formation of this new ocean is not likely to be finished for millions of years, Russian scientists state, unequivocally, that due to the Suns current unprecedented Deep Solar Minimum, our Earth is in danger of being, literally, “ripped apart”, at the worst, or nearing a “total pole reversal” due to an as yet unexplained, but extremely powerful, gravitational force emanating from the outer reaches of our Solar System that some researchers state is the mysterious Planet X, and which many believe to be a large brown dwarf and known to the ancient peoples of Earth as Nibiru, and by called by the name of Wormwood in the Christian Bible.

Russian scientists further warn that the West’s “obsession” with manmade Global Warming is a deliberately designed propaganda effort to shield their peoples from the fact that not only our Earth, but all of the planets in our Solar System are currently undergoing rapid warming, and as proved, beyond all doubt, by Doctor Scientist Habibullo Abdussamatov, head of space research at St. Petersburg's Pulkovo Astronomical Observatory in Russia, when in 2007 he released his findings that for the previous 3 years the ice caps of Mars have been melting at an unprecedented rate.

And, as reported by one, of many, dissident Western news sites, “Photographs of the merging of two red spots on Jupiter, evidence of warming on Neptune's largest moon Triton, warming on Pluto that is "puzzling scientists" and, of course, the already documented warming trend on Mars all add up to convincing evidence for increased solar activity across the entire solar system.”

To the most chilling parts of these reports on the current instability of the African Tectonic Plate are those Russian scientists who assert, that, should a powerful enough gravitational force be exerted upon this region [such as that which would occur in our Earth’s presence with a Planet X type body], it would cause this plate to be subsumed with the Atlantic and Indian Oceans completely covering what is now known as the African Continent, and further cause a corresponding rise of what were known to the ancient peoples as the Continents of Atlantis in the middle of the Atlantic Ocean and Lemuria in the Indian and Pacific Oceans.

Interesting to note about these current events is that the most important seer of 20th century America, Edgar Cayce, predicted that both Atlantis and Lemuria would arise

again during the ending of our Earth's present age, and which many in the World currently believe will be in 2012 as predicted the Mayan Calendar left to our modern World by a race of mysterious people living in the America's and having a knowledge of mathematics, science and astronomy far surpassing that of even today's most gifted scientist.

There are those in the West, of course, who remain blinded to the true facts regarding the catastrophic Global events soon to take place, and as evidenced in 1950 when the Russian born American independent researcher Immanuel Velikovsky was turned down by 8 US publishers in his attempt to warn humanity of what was to come in his book Worlds In Collision which told the true facts of our Earth's history, to include:

Planet Earth has suffered natural catastrophes on a global scale, both before and during mankind's recorded history. <o:p></o:p>

There is evidence for these catastrophes in the geological record and archeological record. <o:p></o:p>

The extinction of many species had occurred catastrophically, not by gradual Darwinian means. <o:p></o:p>

The catastrophes which occurred within the memory of mankind are recorded in the myths, legends and written history of all ancient cultures and civilizations. <o:p></o:p>

Velikovsky pointed to alleged concordances in the accounts of many cultures, and proposed that they referred to the same real events. <o:p></o:p>

For instance, the memory of a flood is recorded in the Hebrew Bible, in the Greek legend of Deucalion and in the Manu legend of India. <o:p></o:p>

Velikovsky put forward the psychoanalytic idea of "Cultural Amnesia" as a mechanism whereby these literal records came to be regarded as mere myths and

legends. <o:p></o:p>

<i
style='mso-bidi-font-style:normal'><a
href="http://en.wikipedia.org/wiki/Immanuel_Velikovsky#Velikovsky.27s_ideas">The
cause of these natural catastrophes were close encounters between the Earth and
other bodies within the solar system — not least what were now the planets
Saturn, Jupiter, Venus and Mars, these bodies having moved upon different
orbits within human memory. <o:p></o:p>

<i
style='mso-bidi-font-style:normal'><a
href="http://en.wikipedia.org/wiki/Immanuel_Velikovsky#Velikovsky.27s_ideas">To
explain the celestial mechanics necessary to permit these changes to the
configuration of the solar system, Velikovsky thought that electromagnetic
forces might somehow play a greater role to counteract gravity and orbital mechanics.<b
style='mso-bidi-font-weight:normal'><o:p></o:p>

And, to the “cultural amnesia”
that Velikovsky warned the average Westerner about, the same cannot be said of
their leaders, who by their actions in looting from their populations over <b
style='mso-bidi-font-weight:normal'><a
href="http://myprops.org/content/Has-60-trillion-in-wealth-vanished-Stimulus-bills-are-a-drop-in-the-bucket/"><span
style='color:red'>$60 Trillion in just the past 8 months
alone, in the deliberate “<a
href="http://www.deliberatedumbingdown.com/">dumbing down” of their
societies where even the most simplistic fact is unknowable to them, by their creation
of Orwellian police state populations where everyone is used to inform on
everyone else so that all live in constant fear, by their deliberate
terrorizing of their own citizens to, again, keep these simpletons living in
constant dread of death, by their creation of a “<a
href="http://news.nationalgeographic.com/news/2008/02/photogalleries/seedvault-pictures/">Doomsday
Vault” near the North Pole so that these elites can rebuild and populate a devastated
Earth, to the building of the most <a
href="http://www.anomalies-unlimited.com/Denver_Airport.html">mysterious, and
bizarre, airport in the World in Denver, Colorado, able to whisk within 48
hours notice these Western elites to their vast <a
href="http://www.crystalinks.com/underbases.html">underground cities
scattered throughout the Western United States at a rate of over 25,000 an
hour, to all of these, and much, much more, these Westerners continue to
ignore.

Even worse, when those, like us, try to warn them about what is to come, and
as we’ve warned them about for years, we, not their elite slave masters, are
the ones derided as not telling them the truth.

But, then again, a people who can be convinced by their slave masters that
for the first
time in known history, and unsupported by any <a
href="http://www.ae911truth.org/">scientific fact, fires caused by planes
brought down in freefall three of our Earth’s largest skyscrapers, <a
href="http://www.youtube.com/watch?v=iEuJimaumW4">one of which wasn’t even hit
by a plane, and that in the week prior to these skyscrapers being destroyed
the brother
of their current president headed the security company that had unprecedented,
and unlimited, access to these buildings for an entire weekend for reasons
still never explained, these are poor souls who are beyond lost…they are,
frankly, dead people walking.

Any one who has read about the JFK assassination and subsequent "investigation" are familar with J. Edgar Hoover's involvement in the events of this case. The CIA is the intelligence agency that gets the majority of coverage in terms of being involved in the killing of the 35th president, but the FBI had a very secret group that was expert in assassinations, it was/is known as Division Five. The CIA had groups that appear to have been involved, the one out of Mexico City and the one out of the Far East are the two most likely groups, but as a whole the CIA was not involved in all liklihood. To what extent the top echelon at the CIA being aware of the alleged plans of one or two of its stations being active in the assassination is not known for sure. The same thing can not be said of Division Five as its head was Hoover, and he was very involved in the cover-up of the true facts of the assassination, thus, it can be deduced he might have been very well aware of the plans ahead of time (perhaps even worked on them).

To people who like to believe their government always works for the best of their citizenry this will be to difficult to comprehend perhaps, so some background is in order. The main point to remember is the teamwork of Johnson and Hoover. Neither could have done anything without the other, and as history shows they worked very closely on the cover-up (or for official theory believers - the "investigation") of the assassination. They both had a lot at stake - their careers. And this was BEFORE the assassination occured. Johnson was mixed up in a number of investigations and faced a real probability of jail time, or at the very least being dropped from the ticket in 1964. JFK made a serious mistake in my opinion by telling too much, including this, to Sen. George Smathers of FL. JFK tended to discuss things with people he liked and he shared his plans with Sen. Smathers as he wanted him to possibly replace LBJ in 1964. The problem comes in with the fact that Sen. Smathers was also good buddies with Nixon, and he could have told Nixon this info. Nixon did say this a day before the assassination to the media. For anyone who thinks this was all harmless, and perhaps it was, keep in mind Sen. Smathers had a secretary who would play a key role in another

Kennedy's life years later, Mary Jo Kopechne. Mere coincidence, or more, it your choice. As for Hoover, he was going to be forced to retire as neither Kennedy liked him and they were tired of him having so much info on them. Hoover in fact, started tracking the young Kennedy in the early 1940s - one can only wonder why at this stage - and had the goods on him as he had an affair with a woman who turned out to be a German spy. For this reason and many others the Kennedys wanted him out, and the FBI was Hoover's whole life.

In the 1930s Hoover organized the police force of the fledgling Tennessee Valley Authority at the request of David Lillienthal. This group would go on to become The Defense Industrial Security Command (DISC) and it would expand through the southeast and eventually it would cover the Atomic Energy Commission, thus tying it into the Army Intelligence Service. This highly secret group was written about in the Torbitt Document:

"DISC has always been kept secret because it acts, in addition to its two official control organizations, on behalf of NASA, the Atomic Energy Commission, the U.S. Information Agency, and the arms, equipment, ammunition, munitions and related miscellaneous supply manufacturing corporations contracting with NASA, the AEC, USIA, and the Pentagon. One can readily observe that DISC is not compatible with an open Democracy and the U.S. Constitution. Consequently, the top secret arms manufacturers' police agency has been kept from the knowledge of even most U.S. officials and Congressmen."

How does this all tie into Hoover? Division Five acted dually with the Defense Intelligence Agency which was acting on behalf of the Joint Chiefs of Staff in the Pentagon. Directly under the two-pronged leadership of Division Five and the DIA was the Control Group, their highly secret policy agency - the Defense Industrial Security Command. It gets even more interesting. The group Jim Garrison uncovered when he was going after Clay Shaw, a.k.a. Clay Bertrand, was Permindex. This group had direct ties with Division Five at the FBI. L.M. Bloomfield, a Montreal, CANADA lawyer who was friends with Hoover and was the direct supervisor of all contractual agents with J. Edgar Hoover's Division Five, was the top co-ordinator for the network planning the execution. A Swiss corporation, Permindex, was used to head five front organizations responsible for furnishing personnel and supervisors to carry out assigned duties. According to the Torbitt Document the five divisions and their supervisors under Permindex were as follows:

1. The Czarist Russian, Eastern European and Middle East exile organization called SOLIDARISTS, headed by Ferenc Nagy, ex-Hungarian Premier, and John DeMenil, Russian exile from Houston, Texas, a close friend and supporter of Lyndon Johnson for over thirty years.

2. A section of the AMERICAN COUNCIL OF CHRISTIAN CHURCHES headed by H.L. Hunt of Dallas, Texas.

3. A Cuban exile group called FREE CUBA COMMITTEE headed by Carlos Prio Socarras, ex-Cuban President.

4. An organization of United States, Caribbean, and Havana, Cuba gamblers called the Syndicate headed by Clifford Jones, ex-Lieutenant Governor of Nevada and Democratic National Committeeman, and Bobby Baker of Washington, D.C. This group worked closely with a Mafia

family headed by Joe Bonnano.

5. The SECURITY DIVISION of the National Aeronautics and Space Administration (NASA) headed by Wernher Von Braun, head of the German Nazi rocket program from 1932 through 1945. Headquarters for this group was the DEFENSE INDUSTRIAL SECURITY COMMAND at Muscle Shoals Redstone Arsenal in Alabama and on East Broad Street in Columbus, Ohio.

The Defense Industrial Security Command is the police and espionage agency for the U.S. munitions makers. DISC was organized by J. Edgar Hoover; William Sullivan, his chief assistant, is in direct command. The point is made by the Torbitt Document that all the prinicipals we have read about for so many years, Shaw, Ferrie, Bannister, LHO and Ruby were all DISC agents.

Here are some connections:

- The Director of the Federal Bureau of Investigation, Hoover, was in charge of NASA's Security Division and the Defense Industrial Security Command in his position as head of counter-espionage activities in the United States. His agents investigated every employee of the space agency as well as the employees of the pertinent contractors doing business with NASA and also prospective employees of every arms and munitions manufacturer.

- The Defense Intelligence Agency is headed by Lt. General Joseph F. Carroll, a former assistant Director of the FBI. Carroll worked closely with Sullivan, Hoover and L.M. Bloomfield in directing activities of the munition-makers' police agency, the Defense Industrial Security Command.

-Lyndon Johnson, as Vice-President, was Chairman of NASA, and he, Von Braun, Bobby Baker, [and] Fred Black had worked diligently to obtain the nine billion dollar Apollo contract for North American Aviation in 1961. NASA awarded this contract to North American despite the fact that it went against the recommendation of its own source evaluation board.1 Each of the NASA security personnel who were assigned duties in connection with the assassination were employees or contractees for Division Five of the FBI and many were connected with the other four groups. It must be born in mind that this was a relatively small group within all of these agencies. It was not official, and it was not an American operation, but was simply the independent action taken by these men, some of whom happened to hold official positions. (Torbitt Document)

George DeMohrenschildt would later testify that Hoover and Division Five were responsible for the assassination. This is what the Torbitt Document has to say:

"George DeMohrenschildt, a Russian emigre who refused to join the Solidarists and who was familiar with the workings of espionage groups and had worked with them in the past, testified that J. Edgar Hoover, using Division Five of the FBI, was the planner of the assassination of President Kennedy. Through DeMohrenschildt's testimony before the Commission and his documentation, the connection of the espionage section of the FBI and the Assassination has been established.4

The public records of the Corporate Records Department of Italy and Switzerland, Who's Who in the South and Southwest, 1963, 1964, The

Invisible Government, The Espionage Establishment by Wise and Ross, Buddy Floyd murder files, Alice Texas, Warren Commission 26 volumes., the Grand Jury records of New Orleans Parish, New Orleans Louisiana, all further substantiate, bolster, and corroborate the testimony of DeMohrenschildt concerning the FBI's Division Five's involvement.

Many examiners of the case have concluded that George DeMohrenschildt was a part of the conspiracy because of his close association with Oswald during the fall of 1962, and winter and early spring of 1963, but a close reading of the Russian exile's testimony before the Warren Commission shows that DeMohrenschildt was being used by the Solidarists the same as Oswald was being used, and was to have been tied in with Oswald; in connection with the assassination. However, DeMohrenschildt, a highly polished professional geologist, saved himself by moving to Haiti in April of 1963 in connection with a contract with the government of Haiti, where he still resided on the day of the assassination of President Kennedy.

DeMohrenschildt, in retrospect, knew that Division Five of the FBI and the Solidarists had intended to use him as a scapegoat along with Oswald, and he did not hesitate to name the small group within the Federal Bureau of Investigation as the instigators of the assassination of President Kennedy." 5

Jack Ruby was a descendent of White Russia as well and he was a known Solidarists (anti-Communist) like DeMohrenschildt. Ruby would also accuse LBJ of being involved in the assassination while in jail. In letters smuggled from jail, Jack Ruby constantly said that Nazis and Fascists were behind the Kennedy murder. Ruby was much more knowledgeable about the conspiracy than most. He would be quoted as saying the following:

"The world has the right to hear the truth."

He said newsman should search "in the high sources of our political government" to find out how Oswald got a job at the Depository on the motorcade route; said that the full story of the assassination would not come out because "unfortunately some people in high places had so much to gain by putting me in this position", and when asked to elaborate on this, said that the results of the lie detector test had not been divulged, and said that there was a "terrible conspiracy" behind Kennedy's death and he, Ruby, "happened to be a scapegoat to walk into a trap and make that possible."

"...if Adlai Stevenson had been Vice President, Kennedy would still be alive today."

Ruby wrote that Johnson "found me as the perfect setup for a frame. Remember they had the President killed, and now with me in the picture, they'll make it look as though Castro or the Russians had it done. Remember the only one who had all to gain was Johnson himself. Figure that out. "

Division Five would be linked to the assassination attempts on French President DeGaulle according to the intelligence groups of France. It would make perfect sense for Hoover to use his personal group when he would be handling the "investigation" later on as he could contain everything under one roof so to speak. There are four consistent people mentioned in almost all JFK books and articles, LBJ, Hoover,

H.L. Hunt and Clint Murchison. These men are the logical place to start when trying to unravel this case.

1 Appointment on the Moon, Richard S. Lewis, Viking Press, 1969, p. 377 et seq.; New Orleans District Attorney Records.

4 C.H. IX, 47 et seq.; 77 et seq.; Russian exiles testimony to the Commission.

5 New Orleans District Attorney Records.

Bye, Bye Bye Boeing Bye Bye

(With apologies to Janis Joplin)

"New technology from 'Old Europe' overwhelms old technology from new America. The belly comes from Spain, the wings from Britain, the nose from France, and the interior from Germany.

1 February 2005
Joe Vialls

Beauty is more than just skin deep. A miracle of 21st Century technology, the Airbus A 380 has broken new barriers. Where the ancient Boeing 747 has one and a half million vulnerable rivets, the Airbus has none, using laser-guided electric welding instead. Primary construction revolves around the use of state-of-the-art carbon fiber and other enormously strong composites. New York would cheerfully kill to rid the world of this Boeing-destroyer, as it did with Concorde at Paris Charles de Gaulle Airport on 25 July 2000, in a deliberate attempt to assassinate President Jaques Chirac, and, at the same time, forever undermine the credibility of European aerospace excellence.

Nineteen sixty-six seems a very long time ago, but it was on March 11 that year that French President Charles de Gaulle stunned the western world by sending an aide-mémoire to France's 14 partners in the North Atlantic Treaty Organisation

(NATO), in which he announced that all French forces would be withdrawn from the Alliance integrated command. De Gaulle also stated that all French NATO bases and HQ's would be closed within a year. General de Gaulle was a gentleman, and he kept his word.

At the diplomatic level, the reason appeared to be that Charles de Gaulle could not and would not trust America to 'protect' France if Russia attacked Europe, but the real reasons behind his decision were infinitely more profound. You see, President de Gaulle knew all there was to know about Zionist plans for a 'One World Government', and he also knew that France would be crushed into economic submission as an integral part of those Zionist plans.

Less than one year later the French Force de Frappe (Strike Force) was in operation, equipped with sixty-two formidable Mach 2 Mirage IV-P low-level bombers, each capable of delivering a home-made [French] sixty-kiloton nuclear bomb with stunning accuracy. And while the New York media tried to laugh the whole matter off as a bit of a gallic joke, Charles de Gaulle made it painfully clear that he was deadly serious:
"It is obvious that the megatonnes which we could employ do not match the numbers which America and Russia could unleash", de Gaulle said, "But once a certain nuclear capacity is reached and in regard to our direct defense, the size of the respective arsenals does not have an absolute value.

He continued, "For since a man and a country can only die once, deterrence exists once one has the means to inflict mortal damage on a possible aggressor, the determination to use them and the confidence in one’s ultimate decision."

The amazing Mirage-IVP carried much of France's nuclear role in the air for 32 years with the AN-52 nuclear bomb and ASMP missile. In July 1996 the Mirage was [officially] retired from this role, but 5 have been kept for strategic reconaissance missions. They are operated by the 1/91 Gascogne squadron at Mont-de-Marsan, while the rest of the Mirage-IVPs are kept in fully air-conditioned hangars discreetly dotted across France, lest they should suddenly be needed again at short notice.

While Germany continued to bow the knee to its American occupation troops, and allow them free access to frequently unwilling German women, and sometimes children, France was having none of it. In a very real sense, France forced the pace in forming the fledgling European Union, because men like Charles de Gaulle knew that European unity and massive trade were the only tools capable of defeating the New York moneylenders.

Somehow, Europe as a whole had to find a way of freeing itself from the stranglehold of worthless US Federal Reserve notes, which would had to be replaced with revenue derived from the sale of tangible [real] products, such as cars, aircraft, farm products and so on. This was finally achieved in January 2005, when Germany alone (just one of 25 EU member states), published its export/import figures for the financial year 2004.

During 2004, Germany exported products worth US$ 950 billion, while importing products valued at only US$ 748 billion, meaning that Germany made a gross profit for the year of US$ 222,000,000,000. During the same time frame, America's total exports were two hundred billion less than Germany, with American imports completely off the clock. If anyone out there ever wanted hard proof that America is now totally bankrupt, Germany just provided that proof in the form of properly audited balance sheets.

The Boeing 747's design and manufacturing techniques date back to the fifties and the 'good old days' of the Cold War. Despite new engines and flashy flight deck instruments, nothing else has changed. This aircraft is essentially as old and out-of-date as the Boeing B-47 bomber.

Though few people would consider the luxurious Airbus A-380 as a warplane, its very existence will have more strategic impact on future wars than any military design, which requires explanation. Try looking at it this way: At present America has a finite number of military aircraft, ships and tanks, but cannot afford to import the raw materials to build more. What you see is what you get, and George W. Bush is fast starting to look like Romulus Augustulus, the last emperor of the Roman Empire.

On the flip side of the coin, the European Union, Russia and China are positively swimming in oceans of real Euros, Roubles, and Yuan generated by real sales of real goods, and they produce more goods as each year goes by. Mostly these nations trade with each other, across Asia and South America, but with barely a glance towards the USA. Though the United States looks big on a map, its population represents only five-percent of the global market, and traders grow more skeptical of the failing US Dollar as each week goes by. Nowadays many nervous international traders are refusing to accept US Dollar payments, demanding Euros instead.

For nearly a hundred years, the New York Zionists and their forbears have held the world to ransom, using blackmail and sheer force of arms to extract real goods in exchange for useless 'fiat' currency notes, junk bonds, and political bribes. It was never going to last for ever, and the launch of the A-380 on January 18 marked the official beginning of the end, at least from a European perspective.

After successfully sabotaging Concorde 4590 and nearly killing French President Jacque Chirac in 2000, the New York Zionists went on to deliberately sabotage the dedicated A-380 airport terminals in Dubai and Paris. The subliminal message was obvious, i.e. hinting strongly that anything aeronautical designed or built by Europe

Though it is one of the main instruments designed to undermine Boeing Aircraft Corporation and thus the entire American defense industy, the A-380 Super Jumbo is still a stunning aircraft in its own right, and will doubtlessly attract vast numbers of passengers on its merits. Though in standard three-class configuration the A-380 will carry around 560 passengers, rather than a possible 810 maximum in 'cattle truck' mode, it will do so 27% cheaper per passenger-mile than the Boeing 747, with part of this made possible by the engines burning about 20% less fuel.

Curiously, Boeing's counter propaganda about the giant aircraft seems to have fallen flat on its face. The A-380 is not noisier than the Boeing 747, but many decibels quieter, even at maximum takeoff power. The A-380 does not require a special runway, and in fact has a shorter takeoff and landing run that the Boeing 747. The only airport alterations required are special departure and arrival gates, which were originally designed to handle a throughput of around 350 passengers, and will be hard pressed to handle 550 in their current configurations. They could still do the job of course, but the delays would be unacceptable.

Perhaps most irksome of all for the Wall Street moneylenders, is that the giant European aerospace corporation that own Airbus, has not borrowed a single American fiat cent in order to completet this or any other Airbus project, meaning that Wall Street cannot pull the financial plug and make Airbus Industries simply disappear.

Unable to stop the A-380 by direct means, or by indirect acts of sabotage on Concorde and the A-380 terminals, the money lenders sent Boeing off on a different and quite ridiculous tack, made necessary by the fact that America no longer has enough spare cash to build new aircraft or new production lines.

France was the principal driving force behind both Concorde and the Airbus A-380. After surviving an assassination attempt by the doomed Concorde, which only just missed his Presidential Air France Boeing 747 by the side of the runway at Paris Charles de Gaulle Airport in 2000, Jaque Chirac is justifiably proud of "Old

Armed only with a cheap artist's impression, Boeing salesmen set off around the world in an attempt to achieve the impossible, to wit selling the concept of a middle weight airliner dubbed the Boeing 7E7 "Dreamliner", but without first building a prototype of even a full scale mockup. This was to be an exercise in gathering sufficient cash to start building a mockup - which is an incredible way of trying to sell aeroplanes, because it tells everyone instantly that you are so broke you can't afford to show them the real thing.

This is not the first time Boeing has tried this bizarre approach. Within twelve months of the sabotage of Concorde 4590, the corporation suddenly released an artist's impression of the "Sonic Cruiser", a hybrid space-age transonic jet they seemed sure would replace the Concorde, once orchestrated American media pressure had managed to have the Mach 2 Concorde permanently grounded, which, curiously enough, is exactly what happened. Unfortunately for Boeing, no one wanted to buy their 'Sonic Cruiser" painting, so the project eventually folded and died.

But the 7E7 was going to be different, and during the Spring of 2003, All Nippon Airways of Japan placed a firm order for 50 of these unproven aircraft at a fixed price of US$115 million for each airplane. Alas though, All Nippon was not prepared to hand over any ready cash in advance, meaning the full scale mockup and production line could not be started.

"Dreamliner" is a very appropriate name, because this aircraft only exists in the fertile imaginations of Boeing's sales personnel. There is no prototype and no pre-production aircraft, although Boeing does have a few hundred spare copies of this artist's impression

Time dragged slowly by, and then on Friday January 28, 2005, Boeing got the big break it had been looking for. The Boeing Company and officials from the Peoples' Republic of China signed an agreement for the purchase of 70 Boeing 7E7 Dreamliners by Chinese airlines. The agreement mentions a fixed price of US$110 million per airplane. The salemen had pulled it off, and managed to sell more than 100 aircraft based only on an artist's impression! Not bad, but there was to be a very nasty sting in the tail.

The very next day at Davos in Switzerland, Fan Gang, director of the National Economic Research Institute at the China Reform Foundation, boldly stated [on belalf of the Chinese Government], "The U.S. dollar is no longer, in our opinion is no longer seen as a stable currency, and is devaluating all the time, and that's putting troubles all the time," he said in impeccable English.

Fan Gang continued, "So the real issue is how to change the regime from a US dollar pegging to a more manageable - pause - reference - pause - say Euros, yen, those kind of more diversified systems. If you do this, in the beginning you have some kind of initial shock; you have to deal with some devaluation pressures."

China is a very powerful economic force nowadays, and the man from China had just put his boot into the US Dollar, a point well noted by all present. Naturally this means the US Dollar will continue to fall like a stone, going into final freefall when Russia and OPEC decide to start trading their oil stocks in Euros instead of dollars.

So, Boeing has talked itself into the fixed-price delivery in 2008 of more than a hundred 7E7s [now the 787s], with that price fixed in US Dollars. Oh dear, now how much will the US Dollar be worth in four years time, when the Euro has become the world's only viable reserve currency? Let us take 25% of its current value against the Yuan and Yen, which means that Boeing will be contractually obliged to deliver brand-new 787 aircraft to China and Japan for today's equivalent price of a second-hand Boeing 737, or declare bankrupcy.

It is no exaggeration to say that Boeing is the 'flagship' of the American defense industry, and if Boeing goes to the wall, so will everyone else. No more aircraft carriers, no more stealth bombers, and no more attacking overseas sovereign nations in the sacred name of New York Zionist 'Democracy'. Perhaps none of this would have happened at all, if certain certifiable maniacs had resisted the temptation to try and assassinate the French President back on 25 July 2000. Food for thought.

Second Giant Airbus Terminal Mysteriously "Collapses" - Lucky Boeing!

Scroll down to blue update

The shattered edifice of Terminal 2E, custom designed for the giant double-decker Airbus 380 which could drive Boeing into bankruptcy, is frightening away France's record tourist crowds, their fear deliberately increased by vilification and panic-mongering by the New York media. As a result, the US$900 million

Just before 7 a.m. on Sunday May 23, startled security guards inside Terminal 2E at Roissy-Charles de Gaulle noticed tiny spider cracks appearing in one of the support walls of the building. Acting like lightning, the guards started an immediate mass evacuation of the entire terminal, and radioed French police for urgent assistance. Had those guards not acted as quickly as they did, more than 500 staff and passengers would have died in the giant mangled pile of rubble which appeared shortly thereafter. France might thus have suffered its very own Mini 9-11, possibly forcing a reluctant Paris to join the hysterical 'War on Terror' raging on the other side of the Atlantic.

While dust clouds still partly obscured the quarantined terminal disaster area, and no one including media was allowed within 500 yards of the building, the New York Times suddenly went into extra-sensory-perception mode, blandly reporting that, "Rescue workers converged on the site to search for survivors of the accident, which appeared to have been caused by a structural failure, rather than a bomb" … "It is not clear whether the collapse was caused by a structural flaw in the shell, the failure of supporting pillars beneath it or some other reason. But the elliptical arch [of the roof] pushed the limits of conventional vault design, with the curvature continuing beyond the vertical without abutments other than the reinforcing steel hoops to stop it from spreading".

We will return to this impossible and obviously pre-prepared claim later in the report, but a clue to Wall Street's motive for this particular El-Al'eda terrorist attack was provided two days later, when the New York Times gloated, "The collapse of a passenger terminal at Roissy-Charles de Gaulle Airport near Paris on Sunday is likely to cause wide ripples in French industrial circles, perhaps even affecting the introduction of the Airbus A380 superjumbo jet, Europe's answer to the Boeing 747".

Those readers who sincerely believe the only current Wall Street crusade is that being visibly directed against oil-rich Muslim countries in the Middle East, will shortly have to come to terms with Wall Street's less visible but even more fanatical crusade against 'Old Europe' and Russia. Though stealing Iraq [or Saudi Arabia's] crude oil reserves is essential to the long-term survival of America, any such victory will fail completely if Europe and Russia are allowed to

form an alliance, thereby forming the biggest superpower on the face of the earth.

This is the really big battle, and the Zionist Cabal in New York has been covertly chipping away at Russia and Europe for more than twenty years, while at the same time planning the Draconian "Fortress Americas" as a final redoubt, should their plans be uncovered or fail for other reasons. The victor in this gargantuan but largely unseen battle will win the right to monopolize world trade, in partnership with China, for perhaps the next century or even longer, while the loser will unquestionably be relegated to third-world status.

Though 'trade' covers a vast array of products and services both tangible and intangible, four component parts are especially important at the dawn of the twenty-first century. The absolute control of life and death is represented by the pharmaceutical and aerospace-defense conglomerates, while generic tourism in one form or another leads the charge in securing vast sums of transient currencies, and in capturing the 'hearts and minds' of an increasingly mobile global public. None of the above would be able to operate without crude oil, which is therefore the fourth of these important components.

Very few readers in the west realize that a mere eighteen months ago, Russia overtook Saudi Arabia as the world's biggest single national producer of crude oil and gas products, a position it had been striving to achieve for more than twenty years. In fact, Russia very nearly achieved dominance during the mid eighties, right up to the point when the Zionist Cabal instructed President Ronald Reagan to sabotage the Siberian pipelines.

This successful covert American operation led in turn to the first tit-for-tat micro nuclear reprisal in the current ongoing series. On 6 June 1988 a micro nuke no bigger than a coffee cup went critical in the compressor room of Occidental's Piper Alpha platform in the North Sea. As the screeching white-hot fireball reached half the temperature of the sun in six microseconds, and instantly vaporized the top structure of the Alpha platform, the subliminal message was clear. Russia would not tolerate any more Zionist interference in its internal affairs, especially not in its internal oil and gas affairs.

This presented the Zionist Cabal with a nightmare problem, resolved just a few short years later by American Ambassador April Glaspie. At her last confidential meeting with President Saddam Hussein of Iraq before Kuwait was invaded, Glaspie gave the Iraqi President the green light. ""We have no opinion on your Arab-Arab conflicts," she told Hussein, "such as your dispute with Kuwait. Secretary [of State James] Baker has directed me to emphasize the instruction ... that Kuwait is not associated with America." President Hussein unfortunately fell for this obvious ruse, and the rest is vividly recorded history.

Thus the Zionist Cabal had terminally fixated on expanding the Jewish State east to the Euphrates and beyond, without ever stopping to ponder how it would then be able to transport its plundered crude oil home across 7,000 nautical miles of hostile ocean, dotted here and there by silent Russian and French hunter-killer submarines, and fast radar-opaque minelayers.

To an extent, Wall Street's attention was deflected by the simultaneous rising trade threat of the European defense industry, headed by the incredibly profitable aerospace sector. During the last century, no other sector has bestowed more profit and prestige on its shareholders than the ubiquitous plane makers, especially those engaged in the manufacture of flagship long-range commercial airliners. Since the end of World War II, Boeing has completely dominated this market, effectively allowing America to control commercial aviation in western skies. Then as if out of nowhere, Airbus Industries came on the scene. As I wrote in June 2003:

"Though Airbus sales had been very slow since 1969, the consortium adopted a far more aggressive stance in the early nineties, to the point where it threatened Boeing's virtual monopoly of the commercial airliner market. If the Americans saw this as a serious threat, they were quite right to do so. Back in 1969 the European manufacturers produced only 10% of all commercial airliners, despite having one quarter of all airline business worldwide. By its 30th birthday in December 1999, the Airbus Consortium would be reveling in its new 50% share of the global airliner market.

"Apart from its new aggressive sales stance, Europe had another weapon in its arsenal that could not be matched by America under any circumstances, in the shape of the supersonic Concorde. If the Airbus sales team wished to close an important sale, they had this infuriating habit of turning up in one of these sleek and truly awesome aircraft, described countless times as "the sexiest airliner in the world". Sexy or not, Concorde was and still is the absolute guarantee of European aircraft industry excellence.

"By the mid-nineties, these two-hundred-ton white darts had been flashing backwards and forwards across the Atlantic every day of the week at twice the speed of sound, for more than twenty years non-stop without serious incident. A free ride in Concorde, and a glass or two of vintage champagne, was nearly always enough to convince even the most reluctant airline executive to choose Airbus over Boeing." A link to this Concorde sabotage report is provided at the bottom of the page.

It is beyond any doubt that the deliberate sabotage of Concorde was designed to put the brakes on Airbus sales, especially on the growing sales of the giant double-decker A 380 Super Jumbo, an aircraft so opulent that it puts the aging Boeing 747 flagship completely in the shade. Depending on the airline, all passengers will enjoy greatly increased legroom, access to a proper in-flight bar, and room to walk around and stretch their legs. Some operators including Singapore Airlines even plan to have a gym on board. In simple terms, the giant A 380 is light years ahead of the elderly Boeing, with fuel costs around 20% less overall, meaning that everyone is a winner apart from American aerospace in general, and Boeing shareholders in particular.

Just two weeks before Terminal 2E inexplicably collapsed at Roissy-Charles de Gaulle, Airbus [now part of European Aeronautic, Defense Space] celebrated the complete assembly of its first Super Jumbo in a vast hangar at Toulouse. Champagne corks popped wildly as VIP visitors were escorted around the huge construction facility, and firm orders climbed above 130 aircraft. No small achievement in a world beset by synthetic 'Muslim terrorism' largely invented by Wall Street, with a majority of Americans intimidated into not flying at all. But then these giant 21st Century airliners are not destined for America.

While Americans are obliged to submit to extraordinary indignities at their own airports courtesy of the Draconian "Department of Homeland Security", the rest of the world [apart from Australia] has gone in the opposite direction. France, Germany, Russia and even China nowadays welcome tourists as honored guests rather than terrorist suspects, meaning that their tourism revenues have gone through the roof. Arrival in Paris, Frankfurt, Moscow or Beijing means being greeted by cheerful immigration officials before being shown to a cab rank or bus stop. You are certainly NOT bullied by paranoid American officials into providing photographs, fingerprints, retinal scans, and, perhaps in the near future, anal probes as well.

Tourists who want to visit Disney World are not going to put up with Ridge and Ashcroft's insulting paranoid rubbish. Instead, they have voted with their feet by visiting Euro Disney outside

It is right here that we begin to see what was so terribly wrong about the instant bland pronouncement by the New York Times on May 23, that the collapse of Terminal 2E "appeared to have been caused by a structural failure, rather than a bomb". Ever since the World Trade Center attack in 2001, all Americans including reporters at the New York Times have been behaviorally conditioned to believe that airports, and the airliners which use them, are the favorite prime targets of 'Muslim Terrorists'. The sight of a turban or Islamic headdress in the wrong place at Dulles Airport is enough to trigger a panic attack by security staff, and any little old lady who passes wind in the wrong place at the wrong time, runs the risk of a very personal body search for hidden heavy weapons.

Barely concealed paranoia runs deep at American airports nowadays, leading one to ask what the New York Times would have written if, instead of Terminal 2E at Roissy-Charles de Gaulle, the arrivals building at Chicago O'Hare Airport had suddenly collapsed without warning on May 23. But you already know the answer, don't you? While thousands of National Guardsmen rounded up innocent passengers for interrogation by Homeland Security, the New York Times would have accused Syria, Iran, and North Korea of a deliberate terrorist attack. The amazingly creative possibility of "structural failure" would have been laughed at.

So who or what prompted the leading Zionist rag to obscure reality with a bald lie, just after the El-Al'eda attack on Terminal 2E, and long before any reporter had been granted access to the building? Clearly the editorial staff were obeying orders from further up the food chain, because the object of this particular attack was not to achieve the maximum number of dead, but rather to subtly undermine global confidence in the terminal building, the only one in the world constructed specifically to handle the sumptuous Airbus Super Jumbo.

Back in July 2000 as he taxied Concorde Flight 4590 away from the passenger terminal at Roissy-Charles de Gaulle,

Captain Christian Marty had no idea that his aircraft had been creatively sabotaged is such a way that, minutes later, his damaged left undercarriage spacers and crippled #2 engine would drag Flight 4590 left of the runway, and straight into Jacque Chirac's Presidential Boeing waiting at the distant holding point for a pre-arranged viewing of the spectacular take off. One only has to imagine the public relations impact of Concorde and the President of France perishing in a single giant explosion, to realize that the European aerospace industry would have been doomed overnight, with orders for the Airbus Super Jumbo cancelled by all potential customers.

How Christian Marty coped we will never know, but he somehow managed to drag Concorde off the ground and leapfrog over the Presidential Boeing, though by then it was certain that he and his own crew would shortly die. With 25% of its total engine thrust gone, and thus unable to attain essential V2 flying speed of 222 knots, Concorde was doomed and eventually tore into "La Patte d' Oie" at Gonesse, just a few miles from the airport. This particular sabotage certainly contributed to the early retirement of Concorde itself, but it fell short of completely undermining public confidence in the European aerospace industry, the minimum requirement needed for Boeing to maintain its commercial monopoly in the west.

Clearly something else had to be done to help things along, and it must be said that the El-Al'eda attack on the only terminal building custom designed for the Airbus Super Jumbo, was quite clever in the psychological sense. Though the Zionist Cabal has not yet managed to sabotage a flying A 380, trashing its terminal building was certainly the next best thing. Think about this very carefully, because the subliminal message is quite simple. If the French cannot build a lousy terminal building without it falling down in a light breeze, how safe will you feel flying in a giant Super Jumbo designed and built by the same nation? Hence the initially inexplicable determination of the New York Times to make you believe the collapse of Terminal 2E was due to structural failure [shoddy workmanship] rather than terrorism.

The reality is quite different of course. The design of Terminal 2E is avant garde, but the building was conceived with the strictest technical requirements and is made of classic materials like cement. When Architect Paul Andreu quickly flew back from China where he is working on an opera house, he told the newspaper L'Humanite "I can't explain what happened. I just don't understand it". Indeed not, but that was shortly after he arrived, and before discovering that one of the support walls had dropped into an underground cavern, which had suddenly appeared as if from nowhere. Naturally enough the spectacular domed roof followed the support wall downwards, but it did not fracture, as can be seen in the photographs at the top of this page.

One can reasonably ask how any underground cavern can suddenly appear in land that had been so carefully surveyed prior to construction. Especially as Terminal 2E has its own network of steel-reinforced underground service tunnels, including those leading to the nearby underground railway station. In the casual opinion of one senior man currently investigating the sabotage, the collapse was most likely caused by deliberately reducing the tensile strength of one steel service tunnel in particular, positioned directly under the portion of the terminal that collapsed. Final conclusions will have to wait until after the judicial investigation.

The level of resistance to the Airbus Super Jumbo in Boeing's own back yard is now becoming much too obvious. Though the aircraft can easily use the same turning and parking space as a Boeing 747, it needs extended terminal support for the increased number of passengers, which is likely to total about 550 on most flights. Airbus says 14 international airports are currently equipped to handle the A 380, but most of these are in Europe and Asia, with not a single one in the United States. Virgin Atlantic Airlines said in May that it would have to put off delivery of it's A 380s because of delays in the preparation of Los Angeles International Airport. In turn, Los Angeles said that it would be ready "to accommodate the A380 with the highest standards of safety when the first airline begins using the aircraft". Catch 22, isn't it? Presumably Los Angeles intends to throw in a few extra deck chairs when the first Virgin flight has already taken off from London Airport.

Though this report has shown a shocking level of bias and Draconian behavior on the part of US officials, which is likely to alienate every potential tourist and thereby destroy America's once-booming tourist industry, it would be a mistake to assume that this is down to bureaucratic incompetence alone. It seems quite possible that there is an alternative agenda, if only because the Zionist Cabal on Wall Street does not wittingly throw away good money if there is any way to prevent it.

On the available evidence, it seems possible that America is now in the preliminary stages of 'lock down' for the implementation of "Fortress Americas", linked below. The war in Iraq is lost, and unless the Zionists can snatch Saudi Arabia's reserves by stealth as US forces retreat down the Persian Gulf, America is going to be critically short of oil. This will cause considerable unrest back home. If at the same time the defense and aerospace industries in America should collapse and create massive unemployment, the likely combined response by the American public simply doesn't bear thinking about.

Under these circumstances, the Zionist Cabal would be determined to exert rigid direct controls on what it has left, i.e. the United States of America and her people, while excluding all others ranging from unnecessary foreign businessmen to unwanted foreign tourists. In my casual opinion based on observation, Fortress Americas is now closer than ever

before.

Update 28 September 2004

Second Giant Airbus Terminal Mysteriously "Collapses" - Lucky Boeing!

Workers scatter in terror after the new Airbus A 380 Super Jumbo Terminal in Dubai suddenly collapsed without warning at 11.00 a.m. Monday.

If you were ever seriously considering flying on the new European A 380 Super Jumbo Airbus when it goes into service during late 2006, you'd better forget it. This was the clear message when the new French-designed A 380 terminal collapsed in Dubai, the second such collapse in less than six months. You work it out: If the "stupid" French cannot even manage to design a safe static concrete air terminal incapable of flight, then how on earth could they possibly co-design a giant airliner superior in every respect to the Boeing 747?

"The Dubai A 380 terminal 'accident' happened at 1100 (0700 GMT) according to building workers quoted by AP. They said about 150 workers were at the site at the time. Most construction workers in the UAE come from South Asia, although the airport authorities have not confirmed the nationalities of those involved in the accident.

"The new terminal, to be used by Emirates airline, is due to open for passengers in 2006. It has been designed by France's Aeroports de Paris (ADP) and will be in the shape of a giant plane wing almost 1km long (1,100yds).

"An ADP official in Dubai said the firm was not involved in the construction of the terminal. The French company also operates Charles de Gaulle airport in Paris, where a roof at a new terminal collapsed in May, killing four people."

Clear enough for you? The French have actually admitted designing the terminal building for Dubai Airport, which seems to confirm their incompetence when it comes to engineering both civil and mechanical. Better fly Boeing then, or should we?

An artist's impression of the new Dubai terminal due to be opened for service in 2006. Dubai will be the most important Middle East "Hub" for the Airbus A 380

An actuary is a person who produces probability tables which determine the likelihood of a potential future event, normally for insurance companies. Say for example a young man comes along and asks for a million dollars worth of insurance because he wants to fly his untried home made jet aircraft under the Brooklyn Bridge at Mach 2. No problems, sensing a quick kill the actuary would probably calculate a 99.9% probability of a fatal outcome and suggest an insurance premium of 1.2 million dollars payable cash in advance, which should cover the young man's funeral, and the actuary's corporate expenses with change.

However, task the same actuary with assessing the probability of a major airliport terminal collapsing and it would be a very different matter, or at least it would have been before the sudden collapse of the first dedicated Airbus A 380 Super Jumbo terminal at Paris Charles de Gaulle. Up until that point in time no major airport terminals had collapsed anywhere in the world, making them extremely profitable items to insure, i.e. constant providers of moderate cash flow for investors in the form of insurance premiums, at almost zero risk of insurance payout. Marvellous, just what the banker ordered...

Now imagine yourself as the actuary tasked with insuring ten more dedicated A 380 airport terminals, when two out of the only four nearing completion anywhere in the world had already collapsed. All of a sudden your world has been turned upside down, and your probability tables no longer have any meaning. Although these terminals are only two out of about 10,000 world wide [a risk of one in five thousand], they represent fifty percent of the dedicated A 380 terminals, suddenly dramatically shortening the odds of catastrophic loss to a staggering risk of one in two, if you dare to insure any airport terminal with the name "Airbus" attached to it.

By now you will have got the picture. The overall probability of two out of the only four A 380 terminals in the world spontaneously collapsing by accident still has to be based on the estimated total of 10,000 airport terminals world wide, leading any actuary to believe instantly that the collapses were in all probability not accidents at all.

Next there is the "rate" to be taken into account, meaning the frequency of such events per year or per month, depending on your chosen calculations. Let us assume that before the Paris Charles de Gaulle collapse on 23 May 2004, not one of the 10,000 airport terminals world wide had collapsed, meaning that you have 10,000 x 40 terminal/year units free of liability. Put simply, before 23 May 2004 you had 400,000 superb income-generating accident-free terminal/ year units of unhindered investor revenue.

Then, as if out of nowhere, you get two accidents not only within a single year, but within half of a single year. How? The fact that both of these' accidents' [the only two in forty years...] are linked to the same single controversial airplane, sends the probability of deliberate sabotage rocketing sky high. In fact, so high that my calculator ran out of zeroes.

craig-oxley - June 30, 2009 05:52 PM (GMT)

Did America Sabotage Airbus Flight 961?

When part of the rudder on Air Transat Flight 961 apparently 'fell off' the aircraft 30 minutes north of Cuba, the captain requested an emergency landing at the nearest suitable airport, which was Fort Lauderdale International. Then inexplicably and in violation of international aviation treaties and law, America refused, forcing the crippled Canadian jet to return to Cuba.

Copyright Joe Vialls, 23 March 2005

?

It is more than a little convenient for Boeing that the crash of American Airlines 587 in New York, and the near-crashes of Transat 236 and 961 in Cuba and the Azores, all permitted the media to hysterically point the finger at advanced carbon fiber composites used by Airbus but not by Boeing. If foul play was involved in these incidents, the subliminal suggestion appears obvious: All Americans should fly in thirsty old-fashioned riveted American Boeings, the airborne equivalents of US

Before we wade into the distinct possibility of direct American sabotage of European Airbus aircraft in general, first get one essential fact straight in your head, and get it straight right now: Pilots are not politicians, and they do not play political games in emergency situations at 35,000 feet. The actions of aircrew in emergency situations like losing part of the rudder or elevator, are well-rehearsed and virtually automatic, including terse messages to the passengers during the emrgency, attempting to explain the inexplicable.

Such was the case as Canadian Air Transat Flight 961 headed north from Cuba to Canada on March 6, when the aircraft suddenly went into a steep dive without warning. Though the Captain managed to recover, he swiftly discovered that the rudder, part of the vertical stabilizer responsible for turning the aircraft left and right, was not responding to control inputs. Clearly the rudder or vertical stabilizer had suffered significant damage, meaning that the aircraft needed to land as straight ahead as possible, thus avoiding any lateral strain on this essential vertical structure.

The airport best suiting this emergency requirement was Fort Lauderdale International in Florida, but to his astonishment, the American authorities refused him permission for an emergency landing, in direct violation of international law. Continuing another 2,000 nautical miles north to Canada without knowing the level of the damage was impossible, so after conferring briefly with Air Transat headquarters, the captain made the following verbatim announcement on the aircraft public address system, heard by everone on board.

"Ladies and gentlemen, we have a minor problem with the aircraft but the American authorities have denied us landing permission in Florida. We are therefore returning to Cuba and should be landing in about forty minutes." Please note that the use of the word "minor" is normal on the public address system, designed to disguise the severity of the emergency and minimize panic amongst the passengers.

Then the captain very slowly and very carefully reduced his forward airspeed, before commencing a 180 degree turn back towards Cuba, using only his elevators and ailerons. But regarless of how gentle he was, the unnecessary turn he was forced to make as a direct result of the American refusal, placed enormous strain on that piece of the aircraft he

already knew to be seriously damaged - the rudder.

Any slight miscalculation during that forced turn, could have exceeded the shear stress limits on the damaged vertical stabilizer, causing complete separation and a chilling death plunge into the Florida swamps for 270 passengers and crew.

Depending on exactly where the Airbus came down, you can confidently add a few dozen or hundred American dead on the ground in Florida, either crushed by falling debris or turned into screaming human roman candles by blazing jet fuel in their own back yards.

This 'terrible tragedy' would then have generated enormousy adverse publicity for Airbus in general, and in particular for the maiden flight of the giant double-decker Airbus A380 'Super Jumbo', scheduled for mid April 2005. But it would have been very good news for Boeing, wouldn't it?

Concorde 4590 was sabotaged in 2000, almost killing the President of France. Story on the Concorde crash is linked at bottom of this

Were it not for the fact that the passengers and crew survived, and are capable of making sworn statements about the American emergency landing refusal, broadcast to them by the captain over the public address system, there would be no proof at all, meaning that someone somewhere thought this sabotage through very carefully. Let me try to explain why.

If shear stress loads werer exceeded and the Florida swamps had suddenly been splattered with thousands of primarily Canadian body parts, the critical Cockpit Voice Recorder (CVR) would have gone crashing into the swamp with those body parts - right in the middle of Florida Governor Jeb Bush's state jurisdiction. Call me cynical, but the CVR would have been officially lost forever, while Boeing executives rushed off a frantic international sales tour to try and save their already doomed corporation.

To sidetrack briefly here, Boeing does not have much time left. In recent times, low sales and even lower future sales prospects, have caused Boeing to shut down its 717 aircraft production line, while a $23 billion air-refueling tanker 'smoke and mirrors' contract with the Pentagon, designed to fraudulently cook the books and mislead investors on Wall Street, has now been cancelled. And remember, when 'flagship' Boeing finally goes down, the rest of the American aerospace industry will follow shortly afterwards.

Getting back to Flight 961, we must consider what would have happened to the evidence if the captain either survived long enough to reach Canadian airspace, or alteratively survived the deadly 180 degree turn and managed to return to Cuba.

The Cockpit Voice Recorder is designed solely to allow investigators to listen in to the last few moments of any flight that crashes. To this end, the CVR (whether analog or digital) runs in a closed 30-minute loop, meaning that anything said or transmitted in the cockpit 31 minutes or more earlier, has already been overwritten with more recent data.

The American authorities already knew that the minimum time required for Airbus 961 to reach an international airport outside the US was 40 minutes (to Cuba), plus a further 7 - 10 minutes to taxi in from the runway and shut down the engines. Thus the American refusal was already overwritten on the 30-minute loop, meaning it would be the Canadian Captain's word against the combined might of the American Federal Aviation Administration.

Well, that was the game plan, but the American authorities had not reckoned on the obviously shocked Canadian Captain announcing the American emergency refusal to more than 250 human witnesses on the aircraft public address system. Now then, are you going to believe 250 honest Canadian passengers (even if they were going to 'Commie'

Cuba...), or are you going to believe the folk at the FAA, who still claim that a bunch of failed Muslim Cessna pilots were suddenly converted by Allah into Top Guns, thereby enabling them to aaccurately throw huge clumsy Boeing airliners around the sky like lightweight FA-18 Hornet fighters.

There is no doubt that crashing (or nearly-crashing) commercial airliners are of enormous importance to politicians and other certifiable maniacs in New York. Ever since the Jewish State sent Pan Am 103 plunging into Lockerbie village during 1988 to 'set up' the Libyans for destructive economic sanctions, the wannabee New World Order crowd has recognised the emotional importance of large numbers of blazing humans fluttering to earth in full view of the gullible public. After the breathtaking 'accidental' aviation incident has taken place, the media finger of premeditated guilt is subtly pointed at the nation (or planemaker) designated for punishment or destruction

Pan Am bomb was electronically triggered over Dean Cross in the Lake District Story on Pan Am 103 is linked at bottom of this page

While blaming airliners artistically bombed-up by Mossad on the Arabs became quite fashionable in New York, an even bigger threat loomed on the horizon. If the high-tech European Aerospace industry could not be stopped, in less than fifty years it would completely wipe Boeing and all the other major American planemakers off the map. The visible icon of this European aerospace excellence was the sleek Concorde, flashing east and west across the Atlantic Ocean at Mach 2, while passengers sipped vintage champagne in absolute luxury.

This affront to American aviation could not be allowed to continue, so during 1995-1996 Boeing and NASA plotted how to claw one of these sexy Mach 2 machines out of the air very publicly, thereby proving that European aircraft were 'unsafe'.

This covert American operation was successfully concluded when Concorde 4590 smashed into Gonesse at exactly 14 h 44 min 31.6 s on July 25, 2000, filmed all the way by an American spook parked in a truck with a video camera. This camera enabled the saboteurs to frighten the travelling public 'properly'. As with Pan Am 103, there is no point in

deliberately crashing a passenger plane if you cannot then show pictures of gory corpses, and hint at the possibility of stinking charred flesh.

As is pointed out in the long report "Concorde Sabotage" linked at the bottom of this page, this sophisticated and very expensive covert operration was a proxy job, because its primary aim was to undermine general passenger confidence in mass-producer European Airbus Industries - the main threat to Boeing and other American planemakers.

It is known that a number of 'follow up' operations were planned, but all of these apart from one appear to have been shelved or altered after 911. However, because the intent and result of the Concorde sabotage is already known, it is very reasonable to speculate that any inexplicable and thus suspicious Airbus crashes or near-crashes afterJuly 25, 2000, are part of the ongoing lethal 'public relations war' being waged by America against Europe, and against Airbus in particular.

American Airlines Flight 587, New York November 2001, 265 dead.
Story on American 587 is linked at the bottom of this page

Probably the best-known Airbus crash is American Airlines Flight 587, which simply fell out of the sky overhead Jamaica Bay, just after departing JFK Airport in New York. None of the media stories made sense, and neither did any of the bits of wreckage. THe media was peddling garbage, as I noted at the time:

"What cannot be explained away by the NTSB or FAA is how or why the stabilizer parted company with the aircraft at precisely the point where it joins the fuselage proper. Look at the enlarged photograph very carefully. There are absolutely no dents, scratches, on the leading edge or on the panels. This proves the vertical stabilizer was not struck by any other object, in turn proving it was the first component to detach from the aircraft.

"Trickier still for the NTSB, FAA and Airbus Industries, will be explaining to the general public why, with prima facie evidence proving catastrophic separation along a critical attachment line, the FAA and Airbus Industries failed to immediately ground all Airbus A300-600 models worldwide. This in order to conduct black light inspections of the stabilizer spars, panels, attachment pins, bolts and other critical components.

"Not only is grounding of this nature a normal operating procedure, it is also a legal requirement. Most readers will

remember that all Concorde aircraft were grounded for more than a year after the crash of Air France 4590 at Paris. Concorde's grounding was based mostly on speculation, and partly on trivial circumstantial evidence, flimsier by far than the prima facie evidence already existing in the case of American Airlines Flight 587.

"In order not to ground all Airbus A300-600 series, the NTSB, FAA and Airbus Industries would have to be convinced that the reason for the crash of Flight 587 was strictly unique, a one-off that could not occur under similar flight conditions to any other Airbus A300-600 worldwide. The only reason unique enough to fit this requirement is an act of terrorism."

American terrorism, perhaps? Look at the timing, and more importantly look very closely at events during the preceding three months. Do you remember those giant Boeing airliners slicing through the towers of the World Trade Center? Yes, of course you do, as does the rest of the world courtesy of American television. The problem for America is that the anchor men kept saying "Boeing" over and over again.

It was the worst possible publicity Boeing could have. Time after time on a hundred TV channels, millions watched on in horror as BOEINGS, yes BOEINGS ripped through the towers, killing hundreds of women and children. If you want your wife and children to die, just send them for a flight on a BOEING!

Even now in Australia, four years after the event, we regularly see that famous video clip of Flight 175 (a Boeing 767) tearing through the South Tower, spraying Jet A1 fuel as it rips through the glass framework. It chills the blood, and several people have told me they will never fly in a Boeing again. The entire 911 incident was very bad news for Boeing Corporation, which decided to fight back with a bit of counter-propaganda and fear.

And so it was that less than three months later, American Airlines 587, an Airbus 300-600, entered a ballistic trajectory and impacted (almost impossibly) on a narow isthmus of land called Rockaway Beach. Blazing Jet A1, gory body parts, and bit of mangled fuselage were everywhere on very public display.

"The tragic accident, which took the lives of at least five Rockaway residents as well as all of the 265 people on the aircraft, was a flashback for many to September 11, when more than 65 Rockaway residents lost their lives.

"The trauma of that day is still so fresh in my memory that it seems like only yesterday," says one resident who saw the plane, its wings in flames and its tail missing pass over The Sunset Diner, where he was eating breakfast. "All I could think of was "Oh, God, not again."

As we have grown to expect, the American media made a very big fuss about this unfortunate and apparent 'accident', pointing out repeatedly that Airbuses can crash too, in an equally spectacular and highly-targeted fashion befitting the WTC Boeings. Not only that, but for the first time ever, tame journalists started to encourage public suspicion of the enormously strong carbon fiber composites used in all advanced Airbus construction.

American Airlines Airbus 300-600 scattered across narrow Rockaway Beach

Just twenty-five days before the attack on New York, there was another serious Airbus incident in the Azores, an obscure group of islands about 1,000 miles west of Portugal. On Friday August 17, 2001, Air Transat Flight 236 suffered an extremely unusual in-flight emergency, that under more circumstances would have made front page new in New York.

Partly because the Azores are so remote, and partly because of delays caused by the complicated chain of reporting through Air Transat headquarters and the authorities in Canada, this exceptional event was completely smothered by the massive onslought of publicity surrounding the complete destruction of the World Trade Center.

There are hundreds of accounts on the Internet detailing the bravery and sheer skill of Canadian Captain Robert Piché, so I will merely recount the outline details of this so-called 'incident', which involved an Airbus A330 owned and operated by the same small Canadian airline that was refused landing permission at Fort Lauderdale International on March 6, 2005.

In brief, Captain Piché and his First Officer noticed a fuel loss from the starboard (right) wing, which normally feeds number two engine on the same side. Because it was pitch black outside and because there had been no trouble at take-off with both engines running at 100% power, neither pilot had reason to suspect that a truly massive fuel leak had suddenly started in the right-hand number two engine. Nor was there any such indication on the flight deck warning panels. After a short period, number two engine spooled down due to fuel starvation, leaving Captain Piché and 303 other souls with a single engine burning, at night, way out over the Atlanic.

For technical reasons I will not bother with here because they are not directly related to flight 961 over Fort Lauderdale International, certain Canadian officials are convinced the aircraft was sabotaged while in its Canadian hangars, using a remote delay device to start the massive fuel leak. This alone would not normally stop both engines, but pilot's notes for the aircraft in question would trick the pilots themselves into dumping the fuel needed for the left-hand number one engine.

Air Transat Flight 236 'glider' after crash landing in the Azores

On the A330, a computer moves fuel backwards and forwards between the left and right wing to maintain trim - or 'balance' if you prefer. This is achieved by pumps feeding through the "crossfeed valve", which must first be opened by the pilot. Initially suspecting only a small leak in the wing tank (why suspect anything else?), the crew opened the crossfeed valve, fuel started to transfer from the left wing to the right, though the flight deck gauges did not reflect the true rate of transfer. In other words, fuel was transferring across three times faster than shown by the gauges, and vanishing into the night sky via the gaping hole in right-hand number two engine.

Then everything suddenly went very quiet. Starved of fuel, number one engine on the left wing spooled down as well, leaving the giant Airbus with lift provided only by the wings. In a split second, Flight 236 had been converted into the biggest glider on earth. It was indeed fortunate for the passengers on board that Captain Robert Piché had earlier honed his flying skills overcoming wind, fog and rain flying bush planes on the short airstrips of Quebec's rugged Anticosti Island.

From a starting point 39,000 feet up over the Atlantic, Captain Piché briefed the cabin crew for a ditching (water landing), while at the same time planning to glide the giant plane 63 nautical miles to the Azores, and land on the runway at the Terceira military base. Thirty three minutes after sending his first emergency call, Captain Piché slammed the giant Airbus hard onto the runway at Terceira, deliberately bursting the tyres in order to slow down and stop.

Without the extraordinary Captain Robert Piché on board, the Air Transat Airbus A330 would certainly have ditched and probably vanished without trace, because weather conditions were very bad that night. In those circumstances, Airbus Industries would have lost one of its newest aircraft, thereby setting up a shockwave of anxiety among potential passengers.

It is indeed strange how history seems to have an uncanny ability of bringing the bad guys to justice. The reality is that Captain Robert Piché was on board that terrible night, and the reputation of Airbus Industries remained intact. Just twenty-five days later it would be a pair of American Boeing 767s that would terrify the travelling public instead, when they vanished inside the twin towers of the World Trade Center at 575 miles per hour.

The author has more than 8,000 total flying hours, and is a retired member of the Society of Aircraft Engineers and Technologists

"We can now also divulge that French President Nicolas Sarkozy has sent three more nuclear aircraft carriers that have left port with their destination to the Archipelago of Fernando de Noronha area, which is in the vicinity of the nation of Brazil.

These three (3) massive nuclear aircraft carriers include the French carrier Jena, Verdun and

one of the most powerful nuclear aircraft carriers in the world, the Charles de Gaulle.

Folks, you do not send nuclear aircraft carriers to the Brazilian coast to look for bodies that may have been passengers on the Air France jet." **-T.H**

Airbus crashes in New York river

Passengers are rescued from the plane's wings

Friday, 16 January 2009E-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/world/americas/7832191.stm

A US airliner on a domestic flight with 155 people aboard has ditched into the Hudson River in New York City but with no loss of life.

All 150 passengers, three flight attendants and two pilots were rescued in freezing weather, with a number later treated for unspecified injuries.

The US Airways **Airbus A320** crashed just after taking off from LaGuardia Airport heading for Charlotte, North Carolina.

Officials believe the plane may have collided with a flock of geese.

Rescue boats plucked passengers, who could be seen wearing life jackets, from the wings of the plane.

The BBC's Greg Wood, in New York, says the aircraft was drifting rapidly down the Hudson as the rescue was carried out.

Our correspondent says there is a mood of overwhelming relief in New York that there was no loss of life.

US Airways gave an emergency number for people who believe they may have had relatives on the flight: 1-800-679-8215.

'Like on a runway'

Flight 1549 departed LaGuardia at 1503 local time (2003 GMT), after a delay of 18 minutes, the airline said.

According to an air controllers union spokesman, a US Airways pilot reported a "double bird strike" less than a minute after take-off and asked to return to the ground, before ditching in the Hudson.

The spokesman, Doug Church, said the pilot apparently meant that birds had hit both of the plane's jet engines. It appears the birds involved were a flock of geese.

Stephanie Nachman, who works in a high-rise building in Times Square, told the BBC she had seen the plane crash.

She said she had seen the plane flying very low over the Hudson and was shocked by how low.

Then it landed in the water, she added, but "it wasn't wild or erratic but if as it was landing on a runway".

Within minutes, she added, people got out, doors popped out and rafts unfurled.

Jeff Kolodjay, a passenger on the plane, described the crash for the BBC.

"About three or four minutes into the flight... the left engine just blew... flames coming out of it and I was looking right at it cos I was sitting right there.

"And it just started smelling a lot like gasoline and a couple of minutes after that the pilot said 'you guys gotta brace for a hard impact'.

"And that's when everyone started, to be honest, saying prayers and we looked over the water and we thought we had a chance because, you know, there's some water.

Asked how he got out of the plane he said: "At first chaos, but everyone was kind of orderly, man. You know after a while everyone, we just, I just kept saying relax relax, women and children first. And then it just started filling with water, quick."

New York Mayor Michael Bloomberg said that police divers had rescued some people from the water.

A spokesman at St Luke's Roosevelt hospital in Manhattan told Reuters that he expected as many as 50 patients with exposure and secondary injuries, while people with more serious injuries were being sent to nearby hospitals.

'Truly heroic'

New York Senator Charles Schumer said it was a modern-day miracle that no one had been killed.

"The pilot was truly heroic - that's the preliminary indication," he said.

"He saw what was happening, gained a low altitude, turned the plane in the right direction, found the Hudson River and made sure it wasn't a nose-first landing but rather flat.

"And that's probably what saved everybody's life, thank God."

"Gotta give it to the pilot, man, he made a hell of a landing," said passenger Jeff Kolodjay.

America's National Transportation Safety Board has announced it is is sending a team to investigate the crash.

Airbus delivers first China-made jet, underlining its Asian thrust

Ten middle-distance A319/320 aircraft will be delivered by the end of the year, and the factory will then start to churn out up to four planes a month before the end of 2011.

by Staff Writers
Tianjin, China (AFP) June 23, 2009

European aviation giant Airbus delivered the first A320 aircraft made at its factory in China on Tuesday, saying the event symbolised its long-term focus on the growing Chinese market.

A giant red curtain was pulled back to reveal the jet in a hanger during a ceremony at the factory outside the northern Chinese city of Tianjin.

The jet was the first to be completed at an Airbus factory outside Europe and company CEO Thomas Enders said it underlined the consortium's long-term relationship with China, one of the world's fastest-growing aviation markets.

"We will build a strong future with the China aviation industry and for the China aviation industry," he said.

"(Airbus) will be working increasingly with our partners in China, setting new standards."

The plane was delivered to Dragon Aviation Leasing and will be used by Sichuan Airlines, a regional Chinese air carrier whose markings were already on it.

It was to be flown to Chengdu, capital of Sichuan province, later on Tuesday and put into service the following day, officials said.

Tianjin mayor Huang Xingguo called Tuesday's event "a historic day" for Sino-European cooperation.

"We will further cooperate to write a new chapter in Chinese and European cooperation," Huang said.

The ceremony also was attended by the British and French ambassadors to China, German State Secretary Hartmut

Schauerte and other top Tianjin officials.

Ten middle-distance A319/320 aircraft will be delivered by the end of the year, and the factory will then start to churn out up to four planes a month before the end of 2011.

Laurence Barron, president of Airbus China, said the company would sell a total of 70 planes for use in China this year.

Airbus said some 490 of its jets had been put into service in China so far.

The Tianjin plant, modelled on Airbus' factory in Hamburg, Germany, has an investment of nearly 10 billion yuan (1.47 billion dollars) and went into operation in September in the presence of Chinese Prime Minister Wen Jiabao.

The joint-venture factory, about 120 kilometres (72 miles) southeast of Beijing, is 51 percent owned by Airbus, a subsidiary of the European group EADS, and 49 percent by a Chinese aviation consortium.

The venture has revealed the extent that Airbus has gone to get a foothold in one of the world's most dynamic markets.

China's air market, the second biggest in the world, makes up 15 percent of sales at Airbus, which sold its first plane here -- an A310 -- in 1985.

The decision to build the China plant was based on strong growth estimates that predict the nation will buy up to 2,800 passenger and transport planes over the next 20 years.

These planes, of which 190 are expected to be jumbo jets, are valued at about 329 billion dollars.

In the next two decades, passenger travel is forecast to increase five-fold, according to industry estimates.

Airbus' goal is to gain half of the China market from now until 2012, compared with a 39 percent market share in mid-2008 and up from seven percent in 1995. Its main rival is current global market leader Boeing.

craig-oxley - July 2, 2009 02:56 PM (GMT)

Oh won't Boeing be laughing at how easily they've created this. Death to Boeing I say. -Craig

Airbus expected to face calls to ground all long-range airliners

Jul 1 2009
Charles Bremner in Paris
http://www.timesonline.co.uk/tol/news/worl...icle6612165.ece

Airbus is expected to face calls to ground its worldwide fleet of long-range airliners tomorrow when French accident investigators issue their first account of what caused Air France Flight 447 to crash off Brazil on June 1.

It is believed that the accident bureau will report that stormy weather was a factor but faulty speed data and electronics were the main problem in the disaster that killed 228 people.

The European Aviation Safety Agency (EASA) is likely to be asked why it had never taken action to remedy trouble that was well known with the Airbus 330 and 340 series. Nearly 1,000 of the aircraft are flying and until AF447, no passenger had been killed in one.

“EASA has a legal and moral obligation to get to the bottom of this problem now. If there is a defective system and the aircraft is unsafe then it should be grounded,” said James Healy-Pratt of Stewarts Law in London. The firm, which specialises in aviation, is representing the families of 20 of the victims of flight 447.

Only 11 bodies of the 50 recovered from the Atlantic have been identified. They include Captain Marc Dubois, 58, who is believed to have been resting when his two co-pilots lost control of the aircraft in a storm. The search for bodies has been called off but ships continue to hunt for the black boxes although their locator beacons are assumed to have expired.

Suspicion over the air data systems on the Airbus 330 and 340 series has increased after the disclosure that the aircraft

had experienced 36 episodes similar to the one that brought Flight 447 down as it flew from Rio de Janeiro to Paris.

Airbus first reported problems with the speed sensors — known as pitot tubes — in 1994, it emerged this week. The company advised remedies, but no mandatory action was taken.

Last weekend, the US National Transportation Safety Board, began looking into two incidents in which Airbus A330s flying from the US suffered critical episodes apparently similar to that of AF447.

This raises the prospect of a possible US order on modifications to the Airbus.

The first US incident occurred on May 21 when a TAM Airlines flight from Miami to Sao Paulo, Brazil, lost primary speed and altitude information while in cruise flight. The other was on a Northwest Airlines flight, on June 23, from Hong Kong to Tokyo.

Accounts on the internet from the pilots report a desperate struggle to keep the jet in the air.

The fate of Flight 447 would probably have remained an eternal mystery had the aircraft not automatically transmitted data back to the Air France maintenance base.

In the final four minutes, they told a story that was familiar to the airline. Ice particles or water had blocked the three pitot tubes. This upset the air data computers which in turn caused the automatic pilot to disconnect. The pilots would have had to fly manually in near-impossible conditions.

Sarkozy to Netanyahu: Lieberman must go

Mon, 29 Jun 2009 22:36:47 GMT
http://www.presstv.ir/detail.aspx?id=99381...ionid=351020202

France calls on Israel's hawkish Prime Minister Benjamin Netanyahu to dispose of Foreign Minister Avigdor Lieberman, who is labeled as 'racist' by critics, a report says.

The French President Nicolas Sarkozy has urged the Israeli Premier Benjamin Netanyahu to dispose of Foreign Minister Avigdor Lieberman, a report says.

During Netanyahu's meeting with the French president in Paris last Wednesday, Nicholas Sarkozy advised the Israeli premier to appoint opposition chairwoman Tzipi Livni in place of hardliner Lieberman, according to a report circulated by Israel's Channel Two on Monday.

"With her and (Defense Minister Ehud) Barak you can make history. I have always accepted Israeli foreign ministers, and I loved to have Tzipi Livni here at the Elysee, but with (Lieberman) I can't," Sarkozy was quoted as saying.

The Israeli Foreign Ministry in a statement censured Sarkozy's remarks and described them as **"intolerable intervention in internal Israeli affairs."**

Meanwhile, the Member of Knesset (Israeli Parliament) Ahmed Tibi welcomed Sarkozy's comments, saying that he hopes "the international community has started to absorb the danger of the fascism being taught by Lieberman."

Lieberman -- a West Bank settler who is seen as an ultra nationalist -- was dubbed 'racist' by his critics after making harsh statements about Arab Israeli lawmakers and refusing to recognize Palestine's statehood.

craig-oxley - July 11, 2009 02:36 AM (GMT)

Keep absolutely away from this aircraft, Boeing will most likely bomb this one for sure. Now remember that Nov 2009 is 11:11. -Craig

Air France unveils first A380,
New York to be first destination

July 9, 4:10 PM
http://www.examiner.com/x-3584-Airline-Ind...rst-destination

Air France has unveiled their first example of the Airbus A380 at an Airbus facility in Hamburg. The airline, a unit of largest European airline conglomerate Air France-KLM, has also said the A380 will be used on the premier Paris Charles de Gaulle – New York JFK route on a daily frequency, beginning in November 2009. The Air France service would mark a return of the A380 to New York, service that began last year with a nonstop to Dubai on an Emirates A380. Emirates later downgraded that service to a smaller aircraft, choosing to fly the A380 to Toronto instead. The United States has not been without A380 service, however, as QANTAS has placed the aircraft on the Los Angeles – Melbourne service albeit not daily. The aircraft will debut on the Los Angeles – Sydney flight this fall.

Air France has plans to operate the A380 in a three class configuration, seating a total of 538 passengers: 80 seats in Affaires (Business) and 106 in Voyageur (Economy) on the upper deck, with 9 seats in Premiere (First) and 343 in Voyageur on the main deck. While many airlines have announced upgraded or new services with the introduction of the A380 (Singapore with Suites, Emirates with showers, and QANTAS with a general redesign and Premium Economy), Air France has made no such claims, as yet. The airline does tout itself as the first European carrier to operate the A380, as well as the first airline to fly the aircraft on services between Europe and the United States.

Air France's announcement comes at a time when competitor British Airways has announced capacity cuts to include deferral of planned A380 deliveries, and many airlines are scrambling to fill seats on existing smaller aircraft. However, the Paris – New York flights are among the most densely traveled in the airline's network, so it is a reasonable fit. The schedule has not yet been loaded, so no word on which of the four daily JFK-CDG flights the aircraft will operate on, but the two likely candidates appear to be AF6/7 or AF 10/11, both now operated with the higher capacity 777-300 or 747-400 as opposed to the other two flights operated by the 777-200. Between the two flights, Air France Classe Premiere is currently only offered on AF6/7, so it could use the introduction of the A380 to replace the 747-400 and offered Premiere on all JFK departures, or with the drop in premium class bookings, the aircraft could replace the 777-300 for a slight overall capacity increase on the route.

Air France is one of the world's oldest and largest air carriers, serving 183 destinations in 98 countries, with a fleet of 411 aircraft operating an average of 1,700 daily flights. The airline and its subsidiaries employ a worldwide staff of 74,959.

craig-oxley - July 11, 2009 12:36 PM (GMT)

This brand spanking new Airbus 340-600, the largest
passenger airplane ever built, sits just outside its hangar
in Toulouse , France without a single hour of airtime.

Enter the Arab flight crew of Abu Dhabi Aircraft Technologies

(ADAT) to conduct pre-delivery tests on the ground, such as

engine run-ups prior to delivery to Etihad Airways in Abu Dhabi .

The ADAT crew taxied the A340-600 to the run-up area.

Then they took all Four engines to takeoff power with a

virtually empty aircraft. Not having Read the run-up

manuals, they had no clue just how light an empty

A340-600 Really is.

The takeoff warning horn was blaring away in the cockpit

because they had All 4 engines at full power.

The aircraft computers thought they were trying to take off,

but it had not been configured properly (flaps/slats, etc...)

Then one of the ADAT crew decided to pull the circuit

breaker on the Ground Proximity Sensor to silence the alarm.

This fools the aircraft into thinking it is in the air.

The computers automatically released all the Brakes

and set the aircraft rocketing forward.

The ADAT crew had no idea that this is a safety feature

so that pilots can't land with the brakes on.

Not one member of the seven-man Arab crew was smart enough

to throttle back the engines from their max power setting,

so the $200 million brand-new Aircraft crashed into a blast

barrier, totaling it.

The extent of injuries to the crew is unknown due to the

news blackout in the major media in France and elsewhere.

Coverage of the story was deemed insulting to Muslim Arabs.

Finally, the photos are starting to leak out.

A French Airbus: $200 million dollars
Untrained Arab Flight Crew: $300,000 Yearly Salary
Unread Operating Manual: $300

aircraft meets retaining wall and the wall wins.

PRICELESS!!!

"that's why God gave them camels"!

BA evacuates fume-filled US jet

Passengers used slides to leave the aircraft

Saturday, 11 July 2009 11:56 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/world/americas/8145686.stm

Hundreds of people have been evacuated from a British Airways plane in the US after the cabin filled with fumes.

The BA Boeing 747 was due to depart for London Heathrow from Phoenix Sky Harbor International Airport in Arizona state.

More than 300 passengers and crew used emergency slides to leave the aircraft. No serious injuries were reported.

BA said there had been reports of smoke as the plane was pulling away from the departure gate. Engineers are trying to find out what happened.

The incident occurred at about 2000 local time on Friday (0300 GMT), Shelly Jamison of the Phoenix Fire Department told the Associated Press.

She said fire crews found smoke in the cabin and hold, but no fire.

One passenger described a scene of panic inside the plane. There was a lot of pushing and shoving - everyone just wanted to get off the plane
Passenger Corinne Casazza

"People were coughing and choking and those with children were very worried and so they brought them to the front where they could breathe," Corinne Casazza was quoted as saying by the Press Association.

"We asked if we could open the doors but were told we couldn't because we were still moving.

"There was a lot of pushing and shoving - everyone just wanted to get off the plane," said Ms Casazza, who is from Sedona, Arizona.

"Then I heard someone yell 'fire' and the doors were opened."

BA said all 298 passengers on board flight BA288 had been safely evacuated. The plane was also carrying 18 crew.

"The plane was being pushed back from the stand when there were reports of smoke," a BA spokesman said.

"A decision was taken to evacuate the aircraft following the usual procedures."

About 15 people received minor scrapes and bruises, and one person was taken to hospital with shoulder pain.

Southwest plane has "football-sized hole", has emergency landing

PICTURE:
http://aviationblog.dallasnews.com/hole.jpg

Eric Torbenson/Reporter Bio | E-mail | News tips
http://aviationblog.dallasnews.com/archive...-plane-has.html

This photo comes courtesy of a passenger on the flight bound for BWI last night that had to do an emergency landing in West Virginia. Details aren't all there, but we understand that the Dallas-based airline is going to inspect all its -300 series 737s, the oldest of its aircraft fleet, generally. We've asked the airline how that might affect its flying today but it's a bit early yet. Wire reports suggested that they would do the checks during the typical overnights on Monday night, which would mean very little impact on operations, though I'm curious as to what the FAA thinks about this incident. Other reports and initial email I'm having with Southwest suggests they did the inspections last night.

Southwest flies 181 of the -300 series aircraft with an average age of about 15 years. It flies 544 total aircraft, all Boeing 737 models, with 25 of them being -500 series and 338 being -700 series.

Stay tuned for more details. In the wake of Southwest's inspection flap with the FAA, this may or may not become a bigger deal.

Copa places $1bn Boeing 737 order

Copa Airlines plans to expand its existing fleet

Thursday, 16 July 2009 20:11 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/business/8154936.stm

Latin American firm Copa airlines has ordered 13 Boeing 737-800 planes, worth $1bn (£607m) at list prices.

In addition to earlier orders, this brings the total number of 737 planes Copa has committed to buy to 27 units.

The 13 newly-ordered planes are set to be delivered between 2012 and 2015. Copa also has options to buy a further eight in the future.

US firm Boeing has been hit by the downturn as airlines have reduced services and postponed aircraft orders.

Shares in Boeing rose after the Copa announcement, adding 1% at just over $41, but in contrast Copa shares slid 2.9% at $40.03.

This article comes from the Daily Mail so you need to suss out who owns and finances this rag and see the connection to the U.S. A nice smear maybe? You'll get many more to discredit Airbus in favour of Boeing -Craig

The Airbus 330 - an accident waiting to happen

With its human-proof computer systems, it is the most technically advanced aircraft in the world. So why has the Airbus 330's gleaming new fleet been so dogged by technical problems... and disturbing evidence of flawed cabling been so comprehensively ignored?

Brazilian Navy sailors retrieve some of the wreckage of Air France Flight 447, which crashed into the Atlantic on June 1 killing all 228 people on board

Two hours and seven minutes into its journey to Perth, Qantas Flight 72 from Singapore cruises serenely at 37,000ft just off the coast of Western Australia, the dazzling blue of the Indian Ocean to starboard. Brunch has been cleared away, and many of the 303 passengers are asleep. By local time it's 12.39 on October 7, 2008, a fine southern-hemisphere spring day. Flying conditions are perfect.

Inside the cockpit, the flight seems utterly routine. The captain sits in the left-hand seat, nominally at the controls, but the autopilot is on and there's nothing much to do except enjoy the scenery. One of the two co-pilots announces he's going to grab some rest.

Made by Airbus, the giant European company that emerged around the time of Concorde's development, the twin-engine, wide-bodied A330 is less than five years old. Since 1993, Airbus has received more than 1,400 orders for this plane and its close sibling, the four-engine A340, and there are around 1,000 of them in the sky. Each A330 costs about £125 million. 'From nose to tail, the A330 and A340 incorporate the latest advances in Airbus technology and innovation,' the company's website says, adding that they exhibit 'the best take-off and landing performance in all conditions, as well as high-efficiency flight'.

Dozing by a starboard window in seat 48K, in the back half of economy, musician Matt Blanton is woken by a jolt. The plane, he realises with terrifying clarity, is plunging downwards.

Almost as quickly, it steadies itself. But the respite is temporary. 'Within a few seconds the plane plunged a second time,

this time violently, and I remember being yanked up against my seat belt,' says Blanton.

'People who weren't strapped in were being smashed about, hitting the roof. The air was filled with screams and a man behind me was yelling out curses in his panic. An Indian couple next to me began muttering prayers. There was a huge hole in the roof above the head of the woman sitting in front of me and I realised she had been thrown up and smashed into the ceiling.

'Then sections of the roof fell down. Everything that had been in my front seat pocket had been tossed into another part of the plane. It was as if the whole aircraft had been violently shaken in a cocktail shaker. I could hear all the plates in the galley crashing around and saw that everything in there had been smashed to pieces.'

A flight attendant, his face white, hurries down the aisle, shouting, 'Put your seat belts on! Put your seat belts on!' His words when he gets to row 48 are far from reassuring: 'Don't worry. I'll be with you through life and death.'

Recovered wreckage from Air France Flight 447

By now, the woman in front of Blanton is barely conscious, with blood flowing from her head. But before the staff can attempt first aid, the pilot barks a command: 'All cabin crew return to their seats immediately.' Around Blanton, injured people are groaning and weeping.

Finally the pilot makes another announcement – that 'something has failed', and the plane will make an emergency landing. Everyone fears it's too badly damaged to make it. Blanton says, 'The approach to the landing was the scariest time of all. The pilot told us we would be landing in 15 minutes, but after 30 minutes we were going around in circles, gradually decreasing in altitude.'

At last, an hour after the crisis began, the plane touches down at Learmonth, a remote Royal Australian Air Force base. Before anyone can disembark, paramedics board to perform triage, removing the most seriously injured on stretchers. Thirteen passengers and one crew member are evacuated to Perth by air ambulance, suffering from spinal injuries, broken bones, concussion and open wounds. A further 30 need treatment in the local hospital for possible concussion, cuts and fractures. Thirty more have bruising and whiplash. Five refuse to finish their journey by air, and insist on travelling the 800 miles to Perth by road. 'There is still no official answer as to the cause of the nightmare,' says Blanton. 'I truly believe there is something terribly wrong with this model of Airbus.'

'The A330 is very well-built, but there's obviously a problem somewhere and we need to find it'

Eight months after QF72's emergency, in the early hours of June 1, 2009, another A330 crashed into the Atlantic Ocean. Air France Flight 447 from Rio de Janeiro to Paris went down with the loss of all 216 passengers and 12 crew – France's worst air disaster.

The full story may never be known. Like most of the wreckage, AF447's black boxes – its data and voice recorders – are thought to be resting 15,000ft below the surface in an underwater mountain range. However, before it crashed the plane transmitted a series of automatic messages, from which it's possible to determine several events leading up to the accident. These are detailed in the newly published official report. Having analysed this as well as reports on the Qantas flight and on other similar incidents, Live has found worrying parallels. Interviews with pilots, lawyers and crash investigators suggest there may be an underlying problem with A330s. It's impossible to conclude what this is, but there are two prime suspects – either flaws in the software, or with the wiring found inside huge numbers of modern aircraft.

'It looks to me like there's only one reason why AF447 crashed and QF72 survived,' says Charles-Henri Tardivat, a former crash investigator who's now part of a team from the London law firm Stewarts Law, which represents the victims' families. 'On QF72, the same things started happening that preceded the Air France crash. They were able to recover control because they were flying in daylight and perfect weather. They could see what was happening, even without their instruments. But AF447 was caught in a violent storm at night. The A330 is a very well-built aircraft, but there obviously is a problem somewhere. With so many of them out there, we need to find it.'

In an A330 cockpit, everything is computerised, and when the system is working properly – under what Airbus terms 'normal law' – it should be impossible for the crew to make a mistake. For example, when a plane is cruising at high altitude, the window between a dangerous overspeed that might place intolerable stresses on the airframe and a stall is quite narrow – less than 70mph. In older planes, pilots discover the aircraft is at risk of stalling through cockpit alarms and when their control sticks start to shake, and they have to react very quickly. On a modern Airbus, if the airspeed falls

to a dangerous level, the system will increase the engines' thrust without human intervention.

'Airbus think they've designed a computer that's smarter than a pilot,' one airman says. 'If a pilot moves the controls so as to turn the aeroplane upside down, the computer will refuse.'

It's possible for the pilots to override the computer, effectively switching to manual control – what Airbus calls 'direct law'. But even then, they remain dependent on electronics. 'In older aeroplanes the throttles in the cockpit are hooked to the fuel controllers on the engines by a steel throttle cable,' another pilot says. 'On an Airbus, nothing in the cockpit is real. Everything is electronic. The throttles, rudder and brake pedals and the side-stick are hooked to rheostats that talk to a computer, which talks to an electric hydraulic servo valve, which in turn – hopefully – moves something.'

An Airbus A340 lies ruined after crashing into a concrete barrier in Toulouse during pre-delivery testing

In the Nineties, when fly-by-wire was in its infancy, several Airbuses crashed because of conditions that hadn't been programmed into the software. A more recent incident involved a brand new A340 being tested on the ground in Toulouse in November 2007. With the engines running at high power – and, contrary to specified procedure, no wheel chocks in place – a technician was taken by surprise when the plane started to move. Instead of reducing the thrust, he released the parking brake in order to use normal braking – but failed to keep the pedals fully pressed.

Seeing a concrete blast wall straight ahead, he tried to steer away from it – but since the A340 automatically inhibits centre-wheel braking when the nose wheels are steered, he didn't succeed. By the time the plane hit the wall, it had reached 36mph. Four people were seriously injured. The aircraft was a write-off.

Australia's Transport Safety Bureau, which is still investigating QF72, isn't yet sure why the aircraft plunged so violently. But the plane's survival means the incident can be reconstructed from the cockpit – in this case, the black boxes were recovered.

The event began at 12.40, just after the first co-pilot went for his break. The first sign was the sudden disconnection of the autopilot, accompanied by a 'master caution' alarm which sounded almost continuously for the rest of the flight. Three seconds later, the ECAM – the Electronic Centralised Aircraft Monitor, the display panel that alerts the crew to faults – warned that a critically important system had failed. This was one of the plane's three ADIRUs, Air Data Inertial Reference Units, which gather data from the plane's sensors about its speed, direction, position, altitude and angle of attack. Losing the ADIRUs is the digital equivalent of flying blind.

The captain tried to re-engage both the primary and back-up autopilots, but to no avail. Messages suggested the computers were going haywire. Two minutes after the crisis began, the first downward lurch occurred, caused by an 'uncommanded' movement of the elevators on the tailplane. 'The captain reported that he applied back pressure on his side-stick to arrest the pitch-down movement,' says the Bureau report. 'Initially this action seemed to have no effect, but then the aircraft responded.'

However, the ECAM was still going crazy, with 'multiple' fault warnings – including one saying that one of the three primary computers had failed. While the crew tried to reboot it, the plane lurched downwards again, and as before, it at first failed to respond to the controls. At 12.49, they issued a radio alert and made for Learmonth air base.

The ECAM was still displaying contradictory, rapidly scrolling messages about the plane's speed and altitude, and the computers were still not functioning. Unable to rely on Airbus's much-vaunted technology, the pilots had to position themselves for a 'straight-in visual approach to [the] runway' from a distance of 15 nautical miles.

Behind that bald language lies a terrifying fact: had they not been able to see the runway from that considerable distance, they might not have been able to land. No less frightening is the fact that the Bureau is still 'evaluating' all the data to ascertain what went wrong. Meanwhile, the plane has been cleaned, refurbished and is back in service.

QF72 isn't the only A330 to have encountered unexplained electronic problems. On flights from Paris to Martinique in August and September last year, two planes flown by Air Caraibes Atlantique also experienced the sudden disconnection of their autopilots. Forced to proceed on 'alternate law' – a hybrid of manual and automatic flying in which many of the normal computerised protections are lost – the pilots also had to deal with the loss of ADIRUs, and bogus ECAM messages.

More wreckage from Air France Flight 447. All 228 people aboard died

Last December, another Qantas plane was forced to return to base by the failure of both its autopilot and an ADIRU. Finally, on May 21, 2009, this happened again on TAM Airlines Flight 8090 from Miami to Sao Paulo. On this occasion, everything returned to normal five minutes after the problem began. Ten days later, AF447 took off from Rio.

We may not have the flight recorders. But thanks to ACARS (Aircraft Communications Addressing and Reporting System), an automated system that broadcasts details of faults via radio or satellite as they occur, there is some data. Thus we know that for the first three hours and 41 minutes of the flight, the only defect appears to have been a minor problem with one of the toilets. At ten seconds after 2.10 in the morning, that rapidly changed.

The plane was in an area of tropical thunderstorms. It isn't clear whether the crew decided to fly through them, or, like several other pilots that night, tried to avoid the worst of the turbulence. In any event, the ACARS recorded a first sign of trouble that may sound familiar – an ECAM message, 'AUTO FLT AP OFF', accompanied by an aural warning. This, says the official interim report issued by the French investigators from the Bureau d'Enquêtes et d'Analyses (BEA), 'indicates an autopilot disconnection [caused] other than by pressing the push-button provided for that purpose on the control sticks'.

From that moment on, the warnings and faults, accompanied by chimes in the cockpit, came thick and fast. One of the first was the failure of the pitot tubes, the devices on the fuselage used to measure airspeed, perhaps because they iced over. After the crash, Air France replaced these tubes on its entire Airbus fleet – although, as one pilot points out, 'Pitot tubes have been equipped with heaters for decades.'

However, according to the BEA, the pitots were at most an 'element' in the crash – only part of what looks like a general electronic meltdown. Within seconds, the ADIRUs ceased to function properly, while the flight-control computer system 'no longer considered as valid' the data being delivered to it. After that, its processors started to crash.

Forced to fly semi-manually in 'alternate law', the pilots' ability to maintain flight was swiftly being compromised, as one by one their electronic instruments failed. By 2.10 and 16 seconds, the ECAM was saying they'd lost awareness of wind shear, no small thing in a thunderstorm. Further warnings in quick succession said the plane was no longer computing their safe speed window or the maximum angle it was safe to move the rudder. After that, the pilots were successively deprived of autothrust, their main navigational and collision-warning systems, their flight-path vector – showing the direction they were flying – and their back-up speed instruments.

The last ECAM warning recorded by the ACARS, at 2.14am, is the most chilling. It simply said, 'ADVISORY CABIN VERTICAL SPEED'. In other words, the plane was heading downwards, with uncontrolled rapidity.

Damage to some of the recovered parts, such as the galley shelves, shows they were compressed by the forces of impact. So were the passengers: according to one source close to the investigation, many of the 51 bodies found to date have broken pelvises, caused by the upward force of their seats on their bones as the plane hit the water.

There was a half-moon, but beneath the 50,000ft-high clouds, it would not have been visible. On the way down, the winds must have been immense. It's likely that, deprived of all means to ascertain their position, the crew flew the plane into the waves of the Atlantic with no idea where they were.

'The rules that admitted the [Kapton wiring] 20 years ago would prohibit it today'

Martin Fendt, Airbus's spokesman, refuses not only to comment, but to supply any information about A330 design. All he will say is that like all Airbuses, 'the A330 and A340 are fully certified to all airworthiness requirements. Airbus cannot get into any issues which may lead to speculation when an air-accident investigation is ongoing.'

Company sources insist that the ADIRUs aren't to blame because QF72 and AF447 used different types. This argument fails to impress the families' lawyer, Tardivat: 'We're looking at the failure of large parts of the system, and there's no way something like this should happen simply because of a problem with the pitot tubes. We need to look at the software. Was it the same – or very similar – in both planes? So far, Airbus won't tell us. If it was, the fact that there were different boxes on different planes is no more important than one person using an IBM, another a Dell PC.'

Chris Hounsfield, editor of Aerospace Testing International, points to another possible cause: 'Airbus crew have told me that their pilots can rely too heavily on an "intelligent" aircraft's flying ability, and should the "intelligent" systems fail, they

may not have had enough simulator training to cope with a sudden “flip” to mechanical systems.’

However, Tardivat and Hounsfield agree that the ultimate problem may lie somewhere else entirely – with the 100-odd miles of insulated wire connecting everything from computers to seat-back televisions. Ed Block, an American air investigator, has long been trying to draw attention to the dangers of some wire types. It was he who found the evidence of the likely cause of the disaster on TWA Flight 800, a Boeing 747 that blew up off Long Island in 1996, killing all 230 on board. He concluded the problem had been short circuits, or arcs, that ultimately led to sparking in the vapour-filled central fuel tank.

Airbus uses a different type of wiring, but one that Block considers equally dangerous. On every model built until at least 2006 – Airbus won’t say if new aircraft are fitted with it now – it employed ‘aromatic polyimide’, better known by its trade name, Kapton. The next Atlantic disaster after TWA 800 shows why Block is concerned: the loss of the Kapton-wired Swissair Flight 111 off Nova Scotia in 1998, caused when its entertainment-system wiring caught fire.

A passenger is taken to hospital after sustaining injuries when Qantas QF72, an Airbus A330, plummeted violently last October

Block is not alone in his warnings about Kapton. In 2005 Nasa announced its space shuttles would not fly beyond 2010, partly because each contained 140 to 157 miles of Kapton. Worse, there was no reliable means to detect whether hidden lengths of wire were already damaged, and hence prone to arcing – an event which can produce temperatures in excess of 5,000°C and the spewing of red-hot copper ‘beebies’. This danger was not theoretical: during a launch of the doomed Columbia in 1999, a Nasa report said, ‘a short circuit five seconds after lift-off caused two of the six main engine controller computers to lose power, which could have caused two of the three main engines to shut down.’

Partly as a result of Block’s efforts, Boeing stopped using Kapton in 2002, when America’s Government Accountability Office, a Congressional watchdog, reported that ‘the rules that admitted [Kapton] 20 years ago would prohibit it today because of the failure modes that have been identified’.

In the past Airbus has insisted its use of Kapton is safe, because it coats it in a thin layer of ‘FEP’ – fluorinated ethylene propylene – making it less likely to crack. But other experts disagree, and in 2008 the Federal Aviation Administration, America’s rule-making body, stated that even when coated with FEP, ‘Kapton wire insulation materials should not be used in airborne applications.’ But to Block’s dismay, it didn’t ban its use, aware perhaps that to do so would call into question the safety of any aircraft using Kapton – as many as 14,000 planes.

Could Kapton have been responsible for both QF72 and AF447? Block believes it could. ‘The introduction of fly-by-wire aircraft has furthered the frequency of these situations,’ he says. ‘But as with QF72, the anomalies often can’t be reproduced on the ground by maintenance personnel, because there the vibrations and humidity experienced in flight are no longer an issue.’

For four years from 1999, Block was a member of a special investigation group set up by the FAA that stripped down six ageing passenger aircraft, including a Kapton-wired Airbus A300, the predecessor of the A330. It found widespread evidence of wire bundles that had become charred, cracked, brittle and prone to arcing, as well as contaminated by dust, lint and fluid from leaking toilets. Yet when its report was produced, the Bush White House took no action.

Arcing may not only cause fires or systems to fail: it can also lead to ‘uncommanded inputs’, such as the sudden plunges experienced by QF72.

Like Nasa, Block points to the fact that there’s still no effective way to test wires’ integrity while they remain in use. ‘This point is crucial,’ he says. ‘Nasa would not have to be retiring the Space Shuttle fleet if there were a simple test. On the other hand, if there were a test, and it showed the Kapton in individual planes is dangerous, thousands of planes might have to be retired.’

Meanwhile, the families of those who died on their way from Rio to Paris want answers. ‘The interim report seems very insufficient,’ says Christophe Guillot-Noel, head of the victims’ association, whose brother, Olivier, died in the crash. ‘A lot of us are asking whether the BEA is trying to protect Airbus. They know that if they say there is a fundamental problem, it’s going to be devastating both for the firm and for aviation.’

THE TROUBLED FLIGHTS OF THE AIRBUS 330

August 2008 - Air Caraibes Atlantique

Paris to Martinique

Plane flying through turbulence experiences failure of autopilot, ADIRU and computerised instruments. Pilots successfully fight to restore control.

September 2008 - Air Caraibes Atlantique

Paris to Martinique

Second Air Caraibes flight to Martinique has identical experience. Plane is same model, different aircraft.

October 7, 2008 - Qantas Flight 72

Singapore to Perth

Makes emergency landing after twice plunging uncontrollably in flight following failure of ADIRU, autopilot and instruments. 64 injured, 14 seriously.

December 28, 2008 - Qantas Flight 71

Perth to Singapore

Forced to return to base after failure of autopilot and ADIRU. Different aircraft, same model as in previous incident.

May 21, 2009 - TAM Flight 8901

Miami to Sao Paulo

Experiences failure of autopilot, ADIRU and instruments. Crew regain control after five minutes. No injuries.
US investigation under way.

June 1, 2009 - Air France Flight 447

Rio to Paris

Crashes during Atlantic storm, killing 228. Automatic radio messages indicate that in minutes before crash, crew lost autopilot, ADIRU and computerised instruments.

June 23, 2009 - Northwest Airlines

Hong Kong to Tokyo

Flight loses autopilot, ADIRU and instruments before landing safely. US investigation under way.

Boeing Statement On FCS Staffing Reductions

by Staff Writers
St. Louis MO (SPX) Jul 20, 2009

Boeing has issued the following statement regarding work force reductions on the Future Combat Systems (FCS) program:

"Due to the decision by the Pentagon directing the U.S. Army to restructure the FCS program, as well as related funding reductions anticipated in fiscal year 2010, Boeing and its partner SAIC will be reducing their combined work force by approximately 30 percent.

"Boeing will begin issuing 60-day advance layoff notices to its employees at several sites nationwide. Approximately 70 Boeing employees will receive notices. Additional notices are expected to be issued on July 31.

"Boeing and SAIC are committed to preserving as many jobs as possible for these valued, highly skilled employees and the companies are taking aggressive steps to lessen the impact of the funding reductions.

"These steps include making every effort to redeploy FCS personnel to other programs within Boeing and SAIC, as well as reassessing contract labor requirements. The companies will work with affected employees to help them through this transition by offering career services and other assistance.

"Boeing and SAIC are committed to working closely with their Army customer to implement required changes to the program in a timely and efficient manner. They will continue to support the Army in delivering these important networked capabilities to soldiers as soon as possible."

Air France plane makes emergency landing in Boston

23 Jul 2009
http://www.google.com/hostednews/ap/articl...SfgqZgD99JTDV00

BOSTON — An **Air France** flight out of Boston heading to **Paris** returned to make an early morning emergency landing 31 minutes after taking off.

Phil Orlandella, a spokesman for the Massachusetts Port Authority, said Wednesday that Flight 321 left Logan International Airport with 125 people on board at 1:16 a.m. Wednesday. Shortly afterward, a warning light flashed for one of its engines.

Orlandella said pilots shut down the engine and returned to the airport. The Airbus 340 landed back at Logan at **1:47 a.m.** No injuries were reported.

Air France spokeswoman Karen Gillo said there was no engine fire.

Passengers were booked hotel rooms for the night and scheduled to leave to Paris on another flight later Wednesday.

BREAKING NEWS: Gatwick airport closed after emergency landing

By Daily Mail Reporter
Last updated at 2:44 PM on 24th July 2009
http://www.dailymail.co.uk/news/article-12...cy-landing.html

A passenger jet was forced to make an emergency landing at Gatwick today after developing technical problems mid-

flight.

The busy airport was forced to close temporarily as crew on the ground evacuated the Flybe Dash 8 aircraft.

There were no reports of any casualties but one passenger said there had been a suspected fire on board and that the cabin had filled with black smoke.

Minutes after the jet landed, passengers were evacuated and fire crews were on hand, posted on Twitter

Passenger Shayne Krige, who lives in France and was due to holiday in Wales, posted pictures on Twitter and admitted they had been afraid for their lives.

He bravely tweeted: 'Fire on board our plane. Had to do emergency landing at Gatwick. Shut down the airport just 4 us. Arrive in style!'

Minutes later he admitted: 'Actually, it was a little scary. 20 minutes of diving with smoke getting thicker.'

He later told Sky News: 'The cabin started to fill with smoke. We immediately descended, landed and had to jump out of the plane.'

Flight BE1432 had been due to land at Cardiff at 12.26pm but was diverted after a technical problem developed.

The aircraft had taken off from **Paris Charles de Gaulle.**

The plane was given priority landing at the West Sussex airport at **11**.25am and emergency vehicles were deployed by the airport

The runway was closed immediately after the emergency landing

A Flybe spokesman said there had been a 'suspected technical fault' onboard.

'All 46 passengers disembarked safely and without incident and will be re-accommodated at the earliest possible opportunity,' the spokesman said.

'The safety of its passengers and crew is Flybe's number one priority.'

A spokesman for Gatwick said the aircraft had been moved to the side of the runway.

Flights inbound and outbound of Gatwick were delayed as the airport closed the runway and flights were diverted.

Gatwick is the world's busiest single-runway airport and Britain's second busiest airport after Heathrow, handling around 34 million passengers a year.

Flybe is Europe's largest regional low-cost airline, carrying 7.5million passengers a year between 13 countries.

Israel rejects French demand on peace

http://www.presstv.com/detail.aspx?id=1014...ionid=351020202

Israel rejects French calls to freeze Jewish settlement activities on the Palestinian lands.

The Israeli government has rejected France's demand to halt Jewish settlement activity and to reopen border crossings into the impoverished Gaza Strip.

"A solution to the settlements can only be reached through a comprehensive and final peace agreement," Israel's foreign ministry spokesman Yigal Palmor told AFP on Thursday.

Palmor instead called on France to persuade the Palestinian Authority to resume the stalled peace talks with Israel.

"In order to promote peace, France would do well to persuade the Palestinian Authority to resume negotiations," he added.

Palestinian say they will not resume the talks until Tel Aviv puts an end to its expansionist policies. Israel has been refusing to heed international calls even form its closest allies including the US to stop its illegal settlement activity.

Israel wants to continue its settlement activity in the occupied West Bank to keep up with what it calls the "natural growth" of the Israeli population. The issue has been widely considered as the main obstacle in the way of the Israeli-Palestinian peace process.

The settlements are built on the land Israel occupied in the 1967 Middle East war and are in violation of the Fourth Geneva Convention, which says the occupying power is not allowed to transfer citizens from its own territory to the occupied territory.

Regarding the Gaza Strip, Palmor said that Israel's blockade of Gaza was the result of "the state of war imposed by Hamas" as well as the "detention for more than three years of soldier Gilad Shalit."

On Thursday, France summoned the Israeli ambassador to France, Daniel Shek, to demand an immediate freeze on settlement activities and for the crossings into Gaza to be reopened to allow Gaza rebuild itself after Israel's deadly war in January.

Paris wants "an immediate freeze on settlement activities, including in east Jerusalem," the French ministry spokesman Eric Chevallier said.

Israel must also re-open border crossings into Gaza, blocked since the Hamas resistance movement took power in 2007, "on a regular basis to allow Gaza to rebuild itself and life to return to normal," Chevallier added.

QUOTE

Israel envoy to France summoned over outposts

France summons Israeli ambassador In Paris to demand immediate settlement freeze in east Jerusalem.

23 Jul 2009
http://www.middle-east-online.com/english/?id=33335

PARIS - France summoned the Israeli ambassador in Paris on Thursday to demand an immediate halt to Jewish settlement building in east Jerusalem, and the re-opening of border crossings into the Gaza Strip.

The French foreign ministry's head of political affairs Gerard Araud made the demands during a meeting with the Israeli envoy, Daniel Shek, said ministry spokesman Eric Chevallier.

Araud stressed that Paris wants "an immediate freeze on settlement activities, including in east Jerusalem," the spokesman said.

French Foreign Minister Bernard Kouchner summoned the Israeli ambassador after similar action by the United States, in protest at plans to build 20 new apartments on the site of a former hotel in the Arab sector of the Holy City.

Israel has so far defied international criticism of the plans and on Tuesday rejected calls from the United States, the European Union and Russia to freeze settlements in east Jerusalem.

The French foreign ministry also urged Israel to reopen border crossings into the Gaza Strip, which has been under a blockade since the Islamist Hamas seized power in 2007, warning "the situation cannot remain as it is."

"Israel must reopen border crossings on a regular basis to allow Gaza to rebuild itself and life to return to normal," Chevallier said.

French plans to rebuild a Gaza hospital bombed during Israel's assault on the territory in January are at a standstill because of the blockade.

Araud also voiced France's "concern about restrictions on the movements of our diplomats in the Palestinian territories over the last few months."

Several French diplomats have reported run-ins with Israeli security forces in recent months and in one case a consular agent was brutally dragged from her car by a Jerusalem police officer.

Paris stressed the "need for Israeli security forces to respect international law concerning diplomatic and consular agents," Chevallier said.

Once Airbus settles down in the military arena, Boeing will be in trouble even more. Great news except for the Airbus attacks that will come of it. VIVA LA FRANCE! -Craig

Fresh backing for troubled plane

The plane had been due to make its maiden flight in March

Friday, 24 July 2009 18:50 UKE-mail this to a friend
http://news.bbc.co.uk/1/hi/business/8167813.stm

Defence ministers from seven European nations have pledged to continue to support the much delayed Airbus A400M military transport aircraft project.

The ministers from Belgium, France, Germany, Luxembourg, Spain, Turkey and the UK now hope to agree a new contract for the plane by the end of the year.

There had been fears that some countries would decide to walk away from the troubled project.

The A400M's maiden flight is a year late due to technical and budget woes.

A second deadline of March this year was also missed.

The plane is not now due to take to the skies until the end of this year.

'Good news'

"We hope to save the programme. We have decided to open a renegotiation," said the UK's Defence Procurement Minister Quentin Davies.

The A400M project was launched in 2003, with orders for 180 planes so far.

The plane was designed as a replacement for the main Nato military transport aircraft, the US-built Lockheed Martin Hercules.

"I am convinced this programme will be re-launched, which will be good news for the trade balance of our countries because I am convinced it has enormous export potential," said French Defence Minister Herve Morin.

Aviation analyst Saj Ahmad of FleetBuzz Editorial said Airbus will find itself under "immense pressure" to deliver to the new contractual arrangements.

"The A400M is Airbus' equivalent to Boeing's delayed 787 Dreamliner," he added.

"However, the key difference is that Boeing was caught out just prior to the 787 first flight, the A400M hasn't even been in proximity of a runway."

British Air Plane Makes Emergency Landing in Spain (Update1)

By Emma Ross-Thomas
http://www.bloomberg.com/apps/news?pid=206...id=a4BnOsC22Hho

Aug. 2 (Bloomberg) -- A British Airways Plc plane made an emergency landing at Barcelona airport today, an official for Spanish airport management company Aena said.

Firefighters, who were alerted after pilots detected smoke in the cabin, did not have to act, according to the official, who declined to be identified in line with policy. The passengers were safely evacuated.

British Airways said there were no reports of serious injuries. The Boeing 757 aircraft was traveling from London Heathrow to Barcelona with 176 passengers, two pilots and five cabin crew, the airline said in an e-mailed statement.

Boeing 787 wing flaw extends inside plane

http://seattletimes.nwsource.com/html/boei...9_boeing30.html

The wing damage that grounded Boeing's new composite plastic 787 Dreamliner occurred under less stress and is more extensive than previously reported.

The wing damage that grounded Boeing's new composite 787 Dreamliner occurred under less stress than previously reported — and is more extensive.

An engineer familiar with the details said the damage happened when the stress on the wings was well below the load the wings must bear to be federally certified to carry passengers.

In addition, information obtained independently and confirmed by a second engineer familiar with the problem shows the damage occurred on both sides of the wing-body join — that is, on the outer wing as well as inside the fuselage.

The structural flaw in the Boeing design was found in May during a ground test that bent the wings upward. Stresses at the ends of the long rods that stiffen the upper wing skin panels caused the fibrous layers of the composite plastic material to delaminate.

The damage at the end of each of the 17 long stiffening rods, called stringers, on each wing's upper skin happened just beyond the aircraft's "limit load," which is the maximum load the wing is expected to bear in service.

Last week, The Seattle Times mistakenly reported that the damage occurred later in the test, just beyond "ultimate load." That is defined as 50 percent higher than the in-service limit load and is the Federal Aviation Administration's test target. The tearing at the end points of the stringers well before the wing reached ultimate load means the problem is worse than suggested in last week's story.

Because the wing test fell short of the ultimate load target, the plane could have flown only under restrictions that would have severely limited the usefulness of a test flight.

It also helps explain why Boeing canceled the first flight planned for the end of June.

The fact that there is corresponding damage on the fuselage side of the wing join adds to the complexity of any fix and the time and cost involved in implementing it.

The wings of the 787 are made by Mitsubishi Heavy Industries in Japan.

Inside the fuselage, on the other side of where each wing joins the jet's body, there is a structure called the "center wing box," made by Fuji Heavy Industries, also in Japan.

This center box is constructed much like the outer wing, with composite-plastic skin panels stiffened by composite-plastic stringers.

The stringers on the fuselage side mate at the wing join, fitting with those on the wing side.

Because the wings are designed to transfer the loads into the fuselage box, the damage that occurred in the test was mirrored on either side of the join.

Though a single fix, once designed and tested, will work on both sides of the join, mechanics performing the necessary modifications inside the airplanes already built will have to duplicate the work inside the wing and inside the fuselage.

According to the engineers, Boeing is focusing on a solution that will require mechanics to create a U-shaped cutout in the end of each upper wing-skin stringer.

This would have the effect of transferring part of the excess load into the titanium fitting at the wing-body join instead of into the wing skin.

The mechanics must then fasten the reshaped stringer ends with newly designed parts to the titanium fitting.

The goal is to reduce the stress-point loads enough to prevent future delamination.

The delamination of the composite-plastic material isn't likely to lead to catastrophic failure of the airplane, but it would require constant monitoring and potentially costly repairs by the airlines.

Any tear would have to be promptly fixed to prevent it from spreading.

The way the stringers terminate and mate at the join, the focus of the problem, is Boeing's responsibility and not that of its Japanese partners. Boeing will have to pay for the cost overruns.

Engineers will have to validate Boeing's chosen solution in tests before they modify the wings and center wing boxes already built.

Company spokeswoman Yvonne Leach said 10 Dreamliners have been completed, including two ground-test airplanes. About 30 more are in various stages of production.

The Dreamliner is already two years late.

CEO Jim McNerney said last week that a new schedule for first flight and delivery will be ready within the next two months.

Estimates by the two engineers of the minimum time needed to fix the problem suggest the plane is now unlikely to fly until next year.

Until the new production timetable is announced, Wall Street analysts are unable to calculate the precise additional cost of this latest delay.

Analyst Joe Campbell, of Barclays Capital, this week downgraded Boeing's stock. He cited an increased risk that the company will book a large accounting loss this year to cover the extra expense of the repeated delays.

In a note to clients, Campbell estimated the total cost overrun of the Dreamliner program so far — extra startup and engineering costs, penalties owed to customers for delivery delays and contractual obligations to suppliers for engineering changes — as "in the vicinity of $11 billion."

Because 850 Dreamliners have already been ordered, Campbell still believes the jet can be "highly profitable" over two decades of full production.

But with that level of cost overrun, Campbell said, "Boeing is highly likely to lose large sums of money on the first 400 to 600 aircraft."

Paris-Spain flight catches fire, several injured

6 Aug 2009
http://www.google.com/hostednews/ap/articl...7CBfsgD99SMSS03

PARIS — The Paris Airports authority says the engine of an **Airbus 320** of the low-cost carrier Vueling on its way to Alicante in southeastern Spain has caught fire and that several people have been slightly injured.

An official at Paris Airports says the passengers were injured as they tried to exit the plane down the emergency slides. The fire was spotted as the aircraft was heading toward the runway for takeoff.

The official spoke Wednesday on condition of anonymity.

Oh ooooo Boeing will NOT be pleased now. Do not fly on Airbus for a while I smell a bang with a smoke signature called 'BOEING' coming. -Craig

Government to lend Airbus £340m

Lord Mandelson: "It is not a bail-out"

Friday, 14 August 2009 15:23 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/business/8201222.stm

The government is to give plane manufacturer Airbus up to £340m in loans for new projects, which is expected to secure 5,000 jobs.

The investment, announced by Business Secretary Lord Mandelson on a visit to Airbus, will be in the design and development of the A350.

It was welcomed by unions as a way of sustaining jobs at plants at Filton in Bristol and Broughton in North Wales.

The investment is smaller than those made by France and Germany in the A350.

France and Germany, the UK's partners in the project have promised to invest 1.4bn euros ($2bn; £1.2bn) and 1.1bn euros respectively.

'Good news'

A350 PROJECT
Three wide-bodied models, carrying between 270 and 350 passengers
Planes will be delivered by 2013
France is investing 1.4bn euros (£1.2bn) and Germany is investing 1.1bn euros in the A350

Airbus says the A350 will be quieter and more fuel-efficient than previous models

Of the jobs being secured in the UK, 1,200 are direct Airbus positions, while the remaining 3,800 are across the supply chain, the Department for Business, Innovation and Skills said.

It was "excellent news" for the UK aerospace sector as a whole and for the British workers within Airbus, Lord Mandelson said.

"It shows British investment in and backing for important new technologies... that are going to maintain our competitive manufacturing strengths in Britain and keep us ahead of the competitive curve," he told the BBC.

'Disappointing'

Airbus chief executive Tom Enders also welcomed the move to invest in the A350 XWB, which is an extra wide-bodied model and will compete with rival Boeing's Dreamliner.

The loans have been criticised by Boeing.

"In less than three weeks, the World Trade Organisation will rule on the consistency with world trade rules of government subsidies to Airbus," its spokesman said.

"It is therefore disappointing that governments should proceed with subsidies on the eve of a WTO decision."

'Vital work'

Bernie Hamilton, Unite national officer for aerospace and shipbuilding, said: "This investment is a vote of confidence for UK manufacturing and a ringing endorsement of the government's aerospace strategy.

"It safeguards thousands of jobs across the UK, but in particular, it is good news for jobs in Wales and the South West."

Ian Godden, chief executive of the Society of British Aerospace Companies, said: "The Airbus A350 XWB is an extremely important programme for the future of the UK aerospace industry and this investment secures vital work across the sector."

He added that the A350 programme's role in developing skills and technology for the future sustainability of the UK aerospace industry could not be exaggerated.

The government's £60m investment in GKN, also a so-called repayable launch investment, came as GKN bought part of the manufacturing operation of the Airbus factory in Filton for £136m last year.

Tsunami Watch Issued For Hawaii

POSTED: 8:30 am HST September 29, 2009
UPDATED: 9:19 am HST September 29, 2009
http://www.kitv.com/news/21150223/detail.h..._01350109292009

HONOLULU -- The Pacific Tsunami Warning Center issued a tsunami watch for the Hawaiian Islands after an earthquake off Samoa on Tuesday morning.

Scientists issued the watch at 8:05 a.m.

(Check to see if you are in an evacuation zone.)

The quake near the Samoa Islands hit with a magnitude 8.3. It had a preliminary measurement of 7.9, officials said. It struck at about 7:48 a.m.

Scientists are evaluating whether the tsunami threat is significant. The earliest Hawaii would see an impact would be 1:11 p.m., PTWC officials said.

The Pacific Tsunami Warning Center issued a tsunami warning for: American Samoa, Samoa, Niue, Wallis-Futuna, Tokelau, Cook Islands, Tonga, Tuvalu, Kiribati, Kermadec Island, Fiji, Howland-Baker, Jarvis Island, New Zealand, French Polynesia and Palmyra Island

A tsunami watch is in effect for: Vanuatu, Nauru, Marshall Islands, Solomon Islands, Johnston Island, New Caledonia, Kosrae, Papua New Guinea, Hawaii, Pohnpei, Wake

Island, Pitcairn and Midway Island.

The National Oceanic and Atmospheric Administration's West Coast and Alaska Tsunami Warning Center said it was a strong earthquake but no tsunami warning, watch or advisory is in effect.

Samoan Islands earthquake generates 10-foot tsunami

Tuesday, September 29th, 2009
http://www.hotindienews.com/2009/09/29/1010421

An earthquake with a magnitude of 7.9 struck in the Samoan Islands region Tuesday, the U.S. Geological Survey said.

The temblor generated a nearly 10-foot (3-meter) tsunami — measured from crest to trough — according to preliminary data, said Chip McCreery, the director of the Pacific Tsunami Warning Center in Ewa Beach, Hawaii.

A tsunami warning was in effect for American Samoa, Samoa, Cook Islands, Tonga and Fiji, among others in the South Pacific archipelago, according to a bulletin from the center.

A tsunami watch was issued for islands farther from the epicenter, including Hawaii and Papua New Guinea.

Officials were determining whether the tsunami could reach Hawaii, the center said.

The quake is not expected to generate a tsunami along the west coast of the United States or Canada, according to the West Coast and Alaska Tsunami Warning Center.

Further details were not immediately available.

There were no immediate reports of damage.

The quake was recorded at 6:48 a.m. (1:28 p.m. ET) at a depth of about 7.4 miles (11.9 km), the USGS reported

At least 14 dead as tsunami hits Samoas

By FILI SAGAPOLUTELE, For The Associated Press Fili Sagapolutele, For The Associated Press – 25 mins ago
http://news.yahoo.com/s/ap/20090929/ap_on_...ific_earthquake

PAGO PAGO, American Samoa – Towering tsunami waves spawned by a powerful earthquake swept ashore on two South Pacific island chains early Tuesday, killing at least 14 people and leaving dozens of others missing at devastated National Park Service facilities.

Hampered by power and communications outages, officials struggled to assess the casualties and damage. The quake, with a magnitude between 8.0 and 8.3, struck around dawn about midway between Samoa and American Samoa.

Mike Reynolds, superintendent of the National Park of American Samoa, was quoted as saying four tsunami waves 15 to 20 feet high roared ashore soon afterward, reaching up to a mile inland. Holly Bundock, spokeswoman for the National Park Service's Pacific West Region in Oakland, Calif., spoke with him from his vantage point under a coconut tree uphill from Pago Pago Harbor; he reported that the park's visitor center and offices appeared to have been destroyed.

Bundock said Reynolds and another park service staffer had been able to locate only 20 percent of the park's 13 to 15 employees and 30 to 50 volunteers. The National Park of American Samoa is the only national park south of the equator, a scenic expanse of reefs, picturesque beaches, tropical forests and wildlife that include flying foxes and sea turtles.

Residents in both Samoa and American Samoa reported being shaken awake by the quake, which lasted two to three minutes, then fleeing uphill out of fear of a tsunami. The Pacific Tsunami Warning Center issued a general alert from American Samoa to New Zealand, warning of the prospect of a "destructive" wave.

The ramifications of the tsunami could be felt thousands of miles away, with federal officials saying strong currents and dangerous waves were forecast from California to Washington state. No major flooding was expected, however.

Mase Akapo, a meteorologist for the National Weather Service in American Samoa, said at least 14 people were killed in four different villages on the main island of Tutuila, while an unspecified number of people died neighboring Samoa, with reports of people and cars swept out to sea. Thousands of people were still huddled on high ground hours after the initial quake, which was followed by at three aftershocks of at least 5.6 magnitude.

An unspecified number of fatalities and injuries reported in the Samoan village of

Talamoa. New Zealander Graeme Ansell said the beach village of Sau Sau Beach Fale was leveled.

"It was very quick. The whole village has been wiped out," Ansell told New Zealand's National Radio from a hill near Samoa's capital, Apia. "There's not a building standing. We've all clambered up hills, and one of our party has a broken leg. There will be people in a great lot of need 'round here."

Schools and businesses were closed, with the Samoan capital virtually deserted.

"Our house has been taken by the tsunami and we have lost everything," Teresa Sulili Dusi told National Radio, adding that "everything dropped on the floor and we thought the house was going to go down as well. Thank God, it didn't."

Local media said they had reports of some landslides in the Solosolo region of the main Samoan island of Upolu and damage to plantations in the countryside outside Apia.

American Samoa Gov. Togiola Tulafono was at his Honolulu office assessing the situation but was having difficulty getting information, said Filipp Ilaoa, deputy director of the office.

"There is some water damage to residences," Ilaoa said. "To what extent and how much, and how many villages are effected, that is a mystery at this time."

Rescue workers found a scene of destruction and debris with cars overturned or stuck in mud. The staff of the port ran to higher ground, and police soon came by, telling residents to get inland. Several students were seen ransacking a gas station/ convenience store.

In Fagatogo, water reached the waterfront town's meeting field and covered portions of the main highway, which was plagued by rock slides.

Rear Adm. Manson Brown, Coast Guard commander for the Pacific region, said the Coast Guard is in the early stages of assessing what resources to send to American Samoa.

"We're going to assume, because a tsunami of this sort is probably going to wreak havoc in the port, we're going to have to get additional personnel and supplies down through the airport," Brown told reporters in Honolulu.

The earthquake and tsunami were big, but not on the same large scale of the 2004 Indonesian tsunami that killed more than 150,000 across Asia the day after Christmas in 2004, said tsunami expert Brian Atwater of the U.S. Geological Survey in Seattle.

The 2004 earthquake was at least 10 times stronger than the 8.0 to 8.3 measurements

being reported for Tuesday's quake, Atwater said. It's also a different style of earthquake than the one that hit in 2004.

The tsunami hit American Samoa about 25 minutes after the quake, which is similar to the travel time in 2004, Atwater said. The big difference is there were more people in Indonesia at risk than in Samoa.

NZ on alert as major quake shakes Samoa

08:43 AEST Wed Sep 30 2009
http://news.ninemsn.com.au/world/869419/nz...ke-shakes-samoa

The death toll from a massive South Pacific earthquake and tsunami has risen to at least 28, with a minimum of 14 reported dead in both Samoa and American Samoa, the Red Cross and media reports said.

About 20 people had died and thousands were left homeless in American Samoa, the territory's delegate to the US Congress Eni Faleomavaega said.

"It was an earthquake, which caused a tidal wave 15 feet (4.5 meters) in height. Some of the areas there are only a few feet above sea level, so you can imagine the devastation," Eni Faleomavaega told AFP by telephone.

Faleomavaega, the territory's non-voting delegate to the US Congress, said he had been in touch with local officials with the US National Oceanic and Atmospheric Administration (NOAA) as well as Federal Emergency Management Agency (FEMA) assessing the area's disaster relief needs.

"It caused severe damage to property, there are cars floating everywhere," said Faleomavaega, who confirmed that early reports of thousands left homeless and some 20 dead were "about right."

FEMA officials were "making preparations to go down there," while officials in Hawaii were also closely watching the situation.

Samoan journalist Jona Tuiletufuga told AFP there was widespread destruction with possibly thousands of people left homeless on the island.

"We are getting reports of missing people in areas were damage is extensive on the south and southeast coasts," he told AFP.

"Entire villages have been wiped out."

Tuiletufuga said there were up to 70 villages in the worst-hit area and each housed from 300-800 people.

"We're hoping to take food and supplies and things, and they're making the necessary arrangements also to see what needs there are in Samoa, the independent state of Samoa," Faleomavaega said.

"This is a really sad time for the Samoan people," he said. "For those who are dead, we can only express our sympathies."

"I'm trying to catch the first flight out" to get home, but having little success, said Faleomavaega.

"So far, I'm just trying," he said.

Powerful earthquake rocks western Indonesia

Sep 30 07:07 AM US/Eastern
http://www.breitbart.com/article.php?id=D9...icle=1&catnum=2

JAKARTA, Indonesia (AP) - A powerful underwater earthquake rocked western Indonesia Wednesday, triggering a tsunami alert for countries along the Indian Ocean and sending panicked residents out of their houses.
The U.S. Geological Survey said the quake had a preliminary magnitude of 7.9. An Indonesian television network reported that buildings had collapsed in the coastal city of Padang, in Southern Sumatra province.

Indonesia's meteorological agency said the quake had a preliminary magnitude at 7.6 and hit 30 miles (50 kilometers) off the coast of Padang, along the same fault line the spawned the massive 2004 Asian tsunami.

The Pacific Tsunami Warning Center issued a tsunami alert for Indonesia, Malaysia, India and Thailand.

"There is a possibility of a destructive regional tsunami in the Indian Ocean," it said in an e-mailed statement.

There were no immediate reports of a high waves.

Witnesses said residents of Padang, and other town and cities, ran out of homes and

buildings in fear.

"People are panicking. They are running out of the buildings... There are many collapsed buildings," an unidentified witness in Padang told MetroTV.

The shaking could be felt in high buildings in the capital, Jakarta, several hundred miles (kilometers) away. It was also felt in neighboring Singapore and Malaysia.

New Earthquake Shakes Indonesia; Update: Tsunami Watch Canceled
http://www.npr.org/blogs/thetwo-way/2009/0...s_indonesi.html

By Mark Memmott

Breaking news from Asia:

"A powerful earthquake off the coast of Indonesia's Sumatra island has damaged houses and bridges, and caused fires in the city of Padang in Sumatra, a Reuters witness said on Wednesday."

The U.S. Geological Survey estimates the temblor had a 7.9 magnitude. That's a major earthquake. The epicenter is thought to have been about 30 miles west northwest of Padang, Sumatra. It happened around 6:16 a.m. ET.

The Pacific Tsunami Warning Center has issued a "regional tsunami watch" for Indonesia, India, Thailand and Malaysia.

Yesterday, a quake near Samoa with a magnitude between 8.0 and 8.3 sent a massive tsunami across Samoa and American Samoa, killing 100 or so people and leaving dozens missing.

Update at 7:55 a.m. ET: NOAA's Pacific Tsunami Warning Center has canceled its "tsunami watch". The Japan Meteorological Agency has also lifted "all tsunami warnings and advisories".

Update at 7:15 a.m .ET: USGS now estimates the quake had a 7.6 magnitude.

Update at 7:10 a.m. ET. The Associated Press reports that the quake "rocked western Indonesia ... triggering a tsunami alert for countries along the Indian Ocean and sending panicked residents out of their houses. ... An Indonesian television network reported that

buildings had collapsed in the coastal city of Padang, in Southern Sumatra province."

5.9 quake reported in Peru, near Bolivia

No signs of damage

ReutersSeptember 30, 2009 2:02 PM
http://www.timescolonist.com/news/quake+re...1444/story.html

LIMA - A magnitude 5.9 quake struck southeastern Peru Wednesday near Bolivia's capital of La Paz, but it was not felt by witnesses and mines in the area.

The U.S. Geological Survey initially reported a 6.3 magnitude quake but later downgraded it. The temblor was 100 miles northwest of La Paz and fairly deep — some 155.5 miles below the surface.

An official at the nearest big Peruvian mine, Xstrata's

Tintaya, said the quake was not felt.

The temblor did not shake La Paz nor Peru's capital of Lima, people in those cities said.

There were no immediate reports of damages or casualties in Peru, a leading metals exporter.

U.S. state of California prepared for possible tsunami

www.chinaview.cn 2009-10-01 03:46:59
http://news.xinhuanet.com/english/2009-10/...nt_12138308.htm

LOS ANGELES, Sept. 30 (Xinhua) -- The U.S. state of California has been put on high alert for possible tsunami, authorities said on Wednesday.

A tsunami advisory has been issued for the Southern California coast because of a

magnitude-8.0 earthquake in the South Pacific near American Samoa.

An inundation of 1 foot to 1.5 feet was expected to hit Los Angeles County and could last at least two hours, according to Curt Kaplan of the National Weather Service.

The U.S. Coast Guard warned the public to move out of the water, off the beach and out of harbors and marinas. Mandatory evacuations have not been ordered.

Tsunamis are potentially dangerous for several hours after initial arrival.

Currents may be hazardous to swimmers, boats and coastal structures and may continue for several hours after the arrival of the initial wave, according to Lt. j.g. Tyler A. Stutin of the U.S. Coast Guard.

"The Coast Guard strongly encourages waterfront users to take extra precautions in preparation for the possibility of a surge, to include securing vessel mooring arrangements and possible sources of pollution," according to a statement from the agency.

Los Angeles Port Police informed terminal operators about the advisory, but operators were not being told to shut down operations.

A tsunami advisory means that a tsunami capable of producing strong currents or dangerous waves, said Phillip Sanfield of the Port of Los Angeles.

The magnitude-8.0 earthquake struck on Tuesday in the Pacific Ocean and triggered a tsunami that leveled at least one Samoan village.

The National Weather Service issued a tsunami advisory for the California coast, stretching from the Mexican border to the Oregon/Washington border.

"A minor tsunami may be recorded in some areas of the coast which could produce dangerous currents and surges in harbors and bays," according to the National Weather Service.

"Coastal residents are advised to stay out of the waters, off the beach and away from harbors and marinas. Wave height and currents are amplified by irregular shoreline and are difficult to predict," said the Service.

Some agencies said they would close beaches and evacuate marinas, while lifeguards at beaches kept a watchful eye.

- This is so sickkk, another big one. All in a matter of days: 8.3 in Samoa Islands; 7.6

Western Indonesia; 6.3 in Peru; 6.7 in Arctic Sea northwest of Alaska; 7.0 again in Western Indonesia. Samoa also had ~40 after shocks, none less than 4.0

Major earthquake hits Southern Sumatra

From the BNO Newsroom.
http://news.bnonews.com/w5f5

BENGKULU, INDONESIA (BNO NEWS) – A major earthquake struck Indonesia's Sumatra on Thursday morning, the second in as many days, officials said. There was no immediate word on damage or casualties.

The earthquake, which had a preliminary magnitude of 7.0, struck at 8.52 a.m. local time, according to the country's seismological agency. The United States Geological Survey reported the earthquake as a 6.8-magnitude. It's epicenter was located about 6 to 15 miles deep, according to preliminary readings, making it an extremely shallow earthquake. Shallow earthquakes often tend to cause more severe damage.

The earthquake struck about 96 miles north-northwest from Bengkulu on Indonesia's Sumatra, or 141 miles southeast from Padang. Briefly after the earthquake, at 9.20 a.m. local time, an aftershock with a preliminary magnitude of 5.5 struck nearby.

The latest quake follows a series of powerful earthquakes in the region, which is also known as the "Pacific Ring of Fire." On Tuesday, a massive 8.0 magnitude earthquake struck near the Samoa islands in the Pacific Ocean, creating deadly tidal waves that likely killed hundreds of people.

On Wednesday, a powerful 7.6 magnitude earthquake struck 30 miles from Indonesia's Padang on Sumatra, possibly killing thousands of people.

A spokeswoman for the United States Geological Survey said that, based on the initial readings, Thursday's earthquake was not an aftershock to Wednesday's earthquake as they were located too far from each other.

There was no immediate word on damage or casualties from the latest earthquake. A tsunami warning was not issued as the earthquake was located too far inland.

6.3 magnitude earthquake hits Samoa region

www.chinaview.cn 2009-10-02 12:56:44
http://news.xinhuanet.com/english/2009-10/...nt_12172495.htm

AUCKLAND, New Zealand, Oct. 2 (Xinhua) -- An earthquake measuring 6.3 on the Richter scale struck off the Pacific island kingdom of Tonga and the Samoa Islands on Friday, the U.S. Geological Survey said.

The quake, which occurred at 02:07 p.m. local time Friday (01:07 GMT), was centered 545 km northeast of Nuku'alofa, the capital of Tonga.

It was at a depth of 10 km.

There were no reports of casualties and damage so far.

No tsunami warning had been issued by the Hawaii-based Pacific Tsunami Warning Center.

It came two days after a giant tremor caused a devastating tsunami which killed almost 150 people.

Strong earthquake rocks eastern Taiwan

From the BNO Newsroom.
http://news.bnonews.com/kyda

HUA-LIEN, TAIWAN (BNO NEWS) – A strong earthquake struck just off Taiwan's eastern coast on Sunday morning, officials said. There were no immediate reports of damage or casualties.

The earthquake, which struck about 18 miles south of Hua-lien, had a preliminary magnitude of 6.3, according to the country's Central Weather Bureau. It struck about 9 miles deep, making it a very shallow earthquake. Shallow earthquakes often tend to cause more damage, and increase the risk of a tsunami when it strikes at sea.

There were no immediate reports of damage or casualties following the tremor, which occurred at 01.36 a.m. Sunday local time, and no tsunami warnings were issued because the quake was located too far inland to have any tsunami potential.

Light shaking was reported in the country's capital, Taipei. According to the Central Weather Bureau, the largest local intensity observed was in Haulien County with a 5.0 magnitude.

Warning of bigger tremor to come

By Kevin Brown in Singapore
Published: October 2 2009 16:55 | Last updated: October 2 2009 18:51
http://www.ft.com/cms/s/0/8d980480-af66-11...?nclick_check=1

The earthquake that struck Sumatra three days ago is likely to be followed by an even larger tremor that could cause a tsunami as devastating as the one that hit Indonesia in 2004, according to a leading seismologist.

Professor Kerry Sieh, director of the Earth Observatory at Singapore's Nanyang University, says earthquakes measured at 8.4 and 7.8 which hit southern Sumatra in September 2007 marked the beginning of a cycle of tremors that starts roughly every 200 years.

"This is 100 times smaller than the big one," Prof Sieh said by telephone from Padang, where he was monitoring the aftershocks from Wednesday's earthquake, estimated by the US Geological Survey at 7.6 on the scale used by modern seismologists.

"My timing has not changed as a result of this quake. This is not the big one, but we don't know when that will happen – it could be in 30 seconds or 30 years," he said.

Prof Sieh said there had been 30 or more earthquakes of magnitude six or greater in Sumatra or the adjacent seas in the last 10 years, including the devastating quake measured at 9.1 on Boxing Day 2004.

These tremors had released more pent up energy from below the earth's surface than anywhere else in the world over the decade, marking the start of a "failure sequence," comparable to watching an aircraft falling apart in mid-air, that would inevitably culminate eventually in a much bigger tremor, he said.

Records going back to 1300 suggested that there had been three such failure sequences in the seas around Sumatra, the last of which began 210 years ago. However, it was impossible to forecast how long the series of quakes would last before calm returned.

Prof Sieh said there was no tsunami on Wednesday because tidal waves accompanied earthquakes only when a subsea fault was so close to the sea floor that it was suddenly deformed and the displaced water rushed on to land.

The Padang earthquake did not trigger a tsunami because it originated about 80 kilometres below the sea floor. By comparison, the ruptures that caused the Sumatran earthquakes in 2004, 2005 and 2007 were within 30 kilometres of the sea floor.

Prof Sieh said in a technical explanation of Wednesday's quake posted on the Earth Observatory's website that most earthquakes off Sumatra occurred as a result of collisions between undersea tectonic plates – large slabs of the earth's crust that move slowly under earth's surface.

"The Indian and Australian plates are sliding north-eastward at about 7cm per year under the Sunda plate, which includes Sumatra and Singapore," he said. "The process of one slab sliding beneath another is called subduction, and the gently sloping upward thrust that occurs where they join is called the Sunda megathrust.

"Until the "subducting" oceanic plates drop to about 30km beneath Sumatra, the megathrust resists slippage and the plates becomes coupled, or locked together. As a result, strain accumulates over many decades and even more than a century, until the megathrust gives way.

"When that happens, the oceanic plate lurches suddenly many metres north-eastward beneath Sumatra, and a big earthquake occurs. That's what happened in the earthquakes and related tsunamis of December 2004, March 2005 and Sept 2007.

"In contrast, however, initial analysis by the US Geological Survey suggests that the September 30 earthquake was caused by a sudden rupture within the descending Indian and Australian plates, about 80km beneath the earth's surface."

Prof Sieh said a follow-up earthquake on October 1, measured at 6.6, appeared not to be an aftershock. It occurred more than 200km away from the September 30 earthquake on the Sumatran fault, a “strike-slip” fault that runs the length of Sumatra, from near Krakatoa in the south to Banda Aceh in the north.

That fault produced many large earthquakes with magnitudes of between 7 and 7.5 between 1892 and 1953, but has been largely quiet for the past 50 years.

Prof Sieh said there was no way to avoid the impact of earthquakes, but deaths and damage could be reduced through better building codes and more effective emergency evacuation procedures he said.

He said this was more likely to save lives than the early warning systems favoured by many governments.

“We need to have a long-term strategy of training people to run away or evacuate vertically – go up – if they can’t run away,” he said.

Australian tsunami watch cancelled, islanders scramble for higher ground

Posted 1 hour 33 minutes ago
Updated 29 minutes ago
http://www.abc.net.au/news/stories/2009/10/08/2708066.htm

A tsunami watch for the Australian coast has been cancelled but islanders across

the South Pacific are heading to higher ground after two big undersea earthquakes sparked a tsunami warning across the region this morning.

A major 7.3 earthquake struck off Vanuatu just minutes after a 7.8 quake nearby triggered a tsunami warning for large parts of the South Pacific, the US Geological Survey said.

The Pacific Tsunami Warning Centre says it is not yet known if a tsunami has been generated, but warns a quake of this size has the potential to generate a destructive tsunami that can strike coastlines near the epicentre within minutes - and more distant coastlines within hours.

But the Australian Tsunami Warning Centre later cancelled a tsunami watch for the Australian coastine.

The epicentre of the 7.8 quake was located 373 kilometres from Vanuatu at a depth of 33 kilometres, the US Geological Survey said.

The Pacific Tsunami Warning Centre issued the warning for 11 nations, including Papua New Guinea and the popular resort islands of Fiji, Vanuatu and New Caledonia.

ABC Papua New Guinea correspondent Liam Fox said the quake had not been felt in the capital Port Moresby.

Vanuatu police in the capital, Port Vila, said they had not felt the quake and there were no immediate reports of sea level rises.

Authorities in New Caledonia are evacuating people from the island's eastern shore and from the nearby Loyalty Islands to higher ground.

Residents of Tuvalu have also been ordered to evacuate from areas close to the sea.

A police spokesman in the French territory's capital of Noumea said they expect waves to hit the coastline at 11:15am (local time).

Meanwhile, a spokesman for New Zealand's Ministry of Civil Defence and Emergency Management said it was issuing a tsunami advisory for people not to be on beaches or boats near the coast.

Earlier this morning, a magnitude-6.7 quake struck south-east of the Sulu archipelago of the Philippines.

The quake was in the Celebes Sea, 320 kilometres south of Zamboanga in Mindanao, and occurred at 5:41am (local time). The depth was 582.8 kilometres, the USGS said.

The latest quakes came a week after an undersea 8.3-magnitude quake struck off

Samoa, causing a devastating tsunami in Samoa, American Samoa and Tonga, which killed hundreds of people.

A deadly 7.6-magnitude earthquake also hit the Indonesia island of Sumatra, destroying entire villages and buying people alive. The death toll is expected to exceed 1,000.

Quake shakes Indonesian capital

Page last updated at 10:49 GMT, Friday, 16 October 2009 11:49 UK
http://news.bbc.co.uk/2/hi/in_depth/8310458.stm

A 6.3-magnitude earthquake has struck the Indonesian island of Java, causing buildings to sway in the capital, Jakarta, officials have said.

The epicentre was located 185km (115 miles) west of the city, in the Sunda Strait, at a depth of 53.7 km (33.4 miles), the US Geological Survey said.

There have so far been no reports of any damage or casualties.

A more powerful 7.6-magnitude quake devastated western Sumatra last month and left more than 1,100 people dead.

A senior official at the Indonesian Meteorology and Geophysics Agency, Suharjono, said Friday's tremor was the result of movement in the same plate, but that it was impossible to say whether the two events were related.

"However, the epicentres are in the same bloc... due to a clash between the Indo-Australian and Euro-Asian plates," he told the AFP news agency.

Suharjono said the quake was not strong enough to cause a tsunami.

Indonesia sits on the so-called "Pacific Ring of Fire", one of the most active areas for earthquakes and volcanic activity in the world.

Magnitude 7.0 Earthquake Strikes Indonesia

Saturday, October 24, 2009
http://www.foxnews.com/story/0,2933,569408,00.html

JAKARTA, Indonesia — A powerful earthquake struck deep under the sea in eastern Indonesia on Saturday, causing panic and sending residents running out of their homes, officials and witnesses said. There were no immediate reports of damage or injuries.

The quake had a preliminary magnitude of 7.0, but at a depth of 86 miles was too far below the earth's surface to cause a tsunami, the Pacific Tsunami Warning Center said.

Saturday's quake came as Indonesia is still recovering from a devastating earthquake last month that killed more than 1,000 people on western Sumatra.

The U.S. Geological Survey says Saturday's quake — the second strong temblor in two days — was located 225 miles southeast of Ambon in the Maluku islands in the Banda Sea.

The shaking was strong and people ran to higher ground fearing a tsunami, said Ian Kotualubun, an official with Indonesia's Meteorology and Geophysics Agency in Saumlaki, the area closest to the epicenter, about 1,700 miles east of the capital, Jakarta.

Indonesia sits above a series of fault lines that make the vast island nation one of the most earthquake-prone places in the world. A massive quake off the coast of Indonesia's Aceh province caused the 2004 Indian Ocean tsunami that killed 230,000 people, half of the victims on Sumatra island.

Mag 6.8 Quake Hits Off Coast of Southern Japan

Friday , October 30, 2009
http://www.foxnews.com/printer_friendly_st...,570466,00.html

A magnitude 6.8 earthquake hit off Japan's southern coast Friday, according to Japan's Meteorological Agency.

There were no immediate reports of damage or casualties. The agency said there was no danger of damage from a tsunami, though there may be a small tidal increase.

The quake hit off the northeastern coast of Amami Oshima island in southern Japan at a depth of 37 miles.

The small island is about 800 miles southwest of Tokyo.

The offshore quake also shook Kagoshima and dozens of towns on the southern main island of Kyushu, but the temblor was not felt in Tokyo or elsewhere in the country, the agency said.

Japan is one of the world's most earthquake-prone countries. In 1995, a magnitude-7.2 quake in the western port city of Kobe killed 6,400 people.

Earthquake measuring 6.7 reported near Indonesia

(AP) – 1 hour ago
http://www.google.com/hostednews/ap/articl...16BY1gD9BRJ7IO1

NEW YORK — A strong earthquake was reported in the ocean off Indonesia on Sunday, the U.S. Geological Survey said.

The quake measured a magnitude of 6.7, the survey reported. It hit at 3:41 a.m. local time (1941 GMT)

It struck at a depth of 11 miles (17.7 kilometers) and had its epicenter about 10 miles (15 kilometers) north-northwest of Sumbawa and 830 miles (1,335 kilometers) east of the Indonesian capital of Jakarta.

There were no immediate reports that tsunami warnings were issued and no immediate reports of damage.

An earthquake of magnitude 7.6 struck off West Sumatra in Indonesia on Sept. 30 and killed hundreds of people and caused massive property damage.

Major earthquake shakes Fiji

November 9th, 2009 - 6:23 pm ICT by BNO News
http://www.thaindian.com/newsportal/envior..._100272214.html

SUVA, FIJI (BNO NEWS) — A major but deep earthquake shook the Fiji Islands on Monday evening, according to seismologists.

The epicenter of the tremor was located about 67 miles from Fiji's capital, Suva. No strong damage is expected as the earthquake struck about 357 miles deep, making it an extremely deep earthquake. Shallow earthquakes often tend to cause more serious damage, and increase the risk of a destructive tsunami.

The Pacific Tsunami Warning Center reported the earthquake as a 7.1 magnitude.

No tsunami warnings were issued following the earthquake, which struck at 10.45 p.m. local time. "A destructive tsunami was not generated based on depth of earthquake," a bulletin from the Pacific Tsunami Warning Center read.

Strong earthquake strikes off coast of B.C.: reports

Posted: November 17, 2009, 3:47 PM by Chris Boutet
http://network.nationalpost.com/np/blogs/p...-c-reports.aspx

PRINCE RUPERT, B.C. — A strong earthquake occurred early Tuesday in the Queen Charlotte Islands region off of B.C.'s central west coast, according to Earthquakes Canada.

The 6.6 magnitude earthquake struck at 7:30 a.m. local time at a depth of 10 kilometres and was followed seven minutes later by an aftershock at the same depth with a 5.7 magnitude, the U.S. Geological Survey said.

No injuries have been reported and a bulletin from the Pacific Tsunami Warning Center said “no destructive widespread tsunami threat exists”.

An earthquake in this range is classified by as “strong” and “may cause a lot of damage in very populated areas,” said Earthquakes Canada.

The area where the earthquake struck is located about 260 kilometres southwest of Prince Rupert, B.C.

According to the Geological Survey of Canada, the Pacific coast is the most earthquake-prone area in the country.

Rod Link, publisher of the Terrace Standard newspaper, told Agence France-Presse that window blinds and picture frames in his office, about 400 kilometres inland from the epicenter, shook for about 30 seconds.

“Shortly after 7:30 am local time, my window blinds started moving back and forth,” he said. “I have a bit of a fever and at first I thought I was just dizzy from the flu... but then I realized the blinds were really moving.

“You get a funny feeling in the pit of your stomach when things are moving around you.”

The last massive earthquake to hit the Queen Charlotte Islands off the coast of B.C. was in August of 1949, at a magnitude of 8.1. The shaking was so intense that cows tipped over in fields. In Terrace, B.C., cars bounced around and windows shattered.

A USGS spokesman had told Twitter's BNO News that no significant damage is expected.

Earthquake hits Spain, and Portugal

December 17, 2009 by Maria Sullivan

http://www.spanishnews.es/20091217-earthqu...rtugal/id=1797/

An earthquake hit Spain and Portugal Thursday night at around 2:3am, with a strength of 6.3 on the Richter scale. The earthquake originated about 100 kilometers southwest of Cape St. Vincent in the atlantic Ocean, at a depth of 58 kilometers, according to Spain's seismological institute and National Geographic Institute.

The earthquake was felt in Sevilla, Cadiz, Malaga, Cordoba, Huelva as well as other cities across Andalucia and Portugal. According to the Spanish media there have been no casualties or damages. The emergency lines in Spain received over 450 calls until 6am Thursday morning, out of them 282 from Sevilla and 176 from Huelva.

The US Geological Survey recorded the quake at 5.7 magnitude on its different moment magnitude scale. It said the quake struck at a shallow depth of 10 kilometers.

Various reports also confirm that the earthquake was felt in parts of Morocco.

Taiwan Hit by 6.4 Magnitude Earthquake, Aftershocks

By Tim Culpan
http://www.bloomberg.com/apps/news?pid=206...id=aaQFWKiQxi6g

Dec. 19 (Bloomberg) -- A magnitude 6.4 earthquake struck Taiwan today at 9:02 p.m. local time, with its epicenter about 145 kilometers (90 miles) south of Taipei, the U.S. Geological Survey said on its Web site.

Buildings shook in Taipei and at least five aftershocks measuring more than 4.2 struck within about one hour after the initial tremor, Taiwan's Central Weather Bureau reported on its Web site. The Taiwan authority registered the primary earthquake at magnitude 6.8.

Taiwan's high-speed rail line and Taipei City's subway system were halted while phone companies reported temporary interruptions, Radio Taiwan International reported on its Web site without saying where it obtained the information.

Taiwan is regularly hit by earthquakes, usually causing little or no damage. On Sept. 21, 1999, a 7.4-magnitude earthquake struck in the center of the island, toppling buildings, killing more than 2,000 people and causing an estimated $9 billion in damage.

Earthquake jolts Indonesia on tsunami anniversary; none hurt

Dec 26, 2009 14:43
By ASSOCIATED PRESS
http://www.jpost.com/servlet/Satellite?cid...icle%2FShowFull

A strong earthquake struck deep under the sea in eastern Indonesia on Saturday, but there were no immediate reports of damage or injuries, officials said.

The earthquake of a preliminary magnitude of 6.0 struck on the fifth anniversary of another quake that spawned the Asian tsunami that left 230,000 people dead in a dozen countries around the Indian Ocean rim. The December 26, 2004 tsunami was sparked by a 9.2-magnitude underwater quake off the Indonesian island of Sumatra.

Saturday's quake was at a depth of 57 kilometers, too far below the earth's surface to cause a tsunami, said Indonesian Meteorology and Geophysics Agency seismologist Paulus Prihandoyo.

The quake had its epicenter about 270 kilometers north of Saumlaki and about 2,700 kilometers east of the capital Jakarta, the US Geological Survey said.

Powerful quake strikes near Solomon Islands

Jan 3 10:49 PM US/Eastern
http://www.breitbart.com/article.php?id=CN...&show_article=1

A powerful 7.2 magnitude earthquake struck near the Solomon Islands in the western Pacific on Monday, triggering panic but causing no major tsunami, disaster officials said.

The US Geological Survey said the quake struck about 103 kilometres from the earthquake-prone island town of Gizo at about 9:36 am (2236 GMT Sunday) and was measured at a depth of about 30 kilometres (19 miles).

It was the largest of a swarm of tremors centred on the area, ignited by a 6.5 magnitude quake at 8:48 am and followed several hours later by quakes of magnitude 5.3 and 5.2.

On the tiny island of Rendova, near Gizo, several houses collapsed but there were no other reports of damage, Julian Makaa of the National Disaster Management Office told AFP.

"The earthquake caused a small wave, and a few people suffered minor injuries as they

ran away from the shore in panic," he said.

An 8.0-magnitude earthquake in the same area nearly three years ago killed more than 50 people, destroyed hundreds of homes and displaced thousands.

The Hawaii-based tsunami warning centre said the latest earthquake was powerful enough to have been destructive along coasts near the epicentre but there was no wider threat.

"No tsunami threat exists for other coastal areas in the Pacific although some other areas may experience small, non-destructive, sea-level changes lasting up to several hours," the centre said in a bulletin.

Gizo, on Ghizo island, is the second largest town in the Solomon Islands archipelago with a population of around 6,000.

It is about 360 kilometres northwest of the capital Honiara, on the island of Guadalcanal, where residents said they felt shakes but there was no damage. Honiara is 300 kilometres from where the nest of earthquakes was centred.

Geoscience Australia seismologist Clive Collins said the main quake, which was estimated at 7.0 magnitude by Australian seismologists, was probably about 80 kilometres from the nearest land.

Further south, in earthquake prone New Zealand, tremors of 4.3 and 3.5 were recorded over the past 24 hours.

Like much of the Pacific, the Solomons regularly experiences large earthquakes.

In April 2007, a 8.0-magnitude earthquake in the western Solomons centred near Gizo, triggered a tsunami that killed 52 people and displaced thousands.

Gizo harbour lost most of it wharves and jetties in the quake and subsequent tsunami which was officially put at five metres high but with some reports of a 10-metre-high wall of water.

On September 29 last year, a devastating tsunami swept along coasts in the Pacific islands of Samoa and Tonga, killing 186 people and wiping out entire villages.

Villages and resorts in Samoa, American Samoa and northern Tonga were flattened by the giant waves generated by the massive earthquake, the strongest in a nearly a century.

Quake in Atlantic near S.Sandwich Islands: USGS

Jan 5 01:17 AM US/Eastern
http://www.breitbart.com/article.php?id=CN...&show_article=1

A major 6.7-magnitude earthquake struck the southern Atlantic ocean early Tuesday east of South Georgia and the South Sandwich Islands, a sparsely populated British territory, a US monitor said.
The quake struck at 3:55 am (04:55 GMT) in waters 685 kilometers (425 miles) east of Bristol Island, part of an chain inhabited mainly by scientists on a series of bases, the US Geological Survey reported.

The earthquake, about 2,800 kilometers (1,740 miles) east of the Falkland Islands, occurred at a depth of 10 kilometers (six miles) according to USGS.

The Pacific Tsunami Warning Center issued an alert stating there was no threat of a destructive widespread tsunami, but warned "there is the small possibility of a local or regional tsunami that could affect coasts" near the epicenter.

A series of six earthquakes rocked the Solomon Islands on Tuesday, a day after landslides and a tsunami left 1,000 people homeless, the U.S. Geological Survey reports.

A 6.8-magnitude quake hit near the islands Tuesday, followed minutes later by five other quakes.

On Monday, a 7.2-magnitude temblor triggered landslides and a tsunami wave that was up to 10 feet high as it plowed into the coast, island officials said.

Some 200 houses were destroyed on Rendova, an island some 190 miles from the capital Honiara. Roughly 3,600 people live on Rendova.

Photographs taken from police helicopters Tuesday showed debris lining the foreshore and damaged houses on the coasts of Rendova and Tetepare, as well as deep scars on hills and cliffs caused by landslides.

Hillsides crashed down and the tsunami inundated homes on Monday, but residents'

memories of earlier disasters probably helped prevent any casualties, officials and residents said.

Haiti devastated by massive earthquake

Page last updated at 12:58 GMT, Wednesday, 13 January 2010
http://news.bbc.co.uk/2/hi/americas/8455629.stm

A massive 7.0-magnitude earthquake has struck the Caribbean nation of Haiti.

The extent of the devastation is still unclear but there are fears thousands of people may have died.

Haiti's worst quake in two centuries hit south of the capital Port-au-Prince on Tuesday, wrecking the presidential palace, UN HQ and other buildings.

A "large number" of UN personnel were reported missing by the organisation. Many people have spent the night outside amid fears of more aftershocks.

The Red Cross says up to three million people have been affected.

Describing the earthquake as a "catastrophe", Haiti's envoy to the US said the cost of the damage could run into billions.

A number of nations, including the US, UK and Venezuela, are gearing up to send aid.

The quake, which struck about 15km (10 miles) south-west of Port-au-Prince, was quickly followed by two strong aftershocks of 5.9 and 5.5 magnitude.

The tremor hit at 1653 (2153 GMT) on Tuesday, the US Geological Survey said. Phone lines to the country failed shortly afterwards.

There is still no official word on casualties and the extent of the devastation is only now becoming clearer with dawn breaking.

China has already indicated in reports in state media that eight of its peacekeepers are buried and feared dead, with another 10 unaccounted for.

The AFP news agency quoted the Jordanian army as saying three of its peacekeepers had been killed and 21 wounded.

The Brazilian army said four of its peacekeepers were killed and a large number were missing.

A French official told AFP about 200 people were missing in the collapsed Hotel Montana, which is popular with tourists.

There have also been some reports of looting overnight.

Rachmani Domersant, an operations manager with the Food for the Poor charity, told Reuters that overnight the capital was in total darkness.

"You have thousands of people sitting in the streets with nowhere to go. There are people running, crying, screaming.

"People are trying to dig victims out with flashlights. I think hundreds of casualties would be a serious understatement."

Earlier, bodies white with dust could be seen piled on the back of a pick-up truck as vehicles tried to ferry the injured to hospital.

Haiti is the poorest country in the western hemisphere and has suffered a number of

recent disasters, including four hurricanes and storms in 2008 that killed hundreds.

'Thoughts and prayers'

In a statement issued in New York, the UN said that its local HQ in Haiti had "sustained serious damage along with other UN installations" and "a large number" of personnel were missing.

UN peacekeeping chief Alain Le Roy said it was unclear how many people were in the building.

The head of the UN mission in Haiti, Hedi Annabi, was reported to have been inside and is unaccounted for.

French Foreign Minister Bernard Kouchner said he was believed to be dead.

The UN's stabilisation mission plays a vital role in ensuring security in Haiti.

Raymond Joseph, Haiti's ambassador to the US, said the presidential palace, the tax office, the ministry of commerce and the foreign ministry had all been damaged, but the airport was intact.

He and Haiti's ambassador to Mexico, Robert Manuel, both said that President Rene Preval and his wife had survived the quake.

The World Bank said its local offices were destroyed but most of the staff were accounted for, Reuters reported.

US President Barack Obama said his "thoughts and prayers" were with the people of Haiti and that he expected "an aggressive, coordinated [aid] effort by the US government".

Venezuela says it will send a 50-strong "humanitarian assistance team".

The Red Cross is dispatching a relief team from Geneva and the UN's World Food Programme is flying in two planes with emergency food aid.

The Inter-American Development Bank said it was immediately approving a $200,000 grant for emergency aid.

The UK said it was mobilising help and was "ready to provide whatever humanitarian assistance may be required".

Canada, Australia, France and a number of Latin American nations have also said they are mobilising their aid response.

Pope Benedict XVI has called for a generous response to the "tragic situation" in Haiti.

'Shouting and screaming'

In the minutes after the quake, Henry Bahn, a visiting official from the US Department of Agriculture, said he had seen houses which had tumbled into a ravine.

"Everybody is just totally, totally freaked out and shaken," said Mr Bahn, who described the sky as "just grey with dust".

He said he had been walking to his hotel room when the ground began to shake.

"I just held on and bounced across the wall," he said. "I just heard a tremendous amount of noise and shouting and screaming in the distance."

Reports on the Twitter message site, which cannot yet be verified by the BBC, expressed the chaos in the wake of the quake.

Tweets from troylivesay spoke of the worst damage being in the Carrefour district, where "many two and three storey buildings did not make it".

In the immediate aftermath of the quake, a tsunami watch was put out for Haiti, Cuba and the Bahamas, but this was later lifted.

Have you been affected by the earthquake? If you have any information you wish to share with the BBC you can do so using the form below:

Haiti awaits rescuers as quake toll may top 100,000

by Clarens Renois Clarens Renois – 37 mins ago
http://news.yahoo.com/s/afp/20100114/ts_af...Wl0aWF3YWl0c3I-

PORT-AU-PRINCE (AFP) – Desperate Haitians awaited a global effort Thursday to find and treat survivors from an earthquake that left streets strewn with corpses and a death toll that may top 100,000.

Hundreds of thousands of homeless, injured and traumatized quake victims spent a second night on the streets and sidewalks, transforming the capital Port-au-Prince into a gigantic and under-equipped refugee camp, as Haitian officials and others grieved for their ruined city.

Schools, hospitals, hotels, ministries and the presidential palace lay in ruins and people caked in blood and dust pleaded for help as they or their loved ones lay trapped beneath mountains of concrete in a mostly destroyed Port-au-Prince, an AFP correspondent said.

Reflecting the mood of hopelessness pervading the city of two million which is thoroughly unprepared to cope with a tragedy of this magnitude, a preacher warned in Creole about the end of the world.

Jeanwell Antoine held a trapped baby's arm and sought to comfort it as he clawed through the rubble.

"It is not me who is pushing back this earth. It is the hand of God, who loves life and is guiding me so I can save this baby," he said.

With every hour crucial for those trapped, a global aid operation swung into action, with rescue teams bringing heavy lifting gear, sniffer dogs and desperately-needed medicines, food and water. Related article: World scrambles rescue teams to quake-hit Haiti.

"The priority is to find survivors," Elisabeth Byrs, a spokeswoman for the UN's Office for the Coordination of Humanitarian Affairs, said as the UN mobilized search and rescue teams.

"We are working against the clock," she said.

Casualty figures were impossible to calculate, but Prime Minister Jean-Max Bellerive told CNN the final death toll from the 7.0 quake could be "well over 100,000." President Rene Preval told the network 50,000 could be dead.

US Secretary of State Hillary Clinton, who canceled an Asia trip and returned to Washington early Thursday, compared the tragedy to the Asian tsunami which killed more than 220,000 people five years ago. Related article: Quake shatters Haiti's fragile recovery.

"The Indian Ocean tsunami was such a terrible tragedy and with such high loss of life. This will be a very high loss of life as well," she said.

Preval, unsure of where he would sleep after his home and the presidential palace were destroyed, painted a scene of utter devastation.

"Parliament has collapsed. The tax office has collapsed. Schools have collapsed. Hospitals have collapsed," he told the Miami Herald.

In Tokyo, Haiti's charge d'affaires Jean-Claude Bordes mourned for a city he learned had been "totally destroyed" by the epic quake.

"The conversations I had (by phone) were not too long. I just heard screams. Our country is destroyed, we have nothing left. It's God will, we have to accept it," he told reporters.

With thousands of people missing, dazed survivors in torn clothes wandered through the rubble as aftershocks continued to rock Port-au-Prince.

Injured survivors were carried on makeshift stretchers past piles of smashed concrete, from which crushed bodies protruded.

The earthquake was the latest tragedy to hammer Haiti, which has been scarred by years of unrest, crime, political tumult and natural disaster.

Former US president Bill Clinton, a United Nations special envoy to Haiti, warned Thursday of an unprecedented humanitarian disaster.

"Early estimates indicate that nearly three million people -- almost a third of Haiti's population -- may need aid, making this one of the great humanitarian emergencies in the history of the Americas," Clinton said in the Washington Post.

"These people deserve a chance to bury their dead, to heal their wounded, to eat, to sleep, to begin to recover, and they can't do it with just government help alone," Clinton said, appealing on CNN for cash to buy aid.

UN officials said at least 16 of its staffers were dead, 56 were injured and a further 150 were missing. The head of the mission, Hedi Annabi, was thought to be among the dead.

US President Barack Obama vowed a swift and aggressive effort to save lives and spoke with an array of regional leaders to coordinate the aid operation.

"This tragedy seems especially cruel and incomprehensible," he said.

Officials said the first US search and rescue teams had arrived and were deploying into Port-au-Prince.

The aircraft carrier USS Carl Vinson was due to arrive later Thursday.

Plane-loads of rescue teams and relief supplies were quickly dispatched from nations including Britain, Canada, France, Germany, the Netherlands, Russia and Spain.

Japan on Thursday became the latest country to assist Haiti, pledging five million dollars in emergency aid and coordinating with UN agencies to help distribute the aid.

The Red Cross launched a 10-million-dollar appeal for donations, the World Food

Programme offered 15,000 tonnes of food and the World Bank said it would provide an extra 100 million dollars in aid. Related article: Celebrities appeal for quake relief.

Doctors Without Borders has set up tent clinics in the city to treat the thousands of wounded.

"There are hundreds of thousands of people who are sleeping in the streets because they are homeless," MSF coordinator Hans van Dillen said.

"We see open fractures, head injuries. The problem is that we can not forward people to proper surgery at this stage."

The quake turned thousands of buildings into rubble. Among them was the UN mission headquarters and a major hotel where 200 tourists were missing.

Brazil said 11 of its peacekeepers were killed. Jordan reported that three of its peacekeepers died, while eight Chinese soldiers were buried in rubble and 10 were missing, state media said.

Haiti earthquake: death toll may hit 200,000

Anger has turned to violence on the streets of Haiti as survivors lose patience with the painfully slow process of getting international aid after the earthquake that authorities say may have killed 200,000 people.

By Gordon Rayner, Chief Reporter
Published: 10:19AM GMT 16 Jan 2010
http://www.telegraph.co.uk/news/worldnews/...hit-200000.html

Haiti's shell-shocked government gave the United States control over its main airport to bring order to aid flights from around the world and speed relief to the impoverished Caribbean nation.

Trucks piled with corpses have been carrying bodies to hurriedly excavated mass graves outside the city but thousands of bodies still are believed buried under rubble.

"We have already collected around 50,000 dead bodies," Paul Antoine Bien-Aime, Haiti's interior minister told Reuters. "We anticipate there will be between 100,000 and 200,000 dead in total, although we will never know the exact number."

Around 40,000 bodies have been buried in mass graves.

Although doctors, rescue teams and supplies had been flying into the Haitian capital, Port au Prince, a series of bottlenecks meant aid was not getting to those who needed it most.

The sound of gunfire echoed around Port au Prince as looters fought over scarce food supplies, hijacked vehicles and raided a UN warehouse where 15,000 tons of food had been stockpiled.

Even the most stoic Haitians began to express frustration at the continued lack of help on the fourth day of their ordeal, and in one part of the capital corpses were piled up to build roadblocks in protest at the delays.

David Wimhurst, spokesman for the Brazilian-run UN peacekeeping mission in Haiti, said: "They want us to provide them with help, which is, of course, what we want to do. But they're slowly getting more angry and impatient."

Brazil's defence minister Nelson Jobim, who spent two days in Port au Prince, said: "As long as the people are hungry and thirsty, as long as we haven't fixed the problem of shelter, we run the risk of riots."

The problem has been worsened by the complete destruction of Port-au-Prince's main prison, where almost all of the 4,000 inmates survived the earthquake and are now roaming the streets.

Rescuers have been told to stop work when it gets dark because of fears they will be attacked.

"Our biggest problem is security," said Delfin Antonio Rodriguez, rescue commander for the Dominican Republic. "Yesterday they tried to hijack some of our trucks. Today we were barely able to work in some places because of that. There's looting and people with guns out there, because this country is very poor and people are desperate."

Shaul Schwarz, a photographer for TIME magazine, said he saw at least two roadblocks formed with bodies of earthquake victims and rocks.

"They are starting to block the roads with bodies," he said. "It's getting ugly out there. People are fed up with getting no help."

Pierre Jackson, who is desperate for medical help for his mother and sister who both have crushed legs, said: "We've been out here waiting for three days and three nights but nothing has been done for us. What should we do?"

The main pinch point is at the small airport in Port au Prince, which lost its control tower in the tremor. It became so clogged with aid aircraft that many of them had to wait hours to be unloaded and it had to be closed to new arrivals for eight hours. A shortage of jet

fuel also meant some could not take off again.

"There's only so much concrete," said US Air Force Col Buck Elton. "It's a constant puzzle of trying to move aircraft in and out."

Once supplies had been unloaded, blocked roads meant progress in getting them to where they were needed was desperately slow. "People have been almost fighting over water," said aid worker Fevil Dubien as he distributed water from a lorry in a suburb of Port-au-Prince.

The situation improved with the arrival of the American aircraft carrier USS Carl Vinson, with 19 helicopters on board, which will be used to transport supplies by air. The US is also sending more than 10,000 soldiers and marines to keep the peace.

Charities have managed to set up several field hospitals, and 17 search and rescue teams were picking through the rubble of collapsed buildings with sniffer dogs, pausing every so often to wait for aftershocks to pass.

Most Haitians, however, are still having to use their bare hands to search for survivors.

"We hear on the radio that rescue teams are coming from the outside but nothing is coming," said Jean-Baptiste Lafontin Wilfried, as he helped dig through the remains of an office building. "We only have our fingers to look for survivors."

The World Food Programme (WFP) said it was drawing up plans to feed two million people for a month.

Emila Casella, of the WFP, said: "The physical destruction is so great that physically getting from point A to B with the supplies is not an easy task. Pictures can get out instantly ... and that's important because the world needs to know. But getting physically tons and tons of equipment and food and water is not as instant as Twitter or Skype or 24-hour television news."

The charity Medecins Sans Frontieres said "thousands" of people in Haiti were waiting for surgical treatment. The UN was looking at the possibility of using the national soccer stadium in Port au Prince as a base for a giant field hospital.

Meanwhile, with bloated corpses posing an increasing risk to public health, mass graves were being dug to get the bodies off the streets.

Aid workers from as far afield as China, France, Iceland and Venezuela are among those already deployed on the ground in Haiti.

Some of the wounded, including Spain's ambassador to Haiti and some staff from the US embassy, were taken to the nearby US naval base at Guantánamo Bay, Cuba – site

of the controversial prison camp for terrorism suspects – for medical treatment.

Liony Batista, project manager of the charity Food for the Poor, said: "I don't think that a word has been invented for what is happening in Haiti. It is a total disaster."

TheUnhivedMind - July 20, 2011 02:05 AM (GMT)

Indian company produces flat-pack, $700 houses

Sunday, July 17th, 2011
http://www.rawstory.com/rs/2011/07/17/indi...ack-700-houses/

The Indian company that launched the world's cheapest car has unveiled its latest product for the fast-growing nation: a flat-pack house that costs just $700 and can be built in a week.

The Tata group, maker of the $2,500 Nano car, said that the 20-square-metre (215-square-foot) home comes from a pre-fabricated kit that includes doors, windows and a roof.

"We have already prepared two-three different designs based on discussions with users and are gathering more feedback," Sumitesh Das, the head of the project at Tata, told reporters in Hyderabad.

"Hopefully, in the next six-eight months we should be able to roll it out in the market nationally."
The basic model of a so-called "Nano" house will cost 32,000 rupees ($720) and will use coconut fibre or jute for wall cladding and interiors. It has a life expectancy of 20 years.

The house, which is being tested in the state of West Bengal, will also be available in a larger 30-square-metre version and with additional features such as a solar panel for the roof and a verandah.

Tata hopes to sell the house to private buyers who have a plot of land available and also to state governments planning mass residential schemes for India's millions of

destitute and homeless.

Das said Tata was using advice from panchayats (village councils) to fine-tune the design.
The Nano car drew worldwide attention when it was launched in 2009, but sales figures have not met expectations due to production delays and safety issues.

World's oldest ritual discovered

Posted by TANN
http://archaeologynewsnetwork.blogspot.com...discovered.html

A startling archaeological discovery that may have gone un-noticed changes our understanding of human history. While, up until now, scholars have largely held that man's first rituals were carried out over 40,000 years ago in Europe, it now appears that they were wrong about both the time and place.

Python stone, the site of ancient serpent worship in north-western Botswana [Credit: Sheila Coulson]

Associate Professor Sheila Coulson, from the University of Oslo, has shown that modern humans, Homo sapiens, have performed advanced rituals in Africa for 70,000 years. She has, in other words, discovered mankind's oldest known ritual.

The archaeologist made the surprising discovery several years ago while she was studying the origin of the San people. A group of the San live in the sparsely inhabited area of north-western Botswana known as Ngamiland.

Coulson made the discovery while searching for artifacts from the Middle Stone Age in the only hills present for hundreds of kilometers in any direction. This group of small peaks within the Kalahari Desert is known as the Tsodilo Hills and is famous for having the largest concentration of rock paintings in the world.

The Tsodilo Hills are still a sacred place for the San, who call them the Mountains of the Gods and the Rock that Whispers. The python is one of the San's most important animals. According to their creation myth, mankind descended from the python and the ancient, arid streambeds around the hills are said to have been created by the python

as it circled the hills in its ceaseless search for water.

Sheila Coulson's find shows that people from the area had a specific ritual location associated with the python. The ritual was held in a little cave on the northern side of the Tsodilo Hills. The cave itself is so secluded and access to it is so difficult that it was not even discovered by archaeologists until the 1990s.

When Coulson entered the cave in the summer of 2007 with her three master's students, it struck them that the mysterious rock resembled the head of a huge python. On the six-meter long by two-meter tall rock, they found three-to-four hundred indentations that could only have been man-made.

"You could see the mouth and eyes of the snake. It looked like a real python. The play of sunlight over the indentations gave them the appearance of snake skin. At night, the firelight gave one the feeling that the snake was actually moving".

They found no evidence that work had recently been done on the rock. In fact, much of the rock's surface was extensively eroded. When they saw the many indentations in the rock, the archaeologists wondered about more than when the work had been done. They also began thinking about what the cave had been used for and how long people had been going there. With these questions in mind, they decided to dig a test pit directly in front of the python stone.

At the bottom of the pit, they found many stones that had been used to make the indentations. Together with these tools, some of which were more than 70,000 years old, they found a piece of the wall that had fallen off during the work.

In the course of their excavation, they found more than 13,000 artifacts. All of the objects were spearheads and articles that could be connected with ritual use, as well as tools used in carving the stone. They found nothing else.

As if that were not enough, the stones that the spearheads were made from are not from the Tsodilo region but must have been brought from hundreds of kilometers away.

The spearheads are better crafted and more colorful than other spearheads from the same time and area. Surprisingly enough, it was only the red spearheads that had been burned.

"Stone age people took these colorful spearheads, brought them to the cave, and finished carving them there. Only the red spearheads were burned. It was a ritual destruction of artifacts. There was no sign of normal habitation. No ordinary tools were found at the site. Our find means that humans were more organized and had the capacity for abstract thinking at a much earlier point in history than we have previously assumed. All of the indications suggest that Tsodilo has been known to mankind for almost 100,000 years as a very special place in the pre-historic landscape." says Sheila

Coulson.

Sheila Coulson also noticed a secret chamber behind the python stone. Some areas of the entrance to this small chamber were worn smooth, indicating that many people had passed through it over the years.

"The shaman, who is still a very important person in San culture, could have kept himself hidden in that secret chamber. He would have had a good view of the inside of the cave while remaining hidden himself. When he spoke from his hiding place, it could have seemed as if the voice came from the snake itself. The shaman would have been able to control everything. It was perfect."

The shaman could also have disappeared from the chamber by crawling out onto the hillside through a small shaft. While large cave and wall paintings are numerous throughout the Tsodilo Hills, there are only two small paintings in this cave: an elephant and a giraffe. These images were rendered, surprisingly, exactly where water runs down the wall.

Sheila Coulson thinks that an explanation for this might come from San mythology.

In one San story, the python falls into a body of water and cannot get out by itself. The python is pulled from the water by a giraffe. The elephant, with its long trunk, is often used as a metaphor for the python.

"In the cave, we find only the San people's three most important animals: the python, the elephant, and the giraffe. That is unusual. This would appear to be a very special place. They did not burn the spearheads by chance. They brought them from hundreds of kilometers away and intentionally burned them. So many pieces of the puzzle fit together here. It has to represent a ritual." concludes Sheila Coulson.

It was a major archaeological find years ago that made it possible for Sheila Coulson to date the finds in this little cave in Botswana. Up until the turn of the century, archaeologists believed that human civilization developed in Europe after our ancestors migrated from Africa. This theory was crushed by Archaeologist Christopher Henshilwood when he published his find of traces from a Middle Stone Age dwelling in the Blombos Cave in Southern Cape, South Africa.

Russia averts 'major' terror act near Moscow: security chief

Jul 18, 2011
http://www.straitstimes.com/BreakingNews/W...ory_691956.html

MOSCOW - MILITANTS from the volatile North Caucasus had planned to stage a 'major' terror act just outside Moscow, the head of Russia's state security agency services told President Dmitry Medvedev on Monday.

'One of major terror acts was averted in the Moscow region several days ago,' FSB chief Alexander Bortnikov told the Kremlin chief.

He said in televised remarks the agency had detained four people from the restive Northern Caucasus, adding the militants had planned to target public places and 'transport infrastructure' in the Moscow region.

The FSB also confiscated several explosive devices carrying 10kg of TNT equivalent, arms and maps, Mr Bortnikov told Medvedev.

Russia is battling a Muslim insurgency in the North Caucasus where attacks on officials are a daily occurrence and after a lull of several years, suicide attacks returned to Moscow.

A suicide bomber from the North Caucasus killed 37 people at Russia's busiest airport Domodedovo in January. Two female suicide bombers from that region killed 40 and wounded dozens on the underground during morning rush hour last year. -- AFP

Russia grounds about 200 planes, cutting off distant regions

2 models of aircraft are backbone of the industry in connecting far-flung cities

7/15/2011 8:42:19 PM ET
http://www.msnbc.msn.com/id/43776310/ns/wo...cience_monitor/

Moscow — Russia's airline industry has been thrown into confusion by a presidential decision to permanently ground two Soviet-era workhorses, the Tupolev Tu-134 and the Antonov An-24, by year's end. The two planes are the backbone of the far-flung country's regional aviation.

Aviation experts say the ban, imposed in response to a recent spate of fatal accidents with the planes, could leave hundreds of small communities effectively cut-off from the world. The planes handle the bulk of airline traffic in Siberia and Russia's far east.

"I see this as a populist decision, made by the authorities in an effort to show the public they're concerned about flight safety," says Oleg Panteleyev, an expert with the online aviation journal Aviaport.ru. "But these planes are the basis of our regional aviation, and airlines cannot afford to replace them, or bring them up to new standards, on such short notice."

Deputy Prime Minister Sergei Ivanov announced the measure Wednesday, saying that the planes must either be grounded or re-equipped with expensive safety equipment, including mid-air and ground collision avoidance systems that cost almost as much as the planes are worth.

Last month a Tu-134 jetliner missed the runway at Petrozavodsk in western Russia and crashed, killing 47 of the 52 people aboard and reviving a long-running debate over the

large numbers of obsolete Soviet-era planes still flying in Russia. An investigation blamed pilot error for the accident.

This week a turboprop An-24 caught fire and ditched in Siberia's Angara River killing five people aboard and injuring over 20.

A separate accident last weekend, in which a Volga River cruise ship sank, killing about 130 people, prompted President Dmitry Medvedev to order a full investigation into Russia's aging transport systems, including a full ban on the two types of aircraft.

But Magomed Tolboyev, a legendary Russian test pilot and honorary president of MAKS, Russia's leading air show, insists there is nothing wrong with the planes and that the fault for recent accidents lies with poor maintenance, decaying infrastructure, and substandard pilot training.

"These aircraft were built in the USSR to be converted at a moment's notice to military purposes, and so they are much tougher than comparable Western-made craft," he says. "Many small airports around Russia can only be served by the An-24, and there are no obvious substitutes for it."

There are over 300 small airports around Siberia, the far east and Russian north, often in places where there are no roads or railways and the only connection to the outside world is by air, he adds.

The Tu-134, a twin-jet medium haul jetliner comparable to a DC-9, entered service in 1967 and about 90 of them still serve regular air routes around Russia.

"The Tu-134 was and remains one of the most reliable planes in the history of Russian civil aviation," says Yury Gnatyuk, press spokesman for UTAir Express, a small Russian airline that flies 28 of the machines. "If [we] withdraw this plane from use, there is nothing to replace it with. The fact is that around Russia there are very many airports that are not adapted for modern Russian or foreign-built planes."

The Ukrainian-built turboprop An-24 has been in operation since 1960 and over 800 of them are still flying around the world, including more than 100 in Russia. According to Russian aviation experts, the An-24 is the mainstay of dozens of small operators that serve remote Russian communities that big airlines won't bother with.
Story: 5 killed in emergency landing on Siberian river

The cost of outfitting a Tu-134 with the modern Automatic Air Collision Avoidance System and Terrain Awareness and Warning Systems demanded by this week's presidential decree would be about $200,000, or approximately the current market value of one of the planes, according to Russia's Transport Ministry. Refitting an An-24 would cost around $300,000, more than half the aircraft's market price of about $500,000.

"It's just not reasonable to re-equip these planes, but if not they will be banned by Jan. 1," says Vladimir Tyurin, chairman of the Russian Aircraft Owners and Pilot's Association, a public organization.

"I'm afraid passengers are going to suffer," from lost services and much higher ticket prices, he says.

Mr. Tyurin argues that there are plenty of old aircraft flying around the world that continue to be perfectly reliable as long as they are well-maintained and operated correctly. He says the government should strengthen regulations and build better infrastructure rather than ban whole classes of aircraft from the skies.

"This is a shoot-from-the-hip solution that will kill regional aviation in this country. Maybe the answer is that everyone should just move to Moscow?" he says.

64 missile warheads stolen from Romanian train

Jul 18, 2011
http://www.straitstimes.com/BreakingNews/W...ory_691943.html

BUCHAREST - AUTHORITIES say they are investigating the theft of 64 missile warheads from a train transporting military equipment to Bulgaria.

Interior ministry spokesman Marius Militaru said on Sunday the components are not dangerous on their own - only when integrated into missile systems.

Prosecutors said on Monday they are investigating the theft.

Railway workers on Saturday noticed the seals on a carriage door were broken, and it was not properly closed when the train reached Giurgiu, a Danube port that borders Bulgaria.

Tohan Zarnesti, the Romanian company that was shipping the warheads, produces artillery ammunition, ground to ground missiles and air to ground missiles and warheads for 122mm missiles. -- AP

TheUnhivedMind - July 18, 2011 03:10 AM (GMT)

Solar plant keeps working, even after sundown

Published Monday, 4th July 2011
http://www.greenbang.com/solar-plant-keeps...down_19005.html

A concentrated solar power plant in Spain has just supplied its first uninterrupted day of electricity to the network, providing energy to the grid even after sundown thanks to molten-salt storage.

Located in Fuentes de Andalucía (Seville), the Gemasolar plant is property of Torresol Energy, a joint venture between Masdar — Abu Dhabi's clean-energy initiative — and SENER, a Spanish engineering and construction company.

The plant, barely one month into commercial operation, can store solar energy in molten salt using a thermal-transfer technology developed by SENER. The system enables the facility to deliver 15 hours of electricity production without solar radiation, helping to overcome fluctuations in the energy supply.

"Gemasolar achieved optimal performance in its systems in the last week of June," said Diego Ramírez, director of production at Torresol Energy. "The high performance of the installations coincided with several days of excellent solar radiation, which made it possible for the hot-salt storage tank to reach full capacity. We're hoping that in the next few days our supply to the network will reach an average of 20 hours a day."

The salt storage system allows the plant to stretch its electrical production hours to beyond sunset, regardless of the cloud cover. With a 19.9-megawatt steam turbine, Gemasolar is able to supply electricity to some 25,000 households.

Eventually, the plant is expected to be able to supply 24 hours of uninterrupted production per day on most summer days, providing a higher annual capacity factor

than most baseload plants such as nuclear power plants.

“The prove-out of both this technology and the commercial approach we have taken to funding and operating the facility are of huge significance to the solar industry,” said Frank Wouters, director of Masdar Power.

SENER has applied its solar technology with thermal-storage capacity in plants throughout Spain, some of which are already in commercial operation. This system significantly improves performance compared to plants with no storage capacity. In addition, it makes it possible to manage the supply of electricity sent to the network and respond to spikes in demand. In this way, the reliability of solar energy becomes comparable to that of conventional fossil-fuel power plants, which is decisive as the demand for renewable energy increases.

Gemasolar is the first plant to apply the thermal-storage system in a configuration with a central tower and an array of heliostats. The main difference between it and plants with parabolic-trough technology is its ability to reach a much higher operating temperature (over 500 degrees C) by dispensing with oil and directly using salts as a transfer fluid. The molten salts make it possible to generate hotter steam at higher pressures, which significantly boosts the plant’s efficiency.

Plane's nose wheel fails on landing

17 July 2011
http://uk.news.yahoo.com/planes-nose-wheel...-150106089.html

Passengers on a flight between Britain and Ireland escaped injury after the plane's nose wheel failed on landing.

Aer Arann, which was operating the Manchester to Shannon service for Aer Lingus, said the aircraft veered off the runway onto the grass.

There were 21 passengers and four crew members on board.

"All passengers and crew safely disembarked the aircraft and no injuries have been reported," a spokesman for the airline said.

The plane left Manchester Airport at 8.50am and was due to arrive at Shannon Airport at 10.15am.

Aer Arann said the aircraft was attempting to land on its second approach at around 10.30am when it experienced a suspected failure of the nose wheel landing gear. Emergency services were rushed to the scene.

"Aer Arann cannot speculate as to the cause of the incident and the Irish Aviation Authority (IAA) and Air Accident Investigation Unit (AAIU), branch of the Department of Transport have been informed," the spokesman added.

A spokesman for Shannon Airport confirmed all passengers and crew safely disembarked and were medically assessed in the airport terminal on arrival.

"There are no injuries reported," he said. "An air accident investigation unit will carry out

an examination of the scene this afternoon."

All flights in and out of Shannon have been suspended until 4pm. Passengers on scheduled arrivals and departures at the airport were asked to contact their airline.

Care homes hell: Seven in 10 neglected elderly residents given wrong drugs by staff 'too busy making breakfast'

Last updated at 4:16 PM on 17th July 2011
http://www.dailymail.co.uk/news/article-20...rugs-staff.html

A damning dossier on Britain's care homes has revealed elderly residents are the victims of neglect and mistreatment.

Some have been left crying out in pain because under-pressure staff were too busy to give them medication, according to the research.

In one case, a family only discovered their elderly mother had cancer when they asked what her tablets were for.

The failings were highlighted by the charities Age UK and The Health Foundation following a study which showed seven in 10 were given the wrong medication.

It revealed that:
A woman repeatedly given codeine despite medical records showing it made her very ill, had to be rushed to hospital on one occasion because her reaction to the drug was so serious.
A resident was given a high-risk drug instead of paracetamol by three different staff in the same week when her regular nurse was on holiday.
Many staff did not have English as a first language, increasing the risk of drug errors.

One of the 26 interviewees, who agreed to speak out on condition of anonymity, told how nurses were 'rushed of their feet' making breakfast instead of doing drug rounds.

One said: 'People were screaming out for their drugs, all sorts of painful stuff going on. The nurses who should be giving out the drugs were doing the breakfasts.'

The report, quoted in the Sunday Telegraph, said residents were given sleeping tablets during the day which left them unsteady on their feet and told how creams prescribed for one patient were shared, causing infection to spread.

A woman of 94 who enjoyed treating herself with eye drops for glaucoma and cream for arthritis, had them taken away and locked up by staff.

'She became withdrawn and depressed with the removal of her independence,' said the report.

Several relatives said they feared if they made complaints about the treatment at the care homes, there would be 'repercussions' from staff for their loved ones.

One said: 'If you start asking awkward questions, you are labelled troublemakers.'

Neil Duncan-Jordan of the National Pensioners Convention, told the paper: 'The accounts are gut-wrenching.

'When you have a system that has badly paid, poorly trained staff administering to the most vulnerable and dependent, those are the ingredients for a system to fail.'

Pemex Says 80 Oil Wells Shut Down Yesterday Due to Heavy Rain Re-Starting

By Bill Faries - Jul 16, 2011 5:57 PM GMT+0100
http://www.bloomberg.com/news/2011-07-16/p...e-starting.html

Petroleos Mexicanos, Latin America's largest oil producer, said 80 oil wells it shut down yesterday in the states of Veracruz and Tamaulipas are re-opening today, according to the company's press office.

The Mexico City-based state oil company closed the wells yesterday as a "preventative measure" amid heavy rains and the risk of flooding.

I was wondering about what happened that website as well. [Taken down by luciferian papal bastards could be a great possibility]

Fortunately, here's the list of books they had in there, however you just have to look for those books in another website that might have them [archive.org ETC] in the meantime.

New Solar Cells Can Now be Printed on Paper

Written by Brian Westenhaus
Friday, 15 July 2011 15:19
http://oilprice.com/Alternative-Energy/Sol...d-on-Paper.html

Message :
Investors: Free Oil Industry Investment Report - Our Fracking industry guide shows you the strategies that will enable you to generate excellent returns in what will be one of the most profitable sectors of the energy industry. Click here for your Free report.

It's not a joke, MIT's Miles C. Barr, Jill A. Rowehl, Richard R. Lunt, Jingjing Xu, Annie Wang, Christopher M. Boyce, Sung Gap Im, and Vladimir Bulovi? led by Karen K. Gleason are printing photovoltaic cells on regular paper. Moreover, the process as being reported in MIT News, its possible to print on ordinary untreated paper, cloth or plastic as the substrate for building a solar cell array.

The new technology paper is published in the journal Advanced Materials, published online July 8.

The MIT News article opens describing that the sheet of paper looks like any other document that might have just come spitting out of an office printer, with an array of colored rectangles printed over much of its surface. But then a researcher picks it up, clips a couple of wires to one end, and shines a light on the paper. Instantly an LCD clock display at the other end of the wires starts to display the time. Seems to work, and considering the skill sets and innovative atmosphere at MIT its not a great surprise so much as a quite pleasant one. Photovoltaic is still far too expensive for mass adoption, and in the current economy and government situations, PV is a technology that must self wean itself from incentives.

The device is tough, formed from special “inks” deposited on the paper. It can be folded up to slip into a pocket, then unfolded to watch it again generating electricity in the sunlight. It’s a more complex than just printing out a paper. In order to create an array of photovoltaic cells on the paper, five layers of material need to be deposited onto the same sheet of paper in successive passes, using a mask (also made of paper) to form the patterns of cells on the surface. And the process has to take place in a vacuum chamber.

Solar Cells Printed on Paper. Graduate student Miles Barr holds a sheet of paper that has had one of the layers of the solar cell printed on its surface. Image Credit: Patrick Gillooly.

But the basic process is essentially the same as the one used to make the silvery lining in your bag of potato chips: a vapor-deposition process that can be carried out inexpensively on a vast commercial scale. When one considers the total area of metalized bags like potato chips versus photovoltaic panels the idea of the scale becomes clearer.

The MIT production process technique represents a major departure from today’s systems creating most solar cells on heavy solid inflexible substrates encased in glass, that require exposing the substrates to potentially damaging conditions, either in the form of liquids or high temperatures to etch the silicon into the needed shapes.

The new printing process uses vapors, not liquids, and temperatures less than 120 degrees Celsius. While the PC printer metaphor is used, the MIT News article clarifies that masks are used and vapor deposition takes place over five steps. Its not really so much inkjet printing as five round trips through the potato chip bag process making it more complex but still quite simple, low energy and material intensive and astonishingly low cost.

Using thin film PET plastic in lieu of paper as the substrate in printing a solar cell, the now flexible resilient solar cells still functions even when folded up into a paper airplane. Such assaults of folding and unfolding it 1,000 times, yields no significant loss of performance.

The team is hard at getting past function to appreciable efficiencies. Presently the paper-printed solar cells have an efficiency of about 1 percent, but the team believes this can be increased significantly with further fine-tuning of the materials.

Karen Gleason, who is the Alexander and I. Michael Kasser Professor of Chemical Engineering at MIT points out, “Often people talk about deposition on a flexible device — but then they don’t flex it, to actually demonstrate” that it can survive the stress. Beyond folding the MIT team has tried other tests of the device’s robustness. For

example, Gleason explains, they took a finished paper solar cell and ran it through a laser printer, printing on top of the photovoltaic surface. That subjects the cell to the high temperature of the toner-fusing step, and demonstrated that it still worked. Test cells the group produced last year still work, demonstrating their long shelf life.

Free Investment Report: The Bakken region is currently the hottest oil play going in North America and our research has uncovered a junior oil company that could be it's next bit payout. Click here for the Free Report

These attributes put a whole new perspective on the photovoltaic cell. Professor of Electrical Engineering Vladimir Bulovi? brings the idea forward. Because of the low weight of the paper or plastic substrate compared to conventional glass or other materials, "We think we can fabricate scalable solar cells that can reach record-high watts-per-kilogram performance. For solar cells with such properties, a number of technological applications open up," he says. For example, in remote developing-world locations, weight makes a big difference in how many cells could be delivered in a given load.

That's a major change in perspective.

The MIT team has demonstrated that the paper could be coated with standard lamination materials, to protect it from the elements opening up outdoor use. Plastic laminations aren't going to last like glass, but say at 7% of the energy production at perhaps 1/1000th the cost of current glass photovoltaic cells, life expectancy isn't going to have such an important factor in calculations.

"Printing" cells is commercial now at a price advantage to silicon on glass. Research has been working to produce solar cells and other electronic components on paper, but the big stumbling block has been paper's rough, fibrous surface at a microscopic scale. To counter that, past attempts have relied on coating the paper first with some smooth material. The MIT team uses ordinary, uncoated paper, including printer paper, tissue, tracing paper and even newsprint with the printing still on it. All of these worked just fine. It's a robust technology.

The MIT work in the early stages will most likely go to applications of shorter life times.

Wall applications, portable devices, and disposable electronics come to mind. As more research covers the problems of environmental exposure, raising the efficiency, optimizing connections and the field of applications will expand. Perhaps someone will tie the ideas of gathering more of the spectrum together and very low cost photovoltaic solar will become a consumer reality.

It's getting so a skeptic can look forward to photovoltaic solar in the coming years.

View Full Version: Manhattanhenge: New York's 'magical' astronomical

Title: Manhattanhenge: New York's 'magical' astronomical
Description: *alignments*

TheUnhivedMind - July 16, 2011 12:55 AM (GMT)

Manhattanhenge: New York's 'magical' astronomical alignments

Wednesday, 13 July 2011 15:41 Acharya S Contributing Writers - Acharya S
http://freethoughtnation.com/contributing-...alignments.html

Here's a short article about a phenomenon that demonstrates astronomical alignment of buildings even in a modern city. Popular astrophysicist Dr. Neil DeGrasse Tyson is quoted here about "Manhattanhenge," a term he coined almost a decade ago. However, I would be very surprised if Manhattan is the only city in the world with astronomical alignments. Certainly, many of the world's older cities possessed various such alignments, frequently in conjunction with religious structures.This latter development can be described as "astrotheological." It's great to see mainstream (and

atheistic) scientists like Dr. Tyson discussing this fascinating subject, although it's too bad many others haven't followed suit.

The original article is in French, so I have provided a translation.

New York: 'Magical' alignment of the sun with the streets of Manhattan

The Big Apple will be illuminated Wednesday by a particular sunset in which the sun's rays perfectly aligned with the street layout will engulf the facades of skyscrapers in New York. This phenomenon, which began Tuesday, occurs four times a year in Manhattan.

It has been nicknamed "Manhattanhenge," a reference to the Stonehenge megalithic site located in the south of England. During the summer and winter solstices, the sun passes along a central axis through this site of stone circles, with historians thinking that the place was used as a solar calendar or for pagan cults.

In Manhattan, the phenomenon takes place before and after the solstices, when the sun sets ablaze all available perspectives at the end of the streets built from East to West.

"Manhattanhenge may be a phenomenon that occurs only in one city in the world," said astrophysicist Neil DeGrasse Tyson, of the American Museum of Natural History, who claims the label of this phenomenon.

The man looked at the issue in 1996. It wasn't until five years later, in July 2001, that he photographed the alignment of the sun with the streets. In 2002, he published new pictures in a special edition of the magazine Natural History. Thus the phenomenon became known.

This year, the first appearance of "Manhattanhenge" occurred on May 30, just before the solstice of June 21. It happens again Wednesday, July 13, with a partial appearance on Tuesday.

The best place to enjoy [this phenomenon] is to be as far east as possible in Manhattan, advises DeGrasse Tyson. 14th, 23rd, 34th and 42nd streets offer incredible perspectives of the Empire State Building and the Chrysler tower.

View Full Version: BP to redevelop North Sea oil fields

Title: BP to redevelop North Sea oil fields

TheUnhivedMind - July 16, 2011 12:23 AM (GMT)

BP to redevelop North Sea oil fields

Firm counters fears that windfall tax will stifle development by revealing £3bn project for fields west of Shetlands

Dan Milmo
The Guardian, Thursday 14 July 2011
http://www.guardian.co.uk/business/2011/ju...-sea-oil-fields

BP has countered oil and gas producers' warnings of a dearth of investment in the North Sea following the government's energy windfall tax by announcing a £3bn project to redevelop fields to the west of the Shetlands.

The energy firm said the Schiehallion and Loyal oil fields have produced 400m barrels since 1998 and a further 450m could still be available, keeping them open until 2035 at least.

The move comes despite warnings by the Oil & Gas UK lobby group that the chancellor's surprise £2bn levy on North Sea oil and gas companies, announced in this year's budget to ease the pressure on petrol prices, could put in doubt £12bn of investment in the North Sea and the creation of 15,000 jobs.

BP's chief executive, Bob Dudley, said the move reflected the group's strategy of investing in oil fields where it had "extensive knowledge". He added: "BP has over 40 years' experience in the North Sea, during which time it has developed a strong set of assets. We are committed to maintaining a high-quality business there."

The Treasury pounced on the announcement. Justine Greening, economic secretary to the Treasury said: "This shows the North Sea basin remains an attractive area for significant levels of new investment, and the government will continue to work alongside

oil and gas companies to support growth and jobs in the UK."

The North Sea accounts for about 7% of BP's total oil and gas production.

However, Oil & Gas UK said the BP move was likely to have been in the pipeline before George Osborne's March announcement, and that it would probably now be less profitable.

Mike Tholen, the group's economics director, said: "We cannot ignore the continuing impact of the budget, which damaged investor confidence in this mature and expensive province and reduced the attractiveness of many projects which will struggle to gain investment approval without additional measures to mitigate the impact of the tax increase."

A report by consultant Deloitte on Thursday appears to support this argument, saying North Sea offshore drilling activity fell by 52% in the second quarter of the year. Graham Sadler, managing director of Deloitte's petroleum services group, said: "The reduction in activity is likely to be attributable to a combination of issues including a lack of confidence in the market, as well as a possible initial reaction to the UK's shifting fiscal regime."

Description: *blast [WATCH PRICES]*

TheUnhivedMind - July 15, 2011 09:26 PM (GMT)

Mumbai's diamond sector badly affected by bomb blast

India's diamond industry worth $30 billion is set to lose business worth over $500 million over the next couple of days, with diamond merchants and businessmen across the country closing their shops as a mark of respect.

Author: Shivom Seth
Posted: Friday , 15 Jul 2011

MUMBAI - A major chunk of India's diamond trade and industry that has its offices at Zaveri Bazaar and Opera House in Mumbai, bore the brunt of the bomb blast that took place in Mumbai on July 13. For the first time ever, diamond traders across India shut their shops following the terror attack . as a measure of solidarity.

Several Indian diamond and jewellery industry workers were feared to be among the 17 killed and 131injured in the bomb attacks. While India's largest diamond trading market at Opera House will remain closed till Monday, resulting in a loss of business worth several million dollars, markets in Ahmedabad, Surat and Kolkata remained closed for the second consecutive day on Friday.

According to the Bombay Bullion Association, the area in Mumbai accounts for gold and diamond industry trade worth $224 million per day. Even a day's closure results in a massive loss to the trade since it has a cascading effect.

Sanjay Kothari, vice chairman of the Gems and Jewellery Export Promotion Council said: ``The place near the diamond market is very crowded during evenings. The terrorists wanted maximum damage. Unfortunately, each time there is an attack, the industry goes on the blink for the next quarter, resulting in huge losses."

Diamond traders have been operating from the Mumbai area for several years. Many fear that diamonds worth several millions could have been lost in the melee that ensued soon after the blast. Traders said that while some of the packets were handed over to the victims' relatives, others were taken to the safety vaults in buildings on either side of Opera House.

The blast, the most powerful of the three that rocked Mumbai, coincided with the `peak transaction time'. Like any other evening in the narrow bylanes, traders were negotiating deals and handling diamonds, weighing and checking them for their cut and clarity. At the end of the trading day, brokers deposit the diamonds in the four or five safety vaults in the area.

Some traders fear that diamonds worth $5 million have gone missing in the aftermath. "We shall only come to know of the exact loss when the market reopens on Monday," said Danukbhai Jhaveri, adding that a few of the big traders had already moved to a better guarded diamond bourse that was opened at the Bandra-Kurla Complex (BKC) last October.

Moving out

For many diamond traders, moving out of the congested lanes which have housed their business for generations, is the only option. For the Mumbai Diamond Merchants Association, with 13,000 members dealing in diamonds worth $3 billion, shifting to the new offices at the BKC has been brought to the front burner.

"It is out flight to safety. By Diwali this year, almost all our members would have moved out to the Diamond Bourse. We have been targeted for long enough, now we need to protect ourselves," said Bharat Shah, president of the Mumbai Diamond Merchants Association.

Though the 35,000 square feet Diamond Bourse was handed over to the association, the severe real estate prices at the bourse and the absence of adequate safety vaults has prevented merchants from moving into the new premises. However, the blast has changed that.

Though the Indian diamond industry is a multi-billion dollar industry, it is run like a small and medium enterprise unit with most cutting and polishing happening at small rooms and centres and smaller shops around the area.

Despite this, the diamond sector has witnessed considerable growth with exports of diamonds and other precious stones rising by 46.89% to $43.12 billion in 2010-11. The growth in the sector was primarily driven by the cut and polished diamond business, which increased 54.91% to $28.25 billion in FY11.

Downing shutters

The diamond cutting and polishing centre in Surat observed a day's closure to condemn the blasts, with over 3,000 diamond units and markets in Varachha and Mahidharpura downing their shutters. The turnover of these two markets is worth $157 million per day, said Dinesh Navadia, president of the Surat Diamond Association.

In 2010-2011, rough diamonds worth $11 billion were imported to Surat via Mumbai for cutting and polishing, registering a 31% more than the previous year. The same year, Surat imported polished diamonds worth $14 billion through Surat Heera Bourse (SHB), which were re-exported via Mumbai to the world markets.

"Mumbai and Surat are interlinked as far as the diamond business is concerned. If Surat is the diamond manufacturing centre, Mumbai is the trading hub," said Chandrakant Sanghavi of Sanghavi Exports.

Pravin Nanavati, former president of the Surat Diamond Association said that the attack could severely affect the diamond trade since ``foreign buyers in particular are normally wary of travelling to Mumbai given these attacks. This move will hit diamond sales, but we will ensure that it is just a temporary setback. The terrorists should know they have not won," he said.

Drug shortages slam patients, health workers, surveys show

Delayed or diverted care, staffing pressures, high costs all getting worse

7/12/2011 10:00:29 AM ET
http://www.msnbc.msn.com/id/43718291/ns/health-health_care/

Escalating shortages of vital drugs could be affecting nearly every hospital in the nation, forcing delays or substitutions in patient care, diverting pharmacy staff from crucial duties and racking up $216 million in costs to manage the situation nationwide.

That's the take-away message of two new surveys about the impact of rising drug shortages on clinical staff and patients, conducted by the American Hospital Association and the American Society of Health-System Pharmacists.

The groups planned to hold a Capitol Hill briefing Tuesday about the consequences of the worst-ever shortage of medically necessary and life-saving drugs in the nation's history. A coalition of cancer care organizations, concerned about a shortage of oncology drugs, plan a similar briefing on Wednesday. The groups worry that ongoing shortages of drugs, often with no warning, have been skyrocketing in recent years.

Federal Food and Drug Administration officials say the shortages are caused by manufacturing problems, firms that simply stop making drugs, and production delays.

In 2010, reported drug shortages totaled 211, up from 166 the year before and the most ever recorded. Already in 2011, 156 shortages were tallied as of June 20, according to the University of Utah Drug Information Service, which tracks the problem.
Story: When vital drugs run out, patients pay the price

“Drug shortages are a national health crisis,” said Henri R. Manasse Jr., executive vice president and CEO of ASHP, a coalition of pharmacists who practice in hospitals and health systems.

Survey: 99.5 percent of hospitals affected
Among the findings from AHA’s online survey that drew responses from 820 of the nation’s 5,100 hospitals: 99.5 percent of hospitals reported one or more drug shortages in the last six months, and nearly half reported shortages of 21 or more drugs. Some 82 percent of those hospitals said they’ve delayed patient treatment because of shortages, or have been unable to treat patients as recommended.

The ASHP survey, which drew 353 responses from 1,322 pharmacy directors, found that more than 80 percent of institutions ran low on three top vital drugs: succinylcholine injection, used to relax throat muscles to allow intubation; concentrated dextrose solutions used to mix or dilute medications; and epinephrine injections used for emergency treatment of severe allergic reactions.

The shortages have forced some clinical staff to shift away from patient duties in order to manage the problem, found the ASHP survey, which tallied the labor costs at $216 million a year nationwide.

In addition, the surveys both chronicled ongoing shortages of drugs used to for basic treatments from pain relief and sedation to antibiotics for infections and medications for cancer.

Nearly two-thirds of hospitals said they rarely receive advance notices of shortages and 14 percent never do, the AHA survey said. More than half said they're rarely told how long the shortages will last.

The studies released this week mirror a survey this spring that showed 90 percent of anesthesiologists responding — some 1,373 doctors in 48 states — said they had experienced shortages of vital drugs. More than half had to alter their care for patients and 10 percent postponed or canceled treatments because of shortages, according to the American Society of Anesthesiologists.

Patient had to track down his own drugs
For Thomas Kornberg, 62, of San Francisco, Calif., shortages threatened to derail his treatment for Hodgkin’s lymphoma two years ago when doctors informed him they couldn’t get two of four drugs necessary for his cancer-fighting infusions.

“I was warned ahead of time, the hospital did not have an adequate supply,” said Kornberg, a professor of biochemistry and biophysics at the University of California at San Francisco. Because he had contacts in the medical field, he was able to call in favors from friends at hospitals who helped ensure his supply.

But the experience outraged him enough to prompt him to testify on Capitol Hill this week. “These shortages could well have affected my treatment,” he said.

The issue has received attention from Congress, the Preserving Access to Life-Saving Medications Act. That bill would require drugmakers to give early notification of any incident that would likely result in a drug shortage.

Such action alone wouldn’t solve the pressing problems, said Joseph Hill, director of federal legislative affairs for the ASHP, which since November has been working with industry, government and safety groups to find a solution.

“It’s a good first start,” he said. “It’s a piece of the puzzle."

View Full Version: First Demonstration of Time Cloaking

Title: First Demonstration of Time Cloaking

TheUnhivedMind - July 15, 2011 05:17 PM (GMT)

First Demonstration of Time Cloaking

Physicists have created a "hole in time" using the temporal equivalent of an invisibility cloak.

kfc 07/14/2011
http://www.technologyreview.com/blog/arxiv/26992/

Invisibility cloaks are the result of physicists' newfound ability to distort electromagnetic fields in extreme ways. The idea is steer light around a volume of space so that anything inside this region is essentially invisible.

The effect has generated huge interest. The first invisibility cloaks worked only at microwave frequencies but in only a few years, physicists have found ways to create cloaks that work for visible light, for sound and for ocean waves. They've even designed illusion cloaks that can make one object look like another.

Today, Moti Fridman and buddies, at Cornell University in Ithaca, go a step further. These guys have designed and built a cloak that hides events in time.

Time cloaking is possible because of a kind of duality between space and time in electromagnetic theory. In particular, the diffraction of a beam of light in space is mathematically equivalent to the temporal propagation of light through a dispersive medium. In other words, diffraction and dispersion are symmetric in spacetime.

That immediately leads to an interesting idea. Just as its easy to make a lens that focuses light in space using diffraction, so it is possible to use dispersion to make a lens that focuses in time.

Such a time-lens can be made using an electro-optic modulator, for example, and has a variety of familiar properties. "This time-lens can, for example, magnify or compress in time," say Fridman and co.

This magnifying and compressing in time is important.

The trick to building a temporal cloak is to place two time-lenses in series and then send a beam of light through them. The first compresses the light in time while the second decompresses it again.

But this leaves a gap. For short period, there is a kind of hole in time in which any event is unrecorded.

So to an observer, the light coming out of the second time-lens appears undistorted, as if no event has occurred.

In effect, the space between the two lenses is a kind of spatio-temporal cloak that deletes changes that occur in short periods of time.

The device has some limitations. The Cornell time cloak lasts only for 110 nanoseconds--that's not long. And Fridman and co say the best it can achieve will be 120 microseconds.

But it's early days yet. Given the rapid development of spatial cloaks, it'd be a brave man who'd bet on this being the last word.

Fridman and pals have clearly made themselves an interesting toy but they modestly refrain from speculating about the applications for their time cloak.

However, that's a task well suited to readers of the Physics arXiv Blog. If you have any suggestions, leave them here.

Delta Jets Collide at Boston Airport

By Mary Jane Credeur and Chris Jasper - Jul 15, 2011 2:49 PM GMT+0100
http://www.bloomberg.com/news/2011-07-15/d...our-months.html

A Delta Air Lines Inc. (DAL) wide-body plane struck the tail of a smaller jet from regional partner Atlantic Southeast Airlines as they prepared for takeoff from Boston's Logan Airport last night.

"I think we hit the RJ off of our left with our wing," one of the pilots of the Delta Boeing Co. (BA) 767 said on an air- traffic recording posted on LiveATC.net.

ASA's Bombardier Inc. (BBD/B) CRJ-900 jet suffered "severe damage to the tail," a loss of hydraulic fluid and faulty brakes, one of the pilots on that plane said on the recording. He requested a tug vehicle to pull the plane back to the gate. Images on the Boston Herald's website show the upper half of the CRJ-900's tail twisted and bent over toward the right side.

Both planes are out of service for repairs, said Trebor Banstetter, a spokesman for Atlanta-based Delta, and the only reported injury was a passenger with a hurt neck. The 767 was operating as Flight 266 to Amsterdam, while ASA Flight 4909 was headed for Raleigh-Durham, North Carolina, Banstetter said.

The twin-engine 767 carries about 220 people, usually on international and other long-haul routes. The CRJ-900 makes shorter trips with as many as 74 passengers. The 767 can have a maximum takeoff weight of as much as 450,000 pounds (204,000 kilograms), or about five times as much as the heaviest CRJ, according to the planemakers' websites.

Yesterday's collision was the third in fourth months involving Delta planes.

On April 11, a Bombardier CRJ-700 from Delta's Comair unit was clipped by the wing of an Air France Airbus SAS A380 superjumbo at New York's John F. Kennedy International Airport, spinning the smaller plane and 66 occupants through 90 degrees.

A month later, the wing of a Delta Boeing 737 struck the tail of another at Atlanta Hartsfield-Jackson Airport, Delta's hometown hub.

Atlantic Southeast is a unit of St. George, Utah-based SkyWest Inc. (SKYW)

View Full Version: First biofuel passenger flight

Title: First biofuel passenger flight

TheUnhivedMind - July 15, 2011 03:25 PM (GMT)

First biofuel passenger flight

Lufthansa has become the first airline to use biofuels on a scheduled fight.

By David Millward, Transport Editor
3:48PM BST 15 Jul 2011
http://www.telegraph.co.uk/travel/travelne...ger-flight.html

An Airbus A321 completed the one hour 10 minute flight from Hamburg to Frankfurt using a 50-50 mix of conventional and alternative fuel.

The trial, which will last six months, will entail 1,200 flights. Should the programme be successful, the use of biofuel – in this case biosynthetic kerosene – will be extended to other routes.

According to Lufthansa the programme will reduce carbon emissions by 1,500 tonnes.

Environmental lobby groups have been sceptical of the programme, arguing that aviation's use of biofuels is less environmentally friendly than the aviation industry says.

But Christoph Franz, Lufthansa's chief executive insisted the airline's trial did not entail using material which could otherwise be used for food production.

"Lufthansa is the first airline worldwide to use biofuel in scheduled daily flight operations. We are thus continuing to steadily implement our proven and successful strategy for sustainability," he added.

The International Air Transport Association, which represents the world's major airlines has said that biofuel will account for 10 per cent of the total used by the industry by 2017.

It has also pledged to cut the industry's carbon footprint by improving energy efficiency and improved air traffic control which will cut the time aircraft spend in the air.

Thomson has said it will begin biofuel flights by the end of the month, while Virgin, Continental, JAL and Air NZ have also established programmes.

Meanwhile British Airways has entered a partnership with an American company, Solena, to turn household waste into jet fuel.

But the latest initiative by Lufthansa has failed to satisfy Robbie Blake, biofuels campaigner for Friends of the Earth Europe.

"Lufthansa is painting itself green with biofuels – but these flights are anything but environmentally friendly," he said.

"Biofuels exacerbate poverty and hunger, drive land grabbing and deforestation, push up food prices, and make climate change worse.

"Short-haul flights from Hamburg to Frankfurt, bio-fuelled or not, can never be green. Lufthansa's passengers, and the climate, would be better off catching the train."

Title: Many missing as Russian boat Bulgaria sinks on
Description: *Volga [11-0 ON BOARD {JUDGEMENT}]*

TheUnhivedMind - July 10, 2011 11:20 PM (GMT)

Many missing as Russian boat Bulgaria sinks on Volga

Survivors wrapped in blankets were met by relatives at a port in Kazan

10 July 2011 Last updated at 22:18
http://www.bbc.co.uk/news/world-europe-14099637

More than **11**0 people are missing and feared dead after a tourist boat sank on the Volga River in Russia.

Dozens of people were rescued after the boat sank in the Tatarstan region, about 750km (450 miles) east of Moscow. At least two deaths are confirmed.

More than 180 passengers and crew were believed to be on the Bulgaria, which was sailing from the town of Bulgar to the regional capital, Kazan.

Hopes of finding survivors faded as a rescue operation continued after dark.

Bad weather, mechanical failure on the aged craft and overcrowding have all been cited as possible reasons why the boat sank, says the BBC's Steve Rosenberg in Moscow.
Miles from shore

Nearly 50 Russian divers were scouring the murky river early on Monday amid vanishing hopes that any survivors would be found.

"The results of the inspection show that the chance of us finding survivors is minimal," Interfax quoted an emergencies ministry spokeswoman in Moscow as saying.

The Bulgaria - a 55-year-old vessel which is believed to be owned by a local tourism company - was on a two-day cruise when it got into difficulty at about 1400 on Sunday

(1000 GMT), sinking within minutes, says our correspondent.

The 80m (260ft) boat sank several kilometres from the shore near the village of Sukeyevo, about 80km south of Kazan.

One survivor described it as "a bad ship, a very old ship", which had already been listing to starboard when it set sail.

"She went under in three minutes," said the survivor, Nikolai Chernov. "There were no announcements or anything, she just listed to starboard and capsized and sank. That was it."

While dozens of people were rescued by another pleasure boat that was passing nearby, more than 100 are still missing.

The Bulgaria was built 55 years ago

Weeping survivors draped in blankets were shown on state TV, while relatives gathered at a port in Kazan waiting for news of their loved ones.

"My son-in-law telephoned to say that he held out his hand to his wife but she could not grab on," one man told Rossiya 24 state television. "He could not pull her out."

Around 30 children had gathered in a play area on deck just before the boat went down, said one survivor, who feared all may have drowned.

Russian President Dmitry Medvedev has ordered an investigation into the incident.

The Volga, a wide river, is popular with cruise boats at this time of the year, says our correspondent.

Are you in the vicinity of the sinking? Do you know anyone who may have been on the boat? Send us your comments and experiences.

TheUnhivedMind - July 12, 2011 11:19 PM (GMT)

Medvedev Vows Probe After Russia Cruise Ship Accident Kills as Many as 129

By Ilya Arkhipov and Lyubov Pronina - Jul 12, 2011
http://www.bloomberg.com/news/2011-07-11/m...e-accident.html

Russian President Dmitry Medvedev vowed “a complete review” of passenger ships after one of the deadliest accidents since the collapse of the Soviet Union killed as many as 129 people on an unlicensed cruise.

“We need harsh measures aimed at those violating transportation laws,” Medvedev told the leaders of parliamentary parties outside Moscow today. “It’s obvious that we can no longer put up with this.”

Ninety bodies have so far been recovered after the July 10 shipwreck on the Volga River and almost no hope remains for finding more survivors from the Bulgaria double-deck river cruise ship, Emergency Minister Sergei Shoigu told Medvedev yesterday. Of 208 people aboard the tourist boat, 79 people were rescued, according to the ministry.

Medvedev, a former lawyer who made combating corruption a centerpiece of his term, ordered a probe of the operator, ships and transportation officials. About 120 tourist river boats are currently in service in the European part of Russia, all of them built in Germany and Czechoslovakia before 1991, the Russian Tourism Union said in a statement on its website today.
Criminal Probe

The Investigative Committee said today it detained and opened a criminal probe into a local river-transport official and the head of the company that leased and operated the boat. The vessel didn’t meet the required safety standards and wasn’t properly insured, while the crew was working without a contract with the operator, the committee said on its website.

Medvedev declared today a day of mourning, and he and Prime Minister Vladimir Putin expressed condolences. The federal government will pay 1 million rubles ($35,400) to families of the deceased and compensate those injured in the accident, Putin told reporters in Moscow today.

“State control has increased in the past 10 years, but there is more bribe-taking and less order,” Dmitry Oreshkin, a political analyst, said by phone from Moscow. “Perhaps now, if not Putin himself, then his People’s Front, will come out with an initiative to toughen and broaden state control.”

Russia is the world’s most corrupt major economy, according to Berlin-based Transparency International’s 2010 Corruption Perceptions Index released in October.
People’s Front

Putin, who stepped down as president in 2008 because of a ban on serving more than two consecutive terms, in May formed the All-Russia People’s Front, a coalition of interest groups including labor, business and women, to broaden the political base for his United Russia party.

The disaster raises concerns about safety oversight and regulations of Russia’s passenger transportation, Medvedev said.

“The number of old tubs in operation exceeds all limits,” he said. “The government owns only a small number of these ships, but that doesn’t mean that the government should shirk control.

The Bulgaria hadn’t been overhauled since 1980 and was running with a faulty left engine, and the cruise was operated without a license to carry passengers, the Prosecutor General’s Office said on its website. The boat had passed an inspection this year, according to state television.

The Bulgaria was listing to the right when it left Kazan, which may be one of the reasons it sank, Vladimir Markin, spokesman for the Investigative Committee said on state television. A criminal investigation has been opened into violations of transportation safety regulations, according to the Investigative Committee’s website.
Worst in 25 Years

The incident is the worst riverboat disaster in more than 25 years, according to Alexei Klyavin, president of the Association of Shipping Companies. Plane crashes in Irkutsk killed 125 people in 2006 and 145 people in 2001, according to the Aviation Safety Network’s website.

The boat sank “in minutes, very fast,” Liliya Khaziyeva, a spokeswoman for the Rescue Service from the neighboring Udmurtia region, said by phone yesterday from a boat near the accident site. “We found dead people wearing safety jackets, people who were simply unable to leave the ship.”

Divers are working at depths of 7 to 14 meters, and workers have combed the river banks and islands in an area where the water stretches into a reservoir about 30 kilometers across, Khaziyeva said.
Returning to Kazan

The ship was returning to Kazan, the capital of Tatarstan, from the town of Bolgar when it sank about 740 kilometers (460 miles) east from Moscow at 1:58 p.m. local time on July 10. It sank about three kilometers from shore, according to a statement on the Emergency Ministry’s website.

Nikolai Chernov, a survivor, told state television he saw at least two ships pass by without offering help.

Divers have now reached a recreation hall on the sunken ship where as many as 50 children may have been trapped, state television channel Rossiya 24 reported. The bodies of the captain and his wife were also recovered, Rossiya 24 said.

Rescue vessels expect to begin lifting the Bulgaria on July 16, Emergency Minister Shoigu said in comments broadcast on state television.

Russia arrests two after Volga boat sinking

The funeral for the boat's captain was held in Kazan, near the scene of the sinking

13 July 2011 Last updated at 22:40
http://www.bbc.co.uk/news/world-europe-14147460

Russian police have arrested two officials following the sinking of a tourist boat on the Volga in which more than 100 people died.

Both the director of the company that rented the boat and a ship registrar who certified it have been detained, prosecutors said.

Officials have said the boat was overloaded and in poor condition when it sank in the Tatarstan region.

Meanwhile divers have widened their search for bodies of the victims.

So far 104 bodies have been found including those of 23 children.

The 80m (260ft) Bulgaria - a double-decker river cruiser built in 1955 - listed during a thunderstorm on Sunday and sank in minutes, trapping many passengers inside.

About 80 people were rescued.

Officials said the boat was designed for 140 passengers and crew but it had been carrying 208 people. It also lacked the correct licences and one of its engines was not working, prosecutors said.

The Bulgaria was built 55 years ago

On Wednesday the head of the Argorechtur company that leased the boat and a river transport inspector were arrested, Itar-Tass news agency reported.

They are charged with providing services that fail to reach safety standards and could be jailed for up to 10 years if convicted.

At Kazan near the site of the disaster, the funeral was held for the boat's captain,

Alexander Ostrovsky.

"I am sure he simply did his civil duty, heroically, up to the bitter end," said his former wife, Tatyana.

Deputy Emergencies Minister Alexander Chupriyan said divers would continue working "until we are sure that all the bodies have been found".

"The divers are working in absolutely extreme conditions," he added.

Russian media have been scathing in their accounts of the tragedy.

The Vedomosti business daily said the accident "shows the logic of neglecting safety in the name of profit".

An editorial in the Komsomolskaya Pravda read: "The owners extracted profit while turning a blind eye to safety rules. People die... because of their tacit acceptance that things are not done the right way."

Deputy Prime Minister Sergei Ivanov said the sinking was "lawlessness and a crime" and the ship had a "whole bunch of violations", Interfax news agency reported.

TheUnhivedMind - July 14, 2011 12:49 AM (GMT)

Drug shortages slam patients, health workers, surveys show

10:00 AM EST July 12, 2011
http://foxvzw-news.mobile.msn.com/en-us/ar...43718291&afid=1

In a new survey, 80 percent of pharmacists said they ran low on top vital drugs, including epinephrine injections used for emergency treatment of severe allergic reactions.
© FDA

Escalating shortages of vital drugs could be affecting nearly every hospital in the nation, forcing delays or substitutions in patient care, diverting pharmacy staff from crucial duties and racking up $216 million in costs to manage the situation nationwide.

That's the take-away message of two new surveys about the impact of rising drug shortages on clinical staff and patients, conducted by the American Hospital Association and the American Society of Health-System Pharmacists.

The groups planned to hold a Capitol Hill briefing Tuesday about the consequences of the worst-ever shortage of medically necessary and life-saving drugs in the nation's history. A coalition of cancer care organizations, concerned about a shortage of oncology drugs, plan a similar briefing on Wednesday. The groups worry that ongoing shortages of drugs, often with no warning, have been skyrocketing in recent years.

Federal Food and Drug Administration officials say the shortages are caused by manufacturing problems, firms that simply stop making drugs, and production delays.

In 2010, reported drug shortages totaled 211, up from 166 the year before and the most ever recorded. Already in 2011, 156 shortages were tallied as of June 20, according to

the University of Utah Drug Information Service, which tracks the problem.

"Drug shortages are a national health crisis," said Henri R. Manasse Jr., executive vice president and CEO of ASHP, a coalition of pharmacists who practice in hospitals and health systems.

Singing Mice Made Via Genetic Modification

July 11, 2011 13:14 PM
http://www.bernama.com/bernama/v5/newsworld.php?id=600404

OSAKA, July 11 (Bernama) -- A group of researchers at Osaka University has genetically engineered mice so that they can sing like birds, in hope this creation will shed light on the origins of human language, reported Japan's Kyodo News.

A team of researchers at the University of Osaka created the animal in their "Evolved Mouse Project," in which they use genetically modified mice that are prone to miscopying DNA and thus to mutations.

"Mutations are the driving force of evolution. We have cross-bred the genetically modified mice for generations to see what would happen," lead researcher Arikuni Uchimura said.

He added that the team discovered a mouse tweeting like a bird when they were breeding mice genetically-engineered to produce frequent mutations.

"We checked the newly born mice one by one• One day we found a mouse that was singing like a bird," he said, noting that the "singing mouse" was born by chance but that the trait will be passed on to future generations.

The laboratory, directed by professor Takeshi Yagi at the Osaka University's Graduate School of Frontier Biosciences in western Japan, now has more than 100 "singing mice" for further research.

The team hopes they will provide clues on how human language evolved, just as researchers in other countries study songbirds such as finches to help them understand

the origins of human language.

Scientists have found that birds use different sound elements, put them together into chunks like words in human languages and then make strings of them to sing "songs," that are subject to certain linguistic rules.

"Mice are better than birds to study because they are mammals and much closer to humans in their brain structures and other biological aspects," Uchimura said.

China raises undersea ante

By MICHAEL RICHARDSON
Wednesday, July 13, 2011
http://search.japantimes.co.jp/cgi-bin/eo20110713mr.html

SINGAPORE — Nestled on the deck of its mother ship, China's most advanced deep-sea submersible is on its way to the depths of the central Pacific Ocean in a program that is being closely watched in Asia and the West for its mining and military potential as well as its scientific research.

The Jiaolong, named after a mythical dragon, is designed to be the world's deepest-diving manned submersible. The support ship is carrying the undersea craft and its three crew members to waters between southeastern Hawaii and North America where it will attempt to plunge 5,000 meters below the surface of the Pacific, exceeding its 3,759-meter dive in the South China Sea last year.

The submersible has a special titanium hull to withstand the crushing pressures of the deep ocean. If the current expedition is successful, the craft is expected to try operating close to its maximum depth of about 7,000 meters in 2012, making it capable of reaching the bottom of almost all the world's sea areas.

This would elevate China to the top of an exclusive club of deep-sea submersible operators, putting it ahead of Japan, Russia, France and the United States.

China says one of its main aims is to be in prime position to explore and exploit what experts say is a treasure trove of trillions of dollars of gold, copper, lead, zinc, nickel, manganese, cobalt, iron and other minerals in rich reserves on the seabed of the ocean, which covers more than two-thirds of Earth's surface with an average depth of 4,000 metres.

Sustained rapid growth of China's economy requires access to ever more resources. Chinese leaders are looking to the oceans and seabed as a key frontier for the future, in case supplies on land run short or are withheld in a crisis. Some seabed deposits are also richer than those on land, among them deposits of gold, which is currently fetching near record prices, and cobalt, used to make corrosion-resistant light, strong metal alloys and paints.

China hopes to use superior deep ocean technology to increase its influence and leverage over resource control in territorial disputes with several Southeast Asian countries and Japan in the South and East China seas. This aim was symbolized when the Jiaolong used a robotic arm to plant a Chinese flag on floor of the South China Sea during one of its 17 dives in May and June 2010, the longest of which lasted over nine hours.

China also wants to tap reserves of natural gas in frozen hydrate form in offshore areas it claims and in international waters. Chinese scientists say that have found huge hydrate deposits in the South China Sea.

As the Jiaolong and its support ship prepared to leave port on July 1, Jin Jiancai, secretary general of the China Ocean Mineral Resources Research and Development Association, said that part of the mission was to fulfill a contract between the Association and the International Seabed Authority (ISA), an autonomous inter-governmental body linked to the United Nations that regulates mining in international waters.

The ISA is meeting July 11-22 at its headquarters in Kingston, Jamaica. It's consider approving four new applications for deep-sea mineral exploration in the International Seabed Area. They are from China, Russia, Nauru and Tonga. The two Pacific island-states are sponsoring private mining companies, the first time such applications have been made.

The applications from China and Russia are for polymetallic sulphide exploration, also a first for the ISA. Polymetallic sulphides contain mainly copper, lead, zinc, gold and silver. They form massive deposits that can range up to 100 million metric tons. High concentrations of base metals (copper, zinc, lead), and especially precious metals (gold, silver), in some of these deposits have recently attracted interest from the international mining industry as advances in offshore exploration and mining technology brings them within reach.

Most of the 100 sites located so far are in the Pacific but only about 5 percent of the seabed worldwide has been systematically searched.

Jin said that the Jiaolong's mission included taking photographs and video footage of

the sea floor, and measuring submarine topography and geology, in a 75,000 square-kilometer area designated by the ISA. "With permits from the ISA, China will be able to explore (for) minerals and other resources for commercial purposes in this area once the technology matures," he added.

The mineral potential of the deep ocean seabed was underscored on July 3 when a group of Japanese specialists announced the results of a seabed survey of 78 sites in the Pacific containing rare earth minerals that are critical to a wide range high-technology products for both civilian and military use.

They estimated that a one square-kilometer area in one hot spot alone held a cache of rare-earth oxides equivalent to one-fifth of current global demand in a market where China produces around 97 percent of the supply and has sent prices sky rocketing by imposing increasingly tight export quotas.

China's ambitious deep ocean exploration and development program only began in 2002. It is a well-funded, high priority venture involving more than 100 research institutes and companies.

As part of the program, China will launch its second marine remote-sensing satellite later this year at about the time it begins construction of a national research base in the coastal city of Qingdao to accelerate the study and search for deep-sea energy and mineral resources. The Jiaolong and its mother ship will be home-ported at the base. China is also expected to build its own deep-sea drill ship and a network of automated observatories on the ocean floor.

While China makes no secret of its deep-sea mineral and energy ambitions, it has said little about the military potential. However, the stated capabilities of the Jiaolong indicate that it could perform key missions for China's armed forces and national security agencies.

They include tapping into foreign undersea fiber-optic communication cables to intercept diplomatic and commercial secrets, recover lost nuclear weapons and missiles, and make high-resolution seabed maps to aid the operation of China's growing fleet of submarines.
Michael Richardson is a visiting senior research fellow at the Institute of Southeast Asian Studies in Singapore.

China's new high-speed trains halted again

12 Jul 2011
http://www.google.com/hostednews/afp/artic...c012e7eae10.6e1

BEIJING — China's new flagship high-speed rail link between Beijing and Shanghai suffered fresh delays Tuesday due to a power cut, transport authorities said, two days after a similar incident hit the line.

A power failure near the eastern city of Suzhou delayed 29 trains on the $33 billion line, before services restarted two hours later once faulty equipment had been repaired, the railways ministry and state media said.

"The air-conditioning went out and it was sweltering in the carriage," a passenger was quoted as saying by the news website Eastday.com.

The incident was the second in three days after a dozen trains were halted for about 90 minutes on Sunday when thunderstorms and heavy winds brought down the power supply to a section of the line in the eastern province of Shandong.

Chinese Premier Wen Jiabao formally opened the new line, which halves the rail journey time between the two Chinese cities to five hours, on June 30, although it had been operating on a trial basis since mid-May.

He said the high-speed line -- launched on the eve of celebrations to mark the 90th birthday of China's Communist Party -- would be key to "improving the modern transport system... and satisfying people's travelling needs".

However, huge investment in the new link has made the sector a hotbed for corruption, raising concerns over costs and safety.

China's state auditor in March said construction companies and individuals last year siphoned off 187 million yuan ($29 million) in funds meant for the Beijing-Shanghai link.

The revelation followed the February sacking of former railways minister Liu Zhijun, who allegedly took more than 800 million yuan in kickbacks over several years on contracts linked to China's high-speed network.

China halts drilling at leaking oil platforms

Government intervenes as ConocoPhillips rigs pose 'huge threat to oceanic ecological environment'

Jonathan Watts and agencies
guardian.co.uk, Wednesday 13 July 2011 13.23 BST
http://www.guardian.co.uk/environment/2011...top-leaking-oil

China has ordered US oil company ConocoPhillips to halt drilling at two leaking oil platforms in the Bohai Sea, with a warning that further spills posed "a huge threat to the oceanic ecological environment".

The injunction comes amid rising public anger over a slick that has spread at least 840 sq km, despite corporate reassurances that the situation was under control and government delays in releasing information.

It took a month for news to emerge about an initial seabed leak on 4 June in the Penglai 19-3 field, which is operated by ConocoPhillips in partnership with the China National Offshore Oil Corporation. Since then, there have been reports of two more leaks, most recently on Tuesday. Despite the companies' insistence last week that the spills were "basically under control", the State Oceanic Administration said on Wednesday that progress was slow and the situation remained worrying.

"There has been oil seeping continuously into the sea for days from platforms B and C in the Penglai 19-3 oil field and there is still a slick in the surrounding marine areas," the administration said in a statement. "Another spill could happen at any time, which [poses] a huge threat to the oceanic ecological environment."

It said operations at the rigs must stop until the leaks are plugged and the risks

eliminated. At an emergency meeting in Tianjin the previous day, Liu Cigui, the head of the SOA, called for tighter inspections of offshore wells, and checks on potential impacts from the pollution such as algae blooms and red tides.

In addition to the main slick, the government says an area of 3,400 sq km of the sea has suffered a sharp fall in water quality. The government has yet to publicly estimate the scale of the leak.

View Full Version: BIGFOOT CROSSING

Title: BIGFOOT CROSSING

TheUnhivedMind - July 13, 2011 03:57 AM (GMT)

BIGFOOT CROSSING

http://www.groundzeromedia.org/bigfoot-crossing/

Railroad officials and central Oregon sheriff's detectives are trying to determine who pushed large boulders onto railroad tracks near a Madras, Ore., trestle twice in recent weeks.

A freight train locomotive hit the first boulder and suffered damage. Burlington Northern Santa Fe spokesman Gus Melonas says train conductors spotted the second boulder last week and stopped the train in time.

No one has been injured. But Jefferson County sheriff's Detective Starla Green says KTVZ that authorities think someone pushed the 200- to 300-pound boulders onto the tracks in an effort to derail a train into a canyon.

Now, authorities are saying that they have had reports of a red dune buggy in the area, and so they are looking into that as a possible lead.

However, I have been getting a lot of mails about the possibility that humans are not responsible for the boulders there. Some are speculating that it may be Bigfoot and that there is something definitely wrong with the eco system people tell me that the bird and animals are going crazy.

I received an e-mail from a listener who was telling me that he was noticing that most of the day birds in Oregon are becoming louder at night and he is beginning to see robins and crows in abundance at night.

I also saw some unnatural activity with the birds as I had witnessed two crows surrounding a falcon attacking a pigeon. I was worried that the pigeon was dead,

however when I shooed the birds away all of them were very much alive. This happened at dark, which I thought was peculiar and a little creepy.

Many people would consider speculations about Bigfoot and weird behavior of animals something to be put in the tabloids, but there seems to be an increase in strange animal behaviors and blurry photos of a big hairy beast that many people are describing as dog or apelike moving through the woods of the Southern States and in the Northwest.

The Bigfoot creature still, has that tabloid edge to him and he is always the topic of tall tales when all are snug in their sleeping bags listening to fireside ghost stories on family camping trips.

Reports of upright walking dogs or apes come in from all over the country. Reports usually say that it is between 6 to 8 feet tall, hirsute with large feet, glowing eyes and producing a horrible smell of sulfur or rotten eggs.

The combination of glowing eyes and terrible smell were similar to other crypto creatures that had been reported in other parts of the country, namely the Flatwoods monster, the Skunk ape, Mothman and most recently the Chupacabra of Puerto Rico.

There have been researchers who claim that the smell is similar to human body odor. It has also been said that the odor is like a dead animal.

There is also some new reports of bigfoot in places where he isn't normally seen. There have been reports of Bigfoot seen in the south. There have been reports of Bigfoot seen in Kansas of all places,

The reality of Bigfoot may be as mundane as a monkey that has yet to be classified by science. However seeing one in the forests of the United States can be an experience not easily forgotten.

View Full Version: Simple Harmonic (and non-harmonic) Motion

Title: Simple Harmonic (and non-harmonic) Motion

TheUnhivedMind - July 13, 2011 02:14 AM (GMT)

- Simple Harmonic (and non-harmonic) Motion

Pendulum Waves

http://sciencedemonstrations.fas.harvard.e...gecontent341734

[S | t | ★★★★] keywords: simple harmonic motion, periodic motion, quantum revival, aliasing

What it shows: Fifteen uncoupled simple pendulums of monotonically increasing lengths dance together to produce visual traveling waves, standing waves, beating, and random motion. One might call this kinetic art and the choreography of the dance of the pendulums is stunning! Aliasing and quantum revival can also be shown.

How it works: The period of one complete cycle of the dance is 60 seconds. The length of the longest pendulum has been adjusted so that it executes 51 oscillations in this 60 second period. The length of each successive shorter pendulum is carefully adjusted so that it executes one additional oscillation in this period. Thus, the 15th pendulum (shortest) undergoes 65 oscillations. When all 15 pendulums are started together, they quickly fall out of sync—their relative phases continuously change because of their different periods of oscillation. However, after 60 seconds they will all have executed an integral number of oscillations and be back in sync again at that instant, ready to repeat the dance.

Setting it up: The pendulum waves are best viewed from above or down the length of the apparatus. Video projection is a must for a large lecture hall audience. You can play the video below to see the apparatus in action. One instance of interest to note is at 30 seconds (halfway through the cycle), when half of the pendulums are at one amplitude maximum and the other half are at the opposite amplitude maximum.

[dohtml]<object width="640" height="390"><param name="movie" value="http://www.

youtube.com/v/
yVkdfJ9PkRQ&rel=0&hl=en_US&feature=player_embedded&version=3"></
param><param name="allowFullScreen" value="true"></param><param
name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.
com/v/yVkdfJ9PkRQ&rel=0&hl=en_US&feature=player_embedded&version=3"
type="application/x-shockwave-flash" allowfullscreen="true"
allowScriptAccess="always" width="640" height="390"></embed></object>[/dohtml]

Comments: Our apparatus was built from a design published by Richard Berg 1 at the University of Maryland. He claims their version is copied from one at Moscow State University and they claim to have seen it first in the US, so we don't know who made one first. The apparatus we have was designed and built by Nils Sorensen.

James Flaten and Kevin Parendo2 have mathematically modeled the collective motions of the pendula with a continuous function. The function does not cycle in time and they show that the various patterns arise from aliasing of this function—the patterns are a manifestation of spatial aliasing (as opposed to temporal). Indeed, if you've ever used a digital scope to observe a sinusoidal signal, you have probably seen some of these patterns on the screen when the time scale was not set appropriately.

Here at Harvard, Prof Eric Heller has suggested that the demonstration could be used to simulate quantum revival. So here you have quantum revival versus classical periodicity!

4 Bush Biographers--All Suicided
by Vince Foster
Sunday Dec 12th, 2004 5:35 PM
Four Bush biographers, Mark Lombardi, J.H. Hatfield, Danny Casalaro, and now Gary Webb--all "suicide" victims. What are the odds all of these people actually committing suicide?

Examining the male U.S.suicide rate for recent years (http://www.suicidology.org/stats2001/1999datapage2.pdf), we can extrapolate a conservative estimate of 17 male suicides per 100,000 people, or 0.017%. The odds of 4 specific, male biographers committing suicide would be the 4th power of 17/100000, or 8.3521 4.913 x 10^-17...roughly 1 chance 10,000,000,000,000,000. About as good a definition of impossible as you can get. A person would stand a better chance of playing the Canadian lottery 6/49 exactly twice in one's lifetime and winning ther grand jackpot BOTH TIMES! (That is, picking 6 numbers out of 49 possible numbers and matching all 6 numbers out of 6 random draws, on 2 separate occasions, and having only purchased two Canadian lottery tickets ever.) This calculation should be regarded as a conservative estimate: the actual odds against such a "coincidence" would be much greater. For example, if any of the biographers were female, the odds would be even greater.

QUOTE

It wouldn't be the first time a journalist died of an "apparent suicide."

"The Octopus Returns"
by Kenn Thomas

Here's a quick refresher paragraph on the Octopus:

Danny Casolaro was "suicided" in 1992 on the trail of the mother of all conspiracies, a transnational cabal manipulating world political events since World War II called The Octopus. Key to his research was a super-surveillance software called PROMIS, which was given to a crony of Ronald Reagan's as a pay off for the deliverance of $40 million to the Ayatollah Khomeini for the "October Surprise" -- holding on to the 52 American hostages in Iran until after Jimmy Carter lost the 1980 election. The crony profiteered from PROMIS (really owned by a company called Inslaw) by selling it to police agencies throughout the world for the purpose of tracking criminals and extrapolating their next moves.

Feral House plans a new edition of the book The Octopus: Secret Government and the Death of Danny Casolaro. Casolaro's own notes - those that didn't disappear the night he died - provided the basis of the book, which I co-wrote with another celebrated conspiracy writer, Jim Keith. That first edition came out in 1996 and is now a bit of a collector's item, costing about $100 on amazon if you can find a copy.

Like all great conspiracy writers, Casolaro was dismissed as a paranoid crank. The book's existence as a kind of cult classic testifies to how cutting-edge parapolitical insight is pushed into an underground of the few who care to know. It's re-emergence now, however, has an eerie, although not unsurprising, parallel with events and people easily recognizable to the wider world. The Octopus, the real one, has returned just in time for the book.

Example one: shortly after the Afghanistan war stories began circulating that Osama Bin Laden was using the PROMIS extrapolation function to avoid capture. According to these stories, it was given to him via a circuitous route from the Russians who got it from the famed turncoat spy Robert Hanssen.

Example two: the June resignation of Paul Redmond, Assistant Secretary of Information Analysis for the US Homeland Security department. Described by some as a "legendary spy catcher" - he had a role in

the capture of CIA traitor Aldrich Ames - Redmond officially resigned for "health reasons." Most took that as polite cover for Redmond's frustration with under-funding of the department, but others connected into to a rumored secret investigation Redmond was conducting of long-standing common interests between the Bush and bin Laden families and was forced to resign. Among the connections: PROMIS, also had been given to Saddam Hussein by the senior Bush in the early 1990s, and he too now uses it to avoid capture. Danny Casolaro had reported that Iraq was among the countries that originally purchased the software illegally.

Example three: Casolaro had also written about John Poindexter, one of the few people convicted in the Iran-contra scandal, a trading-with-the-enemy affair that grew out of the October Surprise. An appeals court overturned his five 1990 felony convicitions, however, and more recently Poindexter was appointed head of a new information technology unit of the Defense Advanced Research Projects Agency, the Pentagon agency that developed the internet. This new DARPA unit was called Total Information Awareness. Symbolized on its website and on a wall decoration in Poindexter's office by an eye over a pyramid - a tip of the hat that he worked for secret masters -- it's purpose was to further develop PROMIS-like software that could track every detail of every American citizen's life.

In July, Poindexter was forced to resign from the administration when it was discovered that DARPA's TOI also was developing a futures trading market based on the prediction of terrorist events. Of course, a short-selling spree on the real market made a fortune for someone just after the destruction of the World Trade Towers, so someone was already pretty good at predicting terrorist events.

Examples four and five: the central conspiracy that concerns even the major media now is the role of the Saudis in the 9/11 disasters. Casolaro had written about the al-Yamama aerospace contract umbrella that keeps US and British money flowing into Saudi Arabia. He focused on the career of arms merchant Adnan Khashoggi, who helped develop the contracts, and his partner, Manucher Ghorbanifar. Back in March, because of meetings Khashoggi set up with Bush defense adviser Richard Perle to privately profiteer from the still pending war in Iraq, Perle was also forced to resign. This month it has been reported that Pentagon underlings for the Undersecretary of Defense Douglas Feith, have been meeting with Manucher Ghorbanifar, unauthorized by Dubya, of course.

The pattern of resignations is erupting around the edges of the Octopus entity that Casolaro began to delineate back in the late 80s/early 90s. The low-level, limited hang-out resignations more or less shield the central creature from true exposure. The compliant press helps with that, of course, not having enough historical memory to see the pattern. The only memory it has of Danny Casolaro is that he had whacky conspiracy "theories".

The new book looks at all of this and much else concerning The Octopus, Casolaro's original research as well as how it illuminates what now goes on in the post 9/11 warfare world.

But we were told by Jordan Maxwell (Russell Pine) that all Fritz's information was stolen from Jordan himself haha. Now whos rotting in jail and who's on the CIA airwaves with Alex 'CIA' Jones? Precisely!

The very idea that Fritz could write an 800 page book called BE WISE AS SERPENTS, write over 1000 pages in two books about mind control, but not have it in him to write 650 pages on 13 bloodlines is absolutely insane.

Dorothy Kilgallen
Mary Pinchot Meyer

AntiSionist - January 29, 2009 09:35 PM (GMT)

Any details on them or what they wrote about?

14april2000 - January 29, 2009 09:49 PM (GMT)

I have heard to but i also heard from Jordan Maxwell (Russell Pine) himself last time i heard him on alex radio show. that all Jon Rappoport 's information to his book The Secret Behind Secret Societies : Liberation of the Planet in the 21st Century was stolen from Jordan himself. To add to this it was in the same live radio i heard it in the summer or fall of 2008.

There was a woman, I believe an SDA whose first name might have been Jeannie, who wrote a book exposing the Jesuits. She and her husband and daughter were murdered.

14april2000 - January 29, 2009 10:30 PM (GMT)

Robin cook.

Bin Laden was, though, a product of a monumental miscalculation by western security agencies. Throughout the 80s he was armed by the CIA and funded by the Saudis to wage jihad against the Russian occupation of Afghanistan. Al-Qaida, literally "the database", was originally the computer file of the thousands of mujahideen who were recruited and trained with help from the CIA to defeat the Russians.

On 6 August 2005, Cook was with Regan on the mountain Ben Stack in Sutherland, Scotland, when he suffered a severe heart attack.
paramedics at the scene had speculated that he died of a broken neck.

and if you believe he died how they said?well DR D kelly comes to mind.

British Prime Minister Tony Blair, who was on holiday at the time, did not attend the funeral. What a TOSSER.

Cook was said to be never fully committed to Blair's "New Labour" project, considering it a step too far to the right.

Yep, that's the one.

14april2000 - January 30, 2009 12:54 AM (GMT)

Dean Warwick was a whistleblower who exposed the child sacrifice of Holly and Jessica which has been blamed on Ian Huntley and was killed during a conference.

http://www.conspiracyplanet.com/chan...id=3982&page=2

Dave Starbuck Interviews Dean Warwick - Oct 2006 part 4

(in a document i found on this subject .....)On Saturday October 7th a UFO conference in Blackpool called
'Probe international'. I planned to meet former US government official Dean Warwick who was the last speaker of the afternoon and try to convince him to blow the whistle about his experiences and knowledge regarding the NSA, missing children and Extra-terrestrials.

At this time Dean had already gone public and completed an interview a couple of weeks earlier with my friend, investigative journalist Dave Starbuck. The fact of the matter was that Dean had only talked about a fraction of what he really knew. Therefore it was my intention to appeal to him and try to convince him to fully blow the whistle.

When Dean was only minutes into his talk on stage he collapsed unconscious on the floor. The crowd was stunned and mass confusion ensued. He had stopped breathing and an ambulance was called but Dean had died on stage.

When Dean collapsed on the floor a woman witnessed a man with dark hair slip out of the hall. She followed this man who then proceeded to walk down the stairs whistling merrily to himself, get into a car and make a phone call.
He was then seen laughing down the phone to whoever he was speaking to. Who walks out of a hall whistling happily to themselves and then starts laughing down the phone after a man has just collapsed and stopped breathing on stage?

All of these events point to the fact that this was an Intelligence agency 'hit' using an E.L.F (Extremely low frequency) weapon. These E.L.F weapons can be set on a 'Delta wave' and are able to shut a person's nervous system down.

Much of this technology has been perfected on the 4th level of the CIA underground Dulce facility in the New Mexico desert. The fourth level of this underground base deals with technological aspects of Human aura research, dream manipulation, hypnosis, telepathy and advanced mind control. The E.L.F weapons 'suck' the life out the victim's body and Dean literally 'fell asleep' on his feet.

I was in tears and I walked past my friend Ellis who stared me right in the eyes with a look that said "We both know exactly what happened then" . Dean Warwick was a very brave man who died fighting for our freedom. Those responsible will be held fully accountable when the time comes. That time is coming soon. The same holds true for the '5th column' agents who were trying to convince the people at Probe they were one of us. You know who you are and so do I.

The following are excerpts from the interview Dean Warwick completed with Dave Starbuck a couple of weeks before his death. This regards missing children, military/Extra-terrestrial involvement and the planned American holocaust

14april2000 - January 30, 2009 01:03 AM (GMT)

But all the famous are still alive why?

Alexandra - January 30, 2009 01:03 AM (GMT)

You know, I wonder if Ira Einhorn really killed his girlfriend or not? If the Internet was around back then he'd probably be posting here like crazy, from what I can tell. He was always Xeroxing things and sending them.

He claims that the CIA or whoever framed him. Know what? That might actually be true. I'm thinking he and his girlfriend were starting to find out a bit too much, and she was killed as a warning, and he was put in prison. He might have been right when he claimed he couldn't get a fair trial here.

14april2000 - January 30, 2009 02:27 AM (GMT)

http://da.wikipedia.org/wiki/Jon_Galster

Jon Galster

Jon Galster (26 September 1915 - 3 January 1992) was a Danish historian. He was cand. mag. in Danish and French from the University of Aarhus in 1941 and Law degree. in 1954.

Galster was a controversial historian who in the late 1950s was known for his accusations against the current Socialist government. The allegations was that P. Munch ® had negotiated capitulation Denmark already three weeks before 9 April 1940 by what was called Rostock meeting.

His allegations were primarily directed against Stauning and Munch, but he also accused a large number of officials for high treason. The allegations led to a justice, where in 1958 he was sentenced to four months in prison for libel. This penalty was increased to eight by the High Court.

Galster published in the 1990 book 9 April - a true myth, explaining his theories, but not recognized by the occupying tomorrow other historians.

102 DEAD SCIENTISTS AND MICROBIOLOGISTS
Compiled by Mark J. Harper
mjharper712@hotmail.com
http://puppstheories.com/forum
Updated: October 12, 2006
QUOTE
While some of these deaths may be purely coincidental and seem to pose no connection, many of these deaths are highly suspicious and appear not to be random acts of violence. Many are just plain murders.

If you see any incorrect dates or errors, please provide me with accurate information, Thank you!
Peace, Mark

Marconi Scientists Mystery
List compiled by Raymond A. Robinson in 'The Alien Intent'
(A Dire Warning)
http://web.archive.org/web/200302080808 ... tists.html
(Thanks Joe C. for the web archive link.)

(On this update to the Marconi File, date variances have been submitted by Cal S. and are in [brackets] - 4/9/2006)

In the 1980's over two dozen science graduates and experts working for Marconi or Plessey Defence Systems died in mysterious circumstances, most appearing to be 'suicides.' The MOD denied these scientists had been involved in classified Star Wars Projects and that the deaths were in any way connected.

Judge for yourself...

March 1982: Professor Keith Bowden, 46
--Expertise: Computer programmer and scientist at Essex University engaged in work for Marconi, who was hailed as an expert on super computers and computer-controlled aircraft.
--Circumstance of Death: Fatal car crash when his vehicle went out of control across a dual carriageway and plunged onto a disused railway line. Police maintained he had been drinking but family and friends all denied the allegation.
--Coroner's verdict: Accident.

April 1983: Lt-Colonel Anthony Godley, 49
--Expertise: Head of the Work Study Unit at the Royal College of Military Science.
--Circumstance of Death: Disappeared mysteriously in April 1983 without explanation. Presumed dead.

March 1985: Roger Hill, 49
--Expertise: Radar designer and draughtsman with Marconi.
--Circumstance of Death: Died by a shotgun blast at home.
--Coroner's verdict: Suicide.

November 19, 1985: Jonathan Wash, 29
--Expertise: Digital communications expert who had worked at GEC and at British Telecom's secret research

centre at Martlesham Heath, Suffolk.
--Circumstance of Death: Died as a result of falling from a hotel room in Abidjan, West Africa, while working for British Telecom. He had expressed fears that his life was in danger.
--Coroner's verdict: Open.

August 4, 1986: Vimal Dajibhai, 24
[NOTE: My records show this date to be Oct. 1986]
--Expertise: Computer software engineer with Marconi, responsible for testing computer control systems of Tigerfish and Stingray torpedoes at Marconi Underwater Systems at Croxley Green, Hertfordshire.
--Circumstance of Death: Death by 74m (240ft.) fall from Clifton Suspension Bridge, Bristol. Police report on the body mentioned a needle-sized puncture wound on the left buttock, but this was later dismissed as being a result of the fall. Dajibhai had been looking forward to starting a new job in the City of London and friends had confirmed that there was no reason for him to commit suicide. At the time of his death he was in the last week of his work with Marconi.
--Coroner's verdict: Open.

October 1986: Arshad Sharif, 26
--Expertise: Reported to have been working on systems for the detection of submarines by satellite.
--Circumstance of Death: Died as a result of placing a ligature around his neck, tying the other end to a tree and then driving off in his car with the accelerator pedal jammed down. His unusual death was complicated by several issues: Sharif lived near Vimal Dajibhai in Stanmore, Middlesex, he committed suicide in Bristol and, inexplicably, had spent the last night of his life in a rooming house. He had paid for his accommodation in cash and was seen to have a bundle of high-denomination banknotes in his possession. While the police were told of the banknotes, no mention was made of them at the inquest and they were never found. In addition, most of the other guests at the rooming house worked at British Aerospace prior to working for Marconi, Sharif had also worked at British Aerospace on guided weapons technology.
--Coroner's verdict: Suicide.

January 1987: Richard Pugh, 37
--Expertise: MOD computer consultant and digital communications expert.
--Circumstance of Death: Found dead in his flat in with his feet bound and a plastic bag over his head. Rope was tied around his body, coiling four times around his neck.
--Coroner's verdict: Accident.

January 12, 1987: Dr. John Brittan, 52
[NOTE: My records show this one to be 1986]
--Expertise: Scientist formerly engaged in top secret work at the Royal College of Military Science at Shrivenham, Oxfordshire, and later deployed in a research department at the MOD.
--Circumstance of Death: Death by carbon monoxide poisoning in his own garage, shortly after returning from a trip to the US in connection with his work.
--Coroner's verdict: Accident.

February 1987: David Skeels, 43
--Expertise: Engineer with Marconi.
--Circumstance of Death: Found dead in his car with a hosepipe connected to the exhaust.
--Coroner's verdict: Open.

February 1987: Victor Moore, 46
--Expertise: Design Engineer with Marconi Space and Defence Systems.
--Circumstance of Death: Died from an overdose.
--Coroner's verdict: Suicide.

February 22, 1987: Peter Peapell, 46
--Expertise: Scientist at the Royal College of Military Science. He had been working on testing titanium for it's resistance to explosives and the use of computer analysis of signals from metals.
--Circumstance of Death: Found dead allegedly from carbon monoxide poisoning, in his Oxfordshire garage. The circumstances of his death raised some elements of doubt. His wife had found him on his back with his head parallel to the rear car bumper and his mouth in line with the exhaust pipe, with the car engine running. Police were apparently baffled as to how he could have manoeuvred into the position in which he was found.
--Coroner's verdict: Open.

March 30, 1987: David Sands, 37
--Expertise: Senior scientist working for Easams of Camberley, Surrey, a sister company to Marconi. Dr. John Brittan had also worked at Camberley.
--Circumstance of Death: Fatal car crash when he allegedly made a sudden U-turn on a dual carriageway while on his way to work, crashing at high speed into a disused cafeteria. He was found still wearing his seat belt and it was discovered that the car had been carrying additional petrol cans. None of the 'normal' reasons for a possible suicide could be found.
--Coroner's verdict: Open.

April 18 1987: George Kountis, 28
--Expertise: Systems Analyst at Bristol Polytechnic.
--Circumstance of Death: Drowned the same day as Shani Warren (see below) - as the result of a car accident, his upturned car being found in the River Mersey, Liverpool.
--Coroner's verdict: Misadventure.
(Kountis' sister called for a fresh inquest as she thought 'things didn't add up'.)

April 10, 1987: Shani Warren, 26
--Expertise: Personal assistant in a company called Micro Scope, which was taken over by GEC Marconi less than four weeks after her death.
--Circumstance of Death: Found drowned in 45cm. (18in) of water, not far from the site of David Greenhalgh's death fall.
[NOTE: My records show Greenhalgh also died on April 10, 1987 when he fell off of a bridge.]
Warren died exactly one week after the death of Stuart Gooding and serious injury to Greenhalgh. She was found gagged with a noose around her neck. Her feet were also bound and her hands tied behind her back.
--Coroner's verdict: Open.
(It was said that Warren had gagged herself, tied her feet with rope, then tied her hands behind her back and hobbled to the lake on stiletto heels to drown herself.)

April 10, 1987: Stuart Gooding, 23
--Expertise: Postgraduate research student at the Royal College of Military Science.
--Circumstance of Death: Fatal car crash while on holiday in Cyprus. The death occurred at the same time as college personnel were carrying out exercises on Cyprus.

--Coroner's verdict: Accident.

April 24, 1987: Mark Wisner, 24
--Expertise: Software engineer at the MOD.
--Circumstance of Death: Found dead on in a house shared with two colleagues. He was found with a plastic sack around his head and several feet of cling film around his face. The method of death was almost identical to that of Richard Pugh some three months earlier.
--Coroner's verdict: Accident.

May 3, 1987: Michael Baker, 22
--Expertise: Digital communications expert working on a defence project at Plessey; part-time member of Signals Corps SAS.
--Circumstance of Death: Fatal accident when his car crashed through a barrier near Poole in Dorset.
--Coroner's verdict: Misadventure.

June 1987: Jennings, Frank, 60
--Expertise: Electronic Weapons Engineer with Plessey.
--Circumstance of Death: Found dead from a heart attack.
--No inquest.

January 1988: Russell Smith, 23
--Expertise: Laboratory technician with the Atomic Energy Research Establishment at Harwell, Oxfordshire.
--Circumstance of Death: Died as a result of a cliff fall at Boscastle in Cornwall.
--Coroner's verdict: Suicide.

March 25, 1988: Trevor Knight, 52
[NOTE: My records show Trevor Knight dying in May 1988.]
--Expertise: Computer engineer with Marconi Space and Defence Systems in Stanmore, Middlesex.
--Circumstance of Death: Found dead at his home in Harpenden, Hertfordshire at the wheel of his car with a hosepipe connected to the exhaust. A St.Alban's coroner said that Knight's woman friend, Miss Narmada Thanki (who also worked with him at Marconi) had found three suicide notes left by him which made clear his intentions. Miss Thanki had mentioned that Knight disliked his work but she did not detect any depression that would have driven him to suicide.
--Coroner's verdict: Suicide.

August 1988: Alistair Beckham, 50
--Expertise: Software engineer with Plessey Defence Systems.
--Circumstance of Death: Found dead after being electrocuted in his garden shed with wires connected to his body.
--Coroner's verdict: Open.

August 22, 1988: Peter Ferry, 60
--Expertise: Retired Army Brigadier and an Assistant Marketing Director with Marconi.
--Circumstance of Death: Found on 22nd or 23rd August 1988 electrocuted in his company flat with electrical

leads in his mouth.
--Coroner's verdict: Open

September 1988: Andrew Hall, 33
--Expertise: Engineering Manager with British Aerospace.
--Circumstance of Death: Carbon monoxide poisoning in a car with a hosepipe connected to the exhaust.
--Coroner's verdict: Suicide.

End of Marconi File

1988: Stanley Irving Sigal, 35
--Expertise: Top AIDS researcher at Merck's.
--Circumstance of Death: In seat number 13B on Pan American Flight that was shot down over Lockerbee Scotland.
http://web.syr.edu/~vpaf103/victims.htm

1994/95?: Dr. Jawad Al Aubaidi
--Expertise: Veterinary mycoplasma and had worked with various mycoplasmas in the 1980s at Plum Island.
--Circumstance of Death: He was killed in his native Iraq while he was changing a flat tire and hit by a truck.
Source: Patricia A. Doyle

April 1996: Dr. Clive Bruton
--Expertise: He had just produced a paper on a new strain of CJD. He was a CJD specialist who was killed before his work was announced to the public. He had been publicly arguing that deaths from CJD were going unrecognised because it was assumed that Alzheimer disease - which has indistinguishable symptoms - was the cause.
--Circumstance of Death: He died in a car crash after an apparent heart attack.

May 7, 1996: Tsunao Saitoh PhD, 46
--Expertise: He was professor of neurosciences at the University of California, San Diego. was an internationally respected researcher into the reasons for diseases such as Alzheimer's and had been doing ground-breaking research on the deformation of the amyloid brain protein (found in CJD and Alzheimer's).
--Circumstance of Death: He and his 13 year-old daughter were killed in La Jolla, California, in what a Reuters report described as a "very professionally done" shooting. He was dead behind the wheel of the car, the side window had been shot out, and the door was open. His daughter appeared to have tried to run away and she was shot dead, also.

Dec 25, 1997: Sidney Harshman, 67
--Expertise: Professor of microbiology and immunology.
"He was the world's leading expert on staphylococcal alpha toxins," according to Conrad Wagner, professor of biochemistry at Vanderbilt and a close friend of Professor Harshman. "He also deeply cared for other people and was always eager to help his students and colleagues."
--Circumstance of Death: Complications of diabetes

July 10, 1998: Elizabeth A. Rich, M.D., 46
--Expertise: An associate professor with tenure in the pulmonary division of the Department of Medicine at CWRU and University Hospitals of Cleveland. She was also a member of the executive committee for the Center for AIDS Research and directed the biosafety level 3 facility, a specialized laboratory for the handling of HIV, virulent TB bacteria, and other infectious agents.
--Circumstance of Death: Killed in a traffic accident while visiting family in Tennessee

September 1998: Jonathan Mann, 51
--Expertise: Founding director of the World Health Organisation's global Aids programme and founded Project SIDA in Zaire, the most comprehensive Aids research effort in Africa at the time, and in 1986 he joined the WHO to lead the global response against Aids. He became director of WHO's global programme on Aids which later became the UNAids programme. He then became director of the Francois-Xavier Bagnoud Center for Health and Human Rights, which was set up at Harvard School of Public Health in 1993. He caused controversy earlier this year in the post when he accused the US National Institutes of Health of violating human rights by failing to act quickly on developing Aids vaccines.
--Circumstance of Death: Died in the Swissair Flight 111 crash in Canada.

March 2000: Larry C. Ford
--Expertise: Served as a consultant to both the CIA and the chemical and biological-weapons program of the South African Defense Forces, headed by Wouter Basson. His contributions to Basson's program included lectures on converting ordinary items into lethal biological weapons.
He provided samples of virulent, designer strains of cholera, anthrax, botulism, plague, and malaria, as well as a bacteria he claimed had been mutated to be "pigment specific" for the white minority government of South Africa.
http://www.edwardhumes.com/articles/medicine.shtml
--Circumstance of Death: Died of a shotgun blast at his home in Irvine, Orange County, California. His death was later ruled a suicide.
http://www.visioncircle.org/archive/000055.html

April 15, 2000: Walter W. Shervington, M.D., 62
--Expertise: An extensive writer/ lecturer/ researcher about mental health and AIDS in the African American community.
--Circumstance of Death: Died of cancer at Tulane Medical Hospital.

July 16, 2000: Mike Thomas, 35
--Expertise: A microbiologist at the Crestwood Medical Center in Huntsville.
--Circumstance of Death: Died a few days after examining a sample taken from a 12-year-old girl who was diagnosed with meningitis and survived.

November 19, 2000: Dr. Fred Knauert, 57
--Expertise: He was a civilian scientist who served the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID) for 17 years.
--Circumstance of Death: Died suddenly at his home.

December 25, 2000: Linda Reese, 52
--Expertise: Microbiologist working with victims of meningitis.

--Circumstance of Death: Died three days after she studied a sample from Tricia Zailo, 19, a Fairfield, N.J., resident who was a sophomore at Michigan State University. Tricia Zailo died Dec. 18, a few days after she returned home for the holidays.

February 1, 2001: Dr. Shmuel Gillis, 42
--Expertise: A senior hemotologist at Hadassah Hospital Ein Kerem in Jerusalem who treated patients suffering from leukemia and lymphoma regardless of ethnic or religious orgin.
--Circumstance of Death: Killed by 11 gunshots fired from a passing car on a section of the Jerusalem-Hebron Highway.

February 16th, 2001: Dr Joe Gibbs, 76
--Expertise: An expert on neurological diseases who helped show that maladies like mad cow disease and scrapie are infectious rather than genetic.
--Circumstance of Death: Died of a heart attack while in a hospital in Washington.

March 2001: Dr. Trudy L. Bush, 52
--Expertise: Professor of epidemiology and preventive medicine at the University of Maryland School of Medicine whose work in the field of women's health brought her international acclaim.
--Circumstance of Death: Died of undetermined causes at her home.

May 7, 2001: Professor Janusz Jeljaszewicz
--Expertise: Expert in Staphylococci and Staphylococcal Infections. His main scientific interests and achievements were in the mechanism of action and biological properties of staphylococcal toxins, and included the immunomodulatory properties and experimental treatment of tumours by Propionibacterium.

November 2001: Yaacov Matzner, 54
--Expertise: Dean of the Hebrew University-Hadassah Medical School in Jerusalem and chairman of the Israel Society of Hematology and Blood Transfusions, was the son of Holocaust survivors. One of the world's experts on blood diseases including familiar Mediterranean fever (FMF), Matzner conducted research that led to a genetic test for FMF. He was working on cloning the gene connected to FMF and investigating the normal physiological function of amyloid A, a protein often found in high levels in people with blood cancer.
--Circumstance of Death: Professors Yaacov Matzner and Amiram Eldor were on their way back to Israel via Switzerland when their plane came down in dense forest three kilometres short of the landing field.

November 2001: Professor Amiram Eldor, 59
--Expertise: Head of the haematology institute, Tel Aviv's Ichilov Hospital and worked for years at Hadassah-University Hospital's haematology department but left for his native Tel Aviv in 1993 to head the haematology institute at Ichilov Hospital. He was an internationally known expert on blood clotting especially in women who had repeated miscarriages and was a member of a team that identified eight new anti-clotting agents in the saliva of leeches.
--Circumstance of Death: Professors Yaacov Matzner and Amiram Eldor were on their way back to Israel via Switzerland when their plane came down in dense forest three kilometres short of the landing field.

November 6, 2001: Jeffrey Paris Wall, 41

--Expertise: He was a biomedical expert who held a medical degree, and he also specialized in patent and intellectual property.
--Circumstance of Death: Mr. Walls body was found sprawled next to a three-story parking structure near his office. He had studied at the University of California, Los Angeles.

Nov. 16, 2001: Don C. Wiley, 57
--Expertise: One of the foremost microbiologists in the United States. Dr. Wiley, of the Howard Hughes Medical Institute at Harvard University, was an expert on how the immune system responds to viral attacks such as the classic doomsday plagues of HIV, ebola and influenza.
--Circumstance of Death: Police found his rental car on a bridge outside Memphis, Tenn. His body was found Dec. 20 in the Mississippi River.

Nov. 21, 2001: Vladimir Pasechnik, 64
--Expertise: World-class microbiologist and high-profile Russian defector; defected to the United Kingdom in 1989, played a huge role in Russian biowarfare and helped to figure out how to modify cruise missiles to deliver the agents of mass biological destruction.
--Background: founded Regma Biotechnologies company in Britain, a laboratory at Porton Down, the country´s chem-bio warfare defense establishment. Regma currently has a contract with the U.S. Navy for "the diagnostic and therapeutic treatment of anthrax".
--Circumstance of Death: The pathologist who did the autopsy, and who also happened to be associated with Britain´s spy agency, concluded he died of a stroke. Details of the postmortem were not revealed at an inquest, in which the press was given no prior notice. Colleagues who had worked with Pasechnik said he was in good health.

Dec. 10, 2001: Robert M. Schwartz, 57
--Expertise: Expert in DNA sequencing and pathogenic micro-organisms, founding member of the Virginia Biotechnology Association, and the Executive Director of Research and Development at Virginia´s Center for Innovative Technology in Herndon.
--Circumstance of Death: stabbed and slashed with what police believe was a sword in his farmhouse in Leesberg, Va. His daughter, who identifies herself as a pagan high priestess, and several of her fellow pagans have been charged.

Dec. 14, 2001: Nguyen Van Set, 44
--Expertise: animal diseases facility of the Commonwealth Scientific and Industrial Research Organization had just come to fame for discovering a virulent strain of mousepox, which could be modified to affect smallpox.
--Circumstance of Death: died at work in Geelong, Australia, in a laboratory accident. He entered an airlocked storage lab and died from exposure to nitrogen.

January 2002: Ivan Glebov and Alexi Brushlinski.
--Expertise: Two microbiologists. Both were well known around the world and members of the Russian Academy of Science.
--Circumstance of Death: Glebov died as the result of a bandit attack and Brushlinski was killed in Moscow.

January 5, 2002: Dr. Graham Ryder, 52
--Expertise: A Staff Scientist at USRA's Lunar and Planetary Institute in Houston who was a premier lunar scientist that pioneered many of our most important concepts about the Moon and its evolution.

--Circumstance of Death: Died suddenly from cancer.

January 28, 2002: David W. Barry, 58
--Expertise: Scientist who codiscovered AZT, the antiviral drug that is considered the first effective treatment for AIDS.
--Circumstance of Death: unknown

Feb. 9, 2002: Victor Korshunov, 56
--Expertise: Expert in intestinal bacteria of children around the world
--Circumstance of Death: bashed over the head near his home in Moscow.

Feb. 14, 2002: Ian Langford, 40
--Expertise: expert in environmental risks and disease.
--Circumstance of Death: found dead in his home near Norwich, England, naked from the waist down and wedged under a chair.

Feb. 28, 2002: Tanya Holzmayer, 46
--Expertise: a Russian who moved to the U.S. in 1989, focused on the part of the human molecular structure that could be affected best by medicine.
--Circumstance of Death: killed by fellow microbiologist Guyang (Matthew) Huang, who shot her seven times when she opened the door to a pizza delivery. Then he shot himself.

Feb. 28, 2002: Guyang Huang, 38
--Expertise: Microbiologist
--Circumstance of Death: Apparently shot himself after shooting fellow microbiologist, Tanya Holzmayer, seven times.

March 24, 2002: David Wynn-Williams, 55
--Expertise: Respected astrobiologist with the British Antarctic Survey, who studied the habits of microbes that might survive in outer space.
--Circumstance of Death: Died in a freak road accident near his home in Cambridge, England. He was hit by a car while he was jogging.

March 25, 2002: Steven Mostow, 63
--Expertise: Known as "Dr. Flu" for his expertise in treating influenza, and a noted expert in bioterrorism of the Colorado Health Sciences Centre.
--Circumstance of Death: died when the airplane he was piloting crashed near Denver.

August 05, 2002: David R. Knibbs, PhD., 49
--Expertise: Director of Electron Microscopy at Hartford Hospital and had a doctorate in pathobiology from the University of Connecticut. He also served as an adjunct faculty member at the University of Hartford.
--Circumstance of Death: He collapsed and died after an evening
run (one of his joys in life).

Nov. 12, 2002: Benito Que, 52
--Expertise: Expert in infectious diseases and cellular biology at the Miami Medical School
--Circumstance of Death: Que left his laboratory after receiving a telephone call. Shortly afterward he was found comatose in the parking lot of the Miami Medical School. He died without regaining consciousness. Police said he had suffered a heart attack. His family insisted he had been in perfect health and claimed four men attacked him. But, later, oddly, the family inquest returned a verdict of death by natural causes.

April 2003: Carlo Urbani, 46
--Expertise: A dedicated and internationally respected Italian epidemiologist, who did work of enduring value combating infectious illness around the world.
--Circumstance of Death: Died in Bangkok from SARS (severe acute respiratory syndrome) - the new disease that he had helped to identify. Thanks to his prompt action, the epidemic was contained in Vietnam. However, because of close daily contact with SARS patients, he contracted the infection. On March 11, he was admitted to a hospital in Bangkok and isolated. Less than three weeks later he died.

June 24, 2003: Dr. Leland Rickman of UCSD, 47
--Expertise: An expert in infectious disease who helped the county prepare to fight bioterrorism after Sept. 11.
--Circumstance of Death: He was in the African nation of Lesotho with Dr. Chris Mathews of UCSD, the director of the university's Owen Clinic for AIDS patients. Dr. Rickman had complained of a headache and had gone to lie down. When he didn't appear for dinner, Mathews checked on him and found him dead. A cause has not yet been determined.

July 18, 2003: Dr. David Kelly, 59
--Expertise: Biological warfare weapons specialist, senior post at the Ministry of Defense, an expert on DNA sequencing when he was head of microbiology at Porton Down and worked with two American scientists, Benito Que, 52, and Don Wiley, 57.
--Helped Vladimir Pasechnik found Regma Biotechnologies, which has a contract with the U.S. Navy for "the diagnostic and therapeutic treatment of anthrax"
--Circumstance of Death: He was found dead after allegedly slashing his wrists and throat and then dragging himself a half mile away in a wooded area near his home at Southmoor, Oxfordshire while he was out for his regular walk.

Oct 11, 2003: Michael Perich, 46
--Expertise: LSU professor who helped fight the spread of the West Nile virus. Perich worked with the East Baton Rouge Parish Mosquito Control and Rodent Abatement District to determine whether mosquitoes in the area carried West Nile.
--Circumstance of Death: Walker Police Chief Elton Burns said Sunday that Perich of 5227 River Bend Blvd., Baton Rouge, crashed his Ford pickup truck about 4:30 a.m. Saturday, while heading west on Interstate 12 in Livingston Parish. Perich's truck veered right off the highway about 3 miles east of Walker, flipped and landed in rainwater, Burns said. Perich, who was wearing his seat belt, drowned. The cause of the crash is under investigation, Burns said.
"Mike is one of the few entomologists with the experience to go out and save lives today."
~ Robert A. Wirtz, chief of entomology at the federal Centers for Disease Control and Prevention

November 22, 2003: Robert Leslie Burghoff, 45

--Expertise: He was studying the virus that was plaguing cruise ships until he was killed by a mysterious white van in November of 2003
--Circumstance of Death: Burghoff was walking on a sidewalk along the 1600 block of South Braeswood when a white van jumped the curb and hit him at 1:35 p.m. Thursday, police said. The van then sped away. Burghoff died an hour later at Memorial Hermann Hospital.

December 18, 2003: Robert Aranosia, 61
--Expertise: Oakland County deputy medical examiner
--Circumstance of Death: He was driving south on I-75 when his pickup truck went off the freeway near a bridge over the Kawkawlin River. The vehicle rolled over several times before landing in the median. Aranosia was thrown from the vehicle and ended up on the shoulder of the northbound lanes.

January 6, 2004: Dr Richard Stevens, 54
--Expertise: A haematologist. (Haematologists analyse the cellular composition of blood and blood producing tissues eg bone marrow)
--Circumstance of Death: Disappeared after arriving for work on 21 July, 2003. A doctor whose disappearance sparked a national manhunt, killed himself because he could not cope with the stress of a secret affair, a coroner has ruled.

January 23 2004: Dr. Robert E. Shope, 74
--Expertise: One of the world's top experts on viruses and infectious illnesses who was the principal author of a highly publicized 1992 report by the National Academy of Sciences warning of the possible emergence of new and unsettling infectious illnesses. He had accumulated his own collection of virus samples gathered from all over the world and worked on a Defense Department project to develop antidotes to viral agents that terrorists might use.
--Circumstance of Death: The cause was complications of a lung transplant he received in December, said his daughter Deborah Shope of Galveston. Dr. Shope had pulmonary fibrosis, a disease of unknown origin that scars the lungs.

January 24 2004: Dr. Michael Patrick Kiley, 62
--Expertise: One of the world's leading microbiologists and an expert in developing and overseeing multiple levels of biocontainment facilities. He was at the forefront in the early studies of Lassa fever, the Ebola virus and mad cow disease while at the Centers for Disease Control in Atlanta, Ga.
--Circumstance of Death: Died of massive heart attack. Coincidently, both Dr. Shope and Dr. Kiley were working on the lab upgrade to BSL 4 at the UTMB Galvaston lab for Homeland Security. The lab would have to be secure to house some of the deadliest pathogens of tropical and emerging infectious disease as well as bioweaponized ones.

March 13, 2004: Vadake Srinivasan
--Expertise: Was one of the most-accomplished and respected industrial biologists in academia, and held two doctorate degrees.
--Circumstance of Death: He died in a mysterious single car accident in Baton Rouge, La. Crashed car into a guard rail and ruled a stroke.

April 12, 2004: Ilsley Ingram, 84
--Expertise: Director of the Supraregional Haemophilia Reference Centre and the Supraregional Centre for the

Diagnosis of Bleeding Disorders at the St. Thomas Hospital in London.
--Circumstance of Death: unknown

May 5, 2004: William T. McGuire, 39
--Expertise: NJ University Professor and Senior programmer analyst and adjunct professor at the New Jersey Institute of Technology in Newark.
--Circumstance of Death: His dismembered body was found floating in three suitcases in the Chesapeake Bay.

May 14, 2004: Dr. Eugene F. Mallove, 56
--Expertise: Mallove was well respected for his knowledge of cold fusion. He had just published an open letter outlining the results of and reasons for his last 15 years in the field of new energy research. Dr. Mallove was convinced it was only a matter of months before the world would actually see a free energy device.
--Circumstance of Death: Died after being beaten to death during an alleged robbery.

May 25, 2004: Antonina Presnyakova
--Expertise: Former Soviet biological weapons laboratory in Siberia --Circumstance of Death: Died after accidentally sticking herself with a needle laced with Ebola.

June 22, 2004: Thomas Gold, 84
--Expertise: He was the founder, and for twenty years the director, of the Cornell Center for Radiophysics and Space Research, where he was a close colleague of Planetary Society co-founder Carl Sagan. Gold was famous for his provocative, controversial, and sometimes outrageous theories. Gold’s theory of the deep hot biosphere holds important ramifications for the possibility of life on other planets, including seemingly inhospitable planets within our own solar system. Gold sparked controversy in 1955 when he suggested that the Moon's surface is covered with a fine rock powder.
--Circumstance of Death: Died of heart failure.

June 24, 2004: Dr. Assefa Tulu, 45
--Expertise: Dr. Tulu joined the health department in 1997 and served for five years as the county's lone epidemiologist. He was charged with tracking the health of the county, including the spread of diseases, such as syphilis, AIDS and measles. He also designed a system for detecting a bioterrorism attack involving viruses or bacterial agents. Tulu often coordinated efforts to address major health concerns in Dallas County, such as the West Nile virus outbreaks of the past few years, and worked with the media to inform the public.
--Circumstance of Death: Dallas County's chief epidemiologist, was found at his desk, died of a stroke.

June 27, 2004: Dr Paul Norman, Of Salisbury, Wiltshire, 52
--Expertise: He was the chief scientist for chemical and biological defence at the Ministry of Defence's laboratory at Porton Down, Wiltshire. He travelled the world lecturing on the subject of weapons of mass destruction.
--Circumstance of Death: Died when the Cessna 206 crashed shortly after taking off from Dunkeswell Airfield on Sunday. A father and daughter also died at the scene, and 44-year-old parachute instructor and Royal Marine Major Mike Wills later died in the hospital.
http://news.bbc.co.uk/1/hi/england/wilt ... 860995.stm

June 29, 2004: John Mullen, 67
--Expertise: A nuclear research scientist with McDonnell Douglas.
--Circumstance of Death: Died from a huge dose of poisonous arsenic.
(Note: McDonnell Douglas did not exist in 2004. It merged with Boeing in 1997.)

July 1, 2004: Edward Hoffman, 62
--Expertise: Aside from his role as a professor, Hoffman held leadership positions within the UCLA medical community. Worked to develop the first human PET scanner in 1973 at Washington University in St. Louis.
--Circumstance of Death: unknown

July 2, 2004: Larry Bustard, 53
--Expertise: A Sandia scientist who helped develop a foam spray to clean up congressional buildings and media sites during the anthrax scare in 2001. Worked at Sandia National Laboratories in Albuquerque. His team came up with a new technology used against biological and chemical agents.
--Circumstance of Death: unknown

July 6, 2004: Stephen Tabet, 42
--Expertise: An associate professor and epidemiologist at the University of Washington. A world-renowned HIV doctor and researcher who worked with HIV patients in a vaccine clinical trial for the HIV Vaccine Trials Network.
--Circumstance of Death: Died of an unknown illness

July 21, 2004: Dr Bassem al-Mudares
--Expertise: He was a phD chemist
--Circumstance of Death: His mutilated body was found in the city of Samarra, Iraq and had been tortured before being killed.

July 21, 2004: Dr. John Badwey 54
--Expertise: Scientist and accidental politician when he opposed disposal of sewage waste program of exposing humans to sludge. Biochemist at Harvard Medical School specializing in infectious diseases.
--Circumstance of Death: Suddenly developed pneumonia like symptoms then died in two weeks.

August 12, 2004: Professor John Clark
--Expertise: Head of the science lab which created Dolly the sheep. Prof Clark led the Roslin Institute in Midlothian, one of the world's leading animal biotechnology research centres. He played a crucial role in creating the transgenic sheep that earned the institute worldwide fame.
--Circumstance of Death: He was found hanging in his holiday home.

September 5, 2004: Mohammed Toki Hussein al-Talakani, 40
--Expertise: Iraqi nuclear scientist. He was a practising nuclear physicist since 1984.
--Circumstance of Death: He was shot dead in Mahmudiya, south of Baghdad.

September 27, 2004: Dr. John E. Mack, 74

--Expertise: Professor John E Mack was an eminent Harvard psychiatrist, psychoanalyst and Pulitzer Prize winner who turned the academic community upside down because he wanted to publish his research in which he said that people who claimed they had been abducted by aliens, were not crazy at all.
--Circumstance of Death: While traveling on foot in North London from the tube station, he was struck by an alleged drunk driver.
The Author of "Abduction" and "Passport to the Cosmos: Human Transformation and Alien Encounters"

October 13, 2004: Matthew Allison, 32
--Expertise: (please help provide information - thank you MJH)
--Circumstance of Death: Fatal explosion of a car parked at an Osceola County, Fla., Wal-Mart store was no accident, Local 6 News has learned. Found inside a burned car. Witnesses said the man left the store at about 11 p.m. and entered his Ford Taurus car when it exploded. Investigators said they found a Duraflame log and propane canisters on the front passenger's seat.

November 2, 2004: John R. La Montagne
--Expertise: Head of US Infectious Diseases unit under Tommie Thompson. Was NIAID Deputy Director.
--Circumstance of Death: Died while in Mexico, no cause stated.

December 21, 2004: Taleb Ibrahim al-Daher
--Expertise: Iraqi nuclear scientist
--Circumstance of Death: He was shot dead north of Baghdad by unknown gunmen. He was on his way to work at Diyala University when armed men opened fire on his car as it was crossing a bridge in Baqouba, 57 km northeast of Baghdad. The vehicle swerved off the bridge and fell into the Khrisan river. Al-Daher, who was a professor at the local university, was removed from the submerged car and rushed to Baqouba hospital where he was pronounced dead.

December 29, 2004: Tom Thorne and Beth Williams
--Expertise: Two wild life scientists, Husband-and-wife wildlife veterinarians who were nationally prominent experts on chronic wasting disease and brucellosis
--Circumstance of Death: They were killed in a snowy-weather crash on U.S. 287 in northern Colorado.

January 7, 2005: Jeong H. Im, 72
--Expertise: A retired research assistant professor at the University of Missouri-Columbia. Primarily a protein chemist.
--Circumstance of Death: He was stabbed several times and his body was found in the trunk of his burning white, 1995 Honda inside the Maryland Avenue parking garage.

January 24, 2005: Roger L. Blair, 54
--Expertise: He worked for the Kennedy Space center as a micro-biologist and most recently for Wuesthoff Medical Center as a Medical Laboratory Technician.
--Circumstance of Death: Died suddenly

February 8, 2005: Geetha Angara, 43
--Expertise: She was a senior chemist with a doctorate from New York University.

--Circumstance of Death: Divers found her body in a 35-foot-deep water treatment tank where she was doing water quality tests at the Passaic Valley Water Commission plant in Totowa.

March 11, 2005: Hiram Graybill Daniel Jr., 61
--Expertise: For 36 years, his day job was working as an epidemiologist for the Georgia Department of Community Health, combating sexually transmitted diseases.
--Circumstance of Death: Died as a result of injuries sustained in an automobile accident.

March 29, 2005: Professor Carlos Hormaeche, 64
--Expertise: A leading international expert in microbiology and vaccine
development. From 1994 to 2002, he was professor and head of the microbiology department at Newcastle University.
--Circumstance of Death: Died in a microlight aeroplane accident in Uruguay.

April 5, 2005: Barbara Kalow, 45
--Expertise: A FEDERAL government veterinary scientist and was a researcher before being hired by the feds in 1992 as a meat inspector.
She then moved to veterinary biologics and was promoted to the science branch to advise on animal health issues.
--Circumstance of Death: She died of asphyxiation after being smothered by a pillow in her hotel room while on vacation in Arizona.

April 18, 2005: Douglas Passaro, 43
--Expertise: He was an associate professor of epidemiology at the University of Illinois at Chicago School of Public Health and had been an outbreak investigator with the Epidemic Intelligence Service for the Centers for Disease Control and Prevention before completing an Infectious Diseases Fellowship at Stanford University in 2001.
--Circumstance of Death: Died suddenly at his Oak Park home.

May 8, 2005: David Banks, 55
--Expertise: He was the principal scientist with Biosecurity Australia and was involved in containing pest and disease threats. His primary mission was protecting livestock and plants in the country, and keeping diseases from crossing into Australia. He was an expert in the propagation of diseases by insect vectors, among other things.
--Circumstance of Death: He died along with 15 other people when the commuter plane he was traveling in went down in Queensland, Australia.

May 8, 2005: Ibrahim Ali, (*age unknown)

--Expertise: Associate Professor of Pharmacology and Toxicology Director Biomedical Research Facility Ponce School of Medicine Ponce, Puerto Rico.
--Circumstance of Death: The Medical School reported that he had collapsed from a massive heart attack, and that in his Will he had left everything to the Medical School. He had been taking medicine for diabetes but was otherwise in good health with no heart problems. The family has been denied numerous requests for copies of the coronors report, Will and probate with no success.

May 20, 2005: Robert J. Lull, 64
--Expertise: A prominent physician at San Francisco General Hospital who once headed the San Francisco Medical Society. Lull focused on improvements in diagnosis and treatment of thyroid cancer. Lull was a highly revered expert in the field of nuclear medicine, a specialty that performs diagnostic screens such as bone scans for cancer patients. Last year, Lull lectured in San Francisco about the threat of nuclear terrorism.
--Circumstance of Death: He was found stabbed to death inside the doorway of his Diamond Heights home.

June 7, 2005: Leonid Strachunsky (age unknown)
--Expertise: World Health Organization expert and director of the Anti-Microbe Therapy Research Institute who specialized in creating microbes resistant to biological weapons, to the hepatitis outbreak.
--Circumstance of Death: He was found dead in his hotel room in Moscow, where he came from Smolensk en route to the United States. He had been hit on the head with a champagne bottle, and some of his possessions were missing.

July 16 2005: William Taylor, 62
--Expertise: A former chief scientist of NASA's Space Station Freedom who was also president of INSPIRE -- Interactive NASA Space Physics Ionosphere Radio Experiments -- one of the pioneering successes in NASA Sun-Earth Connection Education.
--Circumstance of Death: Died of a heart attack at his Washington home.

May 31, 2006: Yoram Kaufman, 57
--Expertise: He was a leading scientist at NASA's Goddard Space Flight Center whose research led to greater understanding of global warming. His primary fields were meteorology and climate change, with a specialty in analyzing aerosols - airborne solid and liquid particles in the atmosphere. He wrote more than 200 scientific papers, found ways to measure aerosols to determine whether they were caused by humans or occurred naturally, and he was working to understand their ultimate effect on Earth's warming climate.
--Circumstance of Death: He was seriously injured after an automobile struck him while he was riding a bicycle and died at Prince George's Hospital Center in Maryland.

July 14, 2006: Christophe Merieux, 39
--Expertise: He was the vice president of French pharmaceutical group bioMerieux who was kidnapped as a child and his father paid 20 million francs for his safe return. BioMerieux was founded in 1963 by Merieux's grandfather, Charles. The family Institute Marcel-Merieux was founded in 1897. It is widely considered a pioneer in industrial vaccines.
--Note: Rodolphe, Christophe's younger brother, was killed in the July 17, 1996, explosion over the Atlantic Ocean of TWA 800 flight en route from New York to Paris when a fuel tank caught fire.
--Circumstance of Death: He died of a heart attack and was found at his family home.

August 27, 2006: Mr. Phillip M. Bates, 55
--Expertise: He was a chemist for many years and worked in quality assurance at PATHEON Corporation in Cincinnati Ohio.
--Circumstance of Death: He was found shot in the head and mortally wounded on his front porch by officers responding to gunshot reports at approx. 12:30 AM.
A "kokopelli" (fertility deity) pendant was found at the scene.

MOSSAD (Israels Secret Service) Liquidates 310 Iraqi Scientists
Mathaba.net
10-31-4

More than 310 Iraqi scientists are thought to have perished at the hands of Israeli secret agents in Iraq since fall of Baghdad to US troops in April 2003, a seminar has found.

The Iraqi ambassador in Cairo, Ahmad al-Iraqi, accused Israel of sending to Iraq immediately after the US invasion 'a commando unit' charged with the killing of Iraqi scientists.

"Israel has played a prominent role in liquidating Iraqi scientists. The campaign is part of a Zionist plan to kill Arab and Muslim scientists working in applied research which Israel sees as threatening its interests," al-Iraqi said.

Mark J. Harper
October 12, 2006

At first I was rather sceptical. But this seems to be the level of research done on each death.

14april2000 - February 1, 2009 01:44 AM (GMT)

QUOTE

It`s with great sadness that we inform that Dr. Ali passed away on May 9 2005.

He will be greatly missed by Faculty members and students alike.

" But those who believe and do deeds of righteousness, We shall soon admit to Gardens, with rivers flowing beneath,- their eternal home: Therein shall they have companions pure and holy: We shall admit them to shades, cool and ever deepening. "Qur'an 4.57

Ibrahim I. Ali, DVM, Ph.D.

POSITION:

Associate Professor of Pharmacology/Toxicology and Director Biomedical Research Facility

ACADEMIC BACKGROUND :

Ph.D., Physiology and Pharmacology
College of Veterinary Medicine
The Ohio State University
June 1979

M.Sc. Physiology and Pharmacology
College of Veterinary Medicine
The Ohio State University
June 1974

D.V.M., College of Veterinary Medicine
Baghdad University
June 1970

PROFESSIONAL EXPERIENCE:

1987 – Present

Associate Professor of Pharmacology and Toxicology Director Biomedical Research Facility Ponce School of Medicine Ponce, Puerto Rico

Major Duties and Responsibilities :

Academic

Instruction in Pharmacology and Toxicology for the second year medical curriculum, including laboratory procedures and discussion.

Services

Managing and supervising all aspects of operation of the Biomedical Research Facility i.e. animal housing, feeding, care and use at the Institution.

Providing veterinary medical services.

Supervision of animal technicians including training programs.

Advisory and instruction in laboratory animal medicine and surgery, animal models and techniques in research to principle investigators, medical doctors, residents and research technicians.

Serving as a member of the Institutional Animal Care and Use Committee and reviewing all animal study

protocols.

Conducting research and problems in laboratory animal medical technology and husbandry.

TEACHING RESPONSIBILITIES :

1987 – Present

Instruction in Medical Pharmacology for the second year medical students, including cardiovascular pharmacology (digitalis glycosides and antiarrhythmic drugs), antianginal, antihypertensive, anticoagulants and antilipemics drugs, local and general anesthetics, general and specific topics in toxicology. Laboratory preparation, experimental procedures and discussion were included.

Instruction in laboratory animal medicine and surgery (including handling, housing, feeding, care and use of rats, mice, rabbits, guinea pigs, dogs, cats, etc.), animal models and techniques in research to principal investigators, medical doctors, graduate students, research and animal technicians.

Research Activities: Demonstrated and supervised graduate students on using proper handling and use of laboratory animals. Advises on anesthetic and surgical animal techniques in research. Co-advisor of two dental graduate students (using rabbits and rats). Assists in supervision of rodents colonies involved in this project.

Veterinary Pathobiology 850 : Participation in teaching slide seminar, necroscopy and anatomical pathology of laboratory animals including my personal rodent colonies involved in toxicity and carcinogenicity studies to Veterinary Medicine students.

Pharmacology Dept. Seminars and Journal Club : Participation in research related topics related to laboratory animal medicine and animal models.

Drug Metabolism 852 : Participated in teaching hepatotoxicity, carcinogenicity and cardiovascular toxicity. Demonstrated animal models in toxicity and carcinogenicity of v a r i o u s environmental agents. Rats, mice, dogs and cats were involved in these studies.

Cardiovascular Pharmacology 821 : Participated in teaching cardioglycosides, antiarrhythmic drugs and antianginal drugs and Ca ++ blockers. Effect of various digitalis and antiarrhythmic drugs were shown on dogs.

Honors :

Graduate Scholarship – Ministry of Research and Higher Education, Baghdad University, College of Veterinary Medicine (represented top 5% of veterinary class)

Honorary Society of Veterinary Medicine (Phi Zeta Delta Chapter), the Ohio State University.

Awards :

Outstanding Professor of the year (1989-90) Ponce School of Medicine
Outstanding Professor of the year (1994-95) Ponce School of Medicine
Outstanding Professor of the year (1996-97) Ponce School of Medicine
Inspirational Professor of the year - Class 2001

Field of Study :

Laboratory Animal Medicine and Pathology, Physiology, Pharmacology/Toxicology.

Area of Interest :

Laboratory Animal Medicine and Pathology, Pharmacology/Toxicology

Certifications :

Educational Commission for Foreign Veterinary Graduates (ECFVG)
Veterinary National Board Examiners
Licensed to practice veterinary medicine and surgery in the State of Ohio.
Licensed to practice veterinary medicine and surgery in Puerto Rico.
United States Department of Agriculture (USDA), Veterinarian Accreditation
Board eligible for American College of Laboratory Animal Medicine and Pathology

Research Grants :

Co-Investigator, Environmental Toxicology Program-NIH-RCMI $316,122 awarded (1990-1995)
Co-Investigator, American Heart Association-Fellowship Program ($12,000/year, 3 years duration)

The Octopus: The Secret Government and Death of Danny Casolaro
by Kenn Thomas and Jim Keith.

QUOTE

Danny Casolaro

http://en.wikipedia.org/wiki/Danny_Casolaro

Joseph Daniel Casolaro (June 16, 1947 – August 10, 1991) was an American freelance writer who was found dead in a bathtub at the Sheraton Hotel in Martinsburg, West Virginia, one day after allegedly arranging to meet a source in connection with an investigation he had referred to as "the Octopus." His research centered around a complex story called the Inslaw Affair, and a sprawling conspiracy theory supposedly connected to it.

Government officials twice ruled that Casolaro's death was a suicide. However, within days of his death, family and friends argued that he had been killed. Gary Lee of the Washington Post wrote, "Friends and relatives strongly suspect foul play, though they presented no evidence... They cited what they called the strange coincidence of Casolaro's death and his investigation into the Inslaw Affair.

Beyond Casolaro's friends and family, medical doctors, independent investigators, and U.S. Government officials (notably former Attorney General Elliot Richardson and a U.S. House of Representatives committee) have argued that Casolaro's death deserved renewed scrutiny. However, no conclusive evidence of murder has been found. David Corn of The Nation wrote, "Anomalies do not add up to a conclusive case for murder...; [the] suicide explanation is unsatisfying but not wholly implausible; the possibility of murder is intriguing but the evidence to date is not overwhelming. Casolaro's death and "the Octopus" have since entered conspiracy theory lore.

AntiSionist - March 15, 2009 01:27 AM (GMT)

QUOTE

Fitted up on phony robbery charges by the establishment and his devious wife.

This was according to Tim White. I remember seeing it in some place on the old TUM board.

Couldn't retrieve it. Wonder how he figured that out. Wouldn't surprise me. Pam Schuffert wrote an article once about three male whistleblowers all framed for spousal abuse and or taken to the cleaners in divorce court all by the same CIA woman.

Here is Cooper actually predicting his own death on an Alex Jones interview: (at ~5 minutes)

"...I don't care who likes it or who doesn't, **even if this means I have to die on my own doorstep.**"

Note: I dont post it because I want to interpret it as an conspiracy or something, I just want to share it.

How Seawater Can Power the World

Brendan Monroe
By STEWART C. PRAGER
Published: July 10, 2011
http://www.nytimes.com/2011/07/11/opinion/11Prager.html?_r=3

DEBATE about America's energy supply is heating up: gas prices are rising, ethanol is under attack and nuclear power continues to struggle in the shadow of the Fukushima disaster in Japan.

But an abundant, safe and clean energy source once thought to be the stuff of science fiction is closer than many realize: nuclear fusion. Making it a reality, however, will take significant investment from the government at a time when spending on scientific research is under threat.

Harnessing nuclear fusion, the energy that powers the sun and the stars, has been a goal of physicists worldwide since the 1950s. It is essentially inexhaustible and it can be created using hydrogen isotopes — chemical cousins of hydrogen, like deuterium — that can readily be extracted from seawater.

Fusion energy is created by fusing two atomic nuclei, in the process converting mass to energy, which appears as heat. The heat, as in conventional nuclear fission reactors, turns water into steam, which drives turbines to generate electricity, or is used to produce fuels for transportation or other uses.

Fusion energy generates zero greenhouse gases. It offers no chance of a catastrophic accident. It can be available to all nations, relying only on the Earth's oceans. When commercialized, it will transform the world's energy supply.

There's a catch. The development of fusion energy is one of the most difficult science and engineering challenges ever undertaken. Among other challenges, it requires production and confinement of a hot gas — a plasma — with a temperature around 100 million degrees Celsius.

But potential solutions to these daunting technical challenges are emerging. In one approach, known as magnetic fusion, hot plasma is confined by powerful magnets. A second approach uses large, intense lasers to bombard a frozen pellet of fusion fuel (deuterium and tritium nuclei) to heat the pellet and cause fusion to occur in a billionth of a second. Whereas magnetic fusion holds a hot plasma indefinitely, like a sun, the second approach resembles an internal combustion engine, with multiple mini-explosions (about five per second).

Once a poorly understood area of research, plasma physics has become highly developed. Scientists not only produce 100 million-degree plasmas routinely, but they control and manipulate such "small suns" with remarkable finesse. Since 1970 the power produced by magnetic fusion in the lab has grown from one-tenth of a watt, produced for a fraction of a second, to 16 million watts produced for one second — a billionfold increase in fusion energy.

Seven partners — the European Union, China, India, Japan, Russia, South Korea and the United States — have teamed up on an experiment to produce 500 million watts of fusion power for 500 seconds and longer by 2020, demonstrating key scientific and engineering aspects of fusion at the scale of a reactor.

However, even though the United States is a contributor to this experiment, known as ITER, it has yet to commit to the full program needed to develop a domestic fusion reactor to produce electricity for the American power grid. Meanwhile other nations are moving forward to implement fusion as a key ingredient of their energy security.

Indeed, fusion research facilities more modern than anything in the United States are either under construction or operating in China, Germany, Japan and South Korea. The will and enthusiasm of governments in Asia to fill their energy needs with fusion, as soon as possible, is nearly palpable.

What has been lacking in the United States is the political and economic will. We need serious public investment to develop materials that can withstand the harsh fusion environment, sustain hot plasma indefinitely and integrate all these features in an experimental facility to produce continuous fusion power.

This won't be cheap. A rough estimate is that it would take $30 billion and 20 years to go from the current state of research to the first working fusion reactor. But put in perspective, that sum is equal to about a week of domestic energy consumption, or about 2 percent of the annual energy expenditure of $1.5 trillion.

Fusion used to be an energy source for my generation's grandchildren; now, plans across the world call for a demonstration power plant in about 20 years. Fusion has the potential to help with all the emerging challenges of this still-new century: energy independence, national economic competitiveness, environmental responsibility and reduction of conflict over natural resources. It is a litmus test for the willingness of our nation to tackle the tough challenges that will shape our future. Scientists and engineers stand ready to help.

Stewart C. Prager is the director of the Princeton Plasma Physics Laboratory, a Department of Energy national laboratory, and a professor of astrophysical sciences at Princeton.

View Full Version: Why is it so hot in Hong Kong at this time

Title: Why is it so hot in Hong Kong at this time
Description: *of year?*

Alex - July 10, 2011 01:52 AM (GMT)

Ok

I was born in Hong Kong and it is very hot like a oven,but this week has got my attention,there are already more than 40 cases of death from heatstroke and death from heat induced heat related cardiac arrest,whats causing this and as well we had day that was over 37 as well

TheUnhivedMind - July 10, 2011 03:54 PM (GMT)

Look up at your skies and do you notice aerosol spraying in Hong Kong? I heard that China does not have these? Most of this weather going on is engineered by both ground based ionospheric weapons and space based platforms using scalar and laser systems.

Alex - July 11, 2011 02:55 AM (GMT)

UHM,mostly the sky is clear over Hong Kong

TheUnhivedMind - July 11, 2011 04:32 PM (GMT)

You're very lucky then but remember with so much aerosol going on around the World, everyone has the after effects just that you'll have less than we do.

Alexandra - July 11, 2011 06:48 PM (GMT)

I see those trails all the time over my town. You have a clear, sunny day, and sooner or later, here they come.

View Full Version: Daniel's 70 Weeks

Title: Daniel's 70 Weeks
Description: *not what you've been taught*

golden_oil - July 19, 2011 04:50 PM (GMT)

There is no seven-year tribulation. It is nowhere to be found in the Book of Revelation. Revelation refers to this period of time as variously as

3 1/2 years

1260 days

42 months

Daniel 9:25-26

25 *Know therefore and understand, that from the going forth of the commandment to restore and to build Jerusalem unto the Messiah the Prince shall be seven weeks, and threescore and two weeks: the street shall be built again, and the wall, even in troublous times.*

26 And after threescore and two weeks shall Messiah be cut off, but not for himself: and the people of the prince that shall come shall destroy the city and the sanctuary; and the end thereof shall be with a flood, and unto the end of the war desolations are determined.

The word, "messiah" in this passage should not be capitalized as it does not refer to the Lord Jesus Christ.

Read paragraph 3 in Elijah's message which explains it.

As for the identification of the Two Witnesses of Revelation chapter 11:1-12,

in God's Word He only gave the power to stop the rain to one person as written in I Kings 17:1, and He only gave one person the power to turn the water to blood as written in Exodus 7:17-25, so we can then understand who the two witnesses of Revelation 11:4 are: none other than Elijah and Moses.

Elijah's message:

18 July 2011,

Dear brother ..... in Christ Jesus' Name,

When you read in Daniel 9:24, it says "to anoint the most holy", that refers to Almighty God's anointed King over Israel.

All these unholy so-called Jews that are not of the seed of Abraham, Isaac and Jacob who are many at this time. All these Khazarite counterfeit Jews have to be removed from Almighty God's Promised Land along with these Arabic Ishmaelite so-called Palestinian people who claim to be Palestinian people of which they're not. Their grandparents were a nomadic people who came as intruders from across the Jordan River east of Amman, Jordan. Only the true Israelites of the seed of Abraham, Isaac and Jacob shall remain in God's Promised Land.

When you read Jeremiah 23:3-8, it speaks about a king over Israel liken to King David. Also read Ezekiel 36:24-28 and Ezekiel 37:14-18. When you read Daniel 9:25, this person spoken of is the anointed King David that will rule for 3 1/2 years, and both Moses and I will walk with him at this time. Almighty God will anoint the 144,000 persons to be His true Israelites who have been anointed by Him as written in Ezekiel 36:27 with a new spirit, born-again that is, like a giant Pentecost.

At this time there will be none of these many so-called Jews in the government and those in the corrupt Orthodox religion as bribe-takers. Israel will go under the Law of Almighty God that He wrote before Moses as written Exodus 31:18 and that I am told all the remaining true Israelites to abide in it in their daily lives to be called Almighty God's people.

After 3 1/2 years then comes the Anti-Christ and a mass of his people to fulfill what is written in Revelation 11:37, Daniel 9:26-27, and Revelation 11:7-13.

....., you want the Lord to shorten your stay upon this Earth as one of His very elect chosen and faithful few as written in Matthew 24:22-31, Mark 13:20-22 + 27, and Luke

17:22 to 37. Be ready to be gone as Satan arrives, soon.

Elijah

Messages of God's Servant Prophet Elijah are on the internet at:

Alexandra - July 20, 2011 12:37 AM (GMT)

Daniel's 70th Week

http://www.truthnet.org/endtimes/4/

4. Daniel's 70th Week (Seventieth Week)

The seventy weeks of Daniel, was a message delivered to Daniel from God, through the angel Gabriel. The message contained a blueprint for world events, revolving around Daniel's people, the Jews, and his holy city, Jerusalem. In Daniel 9:24, Gabriel informs Daniel with the completion of the 490-years on his people and city (70 Weeks), the Messianic Age[will have begun. However, before the Messianic Age, Messiah the prince will be killed or "Cutoff". According to the qualifiers, specified by Gabriel, the Messiah is cutoff on Passover, 33 A.D. (See Daniel's Timeline. #1) This corresponds with the close of 69 weeks[2] (69x7) or 483 years. From the command of the King of Persia, Artexerxes, who gave word to Nehemiah (Neh. 2:8) to rebuild the walls and gates of Jerusalem (Daniel 9:25), to The killing of Messiah the prince, was 69 weeks or 483-years. In Daniel 9:26, Gabriel informs Daniel after the Messiah the prince is killed the Temple and Jerusalem would be destroyed by a group of people, descendents of The prince who is to come. The people who came were the Romans, linking the future prince or ruler to the Roman empire.
The 69th week closes with Messiah the prince being cutoff, but the 70 weeks are not yet complete. The killing of the Messiah, stopped the prophetic clock, before it was completed. There is one week or seven-year period remaining. This seven-year period begins with the confirming of a covenant with many regarding a future Jewish Temple.

The 70th Week of Daniel's 70 weeks is a seven-year period, which begins with the agreement between the prince who is to come, a descendent of the Roman armies, and

Israel allowing the Jewish Temple to be rebuilt. Before the 70th week can be examined we need to understand its context to other events.

The Gap between the 69 and 70th week.

Gabriel informed Daniel, that a specific time period was determined (Daniel 9:24) on his people and his city. The Hebrew word for determined is Jt'j, chathak meaning to divide. The time divided, 490-years upon Daniel's people, the Jews and his holy city Jerusalem. A question is often asked, regarding the 70 weeks, why is there a gap between the 69th and 70th week? Why is the time not continuous? This is prophetic compression, where the time gap between one prophecy in one verse and second verse is separated by time, but the time is not revealed. Two good examples of this is Zechariah 9:9 and 9:10 and Isaiah 9:6 and 9:7. In verse Zech. 9:9, Messiah is seen entering Jerusalem on a donkey while in verse 10 He is seen ruling over the nations, compressing the first and second coming. In Isaiah 9:6 a child is born, a son given, in Isaiah 9:7 He is ruling on David's throne over the nations. Both Zechariah 9:9 and Isaiah 9:6 refer to the first coming of Messiah, and Zechariah 9:10 and Isaiah 9:7 refer two the second coming. Daniel 9:26 is referring the first coming of Messiah, the 70th week is completed with the second coming.

Those who argue, there is no gap between the 69th and 70th week argue the "He" who confirms the covenant in 70th week is Jesus the Messiah, who with his death after 3 ½ years of ministry caused the Temple sacrifice and offering to cease, because they no longer served a purpose.

This interpretation contrives the text to say what it does not. There are several reasons a time-gap is clearly in the context of Daniel's Seventy weeks.

· Daniel 9:26 indicates Messiah the prince will be cutoff or killed at the end to the end of the 69th week.

· After Messiah's death, the Temple and city are destroyed, 37 years later.

· The 70th week is not in the context of their destruction.

· Following the death of Messiah the prince the Temple is destroyed, but in the 70th week, a 7-year covenant is confirmed requiring a Temple for sacrifice. Therefore, a future Temple is required.

· Daniel 9:27 indicates the Prince who is to come is a covenant breaker, not a covenant keeper. To break a covenant puts the covenant breaker under the curse of the agreement. Jesus would not break a covenant he confirmed.

· Daniel 9:26 indicates the Prince who is to come is future, and the people who destroy the city as precursors to the prince who would come following the death of Messiah the prince.

· If there were no time gap, then the 490 years would be complete leaving the 490-years unfulfilled, because the period was determined on Daniel's people and city, the Jews and Jerusalem. The Jews and Jerusalem have not yet experienced the events of Daniel 9:24.

· The word determine means, dividing, the time was divided on Jerusalem and the Jews, meaning the 490-years are segmented (7 weeks+ 62 weeks + 1 week= 70 weeks).

· The stopping of the sacrifice and offering at the Temple causes God's judgment not blessing. The word consummation means complete destruction, this destruction poured out on the desolate, results from the abomination on the Temple. Therefore, this event is separate from Christ's death and covenant.

He shall bring an end to sacrifice and offering. And on the wing of abominations shall be one who makes desolate, Even until the consummation, which is determined, Is poured out on the desolate." Daniel 9:27b

Preparations for the 70th Week

1.The Gathering of Scattered Israel (See Daniel's timeline #3)

Following the destruction of the Temple in 70 A.D. Josephus records Titus' order to destroy the city,

NOW as soon as the army had no more people to slay or to plunder, because there remained none to be the objects of their fury, (for they would not have spared any, had there remained any other work to be done,) Caesar gave orders that they should now demolish the entire city and temple, but should leave as many of the towers standing.[3]

According to Josephus, over one million people perished during the destruction of Jerusalem, in 70 A.D. Many fled to Arabia, and Persia escaping Rome, while others were exiled to outskirts of the Roman Empire.

Fifty years later, in 132 A.D. Emperor Hadrian attempted to place a temple of Jupiter on the Temple Mount, the Jews revolted and rallied around Bar Kokhba, who Rabbi Akiva hailed as the Messiah. Three years later, in 135 A.D. 580,000 Jews were massacred by the Roman legions. The city was renamed Aelia Capitolina, and Judea was renamed Palestine, Jews were forbidden from entering the city. The remaining Jews were exiled

to the outer parts of the Roman Empire. The Covenant curses of Deuteronomy were active, the Jews were scattered throughout the world. The result of Messiah's the prince's rejection (Daniel 9:26)

64"Then the Lord will scatter you among all peoples, from one end of the earth to the other, and there you shall serve other gods,

Deuteronomy 28:64a

God's word also promised a day of gathering, when the Jewish people would be gathered back into the land of promise. In order for the 70th week to take place, Daniel's people the Jews need to be in Jerusalem. Gabriel, informed Daniel that the 490-year period was determined on his people and his city. There are still seven-years to be completed. They will be completed after Israel is in the land.

The gathering of dispersed Israel, is a consistent theme in the Old Testament. Moses, Isaiah, Jeremiah, Ezekiel, Hosea, Amos, Micah and Zechariah all wrote about a future day when Israel would be gathered.

3"that the Lord your God will bring you back from captivity, and have compassion on you, and gather you again from all the nations where the Lord your God has scattered you. 4"If any of you are driven out to the farthest parts under heaven, from there the Lord your God will gather you, and from there He will bring you. 5"Then the Lord your God will bring you to the land which your fathers possessed, and you shall possess it. He will prosper you and multiply you more than your fathers. [4] Deuteronomy 30:1-3

'For behold, the days are coming,' says the Lord, 'that I will bring back from captivity My people Israel and Judah,' says the Lord. 'And I will cause them to return to the land that I gave to their fathers, and they shall possess it.'…..'Therefore do not fear, O My servant Jacob,' says the Lord, 'Nor be dismayed, O Israel; For behold, I will save you from afar, And your seed from the land of their captivity. Jacob shall return, have rest and be quiet, And no one shall make him afraid. 11. For I am with you,' says the Lord, 'to save you; Though I make a full end of all nations where I have scattered you, Yet I will not make a complete end of you. But I will correct you in justice, And will not let you go altogether unpunished.' Jeremiah 30:4,10-11

8"After many days you will be visited. In the latter years you will come into the land of those brought back from the sword and gathered from many people on the mountains of Israel, which had long been desolate; they were brought out of the nations, and now all of them dwell safely. Ezekiel 38:8

These are a sampling of the scriptures regarding Israel's restoration. The events foretold are unique in Israel's history and are taking place in the present not in the past. The verses speak about a long period of desolation in the land, confirming the words of Daniel 9:26, "till the end of the war desolations are determined".

2. The need for a Jewish Temple (Daniel's Timeline #4)

In addition, to the need of the people to be in the land, prophecy also requires a future Temple to initiate the 70th week. Before a Temple can be built, the people need the will to build a Temple. Presently the Dome of the Rock stands in the way of a future Temple. Over 1.2 billion Muslims hold this location sacred, believing Mohammad ascended up to Heaven from the top of Mt. Moriah in 622 A.D.

The Muslim world has already threaten World War if the Dome of the Rock is destroyed, and the Muslim world is braced for such an event. The building of the Temple will cause a world wide conflict pitting Muslim nations and their allies against Israel and her allies.

In the Olivet Discourse, Jesus also talked about the Temple and its end-time significance. In Matthew 24:2 Jesus refers to the stones of the Temple, before the Roman destruction in 70 A.D.

2And Jesus said to them, "Do you not see all these things? Assuredly, I say to you, not one stone shall be left here upon another, that shall not be thrown down." Matthew 24:2

Later Jesus, after referring to a series of events leading to his return, refers to the book of Daniel and the Temple-Mount and events taking place in Jerusalem prior to his glorious return.

14"And this gospel of the kingdom will be preached in all the world as a witness to all the nations, and then the end will come. 15"Therefore when you see the 'abomination of desolation,' spoken of by Daniel the prophet, standing in the holy place" (whoever reads, let him understand),

Matthew 24:14-15

The book of Daniel refers to the Abomination of desolation in four chapters, (Daniel 8:13, 9:27,11:30 and 12:11). In each case, the abomination refers to the desecration of the Temple by placing an Idol, in the Most Holy, or Holy of holies.

Jesus is taking about a future desecration at the end, corresponds to Daniel's 70th week, where the Temple sacrifice is stopped, and an abomination, that brings desolation is set up. This is a future not a past event.[5] In order for this to happen there needs to be a Temple, and the desire to build a Temple.

Today in Israel, there is a growing Temple movement, who's goal is to reestablish the Temple, destroy the Dome of the Rock, and construct the Third Temple[6]. In addition to the prophetic reason there is also a practical reason for Israel to establish the Temple. The only claim Islam has on Jerusalem is the Temple-Mount where they claim Mohammed ascended into Heaven. As long as this claim is maintained, Israel and Jerusalem will always be subjected to Muslim territorial demands. The Temple will eliminate their claim to Jerusalem.

3. The Rapture, Pre-Tribulation, Mid-Tribulation or Post-Tribulation?

The word rapture is not found in the Bible, but is Latin and means "Caught up". The words "caught up" is taken from I Thessalonians 4:16-17. The event referred to is the resurrection of saved individuals, and how God will deal with those who are alive at the time. When Christ receives his church, what happens to those who did not die and are living at the time? The rapture explains the order of events. For those who believe the Bible is the inspired word of God, the rapture or resurrection of the saved is not at question, only the timing of the event.

16For the Lord Himself will descend from heaven with a shout, with the voice of an archangel, and with the trumpet of God. And the dead in Christ will rise first. 17Then we who are alive and remain shall be caught up together with them in the clouds to meet the Lord in the air. And thus we shall always be with the Lord.

I Thessalonians 4:16-17

Those read the Bible literally, believe in the establishment of a Millennium[7], a one-thousand year period of time, when the Messiah will reign over the earth. Since this is a future event, and we live prior to its fulfillment, we live in a Pre-millennial age. The return of Christ, will be the start of the Millennial Age when the saints will be rewarded for faithful service.

Prior to the return of Christ, the Bible refers to a period of conflict, this period is known as the tribulation period, according to the 70th week of Daniel, the period will last 7-years, some see the period lasting 3 ½ years. This period is period unique in the history of the earth, unparalleled in evil and brutality, never to occur again, the time is also known as Jacob's trouble. (See also Daniel 12:1, Jeremiah 30:7)

21"For then there will be great tribulation, such as has not been since the beginning of the world until this time, no, nor ever shall be. 22"And unless those days were shortened, no flesh would be saved; but for the elect's sake those days will be shortened. Matthew 24:21-22

And there shall be a time of trouble, Such as never was since there was a nation, Even

to that time. And at that time your people shall be delivered, Every one who is found written in the book. Daniel 12:1

The question is when does the rapture happen in relation to this time of trouble, the tribulation? There are three main views of the timing of these events, Pre-tribulation, Mid-tribulation and Post-Tribulation.

Pre-tribulation: believes before the tribulation period, Christ calls his church out of the world, so they will not suffer the wrath of God's judgment with the world.

Mid-tribulational: The belief that the rapture will occur at the midpoint of the tribulation period, prior to the great tribulation when God pours out his wrath on the earth.

Post-tribulational: The belief that Israel and the Church will both go through the Tribulation period, and when the period is complete, before Christ returns to judge the world he catches up His church.

Israel and the Church

One of the main question regarding the rapture is the relationship between Israel and the Church.

God's relationship with the church and natural Israel are separated by different dispensations[8]. The church is grafted into Israel's covenant during the church-age[9]. In the future, God will again deal with Israel, the descendents of Jacob. This future dealing with Israel will be during the 70th week. The prophetic clock will start again when the fullness of the Gentiles is complete.

25For I do not desire, brethren, that you should be ignorant of this mystery, lest you should be wise in your own opinion, that blindness in part has happened to Israel until the fullness of the Gentiles has come in. 26And so all Israel will be saved, as it is written: "The Deliverer will come out of Zion, And He will turn away ungodliness from Jacob;

27For this is My covenant with them, When I take away their sins."

Romans 11:25-27

This church-age is in the letters to the seven-churches in the book of Revelations chapters 2 and 3. In Revelation, the seven-churches, can be divided into seven church periods, covering the span from the Apostolic Church to the Lukewarm Church, prior to the return of Christ.

The Prince to Come (Daniel’s Timeline #4)

The 26th verse in Daniel 9, introduces us to the prince who is to come and his descendents who destroy Jerusalem and the Temple. The prince who is to come is a descendent of the Roman Empire. In addition, Daniel informs us the individual will make a covenant with many for seven-years. We know from the context of the verse, the covenant will regard a Jewish Temple, the Third-Temple.

Scripture, specifically the books of Daniel and Revelation tell us additional information about this coming world leader.

· He will come as the leader of a powerful nation, which will guarantee Israel’s right to build the Temple on the third most holy location to Islam. (Daniel 9:27)

· He will be both a military and spiritual leader. (Revelation 13)

· He will persecute and kill those who do not submit to his system. (Daniel 7:25, Revelation 13:15)

· He will have a false-prophet who will do signs to deceive the nations. (Revelation 13:13)

· He will be a friend to Israel at the beginning. (Daniel 9:27)

· He will invade Israel, and conquer the city Jerusalem and desecrate the New Temple after 3.5 years. (Revelation 11:7, Matthew 24:15, Zechariah 14:2)

This individual will at the end of the 70th week period, lead the nations of the world against God, by gathering the world’s armies to the land of Israel. The gathering point is the hill of Megiddo and known as Armageddon.

The 70th Week

The positioning of Israel to begin the 70th requires several important steps before this period can begin. Some steps are implicitly stated in scripture, some inferred and others we can only speculate. This we clearly know from scripture must happen before the 70th week can begin.

· Israel must be restored to the land

· There will be a conflict between the Islam and the Israel, before the 70th can begin.

· Israel must have the desire to rebuild the Temple

· The prince who is to come will be a world leader and a descendent of Rome.

· The Dome of the Rock must be removed to make way for the Third-Temple.

The First Half of Daniel's Seventh Week

Then he shall confirm a covenant with many for one week; Daniel 9:27a

(See Daniel's timeline #5)

The tribulation period is a seven-year period, the 70th seven of the 490-year period. The prophetic clock stopped at the "Cutting off" of Messiah the Prince. The clock starts again when the prince who is to come confirms the seven-year agreement with many. The word "confirm" in Hebrew is rb'G, Gabar and means to prevail, have strength, be strong, be powerful, be mighty. This treaty's is effective by using force.

The only way a treaty like this could be confirmed would be through military might, the use of force, the prince who is to come will enforce peace through military might. Revelation chapters 6 to 9 corresponds with the first 3.5 years of Daniel's 70th week.

In Revelation chapters 6 to 9, we some significant events occur during this period. In Heaven on the throne is Christ, who is opening the seven-sealed scroll, which no man could open, but Christ. When the seals are opened, we see what is transpiring on the earth.

The first four seals describe a false peace, followed by war, one quarter of the Earth's population dies during this time. The series of events in these first four seals describes a nuclear war, and its aftermath. Christians throughout the world will die for their faith. The world will go through geological and cosmic disturbances.

In the first half of the tribulation period, Jews who rejected Jesus Christ before will suddenly realize Jesus is the Messiah and will begin to spread the Gospel (Revelation 7:1-8). In Jerusalem two strange individuals, will be proclaiming God's judgment on the Earth (Revelation 11:9-10). They torment those living on the earth, by their proclamations about Christ, they will be safe and secure in Jerusalem for the first half of the tribulation.

Again, we see war break out on the world, in the first-half of the tribulation and another 1/3 of the population dies from war. Added to the problems of war, asteroids and comets strike the earth destroying water and food supplies. Earthquakes shake the foundations of the earth. These earthly events correspond with the blowing of the seven trumpets by seven angels in Heaven. On earth, the two-witnesses, one being Elijah, warn the earth of these judgments.

By the close of the first half of the tribulation more then half the earth's population has died.

The Midpoint of the Tribulation Period

But in the middle of the week He shall bring an end to sacrifice and offering. And on the wing of abominations shall be one who makes desolate. Daniel 9:27b

(See Daniel's Timeline #6)

The midpoint of tribulation comes when the prince who is to come breaks the covenant and places an abomination or idol in the Temple and proclaims himself to be God (2 Thes 2:4). During this period the two witnesses, bringing down God's judgments on the world are killed by this world leader, who himself was killed but came back to life (Revelation 11:7-9, 13:14).

In Heaven, at this time, and unknown to the inhabitants on earth, Satan loses his position and access to heaven and is cast out with all his fallen angels (Revelation 12:7). Satan then incarnates the individual known as the prince who is to come, the beast (Revelation 13:4, Daniel 7:11), the little-horn (Daniel 7:8), takes reigns of his earthly kingdom. He attempts to totally destroy the Jewish people, Israel and anybody who worships anybody but himself. He enters the Jewish Temple and sets up an image of himself and demands the earth to worship him. This is the abomination of desolation Jesus spoke about.

God then opens an escape route, a sanctuary, for part of the Jewish nation. Jesus warned Israel when you see the abomination spoken of by Daniel the prophet, flee into the mountains. (Mathew 24;15). A select group of Jews respond and are preserved from Satan's plans for the next 3.5 years in the mountains of Israel.

Satan's rage is not stopped because he knows his time is short. He unites the world, under his control and creates a world economic system. Nobody can conduct any type of commerce without first pledging support the Beast, the prince to come.

The Last Half of the Tribulation Period

Even until the consummation, which is determined, Is poured out on the desolate."

Daniel 9:27c

Following the escape of fleeing Israel, Satan is enraged and plots to destroy Israel, by assembling the nations to Israel. He causes the survivors of the first half of the tribulation, to pledge allegiance to him, but Satan, is frustrated by God's mercy. Before the world-wide marking system (666) can be implemented, three angels are sent to warn the inhabitants of the earth to reject the mark and worship the creator alone. (Revelation 14:6-13)

All those who refuse to pledge allegiance (Worship) the prince who is to come, the Antichrist , are killed for their faith, but their spirits are seen in Heaven. (Revelation 15:2) Then from heaven, seven angels are seen with seven bowls, these are bowls contain God's wrath poured out on the Earth inhabitants. This pouring out of wrath in the second-half is what Gabriel tells Daniel what will happen,

"Even until the consummation, which is determined, Is poured out on the desolate" Daniel 9:27c

God's wrath is poured on the earth. Those who chose Satan, and pledged their allegiance to the Antichrist by receiving the mark (666), receive painful sores. All the living creatures in the sea and in rivers die. The sun scorches the inhabitants of the earth. Those who are left of the nations then gather for battle, against God in the hills of Megiddo, Armageddon.

Click to Expand the Chart Below

---

[1] The Messianic Age is period when Messiah (Gr. Christ) will rule on the earth. War will cease, the nature of animal world will change (Isaiah 11:6-11), Messiah, Son of David will reign over the earth from Jerusalem.

[2] Week: means unit of seven, similar to dozen meaning 12 or gross meaning 144. Seven was a period of measure in Hebrew, similar to 7 periods of 7 years followed by the year of Jubilee on the 50th year.

[3] Flavius Josephus, The Wars of the Jews, Book 7, Chapter 1.

[4]The Holy Bible, New King James Version, (Nashville, Tennessee: Thomas Nelson, Inc.) 1982.

[5] Antiochus IV Epiphanes (175-164 B.C.), the Seleucid king of Syria pillaged the Temple and set up an image on the Temple-Mount, almost 200 years before Matthew 24:15. Jesus is referring to a future event not a past event.

[6] The periods of the Temple are divide in to Three periods, the First is from Solomon to the Babylonian destruction (960-586 B.C.), the Second from 516 B.C. to 70 AD, and the Third is a future Temple yet to be built

[7] The Millennium is a 1000-year reign of Christ (Messiah), Revelation 20:4-6, where the saints rule and reign over the earth with Christ. This corresponds with Isaiah 11:6-9, Jeremiah 31:3

[8] Dispensations means management of the house (Ephesians 1:10,3:2,).

[9] When Israel rejected Christ (The Messiah was cutoff), the kingdom promised to Israel was inferred on the Gentiles until the 70th week when Israel will be restored and receive the Millennial blessings promised in Daniel 9:24. (See Luke 14:15-23, Matthew 22:1-14)

be cut off,	PHR.	H3772	כרת karath		TENSE

It is talking about Yeshuah Ha'mashiach / Jesus the Christ / Jesus the Messiah (yes, capital M), who fulfilled this most amazing prophecy ever given to mankind to the teeth - God's signature of autenticy.

You don't bend the Bible to your own purposes. The opposite takes place.

Wolveshater - July 20, 2011 11:34 AM (GMT)

OMG, lets get this interpretation correct, because if I choose the wrong one, I'm done, no excuses, the loving Jesus will trash can me for ever for being illiterate. I'm flipping my quarter and going with Kalongi, hope I make it. ha ha.

Thaalem - July 20, 2011 12:34 PM (GMT)

Please read "Great Prophecies of the Bible" by Ralph Woodrow for an eye-opening account of Daniel's 70 weeks.

Wolveshater - July 20, 2011 03:09 PM (GMT)

Well the first red flag concerning Great Prophecies of the Bible by Ralph is the fact its mainstream book store approved. So whatever it says they want the majority to read it. I'll check it out though, what harm could another interpretation possibly do. :)

kalongi - July 21, 2011 12:24 AM (GMT)

Why don't you .... how can I put this, ah yes ... read the **BIBLE** to see what the **BIBLE**

has to say about Daniel's 70 weeks. It surely can't hurt to see what the absolute authority has to say about it ... I don't know, call me crazy.

> **QUOTE**
>
> Well the first red flag concerning Great Prophecies of the Bible by Ralph is the fact its mainstream book store approved.

Yes, the typical "I got a new vision / interpretation that noone else has, I found *the* code" type of thing...

... because, you know .. the Bible shouldn't have a capital "M" there. We'll have to bring a new version to correct it. Call the Vatican, they'll get on that asap,

Oh yes, I forgot...

John {1:41} *He first findeth his own brother Simon, and saith unto him, We have found the* ***Messias****, which is, being interpreted,* ***the Christ****.* **{1:42}** *And he brought him to* ***Jesus****. And when Jesus beheld him, he said, Thou art Simon the son of Jona: thou shalt be called Cephas, which is by interpretation, A stone.*

John {4:25} *The woman saith unto him, I know that* ***Messias*** *cometh, which is called* ***Christ****: when he is come, he will tell us all things.* **{4:26}** ***Jesus saith unto her, I that speak unto thee am [he.]***

So, yet again, we see another false teaching by golden_oil and "Elijah".

Mashiach / Messiah / Messias / Christ = Jesus, who fulfilled Daniel's prophecy to the teeth (Matthew 21:1-11).

golden_oil - July 22, 2011 04:10 PM (GMT)

QUOTE (kalongi @ Jul 22 2011, 12:22 PM)

John {1:41} *He first findeth his own brother Simon, and saith unto him, We have found the* ***Messias****, which is, being interpreted,* ***the Christ****.* **{1:42}** *And he brought him to* ***Jesus****. And when Jesus beheld him, he said, Thou art Simon the son of Jona: thou shalt be called Cephas, which is by interpretation, A stone.*

John {4:25} *The woman saith unto him, I know that* ***Messias*** *cometh, which is called* ***Christ****: when he is come, he will tell us all things.* **{4:26}** ***Jesus saith unto her, I that speak unto thee am [he.]***

So, yet again, we see another false teaching by golden_oil and "Elijah".

Mashiach / Messiah / Messias / Christ = Jesus, who fulfilled Daniel's prophecy to the teeth (Matthew 21:1-11).

Certainly the quotes in John refer to the Lord Jesus Christ. I did not imply that they didn't.

However, Daniel 9:25 does not refer to Jesus Christ and here's an explanation why this "messiah" it does not, but rather, refers to another.

First of all, look at hese scriptures. They speak of David, the coming King:

Jeremiah 23:5-6 refers to a *righteous branch*. This cannot refer to the Lord Jesus as He Himself said, "I am the Vine, and you are the branches."
So it must refer to another person.

This scripture goes on to say "In his days Judah shall be saved, and Israel shall dwell safely."

Now what period of time will Judah be saved and Israel shall dwell safely?

Well, read Revelation 7:1-8, which refers to the sealing of the 144,000 Israelites, which is prior to the coming tribulation period. So Jeremiah 23:6 is actually foretelling of this time when Judah shall be saved, and Israel shall dwell safely during this coming period of time, that is, the tribulation.

Jesus does not reign until the Millennium, therefore this messiah in Daniel 9:25 must refer to this King David to come and the time he rules over the 144,00. This period is for 3 1/2 years.

In addition, you can cross reference that time of sealing to Ezekiel 37:24-28 and Jeremiah 30:9.

New Bible for Public Release, Changes Jesus 'Son of Man' to 'the Human One'

Wed, Jul. 13 2011 11:55 AM EDT
By Nicola Menzie | Christian Post Contributor
http://www.christianpost.com/news/new-bibl...uman-one-52232/

The new edition of the Common English Bible (CEB) will be released in print and made available to the public for the first time on August 1, publicist Audra Jennings has told The Christian Post.

The publisher of the new version is hoping it will make the Bible understandable and attractive to as many people as possible. To that end, the new edition of the CEB has made several "bold" translation choices, including changing Jesus' "Son of Man" title to "the Human One."

With the complete edition of the Common English Bible arriving from the printers this week and rolling into stores starting next month, associate publisher Paul Franklyn said the goal of translators was to make the Bible accessible and more appealing to readers of various backgrounds and denominations.

“There are a number of translations available for conservative churches,” Franklyn told The Tennessean. “This is trying to make a bridge between conservatives, moderates and liberals.”

On their website, the publishers compare the Common English Bible to the New International Version and the New Revised Standard Version.

For their “bold” new edition, the publishers say they gathered over 100 biblical scholars from across two dozen denominations and from various ethnic backgrounds to translate the Bible from the original Hebrew, Aramaic, and Greek texts into plain English. The publishers also field tested the new edition among 500 readers from more than six dozen groups.

Some other changes in the Common English Bible include swapping out “alien” or “foreigner,” used by some translations for passages like Leviticus 19:33-34; the Common English Bible applies the term “immigrant” instead.

The translation is also gender-inclusive, as the passage in Matthew 5:21-22 involving Jesus’ teaching on the true meaning of murder shows. In the Common English Bible Jesus warns, “But I say to you that everyone who is angry with their brother or sister will be in danger of judgment.”

Another translation change involves the Lord’s prayer, which avoids the King James Version’s “hallowed be thy name” and includes “uphold the holiness of your name” instead.

A very unique aspect of the Common English Bible also involves its use of contractions, as readers of other English Bible versions are more likely to find “it is” instead of “it’s” in the text.

The new translation was produced by five denominational publishing houses and cost about $3.5 million and four years to complete.

The Common English Bible was released in digital format late last year and made available on Bible websites, but this is the first time the new Common English Bible will be available for sale in print. Publishers have so far only made it available in paperback.

In May, Fuller Theological Seminary voted to add the Common English Bible to the NRSV and the TNIV as translations that could be required for students doing biblical

studies. “We wanted something that was an academically excellent translation from Greek and Hebrew, and one that reflected our strong position regarding women in leadership,” Dr. Joel B. Green, professor of New Testament Interpretation, told The Christian Post.

View Full Version: got a rebuttal

Title: got a rebuttal

Keith - July 11, 2011 04:00 AM (GMT)

hey to all who reply, i'm getting seriously confused. i'm trying my best to think for myself like craig says we ought to continually strive to do. what is ya'lls rebuttal of this guys take on yahweh? he mostly talks about yahweh in the second half of the page, and explains the annunaki story in the first half of the page. what you got to say?

Heres what I think:They got some of it right; it wasnt thru eating an apple that caused the fall it was adultery. though it wasnt ailens that came down and caused the genetic form for giants. I believe that it was adultery, that took place in the garden of eden. The serpent was what is now believed to be the 'missing link' between man and apes, not evolutionary though. A large creature that walked upright. HE had sex with Eve, and the offspring was cain. Immediately after that Adam slept with Eve (Abel) and thats why both were born, just like twins one after the other. If you think this is hard to believe; this strange thing is not uncommon and has been documented, there are reports on youtube etc, where a woman sleeps with 2 men the same day and gives birth to 2 babies one from each father. There are cases where there are 1 black and one white baby from fathers of 2 races. this is proven.
Anyway from Cain's lineage we later find the evil giants. Also see how cain was a muderer from the beginning, like his father satan. Who slew his brother. In the new testament we find a clue from the book of John chapter 8 that suggests it was adultery at the beginning. The Pharisees and Jesus were discussing which Father they were from, either God or the devil. The Pharisees accusing Jesus of not being of God. In John 8:41 the Pharisees said: Joh:8:41b: Then said they to him, We be not born of fornication; we have one Father, even God
'Not born of fornication' This indicates they knew what went on in the garden of eden.

Here in 1 john we find out whose father cain was: 1Jo:3:12: 'Not as Cain, who was of

that wicked one, and slew his brother. And wherefore slew he him? Because his own works were evil, and his brother's righteous.' Each brother 'took after his father'
heres another verse that suggests something else happened in eden; Proverb:30:20: Such is the way of an adulterous woman; she eateth, and wipeth her mouth, and saith, I have done no wickedness.
